Mr. BURKE. Mr. President, in a letter to the New York Times the able Bishop of Omaha presents a scholarly discussion of the question of diplomatic relations of the United

States with the Vatican. I ask unanimous consent that the letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of May 12, 1940]

DIRECT DIPLOMATIC RELATIONS WITH THE VATICAN ADVISED—ROMAN CATHOLIC BISHOP OF OMAHA POINTS OUT ADVANTAGES TO BE GAINED BY RESUMPTION OF CONTACT WHICH HAS BEEN SUSPENDED SINCE 1867

To the EDITOR OF THE NEW YORK TIMES:

In annual assembly recently the Methodist Church voted that it is "unalterably opposed" to the establishment of diplomatic relations between the United States and the Vatican. By this action it joined the Baptists and Lutherans, who had disapproved publicly the sending of an American Ambassador to the Holy See. These same churches even criticized the appointment of Myron Taylor, sent by President Roosevelt as his personal representative to the Pope in order to work in the interests of world peace and for the relief of suffering in the war-torn countries of Europe and Asia.

The thought is expressed by these churches that the appointment of Mr. Taylor is but a first step in the resumption of diplomatic relations with the Vatican. Should such relations be reestablished, it is feared that grave injury will be done the principle of separation of church and state. Why and in what way the appointment of an American Ambassador to the Vatican would change the traditional ecclesiastical policy of the United States Government is never pointed out. It is simply asserted, and always by the representative of some Protestant group. No one else seems to have any such misgivings.

POLITICALLY IMPORTANT

The question of the eventual resumption of full diplomatic relations with the Vatican is an important one from an exclusive political standpoint. Cannot it be discussed solely from that angle?

With the election of Pius XII now behind us, and the memory of the almost universal approbation it received still fresh in the public mind, the place of the papacy in world affairs seems to stand out in bolder relief than at almost any other epoch of its long existence. In few periods of history have the Popes exercised a larger influence—an interesting phenomenon when one recalls the low political ebb to which the papacy had sunk at the middle of the last century, when, on all sides, reputable statesmen predicted its final and definitive annihilation within their own lifetime. But from Leo XIII to Pius XII much water has flowed under the bridge of international politics. Kingdoms that were kingdoms in the days of Pius IX are no more, and empires that seemed eternal then have collapsed.

Political liberalism and not the papacy was almost completely destroyed in the cataclysm of the World War. On its ruins there have risen, to take its place, such extremes as communism and fascism, which, despite their many and serious differences, meet on the common ground of state totalitarianism.

Instead of doing battle with a defunct liberalism, the papacy is now in deadlock with a no less arrogant successor. If history is any guide to the immediate future, state absolutism will not be any more successful in its efforts to humble Rome than was the dominant political ideology of the nineteenth century.

STUDYING OUR POSITION

All of which, by way of introduction, brings the thoughtful student of international affairs face to face with a most important issue: Where should the United States stand in relation to this force, whose powers of rejuvenation seem only to be equaled by its world-wide influence and authority? What must we, nationals of the United States, think of this international entity, the papacy, upon whose spiritual empire the sun never sets, and to whose authority almost 400,000,000 human beings owe a spiritual allegiance as deep and moving as that which they profess for the state itself of which, at the same time, they are citizens?

Since 1867 the Government of the United States has ignored officially the very existence of the Vatican. Though conscious of the religious power of the Pope, head of the Catholic Church, we have chosen to remain blind to the political power of the Pope, who is king. But is it the part of wisdom not to recognize the papacy for what it is, despite any religious feelings to the contrary? Rather, is it not the function of political realism to calculate dispassionately the advantages which would accrue to the United States by a recognition of the Vatican as a state, in all things independent and sovereign?

If we cannot at this moment answer the question by a catagorical yes or no, we can examine, in a scientific spirit, the claims for recognition of the Vatican, discuss them, and conclude what course of action it would be best for our country to follow should we be called upon to come to a decision. That our Government and the Vatican are drawing, almost daily, closer together there can be no doubt. Recent acts of both the Holy See and the United States speak louder than any mere protestations of good will. The patent community of interests and purposes which exists points to an understanding and a friendship which can only be climaxed by full and spontaneous recognition on the part of both church and state. Should the United States decide to send a permanent Ambassador to the Holy See, what are the reasons which would impel such a momentous decision?

IMPOSING REPRESENTATION

In the first place, it must be recalled that the Vatican is in no sense of the word an orphan child among the nations of the world. Both qualitatively and quantitatively the foreign representation at the Vatican is little short of imposing. According to the Annuario Pontificio, the official yearbook of the Holy See, 36 nations maintain either permanent embassies or legations in Rome. Among this large number we find such important countries as England, France, Germany, Italy, Poland, and Belgium. Russia, it may be noted, is not represented for reasons known to all.

Of very special significance to us in the United States is the South American roster, which includes such important powers as Argentina, Brazil, Chile, Colombia, and Venezuela. To one interested in the political and social welfare of the peoples of this hemisphere it is of large moment that the South and Central American countries almost universally recognize the Vatican state and maintain with it the closest possible diplomatic relations. Anyone who has traveled in South America and has felt the temper of that people knows that, by faith and tradition, they are preponderantly Roman Catholic, no matter what political party may happen to be in power. In truth, the heads of states are the first to recognize this fact of national existence and meet it in the only way it can be met.

The path of Pan Americanism is not strewn with roses, as everyone connected with the movement knows. Solidarity between the peoples of the two continents depends more on the recognition of basic principles in the fields of social ideals and of ethics than on an acceptance of similar commercial or political doctrines. The surest, safest, and most realistic approach to understanding and cooperation between the Americas is along the road of morality and religion. In that large task the representatives of the Vatican in South America could play a really constructive role, were they instructed from Rome to cooperate fully with the forces advocating Pan Americanism, the leadership in which has always been held by the United States.

SELFISH RELATIONSHIPS

The diplomatic history of modern Europe presents few, if any, examples of completely unselfish relationships between nations. When nations act they proceed on the well-known lines of quid pro quo. It is patently absurd to assume that Germany, France, and England now recognize the Vatican state for any high motives of Christian charity. If they give something, they expect something in return.

Nor is it difficult to imagine what the hard-headed diplomatists of the major European powers expect from the presence at the Court of St. Peter. They see clearly that the Vatican, as a world-wide moral power, must be reckoned with, and they proceed so to act on an assumption whose practical truth has been proved times without number. English or German recognition of the Pope as head of the Vatican state no more entails national acceptance of the Catholic religion than does recognition of the Shah of Iran involve acceptance of the religious claims of Mohammedanism.

It seems difficult for many American Protestants to appreciate the distinction between political and religious recognition. That the distinction exists, and possesses validity, is apparent from the acts of the great European Protestant powers who recognize the Vatican but do not accept the Catholic Church; in fact, are legally and constitutionally committed to other churches.

WORTH-WHILE EFFORT

It may be difficult to get all the American people to reach the same soundly logical and practical conclusion. The effort, however, should be made in the higher and lasting interests of the Republic, and, may we add, at no time more than at this hour of the world's history, where understanding among the forces molding public opinion is of paramount importance if civilization itself is not to collapse under the action of subversive philosophies which seem bent on its complete detruction.

The Vatican has been called the "listening post of Europe." Certainly there is no other chancelry where such correct information concerning world affairs and interests is to be found. When one recalls the far-flung outposts of the Roman Church, coupled with its highly centralized organization, in the interest of which thousands of well-trained, official and unofficial, diplomats are constantly reporting on even the slightest changes in public opinion in their respective territories, it can readily be grasped why the information in the possession of the Holy See is of a high accuracy no less than of inestimable value to anyone able to tap its resources. This, of course, can only be done by the powers who are in daily contact with the Papal Secretariat of State.

AUTHORITATIVELY INFORMED

Writing recently in the New York Times magazine, Camille M. Cianfarra summed up the situation from the point of view of a keen observer of international events. "Without the slightest doubt the Vatican is the best-informed power in the world. Information, both political and ecclesiastical, pours into its various offices through gigantic machinery that extends to the farthest corners of the globe."

Constantine Brown, one of the best-informed writers on international affairs, published in his column in the Washington Evening Star an appraisal of the work of Myron Taylor in which he says that Taylor "is doing a remarkably fine job." He continues: "The Vatican has proved so far the best and most reliable source for the American Government, and Ambassador Taylor is a perfect reporter. The Vatican's intelligence service is the best in the world. The 'intelligence officers' are members of the Catholic clergy who are in touch in every country of the world with people of all social strata."

All of which points a moral which only the willfully stupid would be likely to misunderstand. While it is true that friendly powers

can be counted on to keep us informed up to a point of what the Vatican thinks and knows, yet in the game of international politics full trust cannot be placed even in our friends. The only sure way to obtain access to the Vatican is to be represented there, to have built up with the spokesmen of the Holy See a degree of confidence and intimacy which comes largely from personal contact, understanding, and appreciation of each other's policies and motivations.

The Papacy is fundamentally a spiritual, not a political power. But so widespread and all inclusive is the realm of the spirit that it is difficult to segregate it from the political and to say that one thing is exclusively spiritual, the other exclusively political. Even if we were able theoretically to do so, there should always remain open for delimitation a no-man's land to which both sides would lay claim and in which both would endeavor to exercise jurisdiction and to make their influence felt.

At no time in history has there been keener rivalry between the spiritual and the political for the possession of men's souls. The totalitarian states are frankly exclusivist in their claims to complete domination of men's minds, wills, and bodies. The democratic regimes, on the other hand, respect the rights of the individual citizen, and in this action are backed up, philosophically and religiously, by the churches, both Protestant and Catholic, and particularly by the latter, whose basic creed is respect for the individual soul and its rights.

The conflict has now entered its final stages and bids fair to become one of the great battles in the history of human freedom. The Nazi and Fascist ideologies, with their increasing emphasis on racism, have thrown down the gauntlet to Catholicism, which, because of its belief in the oneness of mankind, cannot capitulate to the new theories without sacrificing a fundamental tenet of a creed which is as old as Christianity itself.

The democracies and the Catholic Chuch are one in their opposition to totalitarian philosophies, a fact made clear by statements of the late Pope, Pius XI, and proclaimed as the policy of the newly elected Pius XII in the first encyclical he addressed to the world. On whose standards victory, in this contest, shall perch ultimately, no man knows. But one thing which every follower of realistic politics must admit is that it would be, to put it mildly, foolhardy for a democratic state, whose very existence is involved in the outcome of the struggle, to neglect to make friends with that religious power whose assistance is certain to be of such inestimable value.

SUPRA-NATIONAL LEADERSHIP

The moral leadership of the papacy is not bound up with nationalistic policies or considerations. Essentially, it is supranational. It, therefore, places the Pope in a position to regard the problems of peace and war, of national and individual welfare, divorced from the narrowness of nationalistic attitudes and ambitions. For that reason he is able to assume, and actually does assume as occasion requires, an international leadership acceptable to all nations of good will.

More and more are men beginning to see that the materialism of the last century is, as a working political doctrine, extinct as the dodo. In its place we must find an acceptable teaching which, taking due cognizance of spiritual and moral values, will save mankind from the loss of political liberty not only but from the loss of religious freedom as well.

While emphasis is placed on the role of the Pope as an international teacher of morality—and in that function lies the real explanation of his world-wide influence—nevertheless, we cannot fail to mention, in any sound estimate of his position, that he is, at the same time, a temporal ruler—an independent sovereign with juridical powers as valid as those of the ruler of even the greatest empire. Sovereignty does not depend on the size of the state over which one rules. Notwithstanding the fact that Vatican City is the tiniest of modern states, it is always a state, and its ruler, the Pope, is a temporal king recognized by international law, possessing all the rights and privileges of a sovereign. To recognize him for what he is can only be interpreted as a gesture of international courtesy quite in line with the practices of civilized peoples.

Should recognition be given to the Pope by the Government of the United States, the substantial benefits from the act would flow in the direction of this Government, not in that of the Holy See. The Pope, and the church over which he rules, would gain prestige, but little else. The religious situation in this country is almost ideal, as far as freedom of action goes and respect for its ministers and teachings. The Pope could scarcely ask for more.

MUCH TO BE GAINED

There can be little controversy over the fact that the United States Government stands to win much and lose nothing by recognition of the Vatican State. That is the reasoned judgment of almost every man connected with our Diplomatic Service, as it is of students of international affairs, whose views stem from personal experience or the close study of political movements during the last century.

To this writer the problem of Vatican recognition, to which he is favorable and which he has tried to approach from a broad political and not from the religious angle at all, seems at bottom one of education of the American people. Until the great mass of the American people are able to divest themselves of religious preoccupations and view this most interesting problem of national and international conduct in the only light in which it should be viewed, there is small prospect of the Government doing anything positive.

That enlightened Protestants, Jews, and Catholics would welcome a resumption of diplomatic relations between the Vatican and the United States does not seem open to serious debate, and I assert this despite the recent pronouncement of certain Protestant groups. All men, of course, are not enlightened and will not become so until they are prepared to discuss such grave international problems as this from the standpoint of value and advantage to the United States with little or no mixture of feeling and prejudice to distort the conclusion at which they may arrive.

The Most Reverend JAMES H. RYAN,
Bishop of Omaha.

OMAHA, NEBR., *May 6, 1940.*

National Defense

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM NEW YORK DAILY NEWS

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on national defense which appeared in the New York Daily News under date of May 20, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Daily News of May 20, 1940]

DEFENSE, 1933 TO 1940

WHERE THE MONEY WENT

The President has asked for almost $1,200,000,000 extra defense spending as fast as we can efficiently spend it.

His political enemies have begun to object, as loudly as they have the nerve to, that the New Deal has spent almost six and one-half billions on national defense in 7 years, and that the Nation has next to nothing to show for all this outlay of money.

It isn't really as bad as all that. And it seems to us that people who try to alarm the general public by painting the national-defense picture darker than it is in reality do the general public a distinct disservice.

Here are some figures, gathered by the United Press, on our national defense as it was in 1933, and as it is now:

NAVY

	1933	1940
Battleships	15	15
Aircraft carriers	3	5
Heavy cruisers	11	18
Light cruisers	10	17
Destroyers	229	219
Submarines	82	95
Aircraft	933	2,863
Active manpower	90,150	145,400
Navy reserves	39,935	55,085
Marines	13,600	25,000

ARMY

	1933	1940
Aircraft	1,497	2,700
Active manpower	134,085	[1] 241,000
National Guard	189,000	251,000
Reserves	125,000	144,714
Motor vehicles	9,505	17,791
Tanks, etc	[2]	700
Antiaircraft guns	[2]	400
Antitank guns	[2]	744

[1] This figure believed slightly in error; our best information is that correct figure is 227,000.

[2] Virtually none.

It is further pointed out that, while the net warship increase in 7 years has been only 19 vessels, the Roosevelt administration has actually built 130 warships. The bulk of this construction has replaced vessels that became obsolete under the anti-Navy policy of the Coolidge and Hoover administrations.

The fact is that our Army, such as it is, is in fair shape, though it needs the thoroughgoing expansion and modernization that the President now proposes to give it. The fact further is that our Navy is in better shape, and is bigger and more powerful, than it ever was before in our whole history.

Against American Intervention in War

EXTENSION OF REMARKS
OF
HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, May 20 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY SENATOR CAPPER

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address expressing my opposition to intervention in the European war, delivered by me on May 17, 1940, over the National Broadcasting System from Washington, D. C., in a program sponsored by the American Coalition of Patriotic Societies.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends in the radio audience, President Roosevelt's impressive appeal to Congress for appropriations for 50,000 military and naval planes, and for everything needed for national defense, will have my support. I am for national unity in time of crisis.

But I am against any program which proposes to make the United States an actual participant in Europe's wars.

The President is right when he says our defense must be invulnerable. In the light of recent developments we need a great air force, a strong navy, and a highly trained army for our own protection to make sure that no power on earth shall attack us or challenge our safety. But I shall continue to oppose any move to send our fighting forces across the seas.

We must make sure that the billion dollars asked by the President will be spent effectively for the national security, free from "pork barrel" methods.

We must be on guard against the increasing propaganda for our active participation in the European conflict. We should stand against the numerous demands for repeal of the Johnson Act.

Now, in the next few minutes I want to tell you why I am opposed to United States intervention in the latest European war.

In the first place, I say without equivocation or evasion or any mental reservation—and I maintain we must not lose sight of this basic fact: This European war is not our war.

And don't let anyone, by working on your sympathies or on your credulity, tell you otherwise.

In the second place, no nation, no head of a nation, is justified in plunging into a war that is not its own war, unless and until it is clearly evident its own national self-interest absolutely demands it.

I hold that this war in Europe is not our war. I hold also that our own national self-interest does not demand that we make it our war.

I am opposed to our participation in this European war, this foreign war that is not our war.

As a Senator of the United States, representing the State of Kansas—and I was war Governor of Kansas a quarter of a century ago when we entered another European war to make the world safe for democracy, to fight the war that was to end wars—I say I promised the people of Kansas when first elected to the Senate 21 years ago, that I never would vote to send an American boy overseas to fight in a foreign war. I intend to keep that promise.

I am not here to speak for any other State in the Union. But I know that I speak for nine-tenths of the people of my native State of Kansas when I take this stand against intervention in another of Europe's wars.

I am glad to say there is no political partisanship in this country so far as the European war is concerned.

I myself am a lifelong Republican from the Republican State of Kansas.

My good friend, Senator BENNETT CHAMP CLARK, who appears on this same program tonight, espousing the same cause that I espouse, is a lifelong Democrat from the Democratic State of Missouri.

Neither BENNETT CLARK nor myself are or ever have been peace-at-any-price pacifists. BENNETT CLARK served overseas in the A. E. F. in the previous world war; he was the first national commander of the American Legion. He shared in the glorious enthusiasm for those high ideals that set us afire 23 years ago. He shared in the bitter disillusionment that followed the peace of Versailles—the peace that was not a peace; the same kind of so-called peace that will follow this war; the same so-called peace that is not peace, which has followed every European war for thousands of years. Peace in Europe is normally a period of preparation for the next war.

And so Senator BENNETT CLARK, of Missouri, Democrat, and myself, Kansas Republican, find ourselves united in opposition to United States participation in this war.

I shall continue to support President Roosevelt's program so long as he says America must stay out of this war. I hope he will go the entire way and say, with me, that it is not our war.

I will vote for any reasonable appropriation for national defense. In the present disturbed state of the world only the strong nation—the nation prepared to defend itself successfully—can be assured of retaining its freedom.

So I am for whatever the President says is necessary to protect us against any possible attack.

The important thing for us to do, in addition to preparing an adequate national defense, is to keep our feet on the ground. There is no need for hysteria. There is need for hard-headed thinking.

This is not the time to be swept off our feet by emotional shoutings and mouthings—not the time to rush into action, head down and eyes closed, just because the rest of the world is in the grip of war madness.

History has lessons for us, if we are willing to study and able to learn from the pages of history.

We can learn from the history of Europe, and profit by the experience of other nations and other peoples over the centuries, or we can choose to learn by experience—maybe. We tried the experience route in 1917. I hope we learned something from that experience. What we do in the next few months will tell.

What is the history of Europe?

For 2,000 years of recorded history Europe has warred and warred and warred. The tide of conquest has swept over the lowlands time and again through the cycle of years.

Caesar marched his legions to Gallic and British conquests and encountered the Belgians on the way.

The Roman Empire stretched over most of Europe; for centuries the then known world had the enforced peace of the Pax Romana. The barbarians sacked Rome. Then came the Dark Ages. Spain rose and fell; the British swept the Spanish Armada from the seas. France became the dominant power of Europe, after driving the English back to their island. Then the Iron Duke and Nelson ended Napoleon's march to European domination. Since that time England has maintained supremacy in Europe through judicious application of the principle of the balance of power.

Today the European problem is not Napoleon, but Hitler, backed by Stalin, by Mussolini, with Japan in the oriental background.

How this war will result I do not say. We must admit Nazi air superiority has been most effective. There can be no question but the swift expansion of air forces and the injection of parachute troops in this European war has introduced a new and highly important factor in warfare—a most important factor in Germany's successes to date. In view of this fact, we must strengthen our own air forces, give the air force the important place it requires in our own national-defense program.

But the day-by-day developments right now do not necessarily chart the course of the war. Germany, prepared, trained, with everything sacrificed for this supreme effort, was bound to be winning at this stage of the war. But there is not yet an assurance that Hitler will win the last battle—the battle that counts in every war.

Europe has been fighting these wars over boundaries; these contests for supremacy, for thousands of years, and will continue to do so.

No matter how high our ideals, how fervent our enthusiasm; no matter how earnestly we try, nor how much we sacrifice in money and men, we in the Western Hemisphere cannot bring peace to Europe.

The American colonists, 150 years ago, won for the people of the United States the right to stay out of Europe's wars. For 125 years we exercised that right and did stay out of Europe's wars.

Under the same kind of appeals and urgings that now are being made, we abandoned that policy in 1917, and won that war for Britain and France.

We can do that again, at this time. If we decide that is the thing to do, we will do it.

But we should be realistic about the matter. We should face the facts.

If we go to Europe again, to uphold the Allies, we will be committed almost irretrievably to this line of foreign policy.

Every time British supremacy is threatened we go to her aid. We start by expressing sympathy. Then we donounce her enemies, we send war supplies, at first for cash. Then we advance credit. The next step will be to make loans. We do all things, short of war, to help the cause of the Allies. After that the final step is inevitable—we go to war.

The situation today is just this: Sentiment in this country has grown steadily stronger for the Allies. Congress and the American people are overwhelmingly on the side of the democracies of Europe, and my own feeling is strong that way.

But that sympathy for the Allies does not justify us in taking on their war. I believe that is the way the great majority of the people of this country feel today.

Before we do take on their war, before we take the measures short of war, that inevitably will be steps that take us into the war, we should face squarely what some of the effects of going to war will be.

In the first place, when we go to war we will go 100 percent.

The first step inside this country, when we go to war to save democracy, will be to abolish democracy.

Just what good the United States, and in the long run the world, would get out of United States intervention is more or less doubtful. But here are some of the things I know, and you know, the United States would get:

1. We would get a dictatorship.

2. We would get a further increase in the national debt of scores of billions of dollars.

3. The loss of life would run into the millions—property losses would run into billions.

4. After the war we would get a depression worse than this one, and very probably a continuation of the dictatorship and then some more European wars.

I say we ought to keep these things in mind and stay out, and stay all the way out.

I pray God that the youth of America may be saved from the horrors of war; that in this crisis America keeps her faith in God, faith in the ultimate triumph of right, faith in our American form of government, faith in ourselves and in our ability to hold what we have in trust for our children and their children.

And may we be blessed with citizens, and with leaders, who will appreciate our great freedoms—freedom of religion, freedom of press, freedom of speech, freedom of contract—and who will not lightly sacrifice these in the heat of passion.

Proposed Participation by United States in War

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

STATEMENT OF BISHOP JAMES CANNON, JR.

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have inserted in the RECORD a newspaper dispatch having reference to the letter of an eminent churchman, Bishop James Cannon, Jr., urging the United States to immediately get into the European War.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHOULD ENTER WAR, BISHOP CANNON SAYS

RICHMOND, May 20.—In an open letter to Secretary of State Hull, Bishop James Cannon, Jr., of the Methodist Church, today urged Mr. Hull to use his "great influence with the President and Congress to declare war against Hitler and his fellow monsters."

Asserting that defense of the oppressed and of human rights was something both necessary and Christian, Bishop Cannon declared that some things were more precious than peace and that there could be no "permanent peace unless and until justice and righteousness prevail."

"If the United States would today repeal the cowardly neutrality act and declare war against Germany because of the destruction of our rights by her barbarous submarine warfare, there would instantly be a great change in the attitude of the nations of the world," he said. "Instead of fear there would be hope, and I believe that there would be no menace that the sword-rattling Mussolini would enter the war."

Land of Opportunity

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESS BY DR. MARSHALL E. DIMOCK AT NEW CITIZENS' DAY CELEBRATION, MIAMI, FLA.

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Dr. Marshall E. Dimock, Second Assistant Secretary of Labor, at the New Citizens' Day celebration, Miami, Fla., May 14, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

America, land of opportunity! You don't hear it in songs as often as you do "Home of the brave" and "Land of the free," but you have heard it in people's conversations ever since the first colonizing ship set out for American shores. Recent arrival and old settler both have cherished the belief that America is the best opportunity the world affords. And it is. And I am confident it will continue to be, through all the troubles with which the world is beset today.

Opportunities are made. They do not merely exist. America has been made by people who would not take "No" for an answer; by determined, self-reliant men and women. True, there was lots of good land and most of the resources men need. But without the courage and self-reliance exhibited by our forebears, without their boundless energy and their faith in the future, this country of ours would not be standing as it is today at the forefront of all the nations of the world.

We have not changed in these respects. We are today a virile, optimistic, dauntless people. All through the period of hard times in which the world has been plunged, the great bulk of the American Nation has never lost that ingrained conviction that America can and will come out on top of her troubles.

I share this faith. And it is not merely the blood of pioneers in my veins that makes me have this faith. It is a rational, honest conviction that Americans possess the four requisites which will see them through any trouble, no matter how great or how prolonged.

What are the tests? Ask them of yourselves and tell me if you don't think I'm right. To remain free and to solve its problems as they come along, the Nation must first have a citizenry which thinks for itself and thinks common problems through to the end; next it must be prepared to make changes when the need for them clearly appears; third, it must be practical in carrying out these changes; and, finally, it must be drawn together by ethical values which bind us strongly together.

Think it over, and when you have, do you still have faith in America, though she be virtually alone in a troubled and anxious world? I do, and so do you.

As a student of government, as a professor of political science, perhaps I should not be quite so optimistic, so dogmatic, in my beliefs. The voice of caution calls to me as an officeholder from the accumulated wisdom of statecraft's long past. And what do I hear? Why, I hear the political philosophers saying, "Don't you know that no nation stands alone, that all nations are caught up in the sweep of world ideas in the onward movement of forces which are stronger than any one nation?" Am I too sanguine? Are we all too optimistic? America cannot escape, says this voice from the past, because nations must share and share alike. World ideas and world forces will prevail.

The inexorability of world ideas—suppose we call it that. And what is the answer? Fatalistic resignation? No; that is not the American spirit. That is not in our tradition.

The customary way to regard the phrase "land of opportunity" is to think of this country's opportunities for the individual. But I want to broaden this view somewhat and to ask you to think of America's opportunity with reference to the rest of the world. For at this time in the world's history there is nothing more natural or more important to which we could possibly turn our attention. America's opportunity is your opportunity and mine, for we are America. Therefore, when we talk about our country's opportunity we are also talking about our own, for, particularly at a time like this, they are one.

America's opportunity is to be a stalwart example of sanity and true democracy in a world which sooner or later must find its way back to civilized modes of life. I do not say this as the citizen of a Nation which feels proud and superior. I do not assume that the peoples in belligerent countries have gone suddenly mad. Not by any means. No invidious comparison is intended. What I am trying to say, rather, is that we must take stock of ourselves if we are to safeguard what we have gained as a free Nation and if we are to play an unostentatious but nevertheless dominant role in leading the world back to democracy and humanitarianism.

Yes; let us take stock of ourselves. For now it is a race between a widespread awareness of what we have and want to hold on to, and the onward rush of world cataclysms which have the force of cyclones. Puny man! How weak he is after all. Even the strongest are whiffed away by microbes and fast driving. And is not the Nation simply the sum total of its individuals? Why, then, are we so optimistic about this America of ours?

All right, let me explain the four points I gave you. Let me explain what I believe and what I think you believe.

In the first place, I believe that orderly progress is impossible unless our citizens, call them the average man and woman if you prefer, are capable of thinking for themselves and of coming out with the right answers. The right answers, you say? Why, dictators believe they have a monopoly on the right answers and they see to it that everyone thinks as they do. I admit all this, but I still stick to my phrase, "the right answer." The right answer is knowing what constitutes the best interest of the people as a whole, and as a long-range proposition; it means getting access to the facts regularly and reliably; it means being able to think logically; it means being able to exercise a sound instinct concerning rival candidates, picking the one who is sincere and able. And Americans have these abilities in large measure. We are not easily fooled. We have a sound instinct. And education is universal.

Trust the reasoning power of the common man. This the first and foremost conviction in the affirmations of a true Democrat.

The judgment of the average man, whoever he may be, is often better trusted than that of a person ten times as wealthy or twice as well educated. There is something about being close to simple life and its problems, close to the soil, and free to think, that makes the average men gol' darn near right in most cases.

Now for the second point I made, that Americans, instead of being frightened at the prospect of change, are, man and woman, prepared for it. Yes; prepared for it? They are practically born to it. Perhaps the greatest change that has taken place in the thinking of our people during the last 10 years is that even our so-called captains of industry and those who live from their investments, who in the past have been inclined to the greatest caution, now, in most cases look upon social change as something natural and normal, like the movement of the earth. And that is to be expected, for most businessmen are rational human beings, just as you and I. They can see that when problems exist, something must be done about them. The right solution must be found for the particular difficulty. That's the way they run their own affairs.

So, if you think of this analysis of mine as putting factors on the debit and credit side, this factor, America's universal preparedness to accept evolutionary change, must be added as a weighty factor to the credit side.

Americans, being a practical, hard-headed people—due to their long history of hard work—merely insist that reforms shall be practical. That is well. That is imperative. The surest way to kill a reform which is in the popular interest is to be impractical about it. When that happens, even its proponents eventually get fed up with it. But we are a practical people. We cooperate without difficulty; we have an inherent sense of organization, of teamwork; from the top to the bottom of our business and governmental structures we find men with ideas, initiative, and leadership.

At this point I would emphasize another conviction of a true democrat: He is convinced that all men, in varying degrees, possess helpful ideas and traits of leadership, so that the best results are secured by democratic cooperation rather than by exalting the few to run the many.

America's strength is the widespread ability of her people. We simply will not be driven about like sheep or stampeded like cattle. We are independent. We are self-reliant. We do not know what it means to be deferential to class or position. The result: We cooperate. Fortunately for us, obey is a little-heard word and cooperate a common one.

These are simple, homely things I am talking about. A citizenry which is able to think for itself; a people which accepts gradual change as the true order of things; a nation which is intensely practical in all that it does. Homely, lacking in glamor, all of them. And yet, do you know a combination that is better able to keep our Nation on an even keel and heading for widespread public benefits of a lasting character? I certainly do not. And because I am convinced that we as a people have intelligence, reformism, and practicalness in large quantities, universally distributed, I believe, both as officeholder and student of statecraft, that America will keep her promises to herself and to the world.

But there was a fourth point, you will recall. And it is easily the most important of all, particularly at this time in our history. I spoke earlier of a race between popular awareness and world forces. We must be aware of many factors if we are to come through our present troubles intact and at the same time help a very sick and exhausted world to find itself. But at no point do we need a clearer sense of awareness than in realizing now that our ideals as a people, and our ideals more than anything else, are going to keep us on our traditional democratic path and away from the abyss into which others have fallen.

And I don't mean merely war. I mean that we must understand, without any question of doubt, just what our dominant values are, or else we must surely capitulate to world forces which governmental science assumes would normally engulf us. And despite our glorious traditions, the widespread knowledge and sympathy we have for the Constitution of the United States and the Bill of Rights, despite the thoughts of our greatest thinkers and leaders—of Thomas Jefferson, Abraham Lincoln, and our own great President—I fear that our failure sharply to enunciate our values is the weakest point in our armor. All haste compatible with careful, critical thought must be made if this deficiency is to be corrected. Each of us can help by asking, "What means the most to me as an American, as a citizen in a great democracy?" We naturally think of the Constitution and the flag, and properly, too; but they are symbols, instruments. I want us to think about what lies back of them, what they stand for. Well, you say, patriotism, valor, opportunity. Yes; that is all true. But still I am not satisfied.

Back of all these, as the very innermost essence of our national spirit, is a belief in the essential nobility and perfectability of every human being. A democrat believes in people, likes them, wants to be no better and no worse than they are, feels for them, laughs at pretense and his own conceits, resents injustice, sees hidden possibilities and potentialities in his fellows, believes no legitimate goal justifies the warping of personality or the deliberate sacrifice of life. You reply that this is a high goal to set for a nation? Yes; but it is one that we can live up to. I am simply saying that all people are worth while; that mankind is the end and test of all our institutions. That's simple enough. I think we believe it. All our history attests the vitality of this central belief.

Man the instrument of state policy? We could never adopt that view of statecraft, not for very long. Man is the end, not the means. Men are not pawns; they are the sons of God. Any government is wicked if it sacrifices its people for national ambition or false pride.

And the second affirmation in our national religion is that man is born free, and free he must remain. Life is precious, given by God in trust. And every human being comes into the world helpless, full of potentialities, but undeveloped. Society must see to it that all its young lives are free, free to develop, to grow, and to become strong. Give man everything in the world except freedom and what does it profit him? At first he may think himself rich, but soon he will realize that he is merely a well-provided-for prison inmate. Freedom. Priceless word. Priceless as personality.

Freedom is such a gamble. Some make so much of it; others seem only to get into trouble. But with our shrewd American wit we realize that nothing worth while can be gained without the element of chance. If life were conditioned and controlled, it wouldn't be worth living.

The third word in our national affirmation is equality. Yes—equality. It makes shudders run down some people's spines, but I see no reason why it should. It is so precious that we cannot allow it to decline in our standard of values. Equality. It does not mean, should not be interpreted as meaning, that all men are actually equal in every respect. That is absurd. But it does mean that all men are entitled to equal opportunities. The land of opportunity—where opportunities exist and where everyone has a fair chance to compete for them. That comes pretty close to describing our American idea of equality.

Justice is a synonym for equality. Justice is a term we do not use as much nowadays as people once did in times past. That is unfortunate. It is a fine big word which covers a multitude of experience and wisdom. "Fair enough," you hear it said; "give me a break"; these and many other expressions attest the American insistence upon equality of treatment; and so here is something else to underscore: A sense of justice, among people generally, is imperative of a nation is to remain democratic and humanitarian.

Now I come to the fourth and final value which belongs in our shrine of values. This one is fraternity. Fraternity, you say? Aren't you thinking of the French Revolution? Well, perhaps the French talk about it more than we do, but we have certainly practiced it. That being the case, perhaps we should talk about it. Perhaps this is one of those points at which we would do well be a bit more explicit. Fraternity. Fraternity is a feeling of kinship—of brotherly love. It is an awareness of identity which binds us together. We are a fraternal people. Think of it! We came here from many nations, speaking many languages, bringing diverse customs and accomplishments to enrich our national life, and yet we instantly feel that we are all brothers beneath the skin. Why? Well, we are all ordinary human beings, with the same courage, ambitions, human frailties, and belief in democracy. More than that, we are all opposed to social designations and privileges which would tend to divide us. We are a classless people. We hate social distinctions worse than we hate any other form of inequality.

Do you realize how important this is? It is so important, I think, that it constitutes the principal difference between our democratic society and that of the Old World. Let me underscore it: A true democracy will not tolerate a feeling of social superiority and hence takes every precaution to discourage classes, ranks, and distinctions of any kind. Fraternity, this feeling of being as good as anybody else, is one of the chief assets on which we can bank in the future.

Now, how does all this add up? The science of politics tells us that nations cannot escape world ideas and world forces when they become so widespread and intense that they are beyond the resistance of individual nations. We have a homely American expression that conveys the same thought, "We must all sink or swim together." The assumption is that all of us are in the water. Now, this proposition cannot be ignored. There is much historical support for it. Furthermore, successions of political doctrine have been compared, more or less accurately, I believe, to the swing of a pendulum. First it goes clear over to conservatism, then back across to radicalism, with moderatism in-between. The idea is that one extreme begets the opposite. Aristotle set forth this theory succinctly; there is tyranny; the people revolt and overthrow the tyrant; an extreme form of democracy is then set up; but the pendulum has swung too far; extreme democracy is too chaotic and hence the pendulum starts swinging again.

Looking at the world today, we are forced to admit that the pendulum is moving away from the democratic middle and toward minority rule. Will America eventually be swept along? I for one do not think so. We as a people are too well protected by our continental position, our traditions, our democratic men and women of today. Nevertheless, if we are to maintain our position we must rely upon widespread knowledge, ability to adjust to new circumstances, ability to be practical about reforms, and clearly appreciated standards of national values from which we will not swerve. The four ideals we have been discussing pretty well sum up what is basic in our national life and traditions—belief in every human being, his value and perfectability; that is the first, and it is the core of the Christian ethic; then follow freedom, equality, and fraternity. We do believe in these values. We are willing to do more than die for them; we are prepared to live for them more consciously, more valiently, than we have ever done before. If we do that our optimism will be well founded.

The Republican Party Is on the March

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SENATOR VANDENBERG AT THE MICHIGAN REPUBLICAN STATE CONVENTION

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on Thursday last before the Republican State convention at Grand Rapids, Mich.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen of the convention, the Republican Party is on the march. It will march to Philadelphia in June and nominate the next President of the United States. It will march to the November polls and elect him. Then it will march to Washington next January and inaugurate a new administration which will restore the American system of free enterprise, free institutions, and free men; recapture mass prosperity for our whole people, substituting jobs for doles; renew the spirit of the constitutional government; dethrone the pay-roll bureaucrats; and reassure anxious American motherhood that its sons will not be sacrificed in foreign wars.

Yes; the Republican Party is on the march. There is no denying the signs of the times. We shall be substantially joined by faithful Jeffersonian Democracy and by embattled independents who want an end to political and economic dictatorship; who demand a sound and solvent government before it is too late; and who reject—above all else—the perpetuation of any political dynasty in this free Republic. We are not yet a one-man country. We have ugly and undemocratic names for one-man countries.

Our subsequent Republican task in 1941 will stand clear. It is to produce an all-American administration in national affairs which, regardless of mere party labels, shall be dedicated to the paramount purpose of ending the blights of idle men and idle money; of restoring sound foundations to our free institutions; and of insulating every hazard that might draw us into other peoples' wars.

The spirit of our people has made its determination clear. In every recent election the Republican surge has been registered beyond mistake. We are in the eighth and final year of fireside chats; of emasculated States' rights; of dictatorial government by Executive decree; and of annually broken promises to balance a sick Budget. Gone is the force of the charm which made the people forget even that they are unemployed. Gone is the easy chance to live indefinitely on pell-mell deficits—because we have at last collided with the statutory debt limit. Gone is the opportunity to play politics with public pay rolls and with human misery. We are about to disenfranchise Santa Claus and to restore Thanksgiving Day to its traditional date and to some justification for its existence.

At long last we are coming to grips with reality—the reality that you cannot make an $80,000,000,000 country out of a $60,000,000,000 country by spending the difference; the reality that you cannot build a solvent prosperity around an insolvent Treasury; the reality that government cannot substitute for business as the source and stimulous of economic progress; the reality that you cannot lift the lower one-third up by pulling the other two-thirds down; the reality that social-mindedness is good, but that socialism is bad; the reality that we must give as much attention to the man from whom we take a dollar as the man to whom we give it; the reality that our peace is desperately important to our own preservation; the realtiy that 4 more years of our present reckless "master minding" in high places at Washington will put us on the rocks.

The country is ready—aye, it is eager—for a change. The great middle class of Americans, the backbone of our institutions, realizes that it is the special and particular victim of the misnamed New Deal. Agriculture fully understands that, despite hysterical hypodermics, it gradually goes from bad to worse. Labor realizes that wealth must be created before it can be shared, and that better jobs do not flow from stagnant factories. Yes; the country is ready and eager for a change.

But, mark you this, my fellow Republicans. It will not change for the sake of change alone. It will have no part of blind reaction which would scrap all the instrumentalities of social and economic progress that have been built up through these recent years. Good things as well as bad have been done. Unfortunately the bad far outweigh the good. The country expects us to abandon failures and correct mistakes, but it equally expects us to move forward with new vision toward an ever-broadening distribution of the opportunities and the dividends of life. That was the Lincoln dedication, and it must be ours again.

The country is ready for a change. But it demands of Republicanism that it shall justify the stewardship it seeks. We must prove that we are worthy of the responsibility which destiny asks us to accept. It is our most important moment since the Republican Party was born under the oaks at our own historic Jackson. And it is this high spirit of dedication, my friends of Michigan, that I hope this convention, and its successor at Philadelphia, will approach its task. We must deserve to win because we owe it to America that we shall win.

This leads me to a word about these conventions and to a personal word which it is difficult to phrase but which it would be disingenuous and ungrateful to avoid. In one capacity or another I have been on the firing line for Michigan Republicanism for more than 30 years. Why, Mr. Chairman, it seems only like yesterday when I was tossed off the platform through a back window and out into an alley in the famous Bay City convention riot of 1912. I do not feel 20 minutes older than when I was keynoting my first State convention back in 1916. Across the years I have known all the Republicans who have made our party great. It is a tremendously stimulating memory. Thanks to your confidence and friendship I have been permitted to serve you for more than 12 years in the Senate of the United States. Probably I have disappointed you upon occasions. But I have done my best; and if I were to return my commission to the people of Michigan tomorrow I am not conscious of any blemish on it due to any failure to consult what I believe to have been the common weal. That is the best proof I can bring you of my deepest gratitude for your faith. And whatever lies ahead in the battle of 1940, I shall strive to keep this faith.

Coming down to the immediate moment, I must take cognizance of the fact that Michigan Republicans voluntarily did me the great honor 12 months ago of suggesting my availability for higher office. No man could be insensible to this compliment from his own neighbors; and I could not occupy this rostrum today without frank reference to the situation that results, though I speak with the complete consciousness that the fortunes of any individual amount to less than nothing in comparison with the fate of the Republic. I have been too familiar with my own limitations—and with the obligations of what, in effect, will be the greatest receivership in history—to pursue this assignment myself. But I could not do less than to place myself and my experience at the disposal of my party in respect to any labor which might fall to my lot.

This, Mr. Chairman, is my position. And I owe it to you to make it plain, bluntly plain, that when I am assigned in this crucial battle of 1940, be the assignment what it may, I intend to fight every inch of the way from the opening reveille to the final hour of victory. You voluntarily launched a great national adventure in my behalf, and no resource at my command shall fail you if the Philadelphia convention should confirm your draft. But whether it does or not, I am earnestly dedicated to the conviction that this must be a Republican year for the sake of sanity and solvency at Washington and for the sake of free institutions, free enterprise, and free men.

I want, here and now, to express my humble appreciation of the kindness and the compliment for which I am everlastingly indebted to all of my Michigan friends; and to the voluntary support that has come to me—thanks to your initiative—in many other States, including some 40 percent of the Republicans of Wisconsin and an even greater portion of the Republicans of Nebraska. I want to acknowledge in advance my obligation to convention delegates from many States who have made it plain that they will respond to your campaign when the rolls are called down yonder in the shadow of the Liberty Bell which, 5 weeks hence, is to signalize a new Declaration of Independence no less significant than the Spirit of 1776.

The friendly convention contest has really just begun. It is wide open. A deliberative parliament at Philadelphia—free of all duress from any direction—is going to consider the best welfare of the whole Nation. I have complete confidence that it will meet its great responsibility in the solemn spirit of its challenge. I want—I intend—to play my full, aggressive part in these decisions. I want Michigan to take her justly powerful place in these deliberations. But above all, and paramount to all else, I hope that Philadelphia shall make the wisest possible decisions, respecting platform and leadership, which, out of common and unselfish counsel, shall produce not only a victory in November, but also—and above all else—a subsequent administration which shall dependably save America.

Save America from what? From the precipice of national bankruptcy and disintegration at home; and from the precipice of war abroad.

Save America for what? For a solvent destiny in which legitimate private enterprise and private investment shall have a chance to produce new national wealth for all our people; and for a peace that shall permit social and economic progress to bless our hearthstones with new happiness.

Emerson said that America is God's last chance to make a world. Well—Heaven helps those who help themselves. America is at the crossroads. We can turn so sharply to the right that we precipitate a Fascist state. On the other hand, we can turn so sharply to the left that we precipitate the American version of the Communist state. Either is abhorrent to our traditions and our aspirations. But make no mistake: "It can happen here," and only eternal vigilance will be the price of our liberty. Our choice must be the high ground of the middle road. Republicanism must be neither reactionary at the right nor radical at the left. It must cling to every sound inheritance; it must restore history and experience to the council chamber; it must live by the spirit of a rediscovered Constitution; but it must ever strive toward new

frontiers of opportunity and advantage for all the people beneath our blessed flag. We must beat the defeatism which says that the American system is at journey's end.

In pursuit of this destiny, Mr. Chairman, I am frank to say that I would clear the track of every subversive influence that internally threatens our form of government—because if we are ever destroyed it will be from within and not from without. Those who advocate the overthrow of our Government by force are guilty of just plain treason. Our Bill of Rights is sacred and so are all the civil liberties which it protects. But there is nothing in the Bill of Rights which requires us to nourish vipers in the bosom of Columbia; and there is nothing in equity or common sense which requires us, for example, to lend our further hospitality to the representatives and emissaries of Soviet Moscow who are plainly guilty of contemptuously violating the pledges of the Roosevelt-Litvinoff contract upon which our recognition of Russia was mistakenly based in 1933. We do not want the treacherous technique of the Trojan horse reproduced within our own America—and we are on notice that this sort of undermining treachery is at its deadly gnawing work all around the world. We have no business in any sort of partnership with communism—or any other "ism"—at home or abroad. America is not a polyglot boarding house. Those who are not for us are against us, and the quicker we separate the sheep from the goats the safer our institutions will be. One rotten apple can contaminate a barrel. We must condone no rotten apples, not even one.

But a greater though totally different subversive influence flows from the New Deal. It is the more dangerous because it often flows from a deep and wholly patriotic conviction which, in my judgment, is as fatal as it is mistakenly conscientious. Significantly it won the hearty support of Earl Browder and his fellow travelers in 1936. It, too, attacks our form of government by seeking to build a supreme executive who, if he would have his way, would put both courts and legislatures in subservient chains. It attacks our checks and balances—the greatest contribution we have made to the science of free government and the liberties of free men. It attacks our Constitution by asking for laws regardless of their affront to it. It attacks the public credit by undermining it with deficits and debts which our children's children will still be paying in 2000 A. D.—if we have not previously collapsed under repudiation or inflation. It attacks our wage and living standards by an adroit campaign—another Trojan-horse campaign—to strike down the protective tariffs which are indispensable to much of our industry, our labor, and our agriculture. It attacks our money by leaving it at the mercy of a White House whim. It attacks our resources by forcing us to buy all the useless gold and silver in the world at swollen prices. It attacks our business by an endless system of regulation, restraints, and discouragements—and often by the direct and fatal competition of government itself in business operations. It attacks every trust fund, every bank deposit, every insurance policy, by making the returns upon their investments dangerously low. It attacks our national unity by deliberately encouraging class hatreds. It attacks our political liberty by attempting purges—an ugly European word—of all who do not bend a willing knee. It attacks our political economy by attempting to substitute public revenues for private initiative and private investment as the source of national income and national wealth. It attacks our character by spurning thrift and self-reliance. It even attacks our peace by often meddling internationally where it is none of our concern. "Subversive influence?" Put down the New Deal as exhibit A, and, I repeat, get ready to clear the track.

This sounds like the recital of grievances in the Declaration of Independence upon which the founding fathers based their revolt against tyranny and chaos 164 years ago. They went to Philadelphia to assert their vivid cause. And now we go back to Philadelphia to do it all over again. May we catch the spirit of their wisdom and their courage and their faith across the years. Amid the inspirations of those historic shrines and in solemn gratitude for our inheritance, may we write a worthy second declaration, and then go forth to battle with the fighting determination which gave them victory and gave us the Republic.

Yes, but what's your alternative program, our critics like to say to us.

Don't fear; you'll find it adequately detailed when the Philadelphia platform takes its shape. For myself, I have repeatedly answered in many a public speech. But the basic answer is the same as those founding fathers would have uttered in 1776 if they had been asked for their alternatives. They would have said, "Our program is to cure these grievances." And so say we today. When these grievances are cured, America will be well on her way toward sound government, sound economy, and a happier United States. The battle will be two-thirds won.

The New Deal has itself proved what can happen when the traditional American system gets a chance, free from anemia induced by the New Deal poisons. The first 100 days of the Roosevelt administration showed the greatest degree of economic recovery in any like space of time in the history of the world. Why? Because for 100 days the President was clinging to his admirable 1932 platform. He was retrenching. He was building confidence. He was keeping faith. He was giving the recuperative forces of the Nation a fair chance. But then, suddenly, he changed. He discovered the alphabet and made a shambles out of it. Somebody told him you could spend yourself out of debt. Overnight he took to the flying trapeze. We promptly hit bottom—and have been there ever since.

Last fall and this spring a spotted recovery set in again. Why? War orders? Partially, but chiefly because the one-man New Deal party became so engrossed in foreign affairs that it neglected to offer its annual quota of experiments and vivisections, and, perhaps in a sort of death-bed repentance, actually proposed to economize a bit. In other words, when the New Deal "lays on" we sink, and when it "lays off" we survive.

In these two temporarily lucid intervals the New Deal itself has proved how we might restore prosperity and employment if we had an administration at Washington which could be dependably trusted to go in the same healthy direction 48 hours at a time. We have 10 years of frustrated economic aspirations in this country. We have 10 years of enormous obsolescence in plant equipment. We have 10 years of starved capital investment. We have an intense and chastened desire to make capitalism work. The next Republican administration at Washington will release all of these traditional American energies. It has some incidental laundering to do upon the statutes. It has some constructive labors to perform. But the very fact of its inauguration will flash the green light to the American business world. Needless obstacles to prosperity will disappear. Our grievances will be on their dependable way out. Twelve months after Philadelphia our problem may well be not how to fight the New Deal depression, but how to control a square-deal boom.

Of course, it is not so simple as that sounds. There is work to be done to clear away the underbrush. There are specific remedies required as in the case of agriculture which must have its parity share of the national income before there can ever be permanent prosperity in the United States. We must clean out the pay-roll parasites and all the big and little autocrats who mistake themselves for Jupiter. But, by and large, the statement stands; a Republican victory next November will be the "go signal" to prosperity.

One black contingency, however, hangs like the pall of death across this prospectus—the bloody war abroad. Each new expansion of this tragedy multiplies its crime and piles up bitterly rising resentments against such brutal piracy. The horror of it is unspeakable. I belong to that great American majority which hates this rape of neutrals and these contempts of civilization. I have no language strong enough to express my condemnation of the anti-Christ who turns this destruction loose upon peaceful, unoffending neighbors. Yet the greater our resentment the greater must be our cool-headed restraint in official policy and action because the greater must be our determination to stay out unless this war comes to the New World. We cannot go to Europe and control her destiny, even if we would, any more than we could have controlled the history which has produced this crisis Our chance to serve ourselves and civilization is not as a belated belligerent in distant battle zones which we could not now adequately reach in time even to help those with whom we so deeply sympathize. Our chance to serve is as a diplomatic neutral—condemning conquest, serving human needs among all stricken people, ready to speak for them in organizing a new peace whenever possible, but determined to keep at least one sector of this mad globe free of this plague, and to preserve democracy in that hemisphere which is our traditional responsibility.

Our own foreign-born citizens are setting us a magnificent example in their fidelity to our own detachment, despite the anguish with which they view these distant shambles. No matter what our sympathies, we must keep America out of these wars and out of foreign policies which could drag us in. Overnight, our entry would precipitate a virtual war dictatorship in our own America, which would cancel out our liberties almost as completely as they have disappeared among the victims of conquest; and at the end of the adventure, despite our victory, we should sit disconsolately amid the ashes of our own bankruptcy. It is impossible to ignore these hard facts.

We cannot isolate ourselves in this fore-shortened world. But it must be our task to insulate ourselves to the last possible degree against this scourge. We must never surrender to the state of mind which resigns itself to the ultimate inevitability of our involvement—a state of mind which entirely too often possesses Washington. And we must never forget that we have our hands full in saving democracy at home. We owe that not only to America, but to the world.

If any alien war lord mistakes this attitude for the timidity which would buy peace at any price, or which would surrender the Americas to a violation of our neighbors, he will be sadly disillusioned if this sinister plague comes to our shores. In national defense—here and in every essential outpost—we shall, if challenged, fight to the last man and to the last dollar. If we give adequate attention to this national defense, I continue to be one of those who believes we need never fear the issue. Even in the face of an ultimate hazard which some fear might confront us hereafter, we shall be relatively safer against the exhausted victors, whoever they may be, if we have conserved our power. But, my fellow citizens, it would be folly for us not to turn to this problem of national defense with a new and a grim zeal. Not to implement entangling alliances. Not to police the world. But to make national defense—defense of the homeland and its outposts—as impregnable as possible.

Essential appropriations for these purposes must be made on a pay-as-you-go basis. But let's not blind our eyes to facts. This objective requires something more than lavish appropriations. We have had those for 5 years; yet we now find that they have not bought us the degree of protection we anticipated. Shocking deficiencies are coming to light. Without a moment's delay, we should find out why. We should discover what is wrong.

We should swiftly arrange to make all defense appropriations fit the lessons of today's disclosures in the new technique of war. I sharply question whether our Government is geared to meet this end. I think Congress should set up a special joint Committee on the Conduct of the National Defense to sit continuously—not to subordinate War and Navy Department experts to the amateur strategy and judgments of political direction, but to constantly hold the War and Navy Departments to strict accountability for the required results. Congress should not recess until it sees this problem through in some dependable form. This does not mean that the war is coming to us. No one should read that implication in these words. It simply means that prudence and foresight are always better than remorse.

America must be strong. Not to make war; but to defend against war if it comes. I continue to believe that it need not come and that it will not come if we cling relentlessly to foreign policies of noninvolvement. But America must not be left at the mercy of any man's opinion. It must always be ready for eventualities.

Ladies and gentlemen of the convention, I have been able to touch but briefly on the many important issues of the fast-approaching campaign. Yet I have sought to identify the vital seriousness of the problems to be served and solved. They rise above all ordinary partisan considerations and all ordinary pursuits of political power and place. In my view, when we set our feet once more upon the roads that lead to the shrines and landmarks of 1776 and 1787 we go to face responsibilities no less significant than those which there produced the Declaration and the Constitution. Every step toward the Republican National Convention of 1940 should be taken in a spirit of deepest obligation to the destiny of the United States and its 130,000,000 anxious people. Every undertaking should first prayerfully beseech the blessing of infinite God. Republicanism faces its greatest opportunity for service since its birth. And it also faces its greatest test.

So, on to Philadelphia, in the spirit that took the founding fathers there.

On to victory, and prosperity, and peace.

The American Flag and What It Stands For

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SENATOR CONNALLY

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the RECORD a very learned and patriotic address delivered by the junior Senator from Texas [Mr. CONNALLY] at the thirteenth annual massing of the colors, held in the open-air amphitheater on the Washington Cathedral grounds, Washington, D. C., yesterday. It is a splendid address, which I am sure Senators, as well as others, will be delighted to read.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Bishop of Washington, officers of the Military Order of the World War, Sons of the American Revolution, and Americans all: In this magnificent cathedral, erected as a tenement of worship and dedicated to the living God, we have assembled in this service to salute the massed colors and ensigns of the armed forces of the Republic and the emblems of religious and civic organizations. It is an occasion of dedication of our spirit and of our resources and of our might to national patriotism and national unity in an hour of peril to the peace of the world and potential danger to the security and safety of our own people.

The standards and flags here assembled are physical symbols of nobler and loftier things. They are far more than things of grace and beauty. In their folds are written the history of a great people; in their rustling may be heard the footsteps of patriot bands and Lexington and at the bridge at Concord, immortalized in Emerson's phrase:

"By the rude bridge that arched the flood,
Their flag to April's breeze unfurled,
Here once the embattled farmers stood
And fired the shot heard 'round the world."

These standards are covered by the radiance that glowed at Yorktown, where Washington's ragged legions overwhelmed the armies of a king and lifted in triumph the banners of a free people. They waved on land and sea in 1812. They carry in their bright stars and glorious stripes the triumph of our armies from Vera Cruz, through mountain passes and spreading plains, to the bloody heights of Chapultepec. They represent a reunited country and people after 4 bloody and tragic years in which sections and brothers uselessly but gallantly poured out upon a hundred fields the finest blood of the North and South. A part of their fabric stretches from the battlefields of Cuba to the distant jungles of the Philippines. They recall the vivid and stirring recollection of 1917 and 1918, when American troops carried the colors of the Republic to glorious triumph and brought peace to a warring world.

These colors and standards represent something more than armies and navies, and wars and victories. They represent a mighty yet peaceful people. They are the ensigns of a great freedom-loving Republic—a land of free men, which nurses no dream of conquest or aggression.

The United States did not fight in the World War for conquest. It emerged without one foot of new territory. It neither demanded nor received one dollar of indemnity. It brought under its sway at the point of the bayonet no conquered subject. Its hands were clean. No loot nor plunder stained its hands. Its flag came through the smoke and through the shot and through the blood of a great war, covered all over with a new glory.

Wherever these colors are lifted they signify a concept of nationality and an ideal of democracy and self-government that are distinctly American.

America is something more than 3,000 miles of mountain and plain, and river and valley stretching away to the western sea—there are mountain and plain and river and valley in other lands. It means something more than teeming cities and lonely ranches, something more than noisy factories and quiet farms—cities and ranches and factories and farms are in other lands—it means something more than industry and commerce, and shipping and highways, and forests and mining. It means something more than 130,000,000 people—China has 400,000,000.

Great in material things, above all of these things America before the world stands for a political and social ideal—America means tradition and heroic history—back across its history you may see far out on the highways of the deep bands of sturdy colonists with nothing to greet them but sky and wave as they journeyed to a new home in the wilderness—you may see hardship, and hunger and suffering and massacre as they sought in vain to smother them with misery.

These colors are emblematic of the making of America—of the moving, thrilling, and enthralling story of struggle and hardship and suffering in humble beginnings—of youthful and healthful growth and, now, of mature and hardened strength. They represent the industry and enterprise of the pioneers who mastered the wilderness and conquered the plains and deserts. They represent the inventive genius and toiling labor and business leadership which have developed an industrial structure that commands the admiration of the modern world. They represent the educational and cultural and spiritual forces that have ennobled and uplifted the life of this mighty people.

They represent the government and political institutions of the most splendid Republic ever builded by the genius and daring statesmanship of man. It is based upon a noble concept of the rights of the individual—that government rests upon and is created to serve the individual—that in his personal responsibility lies its weakness or its strength—its vice or its vigor.

These colors are emblematic of the Constitution of the United States and its distribution and separation of governmental power. Every American knows that the Constitution is a great barrier between his liberty and tyranny.

Americans should remember that its covenants have preserved for them and their children what was wrested by turbulent barons from an unwilling king. Through its lines is woven the brave spirit of a Parliament that dared defy the Crown. It throbs with the spirit of that ringing declaration that circled the globe and thrilled the world. In its stately stanzas they may catch the echo of a drum beat and hear the tramp of Continental Armies, and majestically moving through its pages are the statesmanship of Madison and Franklin and other patriot fathers, and the calm courage and lofty patriotism of Washington.

That is the America our fathers gave us. This is our America. We are determined that it shall remain our America. If it is to remain our America we, and we alone, can preserve it and protect it and hand it on to our sons, stronger and nobler for our having lived and served and sacrificed.

Every citizen of the Republic has a task and a duty to preserve it—civilian and soldier alike. Individual right, individual privilege, carries with it individual responsibility.

On November 11, 1921, with a vast concourse I stood in Arlington National Cemetery where sleep thousands of soldiers of the Republic, soldiers of the Revolution, of the War of 1812, of the War with Mexico, the Blue and the Gray, reunited in valor and in death's endless sleep, those who fell in Cuba and the Philippines and those whose blood reddened the soil of France, and in the splendid marble amphitheater I saw the generals and admirals and diplomats, representing the governments of many foreign nations and the United States, lay upon the sarcophagus of an unknown and unnamed American soldier a multitude of flowers and pin upon the coffin military decorations expressive of the tribute and gratitude of great nations, and then I heard the President of the Republic lift up his voice and give noble utterance to the emotions that stirred within the hearts of his countrymen in that solemn and sacred moment—here lay only the poor broken body of an unknown soldier wrapped in his uniform and shrouded in the flag for which he died—unknown, one out of 4,000,000—no one knew his name, no one knew whether there flowed in his veins the blood of some

distant noble or that of an ancestral peasant—no one knew from what home he came, whether from a hovel or a mansion—no one knew from where he came—but all the world knows where he went—he went forward filling the file, the individual file, to which his country and civilization called him and in going forward he leaped to fadeless and undying glory.

He set an imperishable pattern for every American—in peace and in war—in times of prosperity and in times of economic disaster, in periods of domestic tranquillity, and in times of stress and strain.

This is our America, our democracy, ours to govern, ours to advance, ours to perfect, and ours to make more glorious. Every American has a solemn and lofty duty laid upon him, a duty commensurate with his ability, his resources, and his intellect. This is our America. If it is to remain our America we must stamp out and extirpate communism and all the other foreign "isms" and subversive influences which seek to undermine things American. We shall tolerate neither the "fifth column" nor the espionage nor sabotage of foreign agents nor the treachery of any domestic influence or group.

This is our America. It shall remain our America.

The United States and its people are devoted to the ideals of peace. We want no war. We have never drawn the sword except with reluctance and to vindicate the violation of sacred rights. We want to lead our own life and attain our national destiny without foreign aggression or involvement. We entertain no imperial ambitions. A liberated Cuba and an independent Philippines are our witness. We covet neither the territory nor the riches of any other land. We want no entangling alliance with foreign nations. Neither do we propose to be the victim of foreign aggression or conquest. We do not want a foot of foreign territory, not a mile of any country under the sun, but, by the same token, we shall not give up a single inch of American territory to any aggressor on the face of the earth. We do not propose to dictate to any other people or nation on the globe its form of government or political institutions. On the other hand, we do propose to maintain our own system and to lead our own way of life.

Today the world is staggered by a terrible picture of blood and horror. The clouds that hang above one of the fairest regions of the earth are charged with the heaviest and most murderous bolts in the armament of Mars. Great nations and mighty armies are grappling in an embrace of death. Neutral nations have been overrun and conquered. Neutral rights have been violated and extinguished by the sword. Frontiers have been destroyed and sovereignty wiped from the map by the bayonet's thrust. In such an hour of world danger, at a time when the processes of peace and the rule of law have been dethroned, and military might and conquest have usurped the seats of power, what is the duty of the American people and the Government of the United States? It is our manifest obligation to our people, to our institutions, to our territory, and to our lives; to the heroic traditions of a great and glorious past; to those whose blood and treasure established this Republic; to the martyred dead who have defended it and protected it—it is our manifest obligation to all of these to make America so strong upon the land and upon the sea and in the air that no power on earth shall dare to attack us or to challenge our safety. We want peace, but there is no other course if we would remain at peace. We must not, through any sense of false security, through any idealistic attachment to pacifism, hesitate one moment to make our national defense absolutely invulnerable from attack from without and so dominant and commanding as to overwhelm and defeat any assault on our sovereignty or our possessions. In this dark hour the admonition of George Washington comes ringing down to us through more than a century, "To be prepared for war is one of the most effectual means of preserving peace." Those were inspired words. They had their background in Valley Forge and Brandywine and Germantown and in the Battle of Long Island, when ragged and hungry and unprepared armies and lack of support almost crushed his great heart with despair. They reach back to Yorktown, when, prepared and with an adequate force, he vanquished the armies of a king and achieved peace and independence.

President Roosevelt, in a masterly address to the Congress on May 16, laid before the country a program of preparedness and national defense which will meet the approbation and support of both the Congress and the country. I am standing and you are standing squarely beside the President in plans for the national defense and security of the Republic. It is my own view that we must build an incomparable and unconquerable Navy, capable of dominating both the Atlantic and the Pacific. A vast fleet of military and naval aircraft must be provided. Antiaircraft defenses and heavy artillery must be produced in increasing volume and of the most modern and scientific pattern. The strength of the Army must be augmented and intensified training and modern equipment must be supplied to the National Guard and to the Reserves.

The American people and the American Government want peace. We pray that the United States may not be dragged into a war anywhere on the globe. These flags and colors are the flags and colors of peace and international good will. They are the emblems of a liberty-loving and peace-loving people. There cannot be peace except in armed defense. We shall arm not for war, but for peace. We must be prepared to say to any power on earth who challenges our security or threatens our safety, "We want no war with you, but if you dare assail us, if you challenge our institutions, if you attack our territory, we shall resist on the sea and under the sea, on the land and above the land, with a Navy, with an Army, and with an air fleet unconquerable and irresistible."

To attain these noble ends we look back through the heroic history and treasured traditions of America for more than 160 years. We strike hands with and salute the Continental Congress that gave us the Declaration of Independence, and with them exclaim, "with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor."

Sixth Anniversary Celebration of Progressive Party

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SENATOR LA FOLLETTE

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the distinguished Senator from Wisconsin [Mr. LA FOLLETTE] at the sixth anniversary celebration of the formation of the Progressive Party, at Wisconsin Rapids, Wis., on Sunday, May 19, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow citizens, in November of 1900, 40 years ago, Robert M. La Follette, Sr., led the Progressive movement in Wisconsin to its first State-wide victory. From that day forward men and women like yourselves have given freely of their time and energy in unselfish devotion to make Wisconsin and the Nation a better place in which to live.

We are proud of the long record of achievement in both State and National Government which the Progressives of Wisconsin have made. It gave Wisconsin the deserved reputation of being the best-governed State in the Union, and it can be said fairly that the Progressives have pioneered the cause of nearly every constructive step taken by the Nation for the advancement of the general welfare of the people.

But we are not gathered here simply to point with pride to the great record which the Progressive movement has made in the past. As Progressives, our eyes are turned ahead; we are looking to the future. As we come together to celebrate the launching of the Progressive Party, we reaffirm our faith in the necessity for a genuine political realinement in the State and Nation and a truly Progressive program for a dynamic America and the building up of the Western Hemisphere.

Long before we launched the Progressive Party in Wisconsin, my father realized that a general political realignment would have to come in State and Nation if the people were to have an effective political instrumentality through which they could solve the problems of this day and generation. The two old parties grew up in response to issues of a day gone past, and they are incapable of meeting our present problems effectively because of their reactionary control or internal conflict. The Progressive Party was born of present-day issues. It is made up of people like yourselves who understand and appreciate the issues of national unemployment, economic insecurity, and the dangers which beset democracy both at home and abroad. What is still more important: Progressives have a program to meet these issues.

On this sixth anniversary of its establishment in our State, I can say to you with a great deal of pride that the Progressive Party is the party of today in Wisconsin, and I confidently believe that it will be the party of tomorrow in the Nation.

Reactionaries have speculated as to my political course in the coming campaign.

My answer to all such speculation is that I did not join in the formation of the Progressive Party in 1934 as a political expedient. I gave my wholehearted support to this movement for a new political alinement in State and Nation because I believe it is essential to a dynamic functioning of our democracy. So far as I am concerned, the fight in Wisconsin will be waged under the banner of the Progressive Party in 1940.

We members and supporters of the Progressive Party face the challenge of another campaign. It is vital to unite in a supreme effort which will bring a smashing party triumph that can leave no doubt as to the destiny of this movement.

Important issues are at stake in this political campaign, and there is no doubt in my mind that the Progressives can carry Wisconsin by a decisive margin, providing we bring our full strength to the polls. When you realize that there were actually 35,000 fewer votes cast against the Progressive candidate for Governer in 1938 than were cast against him in 1936, a year in which we scored a

tremendous victory, you will understand the importance of marshaling our full strength at the polls on election day.

If I am any judge of the sentiment expressed here today, the Progressive forces in the State have come back with renewed determination to make up in good measure for the defeat of 1938. Furthermore, Wisconsin has now had a 2-year inoculation of reactionary Republicanism, which ought to serve as an effective vaccination against contracting the disease further. It is my sober judgment that this will be our year.

I appeal to the men and women voters of this State, regardless of class, creed, or former party allegiance, to unite in rededicating the Government of the State and Nation to American principles, and to band together to fight with unswerving determination the tyranny of communism, on the one hand, and fascism, on the other, confident that a full and abundant life for all the people can be attained when "the will of the people shall be the law of the land."

The events taking place in the world emphasize beyond doubt that the democratic way of life is in danger. It is no time for either despair or hysteria, but it is time for every patriotic American to search his heart and rededicate his civic energies to the defense of our American heritage.

Adequate national defense is more than a mere matter of armaments. To achieve great national strength we must build up our human and material resources. We must give youth the opportunity to succeed in life and make employment available to those who are in want of work at fair wages. We must assure the farmer a price for his products which will represent the cost of production plus a fair profit and give business access to the credit which it needs to expand and develop new markets. We must provide security for those who have contributed so much to the upbuilding of this country and who in their later years are entitled to a life of comfort and respectability.

These are essential to our national morale and the efficient use of our economic and social resources. These are our internal defenses against the enemies of democracy.

The Progressive Party is committed to the task of strengthening the internal as well as the external defenses of American democracy, and in this period of crisis there is no time for compromise or delay. As patriotic American citizens we must all make up our minds that we can no longer tolerate a house divided, part idle and part at work. We must have the courage to adhere to a sound, constructive, coherent program to put our human and material resources to work in America for the building of a stronger and better national life.

No one can doubt our capacity to achieve these objectives. The productive facilities on our farms and in our factories are the greatest the world has ever known. I, for one, refuse to join the pessimists who see disaster lurking around every corner. Man created this paradox of privation and insecurity in the midst of potential plenty, and man can solve it.

This economic crisis which has so disorganized our economy was brought upon us by the reactionaries who controlled both business and government almost continuously since the Civil War until 1933. They refused to recognize that permanent prosperity cannot be built without mass buying power. For years they permitted monopolists and the privileged few to drain away the people's wealth and purchasing power.

When people were no longer able to buy the products of our farms and factories, the reactionaries were content to assume that we were facing a problem of overproduction. Their only answer was curtailed production throughout industry and the situation became worse. By the spring of 1933 we were threatened with panic and complete economic paralysis as a result of this reactionary economic policy.

Since 1929 we have lost $250,000,000,000 in income that might have been produced if we had kept our productive resources at work. That sum represents enough money to buy a $6,000 house and a $1,000 car for every family in the United States.

When there is a shortage of 2,000,000 homes, when one-third of our people are undernourished and without enough clothing, and when there is scarcely a family in America that does not have some need that must be neglected for financial reasons, it is time to abandon this reactionary theory of overproduction.

To get our economic system functioning again so that our unused manpower, idle capital, and material resources can be put to work, we must increase mass purchasing power, and make available adequate monetary and credit facilities to all forms of constructive enterprise.

Progressives have long advocated the establishment of public control over our money and credit through a Government-owned central bank. This is clearly a power conferred upon the Federal Government by the Constitution, which gave to Congress the power to coin money and regulate the value thereof. In this crisis, when there are billions of idle capital, it is imperative that the people assert their rightful control over money and credit in order that it may be available to businessmen, to farmers, and to all the others who have a legitimate need for it.

Business needs suitable credit facilities in order to undertake new ventures and expand production. The railroads right now, for example, could put three or four billion dollars' worth of new capital to work in modernizing their transportation facilities. Reliable estimates indicate that nearly $18,000,000,000 of credit are needed to bring the machinery in our factories up to date and make it adequate to meet our present requirements. Sixty-five percent of all our metal-working equipment is obsolete.

The farmers in Wisconsin and the Nation are in urgent need of adequate credit, not only to meet the present emergency but to assist them in the larger task of restoring agriculture to a sound basis and making it once more the backbone of a prosperous nation.

Debt has been one of the curses of American agriculture ever since the World War, and it has broken literally thousands of good, honest, hard-working farmers, whose only fault has been that they happened to be farming when times were hard. It has ruthlessly driven them and their families out of their homes onto the highways where they have been forced to join the great army of homeless unemployed.

We are already making a direct attack upon this problem. In the United States Senate I have joined with Senator WHEELER of Montana and Senator BANKHEAD of Alabama in introducing a bill which proposes a comprehensive program of farm-debt adjustment and refinancing. Its enactment would put a stop to unjustified foreclosures. The bill will give the farmer a chance to get unduly heavy mortgages reduced to an amount the productive capacity of the farm can successfully carry. It will give him interest rates reduced to 3 percent on his mortgage, and it will give him up to 40 years in which to repay the loan.

All of this can be done without expense to the Government. The bill will give the farmer the benefit of the Government's credit. By borrowing the money for him and administering the loans made with the aim in view of aiding agriculture in getting reestablished, financially, it will improve the security behind the loans.

Progressives likewise recognize the necessity for raising farm-commodity prices so that the farmer can secure cost of production plus a fair profit on his labor and investment. With this objective always in view, Progressives have fought for legislation approaching it from many angles. We have been successful in securing the adoption of a program through which the Federal Government buys up surplus farm products and distributes them to people on relief who could otherwise not buy them. This program is now receiving new form in the food-stamp plan which is operating in approximately 100 cities.

The encouragement of cooperatives, the elimination of monopoly from the dairy markets, and parity prices are all part of the Progressive program for agriculture.

With the stimulation of business through the provision of adequate credit opportunities and the general rehabilitation of agriculture, will come a renewed demand for the products of labor. As unemployment is reduced and the purchasing power of the people in our cities is restored, there will come a greater market for farm products.

Progressives likewise have a long record of achievement in the field of labor legislation, and I am happy to report to you that at last the Senate is now considering the La Follette-Thomas bill to stamp out industrial spies, strikebreakers, and industrial munitions. I am flying back to Washington to carry on the fight for the passage of this bill which has the endorsement of every important labor organization in America.

To afford continuous protection to the mass purchasing power which is vital to permanent prosperity, the fight against monopoly must be pressed forward with even greater vigor than before. We must secure a system of taxation which is without reservation or qualification based upon the taxpayer's ability to pay.

We can see in the success of the aggressors in Europe that the first essential of a strong, united nation capable of defending itself is a sound economy which affords opportunity to youth, the wage earner, the business and professional man, and security to its senior citizens. In order to make America secure against attack we must restore the dynamic quality of life which marked our development in the decades before 1930.

The youth of a nation is its most precious asset, and there can be no pardon for the crime of denying opportunity to the 5,000,000 young men and young women out of school and without jobs. Our younger generation is entitled to the opportunity for a full and better life commensurate with the productive capacity of the Nation.

The progressive movement looks to youth just as it looks to the future, for youth is primarily interested in the future. Their lives lie ahead of them, and they demand a program of political and social action which will enable them to make the most of their lives.

All patriotic American citizens must enlist in this task. We must all join together in a concerted and decisive effort to build up the internal and external defenses of democracy. Thus we can and will make America safe from any enemy.

America has the opportunity of emerging from this world crisis as the strongest nation on earth if we will follow our determination to solve our own domestic problems and keep out of the European war. We have only to follow that course faithfully and we will be in a position when the war is over to offer some real assistance to the war-torn nations in bringing about a lasting peace and extending aid to the victims of war and aggression. But if we allow ourselves to be drawn into the European slaughter, it will bleed us white and leave us as helpless as the rest.

We must and shall provide adequate military defenses for this hemisphere to protect us against invasion or interference. I would vote the last man and the last dollar if necessary to defend this hemisphere, but in the name of democracy I pledge to you that I shall never give my vote to send American boys to fight overseas in a foreign war.

I am ready to support the President's recent request for more than a billion dollars for national defense. This will bring the appropriations for this session up to three billions for this purpose alone. But I want a joint congressional committee created repre-

senting the Military, Naval, and Appropriations Committees of the House and Senate, including technical experts, to make a thorough study of this vital problem. The taxpayers and the Congress are entitled to know what the present state of our national defense is. Equally, if not more important, they have the right to demand a sound, coordinated plan for the future development and maintenance of our national defense.

We are determined to defend this hemisphere from the Arctic Circle to Cape Horn against all comers. We are prepared to make whatever sacrifices are necessary in order to do so. We will not tolerate a change in sovereignty of an inch of territory needed for the defense of this hemisphere. But there is one lesson which even a layman can see emerging from the smoke of battle in Europe, namely, that all the reactionaries are not in Congress or the State legislatures. They have been revealed in the military and naval establishments of some nations abroad. The responsibility for our own national defense is still by tradition divided between two departments of the Government, the Army and the Navy. This is reflected in the division of jurisdiction in the committees of Congress.

The technique of modern war demands coordination of all branches of military and naval defense. Through a joint congressional committee we can get a proper study and solution of the problem of defense. It would insure an adequate and coordinated program. We can then face the future with supreme confidence. I shall work for and support such a joint committee.

I believe that Congress should provide taxes now to meet as much of the new armament burden as possible. There will be fat profits made from the new defense program. This alone would be a sufficient reason for more taxes. But there is a more compelling one. Progressives have always favored a pay-as-you-go policy, and while we have recognized that there are emergencies when the credit of the National Government must be utilized, at the same time we have fought for increased taxes based on ability to pay. There should be no further delay in facing this vital problem.

I am opposed to the adjournment of Congress. In this foreign and domestic crisis we should stay in session. We should discharge our responsibility to provide the country with a program for adequate national defense, a sound tax bill to meet it and a dynamic program to attack our domestic problems of unemployment, insecurity, and low farm income.

There is no time to waste in meeting the challenge of our day and generation. To guard America effectively against the fifth columns of communism and fascism we must have a contented and united people. We must banish the discouragement and dissatisfaction that breed in the dead atmosphere of idleness and poverty on which ruthless dictators have risen to power.

The Progressive Party program will make and keep democracy safe for America.

Keynote Address at Connecticut Republican State Convention

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SENATOR DANAHER

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD the interesting and able address delivered by the distinguished Senator from Connecticut [Mr. DANAHER] before the Republican State Convention at Hartford, Conn., on May 14, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In 1794 Zephaniah Swift, who later became our Chief Justice, wrote his System of the Laws of Connecticut. Swift traced the history and the philosophy of government looking to the experimental development of the representative Republic, our own United States of America, then only 5 years old. It seems to me our people too loosely refer to us as a democracy, when in point of fact as well as of principle we function through and by our agents, our representatives. Of the status of the latter, Swift said:

"Our Government originated from the people and was instituted for their sole benefit. The impracticability of assembling a great nation to collect their will rendered it necessary that certain persons should be elected, to whom the power of acting for the people should be delegated. This constitutes our Government, to be a representative Republic, and an attention to this leading feature will unfold the basis on which it is established and the principles by which it is to be executed. A government by representation implies the idea that the representatives stand in the place of the people and are vested with all their power within the Constitution. In the Legislature, therefore, consisting of the representatives, is concentered the majesty of the people and the supremacy of the Government. They are neither bound to obey the instructions nor to consult the will of the people—but, being in their place and vested with all their power, they have a right to adopt and pursue such measures as, in their judgment, are best calculated to promote the happiness and welfare of the community in the same manner as the people themselves would act if it were possible for them to assemble and deliberate on their common concerns. The reason why the instructions of the people are not to be regarded is because it is impossible that the general sense should be collected; and, even if that could be done, they have not those means of information which are necessary to qualify them to deliberate and decide. As to the instructions from any particular district to the representative by them elected, they ought to have no influence, because when elected a person becomes the representative of the community at large; he cannot therefore regard the instructions of his immediate constituents, but must consult the general good of the community and not the particular advantage of a district."

So I greet you not merely as delegates but as representatives of those enrolled Republicans who chose you to act for them in the business of selecting delegates who will represent all of us at the Philadelphia Convention. You are not to consult merely the possible good of a particular section or of a particular town, but will also have in mind those principles which draw us together as a party functioning, as we believe, for the best interests of all of our people and of the Nation. As Republicans we can desire no less, as citizens we can do no more.

There have been times in Republican history when we could take no pride in the results achieved by those in whom we had placed our trust and our confidence. We can frankly confess our dismay at discovering that some were eager to use the name of the achievements of the Republican Party as mere implements to their advancing their own selfish ends. Some had thought that "fat cats" could continue to dominate our party and our Government by misuse of money and to control through personal power as if the people would tacitly acquiesce in and even tolerate such abuses. Happily, the electorate, while sometimes tardy in action, is nonetheless decisive when aroused. And so, in 1940, we find our citizens turning again to the Republican Party as the party of the people and their one hope of bettering their own condition and that of their Government.

Now we are met to select those delegates who will, at the convention to be held in Philadelphia, join with hundreds of others who will select the nominee of the Republican Party to be President of the United States. Our party does not at this spring convention write a platform of the principles or an outline of the program upon which we will seek to elect our candidates for the various offices of our National and State governments. But we cannot be unmindful either of the failures of the incumbent administration or of the problems which will confront the next one. This is not to say that all and singular acts and conduct of the Democratic Party in its current national administration have been failures; quite the contrary, but that administration which has overwhelmingly controlled the legislative acts of the Congress since 1933 cannot escape responsibility for the continuation of such policies as were not only mistaken in concept but have been proved in administration demonstrably fallacious. Nor can the Republican Party simply go before the people with a program to repeal this and repeal that and then expect that blithely and serenely all things will be righted, or that they will right themselves and that, like Pippa, we will find "All's well with the world."

When I got out of high school only 24 years ago, we boys talked among ourselves as to what we were going to do and what we were going to be. Just as through generations previously in the history of the United States boys had looked forward to their future in this land of opportunity, even down through the twenties we found youth at the threshold of life, still free to pick and choose a probable career as an artisan, a professional man, a businessman. The older men knew just from watching him work and from his aptitude that yet another boy would make a good farmer, who would some day own acreage of his own and who would achieve a subsistence for himself and his family.

Over the years since 1916 maladjustments have been growing apace. Millions of women have left the home and have undertaken employment in every walk of life. Machines have been developed so that one machine today can perform the task formerly wrought through the labor of many men. While production of such machinery has made yet other work for yet other thousands who never had known such tasks, the latest available surveys show that down through the 1920's for every 100 men displaced by machines in industry only 91 could find other jobs. Maladjustments in the world scene accompanied by international political and economic disaster combined to produce the debacle in which whole nations of millions of people surrendered themselves and their lives to authoritarian governments in return for a degree of promised security. The United States was not untouched by the swiftly moving sequence of events. And so it was that in 1932 our people had succumbed to a charming voice which promised Americans a sound currency which would be maintained at all hazards, a reduction of 25 percent in the cost of government, a reduction of taxes, taxes which had to be paid for in the sweat of the brow of every man who works. We heard of the intended elimination of useless bureaus, and so responsive were we to such pleas that our people exercising their franchise in time-honored form, elected to be governed by the nominees of the Democratic Party.

And now, after nearly 8 years, there are nearly a million civil servants of the United States, an increase of nearly 100 percent, the number of bureaus and administrative agencies has more than quadrupled, the national debt has more than doubled, and taxes have so far increased that a present recapitulation of them would simply prove wearying.

The millions upon millions of young men and women who have come of age since 1932 find the doors of opportunity closed. No longer can each say I will be this or I will be that, and every one of them would be glad to take any kind of job whatever just so long as it is not actually repulsive and even as to such work, somehow it gets done. There is not a single family among the workers of the United States, who comprise almost exclusively our entire citizenry, but what has seen and is coming to know a lowered standard of living. Millions upon millions of our citizens are without work of any kind. Millions upon millions of our citizens are working part time, and even when they can work an entire week they find themselves possessed of a dollar income which will buy only what they formerly bought from the rewards of 3 days' work. Housewives feeling the pinch of life, and striving valiantly and courageously to maintain happiness in the home, have been going without a piece of finery, some little luxury as dear to the heart of women today as always. Mothers from one end of the country to the other are giving up that their children may have. Bewildered husbands and fathers daily face the struggle of life not knowing just what is wrong, hopes for themselves and their families daily sinking lower as they realize how futile are the efforts of a government which, after 7 years of unbridled power and control, has failed in the essentials of government.

Your citizen, your average man and woman, just simply does not have the time, day by day, to acquaint himself with what factors have been producing and are continuing his plight. He does not know, and could not get the truth if he sought to know, the objectives of this administration which continues to pay $35 of American taxpayers' money for every ounce of gold that some Communist Russian produces for $8. He fails to realize that $35 of his money is being paid for every ounce of gold shipped to us from foreign nations, gold which has a prevailing average price of approximately $20.67 an ounce. But if you tell him that we now have approximately $18,000,000,000 worth of such gold coming from the mines of every nation on the earth and being transferred to a mine of our own where we bury it at Fort Knox, Ky., he should ask: "Do you mean to say that we have bought $650,000,000 in gold from Japan in the past 2 years, and that we are, therefore, helping Japan to finance her war of aggression against China?" Tell him, "Yes, but you don't know why you are doing it." When he asks if we are underwriting the cost in large degree of the European war now going on by this process of purchasing foreign gold, you may answer in the affirmative, but you can't tell him why we are doing it. And if your citizens should discover that merely in the months of September, October, November, and December of 1939, taking Russian gold in return, we sold to Russia, $25,000,000 worth of gasoline, refined copper and scrap, metal-working machinery, wheat, and molybdenum, not to mention tin and crude rubber, adequate supplies of which we now lack ourselves, at least his curiosity, if not his ire, should be aroused. And in due course, in order to restore money value to this very gold already bought and paid for, we will be obliged to dispense it among the nations of the world to the end that international buying power be again redistributed and a monetary basis be established, that international balances may be maintained. Oh, the ghastly irony of it all.

Your American citizen is beginning to realize to what extent goods made abroad by cheap foreign labor, under conditions with which Americans cannot compete, are displacing in the American markets articles and goods which were formerly produced by Americans who today are unemployed. He is beginning to understand that by limiting production there is not only an increase in the price of the products of the soil, but the continued flouting of the fundamentals of economics is being paid for by every consumer in the United States. On March 20 of this year Senator BYRD placed in the CONGRESSIONAL RECORD a statement indicating only the payments of $10,000 or more to sugar growers under the Sugar Act of 1937, one payment in the State of Florida to the United States Sugar Corporation reaching the total of $430,420.97 for limiting production at a time, mind you, when our sugar producers produce less than 30 percent of the total amount of sugar consumed annually in our country.

That our domestic economy is in greatest danger none can doubt, but that is not all. If the war in Europe were to be terminated tomorrow millions of people now diverted from peacetime pursuits would again be released to participate in an economy which is not prepared to receive them. Nations whose burden of debt from the last war is staggering are today suffering from tax loads imposed not only by the need for current expenditures but for those to come. Probably 50 percent of the national income of Great Britain is today being devoted to the daily expenses of the war. Out of it all, even if there were to be an immediate peace, a standard of living will necessarily be imposed upon people throughout Europe lower than any they have ever known. And Americans again will be forced to compete with them, even for the American market, not to mention the markets of the world. On April 14, 1939, in a letter to Adolf Hitler, the President of the United States said, in part:

"The Government of the United States would be prepared to take part in discussions looking toward the most practical manner of opening up avenues of international trade to the end that every nation of the earth may be enabled to buy and sell on equal terms in the world market as well as to possess assurance of obtaining the materials and products of peaceful economic life."

And if peace does not come, as the war continues there will be greater and greater hue and cry that it is our war and that we must relax restrictions upon credits to those nations who never repaid to us their debts of 20 years ago. Once again, in addition to all current expenditures to be met by the American taxpayer, he will be asked to finance a European war. Again the fruits of American production, paid for by Americans, would be devoted to the attainment of objectives of European nations with whose governments and with whose policies we have no political or national concern.

Now, there are others of our citizens who actually want us to go to war, and who, no doubt, are impelled to even greater desire by recent events. There are those who by measures short of war have already committed our Nation to an unneutral position, the consequences of which have not yet been realized. I deny that it is our war. I deny that we either must or should enter that war. But, for the sake of examination of the point, let us assume for the moment that it is our war. What do Britain and France require from us that we can give them? Do they want airplanes? Yes; but if we enter the war we would reserve the airplanes for the use of our own forces, and necessarily, therefore, Britain and France would get less planes rather than more. That is perfectly apparent by a mere statement of it. Do they need men? The armies of France are probably the best trained in Europe, with millions of men, not to mention the great resources of Britain. And where is the American who wants to leave our shores and enter that war? Which among you in this convention tonight has one son in the Army today? And who among you wants his son in an army to fight overseas?

Do they need our money? They can buy at no faster rate than we can produce. Do they need our credits, that is, the products of American labor to be paid for by Americans? If we were to make available tomorrow ten billions of dollars to our former Allies, what could they buy from us for their present defense that they are not now getting? Moreover, were we to adopt that course, we would but follow the pattern of 1914 to 1917, with an actual participation the only remaining step. No; the thought of our becoming a belligerent in this conflict is contrary to reason and to judgment and to logic.

Suppose the question before you at this minute to be—whether or not you will make appropriations for the defense of the United States—it goes without saying you will wish to defend her against any and all foes, if the need therefor exists. Naturally, if there be no danger, you need appropriate only sufficient to maintain your normal and natural and established armaments. But if a need exists and you must undertake plans for the defense of your Nation, you should be thinking about your Nation, not some other; you should be thinking about your people, you should be thinking about their properties, their homes, their children. The President of the United States in a special message to the Congress in January 1939, told us that he was speaking to us as Commander in Chief of the Army and Navy, that the program he submitted had been considered by himself in that capacity, and his advisers, to be "a minimum program for the necessities of defense." He told us further: "It is proposed that $300,000,000 be appropriated for the purchase of several types of airplanes for the Army. This should provide a minimum increase of 3,000 planes, but it is hoped that orders placed on such a large scale will materially reduce the unit cost and actually provide many more planes." He continued: "Devoid of all hysteria, this program is but the minimum of requirements." When the hearings were held, Major General Arnold, Chief of the Army Air Corps, testified in March 1939, two months later, that the United States had only 847 combat planes, while Germany has thousands.

The Congress appropriated the $300,000,000 requested by the President. Of course, we thought we were going to get the 3,000 planes which the President said as a very minimum were necessary. Of course, we thought we were preparing for our defense. Instead, the airplanes being manufactured in this country are daily being released, and the Army and Navy are waiving their priorities in favor of nations overseas. Last fall I offered an amendment upon the floor of the Congress to require that no planes should be shipped overseas until our own defenses had been built up by at least the number of 3,000 planes, which the President himself had told us we required as a minimum. The administration rallied its forces to defeat that amendment. Within the past 2 weeks Senator LODGE, of Massachusetts, offered an amendment to the Navy appropriation bill to require that, of the sum to be allotted for aircraft, a minimum of $20,000,000 should be obligated for planes prior to July 1, 1941. As Senator LODGE stated:

"The appropriation in the pending bill calls for 352 new airplanes for the Navy. At the present time we have the policy of helping foreign nations to buy American-made airplanes. This amendment does not oppose that policy. It simply provides that the Navy shall have its regular quota, even if some of the foreign nations may have to wait a little while. * * * Let us make it perfectly clear that, regardless of what our sympathies with foreign nations may be, we believe in preparedness for ourselves, and let us adopt this amendment which will insure that, no matter what happens in the foreign field, the United States Navy will be properly equipped with airplanes. The amendment is not aimed at any foreign country; it is not antianything; it is a pro-American amendment; and it will simply mean, if it shall be adopted, that the United States Senate will have recorded itself in favor of the United States Navy."

Again the administration defeated this amendment.

It has long been apparent that naval vessels unsupported by adequate aircraft are incapable of defense against a sufficient force attacking from the air. Imagine, if you will, providing for two battleships to cost $60,000,000 apiece, or a total of $120,000,000, when the battleships cannot possibly be built in less than 5 years. If we need naval defenses at all, we need them now, not 5 years hence. But that sum of $120,000,000 for two battleships to be constructed in the future would provide for delivery in a few months, twelve hundred airplanes at a cost of $100,000 each, and you will notice that I take the same figure of unit cost as that suggested by the President. There are no two battleships afloat which could withstand the attack of twelve hundred airplanes, or a small fraction of that number, and the Secretary of the Navy only 1 week ago admitted publicly that our naval vessels must be reconstructed, that their topsides are inadequate against attack from the air, that we must install "turtleback" construction.

Meanwhile, we continue blithely to export our planes, the finest fighting ships in the world, while we strip ourselves of our minimum defense requirements, and while our planes shipped overseas are falling and can fall into the hands of potential aggressors against our Nation, thereafter even to be used against us.

Oh, yes, we hear fine American citizens say that they do not agree with our President in anything else but that they certainly approve his "foreign policy." They think of foreign policy in terms of a series of acts which are designed to assist one set of belligerent nations in a war against others. Such people think in terms of their emotion, in assisting a given side to win an overseas war. I say we should think in terms of the United States. I say that the preservation of our own Nation should be our immediate as well as our ultimate objective, even if thereafter she be the only nation left on the face of this war-torn and sorely troubled world.

Those who approve this so-called foreign policy, after all, are approving what? Let me point out to you that throughout our entire history the United States of America pursued what Webster calls a policy: "a settled or definite course or method adopted and followed by a government." We were thinking in terms of the United States. Our people mentally took sides, if you like, in other peoples' wars, their sympathies were aroused one way or the other, to be sure, but foreign entanglements were abhorred and foreign involvements were avoided. The only time we ever relaxed that policy under which our Nation grew and prospered, our efforts while nominally successful, actually ended in disaster. Billions upon billions of dollars were spent, hundreds of thousands of American boys were casualties, scarcely a home that did not feel the effect of the war. We put everything into it, our energy, our idealism, our fortunes, and our lives. We took nothing out of it but misery and loss.

The present President of the United States until 1937 followed our traditional policy. The American people were so fully convinced we should give notice to the world that what had been our policy would continue so, that we declared our position and made it a matter of domestic law. But from 1937 down to the present time, day by day, week by week, month by month, the President of the United States, to whom solely is entrusted by our Constitution control over our foreign affairs, has pursued a policy of internationalism. We have undertaken to police the world from Borneo to Iceland. We have intervened in overseas wars, following a policy of whose very objectives the American people are kept in ignorance. We have followed a course of parallel action with certain world powers and by our very liaisons have become involved in the maintenance of the international status of our collaborators.

Let us rather look first to our own defenses. Let us commence with the proper and adequate expansion of our plants for the manufacture of special machinery. Let us first "tool up" our industry. If, for example, our plane production could be increased to 30,000 a year, of what value, if we can manufacture but 4,000 propellers. If we can manufacture when properly equipped 4,000,000 rounds of ammunition, of what value, if we can produce but 500 guns.

Even during the World War, although we were producing munitions for 3 years before we entered, 19 months after we declared war we were able each month to produce only 400 pieces of artillery of all calibers. Even as late as October 1918 we were able to produce only three-fourths of our total requirement of shells. In the past 6 years we have spent for the Army and Navy $6,890,000,000, in round figures, and yet we have only 450 antiaircraft guns scattered from Honolulu to Eastport while the Germany Army is estimated to have had more than twice that number in Norway alone. We can put only one mechanized division into the field; we lack antitank guns—in short—what are we getting for our money? What are we doing for our defense?

Time will not permit nor would you wish me to detail all of the factors, and the considerations applicable to each, which are involved in the departure by the present administration from our history-long position. The series of unneutral steps, the outright and continued aid to Russia, the assistance extended through economic manipulations, the continuation of the purchase of foreign gold at the expense of Americans, without further enumeration, suffice it to say that by acts and declarations our course is daily in the direction of further intervention.

Stated another way, our foreign policy should be abandoned; our foreign policy should be domestic first; our foreign policy should be one of nonintervention and since there reposes in the President of the United States such vast potentialities for our involvement in overseas wars, let your delegates to the national convention have in mind the selection of one to be President of the United States whose policy will be, America first.

Of course, the United States will not later shrink from bringing to bear its influence, its intelligence, its wealth, in the readjustment of the world. We have no slightest intention, like Pontius Pilate, of washing our hands of the whole affair. But just as surely as we today uphold the torch of civilization, of ordered government, of political obligation, so too, will our opportunity of keeping bright that torch remain only so long as we avoid the abyss of war. If everything we stand for represents the hopes of the peoples of the world, so too, can we lose that status as in the mire of entanglement we suffer the ravages of war upon every desirable quality of heart and mind, upon every vestige of the beneficence of peace, upon civilization itself.

That we may as a nation and as a people be in position to make the greatest contribution to civilization that any nation or any people ever made will demand of us the devotion of our utmost energy to the rehabilitation first of our own domestic economy. We must not only be strong, sufficiently so to resist all forces which would destroy us from within, but to render us capable of the greatest possible negotiatory power in the readjustment of an exhausted and bleeding and war-ravaged world. This is not isolation, it is nonintervention. This is not meddling, it is plain common sense.

That the Republican Party is the political entity upon whom will and should devolve such responsibility will become more evident as our people, perforce, attempt to study the events of the past 7 years and to consider what impends in the years just ahead. It is a responsibility which as citizens sworn to uphold our Government and as patriots we gladly embrace. Difficult though the task will be, our duty is plain but our sense of obligation is deep and reassuring.

As representatives of those who sent you here, you will select delegates to the national convention who will act in our names and for our party. They will select as a candidate for President one whose capabilities and experience and judgment will inspire the confidence of our people. That there are such men available is the result of the opportunities which in the past went hand in hand with the principles of American freedom. That such opportunities may be preserved for all of us is the goal of the Republican Party.

Norwegian Independence Day

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SENATOR WILEY

Mr. WILEY. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a speech I delivered at Stoughton, Wis., on the 17th of May—the Norwegian Independence Day anniversary.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow citizens and friends, I address you as fellow citizens because I would have everyone appreciate the value of American citizenship.

I address you as friends because irrespective of our differences in politics, in religion, and the national roots from which we and our forbears stem, I would have you to be friends under the American flag.

In these turbulent times, I would have each one of you recognize your importance as leaders—leaders of thought and action. Each one of you in your church group, in your lodge, in your business, in your avocation, and your vocation influences others.

I have been asked many times, Will war come to America? And I have said, That does not depend upon Washington—that depends upon the leadership back in the villages, cities, and farms, and homes of the Nation.

And, my friends, I am prefacing my remarks today with some thoughts that were not contemplated when I accepted the invitation to speak to you. At that time Norway was uninvaded, she was free, and in your heart and mine, at that time, there was not the hurt there that there is now. We have suffered with other peoples—with the Finns, the Poles, the Czechs, and the Austrians—but, when the land from which our forbears came went down under the blitzkreig it inflicted another wound which will probably bleed until this holocaust of war is over and Norway is free again.

As Americans, in these distressing times we are called upon to be fit for the task that confronts us. Fitness now demands that we remain calm, mentally poised. Lincoln in his day saw the need of that. He preached the doctrine of malice toward none, yet he

fought for righteousness sake. He was a man of prayer. He said: "I have been driven many times to my knees by the overwhelming conviction that I had nowhere else to go. My own wisdom and that of all about me seemed insufficient for the day."

Lincoln in strenuous times also knew the need of releasing the safety valve on the mental tension. He could tell a story. He repeatedly turned to humor and laughter. He said: "With the fearful strain that is on me night and day, if I didn't laugh I should die."

I have often told the story of the man who lost all his worldly goods in the depression of 1933—how he made up his mind to commit suicide, and how a friend of his got him to go out and look through the telescope at the Harvard Observatory. Seeing a speck of light, he was told that was Arcturus, and that he saw not the star but the light which had been traveling 25 light-years at the rate of 186,000 miles per second. He was shown other specks of light which were a million times bigger than our earth. He was taken on a trip through the heights and the depths of the heavens. When he got through, the suicide-minded man said to the young astronomer, "I haven't lost anything, have I? I have my wife, my children, my health, and over in that library are 6,000 years of human wisdom in literature, science, history, economics—all mine. I haven't lost anything, have I?"

He had awakened from his dream that the suicide trail was the way out. He had gotten perspective. Before I begin my remarks, may I say to my constituents what we need to face these troubled days is a sense of humor, a faith in God, and perspective. There was a time when Napoleon overran Europe, and for over 15 years there was war. Before him there was Charlemagne, and Caesar, and Alexander, and numerous other "men of war." Since his time there have been in Europe many, many conflicts. We are shocked and angered now by Hitler's methods, but these emotions have never won a war, although they may have started many. I still believe that the sentiment of the thinking people calls for keeping out of war. However, if Hitler should keep on his rampage and should get overinflated with his successes and should attempt to violate the Monroe Doctrine, or should sink our ships, or should invade our rights, he might precipitate this people into war. Therefore, above everything else, let us get perspective. We have to prepare for what the future may hold, but we are masters of the future.

Today is the one hundred and twenty-sixth anniversary of the constitution of Norway. This is the natal day which marks the anniversary of the adoption of the organic law of old Norway. This is a commemoration of great significance to those of Norse blood. But today my kinsmen, this is a sad anniversary.

These are the times that try men's souls. But I am sure that as Americans we shall overcome the trials of this period. I come here today to speak to you about a great people—a people who will also survive the trials of this period; a people from whom many of us stem; a people who by their blood and by their ideas have fertilized many countries in Europe, many states in Africa, and many commonwealths in our own Nation.

This occasion was to have been one to celebrate the independence of Norway, and in spite of the invasion by Hitler's troops, I believe we can still celebrate that independence.

There are 140,000 Norwegian-Americans in Wisconsin. Almost all of them have some family ties with the motherland. The tragedy of Norway today is painfully close to our hearts. In Dane County alone there are 16,000 Norwegians who scan the war news every day. The Koshkonong settlement, south of Madison, also has its roots deep in the motherland. This settlement was one of the first Norwegian settlements in all America.

There are 10,000 Norwegians in Milwaukee County who daily feel a grim growing resentment against the occupation of their homeland. In Racine alone there are 16,000 men and women of Danish descent, and a little over a month ago they hung the flags at half mast before the Danish brotherhood and Dania halls.

Wisconsin has many ties in Scandinavia. The entire population of Norway is about that of our own State. The 140,000 who have found their home here have had a tremendous effect on our history. The folk songs, the legends, the schools, the music and literature, the faith and character of this people from Norway have been closely woven into the fabric of Wisconsin and American life.

Today's events make the history of the fourteenth and fifteenth centuries particularly interesting. With the Scandinavian countries slashed to tatters it is interesting to look back on that period when Sweden, Denmark, and Norway existed under one government. For four centuries Norway was practically a province of Denmark.

Every school child knows that Norway separated from Denmark in 1814 when she joined with Sweden. The lesson there is that during the union of 91 years whatever strife there was, centered about honest differences which were carried to a dignified and peaceable settlement. The final settlement came on June 7, 1905, when Norway and Sweden settled their differences amicably. There was no bloodshed. The bonds of friendship between these countries still existed.

That in itself should be an example today. That kind of round-the-table peaceful discussion is exactly what the world needs today. It is interesting to note that there are other parallels to history in the present situation. Back in the days when Norway was still a Danish province, the Europe of 1805 presented an almost exact parallel to the Europe of today.

Today the war is faster and more destructive, but in other respects it is much the same as it was in the Napoleonic era. Those years present a closer parallel than the war of 1914–18. Then, as now, one single dictator was attempting to unite all Europe by force of arms. Then, as now, one man had the desire to conquer sea power by an extension of territorial dominion. It failed then, and it is likely to fail again.

Because the present attempt so closely involves the Scandinavian peoples it may be well for us to review the background of those of us who today scan the war headlines for news of the land of our ancestors and news of other despoiled lands.

The first Norsemen to come to these shores probably came about the year 1000 when storms on the North Atlantic drove Leif Ericson somewhere between Nova Scotia and Boston Bay.

The second Norse migration came only a few years later. Its purpose, as the Saga of Erik the Red states, was to find Leif Ericson's Vinland and settle there. This migration did land somewhere in western Newfoundland and 3 years later returned to Iceland.

There were many other Norwegian expeditions to America. But here today we might limit our brief discussion to the second great invasion by the Norsemen in 1825 when the 45-ton sloop *Restaurationen* sailed out of Stavanger for New York with 52 pioneers on board. They settled on the shores of Lake Ontario and later moved farther west. They were led by Cleng Peerson, the Leif Ericson of the forties. He trudged on foot from the New York State colony up the shore of Lake Michigan till one evening in August of 1833. That evening the little footsore, blue-eyed Peerson approached a fur trader's cabin near Lake Michigan. A bearded trader, naked from the waist up, was standing in front of the cabin. He was Solomon Juneau, and he told Peerson that if he continued north he would find "nothing but woods to the world's end."

The little Norwegian journeyed southwestward into LaSalle County and then returned to Lake Ontario after a summer hike of 2,000 miles. He told about the "promised land" which he had found in the West. He told about the Illinois land which sold for $1.25 an acre. That started a great ground swell of migration—first to Illinois, then to Wisconsin, and later to Iowa.

The first wave of settlers spread into Wisconsin in Peerson's wake. By 1847 the first Norwegian-American paper was begun in a barn in the Muskego settlement of Waukesha County.

The first Norwegian church in America was founded in that same settlement near Waterford some 97 years ago. We who gather here today are the descendants of those pioneers. It is natural and understandable that we should look to the land of our forbears in these troubled days.

And these are troubled days. Norway was one victim which had been uninvaded since the Middle Ages. Scandinavia's neutrality survived the World War and 7 months of the present European war. That neutrality became a thing of the past with the Nazi invasion.

There are only about 3,000,000 people in Norway, but they are a peace-loving people. They have learned that war does not pay. About three-quarters of this land is unproductive, and in order to get room to live the Norsemen reached out to the sea. There they developed the fourth largest merchant marine in the world. During the World War, the German submarines sank 1,200,000 tons of her merchant fleet, and Norway lost nearly 2,000 seamen, but she did not enter the war. Before the Nazi invasion she had a merchant marine of 4,756,000 gross tons.

This little country was absolutely unprepared. Its people had faith that they would survive this war as they survived the last World War. But now the sons of the Vikings have fought again. Their forefathers battled into Britain and made it Angle land. They settled Normandy. This year the sons of Vikings from Angle land and Normandy banded together for a common cause.

The Norsemen, for a hundred years, had followed a cult of peace. They have tried to stay at peace. They developed the spirit of cooperation among themselves. Among them, the arts and the sciences and religious thinking thrived. They did not bother to build armies and navies. They believed in treaties between nations. They believed in the pledged word, but that confidence has been rudely shattered.

And once more, as at Eidsvold in 1805, they rallied behind their King and pledged "Enig og tro til Dovre falder."

There are moments, or occasions, when a man is too full for expression. There are other moments when a man feels that he would like to blow off steam and talk endlessly. We have all had such experiences.

In the first category I can recall seeing the sunset on the Grand Canyon, seeing the shadows creep up those majestic canyon sides. It was something mystical and tremendously beautiful. For, hours after the sunset, the influence of that experience remained. A great musician related how, after hearing Wagner's Faust for the first time, the beauty and the purity of those mighty harmonies so exalted him that for days he lived above the mundane.

So to all men and women have come at times great experiences reflecting the hidden beauty and symmetry of the eternal.

On the 9th of April last, I had another experience which could be classified under the second category. When the news came that Hitler had marched, without warning, on neutral Scandinavia, I found that I was not the only one whose emotions were aroused. That feeling appeared to be general. Long ago I learned, though, when the floodgates were open, that it was a good time to hold one's tongue, to wait for a cooling interval.

Apparently the President of these United States had a similar experience, because it was not until the evening of April 14, 1940, following the custom that has obtained in this country from time immemorial when great wrongs have been done, that he spoke and expressed the sentiment of practically everyone in this country, irrespective of where they or their forebears came from. This was the language that he used:

"Force and military aggression are once more on the march against small nations, in this instance through the invasion of Denmark and Norway. These two nations have won and maintained during a period of many generations the respect and regard not only of the American people but of all peoples, because of their observance of the highest standards of national and international conduct.

"The Government of the United States has on the occasion of recent invasions strongly expressed its disapprobation of such unlawful exercise of force. It here reiterates, with undiminshed emphasis, its point of view as expressed on those occasions. If civilization is to survive, the rights of the smaller nations to independence, to their territorial integrity, and to the unimpeded opportunity for self-government must be respected by their more powerful neighbors."

The Executive of this Nation, dating back from the first President, has given free expression to this people's indignation when acts of violence were committed and rights of free peoples jeopardized. In other words, it is our policy not to refrain from condemning acts of wanton lawlessness, acts that violate international law and threaten world peace and the structure of civilization.

There was an added reason why I should refrain from speaking in the Senate of the United States. I did not want to say anything "when the heat was on" that I would regret afterward.

As many of you know, I was in Norway last summer as a representative of this Government at the Interparliamentary Union meeting. As I have said before, my forbears came from the "Land of the Midnight Sun." I went over much of the same territory which has recently been mentioned in our papers. I sailed up Bergenfjord and landed in Bergen. I spent a week in Oslo and its environs. I took the Trondheim road to find the homestead of my mother—the same road the Nazi troops are now traveling. I spent a week in Denmark, headquartering in Copenhagen, and then crossed into Sweden, where I took the Kungsholm at Gothenburg and sailed out of Skagerrak, passed Stavanger and north of Bergen—up north passed the Faroe Islands.

In the past few frantic weeks I have lived through the same experiences that other people in this land have undergone recently as they have seen the land of their fathers ruthlessly ravaged and occupied. After all, here in Wisconsin many of our citizens stem from Finland, Czechoslovakia, Poland, Austria-Hungary, Holland, and Belgium—all invaded countries.

Some time has now elapsed and the first shocks are past. I have had time to think things through. After my visit to Norway and Sweden and Denmark, after seeing these people and seeing their land and realizing that they, more than any others in Europe, had developed along the identical lines of our development, with all the freedoms that we have, I can appreciate their experiences; I can realize what these violations of international law, this jumping on neutrals, means not only to them but to the rest of the world.

The Scandinavian peoples who emigrated here, like the great flood of German people who came to this country, have become Americans. Most of them are good citizens. They are hard-working, straight-thinking people.

In these last years the Scandinavian countries have done a great job. They have demonstrated that it is possible for poor, small countries to build a society based on peace, neutrality, and Christian principles, and these same people have developed the highest standard of living in the world. Since the days of Napoleon they have remained at peace. They have gone to extremes to avoid giving offense to the belligerents. Their governments refused to violate neutrality even for Finland—would not permit allied troops to march through.

Let us keep in mind that Denmark had a nonaggression treaty with Germany and that Norwegian waters were used by Germany for her ships, but nothing availed. The mailed fist had to strike.

It didn't avail the Scandinavian countries to live up to the letter of the spirit of international law. The "blitzkreig" struck regardless of their blameless record. With what results?

We may conclude that (if the totalitarian governments control Europe) no longer will there be safety for small nations; no longer will a small nation be permitted to remain neutral. In that respect the hands of the clock have been set back over a hundred years.

But there is always a silver lining. It may mean that in Europe the idea of union now is nearer fulfillment than was anticipated. The democratic nations of Europe will have to become a confederacy.

The second result of all this should be to open up the eyes of South America. Those nations there should get rid of their petty rivalries and becomes a kind of United States of South America. They should pool their resources and get at that job quickly so that they will not become subject to a "blitzkrieg" from quarters in Europe. The third result is apparent—the British Empire, instead of falling apart, will become more unified than ever. The "blitzkrieg" of Hitler has cemented that Empire, showing the dominions and the colonies the imperative need for being one with the mother country.

The fourth result: In spite of the fact that the word of the totalitarian states has been demonstrated as worthless and their treaties but scraps of paper to be torn up, other peoples know that international faith is not dead. The pledged word between nations, constructive international law, the result of conduct between nations, especially between democratic nations, are still vital matters. For the time being the "blitzkrieg" has made everyone power conscious, and if the present policy is continued then the only guaranty that any nation has is to make itself secure from attack, make itself self-sufficient from a military, economic, and financial standpoint.

The fifth result: The basic principles of the law of neutrality still live, although the "blitzkrieg" of Hitler has made them dormant for the time being.

And so we come to the main problem, How can we best preserve our national safety, promote our national interests? As Americans, on this sad anniversary, we seek the answer to this question.

It is a difficult question and its answer is tied up with a number of conclusions arising out of the European melee.

Let us consider some of these conclusions and attempt to evaluate their significance to America.

It is evident from the Scandinavian crisis—

First. The Scandinavians can never be completely conquered unless they are wiped out.

Second. The more alien peoples trampled on by European dictators, the more people there will be to rise some day against their conquerors.

Third. The economic consequences of the present war in Scandinavia will mean that Allied purchases other than war materials will be increased in this country. (Following the loss of Scandinavian sources.)

Fourth. Our own imports from Scandinavia will be curtailed. (This will affect the pulp and paper industries, since more than 15 percent of our newsprint and pulp is imported from Scandinavia.)

Fifth. An extension of the theater of conflict appears inevitable. An intensification of military operations appears more than likely. This will affect the United States because it will bring increased demands from the Allies for our export of war materials and supplies. Our import trade will be further affected.

Sixth. There is every indication that this may be a war to exhaustion or even to the death.

Seventh. The extent of traitorous and Trojan-horse activities in the Scandinavian countries illustrates the necessity of all neutrals keeping a sharp check on alien activities and alien propaganda.

Eighth. Part of the European dictatorship war technique has been the mesmerism of terrorism. This is a bogey which must not affect neutrals—particularly America.

Ninth. In the World War, Russia provided the second front. In this war Scandinavia provides the second front. There will be other fronts. Thus division of Nazi strength divides Nazi force and speeds up the pace of the war; both of these factors should react to the advantage of the Allied forces with their tremendous manpower and vast sources of material.

Tenth. It is vital for us in America to "keep our shirts on"—to refrain from unrestrained emotionalism. Any participation of the United States in this war would probably end in a complete betrayal of democracy.

Eleventh. The Scandinavians themselves furnished an example for the present conflict when they settled their differences peacefully on June 7, 1905. Norway and Sweden parted peacefully with no bloodshed. That was the most noteworthy event of the century and furnishes an example for today.

Twelfth. Preparedness is the best guaranty of inviolate neutrality. That means both mental preparedness and a physical defense preparedness. The lesson of Scandinavia teaches us the value of the latter and our own common sense teaches us the value of the former.

Thirteenth. Let us reason together about a significant situation. It is important that we realize here in America that no matter where we stem from, we are first and last Americans. Just as we of Norwegian blood have now had a surge of sympathy for the "Land of the Midnight Sun," so it is natural that every nationality sympathizes with its homeland and its home people. It is also natural that all of us Americans, no matter who we are, sympathize with the common people of Europe who are bearing the burdens, suffering the loss, and fertilizing the soil with their bleached bones as they have for centuries past.

Let us reason together and think this thing through. It is my opinion that practically every German who was born in Germany and who is now a citizen of this country, and every descendant of Germans who came here in '48, or before and after, are as loyal to the American traditions and American principles of a republican form of government as any other group, but it is natural also that while they condemn the tactics of the Nazi group, that they should have a feeling for their people, just as some of us have a feeling for the Scandinavian peoples.

If there are any military or propaganda traitors in any American group, as there were in Norway, it is imperative that we find them out. America wants to stay out of this war just as the Scandinavian countries did. We must make sure that there are none boring from within. There must be no termites here.

I was brought up in a community where there were Frenchmen, Scandinavians, Germans, as well as Irish, English, and Scotch. I remember back in 1914, before we got into the war, many incidents

that demonstrate what I have mentioned—the heartthrobs and longing of each race for the well-being of their fatherland. But I remember also in 1917, when we entered the war, there were no more loyal Americans than the Americans of German descent. I have heard nothing but condemnation of Hitler's ruthlessness from my brethren of German extraction.

Fourteenth. America must awaken to the realization that she must take extraordinary precautionary measures within her own borders to see that sedition and treason and traitors do not thrive on our soil. But in doing that we must also be extremely cautious to see that we do not delegate an unwarranted police power to any man or group of men who might utilize it in the same manner that similar powers were utilized in Europe. In other words, we must not become hysterical in this direction, but we must become practical and sane. We want to say to any foreigners in our midst: You are our guests and we expect you to abide by the rules and regulations of life in this house. No guest has a right to abuse the hospitality of America. If they do, they should be given a one-way passport back to where they came from. If there are any Americans who have become inoculated with any foreign ideas or "isms" and take steps that are disloyal or are treasonable to violate the safety of our institutions, they should in this world crisis be dealt with accordingly.

Fifteen. While the great heart of America was shocked by what took place in Scandinavia, and is being duplicated elsewhere, and while this same heart bleeds for downtrodden people everywhere, this question arises, What can we as individuals and what can we as a nation do in this international crisis? What should we do? I have said before that in times of great crisis in the life of an individual, or in the life of a nation, it is imperative that the individual and the leaders of a nation tie to a principle.

The first reaction when injustice occurs in the family of nations is for every red-blooded individual to want to rise and strike back at the aggressor. The individual can do that now if he desires. He can enlist in foreign armies and sacrifice his life for the cause if he wishes to. A public official, however, who has a part in shaping the direction that this Government shall take, must, if he is going to be a trustee of the people's Government, think the problem through. While as an individual, any Senator could sacrifice his life and fortune in the cause of Norway, as a Senator of the United States it is necessary for him to realize that when he acts, he acts for 130,000,000 people. When an elected representative to Congress acts, he is dealing away or protecting the rights of this people, the great American values. War, my friends, is hell, and to put this Nation into war is something of a different nature than for an individual to enlist in the army of a foreign nation.

What can we do? As I have said, Hitler and his Nazi government have turned the hands of the clock back so that no small nation now under the doctrine of neutrality can feel safe. The Nazis have destroyed neutrality as far as the small nations are concerned, but America still must stand for honor among nations, must stand for law among nations. If she does that, then when the storm is over, the peoples of the world will look to us as the mariner looks to the lighthouse.

There is one other way for us to help as a nation. We can continue to keep the record straight. We can continue to make a dispassionate appraisal of foreign affairs and then judiciously express the weight of American approval or disapproval in our official utterances. That may sound weak and ineffectual but in reality American prestige makes it a potent force in restraining European excesses. As a positive force, it is an active encouragement for international fair dealing.

What else can we do? As individuals we undoubtedly will be called upon to make contributions during the war to aid our relatives in Norway. My fellow citizens, I see another position where we all will be called upon, in the days that are up ahead, when war-torn Europe is bled white, for America to do what we did once before under Hoover—when he fed the millions at our expense. Then will be given the opportunity for us to demonstrate that the principles of the Christ still live in the hearts of humanity. When that day comes, when the Biblical saying has come true—"They who take the sword shall perish by the sword"—we can demonstrate that they who love their brothers—Germans, Frenchmen, Scandinavians, Poles, Englishmen—will give a rebirth to the spirit of Him who taught us to love one another.

I hear someone say, "How impractical," but to me this is far more practical than any other method that the ingenuity of man has ever devised. Our opportunity will be to bind up the wounds, the broken hearts, to cast out the fears and hates of a lacerated humanity. Perhaps then we will be the great instrument to bring about the fulfillment of the prophecy that nations will beat their swords into plowshares and there will be no more war.

On this 17th of May let us Americans pledge ourselves anew to the faith that is in us, to the faith that says that Norway shall once more be free, the faith that says that America will not permit the "fifth column" of any nation to penetrate our land, to the faith that says that the great American values—freedom of speech, freedom of the press, freedom of contract, freedom of worship, trial by jury—shall not be taken away from us by our own neglect or by another's conduct and action.

Yes, my friends, on this day let us pledge allegiance to the American flag, and to this Nation of which we are a part. If we do that and govern ourselves accordingly, we shall make the greatest contribution that anyone can make to this day and generation.

Always the Scandinavian peoples have been law-abiding people. Always they have amalgamated with and become a part of the nation they immigrated to—witness, France, England, northern Italy, and America. Always they have been folks with the characteristics of loyalty, thrift, industry deeply ingrained in the fiber of their being.

Today, therefore, is a day of consecration, a day of rededication. Lifting our heads toward the sky, we can sing God Bless America * * * and Gud Velsigne Dig Gamle Norge.

God bless America—

First. With citizens who appreciate her and what she stands for.

Second. Bless her with citizens who will be on guard against the "fifth column's" attack; with citizens who will not become mentally stampeded and unbalanced.

Third. Bless her with citizens who will appreciate and maintain her great freedoms—freedom of speech, press, worship, contract, etc.—and who will also appreciate the great moral virtues—faith in the pledged word, faith in God, and faith in the forward march of mankind.

Fourth. Bless her, O God, with citizens who through this critical period can walk with hope and courage, vision, poise, strength, and unity in their hearts and minds and souls.

America's Gold Policy

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE WASHINGTON POST AND ARTICLES FROM THE CANADIAN FINANCIAL OUTLOOK AND THE NEW YORK TIMES

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Post of May 20, 1940, under the heading "Mr. Morgenthau's doubt"; an article from the Canadian Financial Outlook, of Toronto, Canada, of the issue of May 1, 1940, under the heading "$41 Gold in the offing," by George Williams, financial editor; and an article from the New York Times of May 19, 1940, entitled "Gold Hoard Stirs Growing Concern," by John H. Crider.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 20, 1940]

MR. MORGENTHAU'S DOUBT

Secretary Morgenthau believes that the Government's gold policy has expanded our exports, encouraged domestic industry, and enabled us to acquire "the safest physical asset in the world." After emphasizing the advantages of the gold policy, however, Mr. Morgenthau permitted a note of doubt to creep into the address which he delivered recently before the women's division of the Democratic National Committee.

He mentioned the possibility that the present turmoil may leave the world in the grip of ruthless powers dominating a large number of formerly independent states. In that event international trade and finance might assume the character of domestic trade, with settlement of balances between countries effected by a simple transfer of deposits.

This hypothesis suggests a multitude of disturbing complications. Mr. Morgenthau rightly concludes that, under such conditions, our gold holdings would doubtless be a relatively minor cause of anxiety.

It is, nevertheless, significant that the Secretary of the Treasury has at last publicly recognized the possibility that gold may eventually cease to be employed as a means of international payments. For a long time suggestions of this kind were dismissed as the speculations of irresponsible theorists. Last January, however, Dr. E. A. Goldenweiser, writing in the Federal Reserve Bulletin, referred to the problem presented by "the accumulation in the country, in exchange for our products and other forms of wealth, of an asset (gold) which is of little value now and whose value in the future is unpredictable."

Since then the process of accumulation has continued at an abnormally rapid rate and our gold hoard has risen to approximately $19,000,000,000, or nearly three-fourths of the world's monetary gold stocks.

Regardless of the outcome of the war, these gold acquisitions will present an acute problem when peace is restored. Every nation, including Germany, which has shown extraordinary ingenuity in carrying on foreign trade without gold, has heretofore been eager

to acquire that metal, because it could be exchanged for goods. The fact that the United States has been willing to accept unlimited quantities of gold has maintained its traditional prestige as a medium of international payments. But the situation may be very different in the reconstruction years to come.

It is not necessary to postulate a Europe dominated by a few dictatorial powers to envisage an economic and financial order in which gold would lose most, if not all, of its monetary importance. In the past gold served its purpose well because movements of goods and of capital were sufficiently well balanced to prevent excessive concentration of the money metal in any single country. Unless the political and economic maladjustments which have been responsible for the extraordinary gold influx into the United States can be corrected, it can hardly be doubted that gold will lose its value for monetary purposes in the post-war world.

[From the Canadian Financial Outlook, Toronto, May 1, 1940]

FORTY-ONE DOLLAR GOLD IN THE OFFING

(By George Williams, financial editor)

The spectacular increase in Canadian gold production—springing from a spurt following the 1929 depression and again in 1934, when President Roosevelt boosted the price of gold from $20.67 an ounce to $35 an ounce—continues to be reflected in higher and brighter earnings among Canadian mining stocks.

And now, with the impact of war economy demanding greater and greater spending and wider extension of credit, many observers incline to agree with our view—that a further increase in the price of gold, to at least $41.34 an ounce, may become immediately necessary.

While it is dangerous to generalize about complicated matters, this subject may be reasonably and simply stated thus: At the beginning of the 1914–18 war, conservative economists warned participating governments that war expenditures, at the rate then contemplated, were simply impossible. Yet, the expenditures were made on a scale far higher than that at first contemplated and which the economists had flatly stated were impossible.

What was done? Exactly what has always been done when governments need more money. For money is only what the government says it is. The dollars used in the United States now have often been stigmatized as 69-cent dollars—and, if the present price of $35 an ounce for gold were increased to $41.34 an ounce or higher, conservatives would scream again—but dollars would still buy commodities in the same ratios as previously.

The scale of expenditures for the present war dwarfs that of the previous World War, by comparison. And it is by no means beyond the realm of possibility that, if it lasts for a period of years, increases in the price of gold may become not just a notion to toy with but an urgent necessity.

Now, as to the immediate result of the impending higher price for gold: Figuring on a basis of the expected 1940 Canadian gold crop of 5,750,000 ounces, a further mark-up of the price of gold to $41.34 an ounce would make the current year's crop worth $237,705,000, instead of $201,250,000, based on the present standard price of $35 an ounce—without any allowance for the fact that Canadian gold mines are now receiving $38.50 in Canadian funds for their output. Hence, such a mark-up would put $35,455,000 more into the treasuries of the producing Canadian gold mines—virtually all of which would be clear profit, and would thereby swell their profit margin to that extent. A price of $45 an ounce would give an additional profit of $57,500,000 and a price of $50 an ounce would furnish a further profit of $86,250,000.

Moreover, such a higher price for gold would enable many of the so-called marginal or low-grade-ore mines to operate very profitably.

And virtually all this additional profit would go to shareholder-participants in the form of dividends.

Moreover, this naming of a higher price for gold would be instantly reflected in a spectacular market appreciation of all gold-mining enterprises in the Dominion. It would appear, therefore, that this is the psychological time to procure participating interests in the best of them.

[From the New York Times of May 19, 1940]

GOLD HOARD STIRS GROWING CONCERN

(By John H. Crider)

WASHINGTON, May 18.—The Treasury's gold stock, already the largest in world history, will go over the $19,000,000,000 mark in the next few days if acquisitions continue at the recent rate. In the 5 days ended Wednesday $46,000,000 was added, putting the total at $18,949,000,000.

With reports of Allied reverses in Europe, America's holdings of more than two-thirds of the world's monetary stocks of gold become a question of increasing concern in discussions among officials here. The question is being asked whether a Nazi victory might not seriously jeopardize the value of the metal which is a bulwark of capitalism and an avowed target of German revolutionary conquests.

THE 1939 INFLOW TOPPED THREE BILLION

The Treasury's gold stock passed the $17,000,000,000 mark October 20 and the $18,000,000,000 mark in the first week of February. Thus, in less than 7 months the Treasury has gained $2,000,000,000 in gold. In the calendar year 1939 the net inflow amounted to about $3,132,000,000, a figure larger than the total dollar value of the gold stock held in this country in any year prior to 1917.

The coming of gold has been a principal factor in swelling the excess reserves of the Nation's banks to more than $6,000,000,000, an all-time high, and this, in turn has served importantly to create an excessive "easy-money" situation which was the subject of several critical communications from the Federal Advisory Council to the Federal Reserve Board last year.

The Federal Reserve Board has, in effect, thrown up its hands in the face of the flood of foreign gold, stating that "the potential lending power derived by banks from the receipt of this gold creates an unprecedented problem of control, because the unused reserves of the banks are much greater than can be absorbed by the Federal Reserve under present powers."

Housing and Health

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

STUDY BY UNITED STATES HOUSING AUTHORITY

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very revealing and important study just released by the United States Housing Authority, entitled "Better Housing, Better Health."

There being no objection, the study was ordered to be printed in the RECORD, as follows:

BETTER HOUSING, BETTER HEALTH—THE INTERRELATIONSHIP OF HOUSING AND HEALTH, AND HOW THE NATION-WIDE SLUM CLEARANCE PROGRAM WILL BRING HEALTH AND HOPE TO THOUSANDS OF AMERICANS

The caveman had a housing problem, and he knew what to do about it. Instinct led him to protect both his health and his comfort by seeking shelter against the elements.

The housing problem facing America today isn't so simple. Even if every family throughout the country were adequately protected against the elements by four walls and a roof (and we are far from even this partial solution), a problem of tremendous proportions would remain. For to be decent and adequate, modern housing must also protect its occupants against menaces that arise from our more civilized existence in communities—the dangers of contagion and accident.

By these simple standards, millions of the dwellings in which Americans live are shamefully indecent and inadequate. Though families living in unfit housing are well aware that unsafe and insanitary living conditions undermine their health and threaten their very existence, low incomes have made it virtually impossible for them to improve their housing lot.

THE BAD CONDITIONS

Protection against contagion, as well as decent occupancy standards, would call for adequate space and privacy for all members of a household. Yet in 1935–36 the United States Public Health Service, after investigating the housing in 83 representative cities, estimated that some 3,000,000 urban families in the United States live in homes with more than one person per room. A million urban homes have more than one and one-half times as many persons as there are rooms. And in 700,000 urban homes there are at least twice as many persons as there are rooms.

Though running water for drinking and bathing and sanitary sewage disposal are among the first essentials of sanitary living, it is estimated that some 3,457,000 urban homes in this country have no private bathing facilities. Around 2,536,000 lack private indoor flush toilets. These figures are based on a Nation-wide survey conducted (1934–37) by the United States Department of Commerce and the Works Progress Administration. It should be noted that this investigation did not include the housing in rural areas where pure water supplies and toilet facilities of any sort are frequently lacking.

One of the most obvious ways in which housing and health are related is in downright dilapidation. Ramshackle dwellings increase the possibility of accidents through faulty steps and flooring, falling ceilings, and occasionally even the outright collapse of slum shacks and tenements.

Congested, run-down slum areas are also responsible for an alarming number of disastrous fires and for needless injuries and deaths from this cause.

THE EVIL RESULTS

In practically every community for which statistics are available, the areas of high disease and death rates are found to be almost identical with the areas of bad housing. More people get sick in the slums. They stay sick longer. And they die in greater numbers.

This does not mean that bad housing itself is solely responsible for such conditions. A variety of factors complicate the picture, factors so interrelated that it is practically impossible to determine statistically just how much of the excess sickness and death is directly attributable to bad housing and how much to the other conditions.

Poverty is one of the most important factors. Malnutrition and lowered resistance to disease are frequently found in its wake. Low incomes may mean inadequate medical care during illness or even no medical attention at all.

Another point to be remembered is that people are poor because they are sick, as well as sick because they are poor. Thus, there is often the tendency for families already burdened with sickness to drift into areas of cheaper and less adequate housing.

Ignorance of what to do to protect health is also a major factor. Racial susceptibilities vary, and carelessness and inherent physical weakness play their parts.

But even when the various complicating factors are taken into account, if housing and health are considered in their broader aspects, the relation between the two is self-evident.

The health of the slum dweller is menaced from the day he is born. A survey made by the United States Children's Bureau covering some 23,000 births in 8 cities indicates the effect of overcrowding—a prime characteristic of slums—upon a baby's chance of survival. The cities surveyed were Baltimore, Md.; Akron, Ohio; Waterbury, Conn.; New Bedford, Mass.; Saginaw, Mich.; Johnstown, Pa.; Brockton, Mass.; and Manchester, N. H.

In homes averaging less than one person per room, the infant-mortality rate was found to be 52 per 1,000 births. Where the average was between one and two persons per room, the rate was 94.9 per 1,000 births. In homes averaging two or more persons per room, the rate was 135.7 per 1,000 births, or more than two and one-half times as high as in favorable surroundings. In interpreting these results, it was recognized that low incomes and low racial immunity to certain diseases, as well as overcrowding, influence the number of deaths. But even after allowances were made for these two factors, it was found that the infant-mortality rate in congested dwellings was still much higher than in homes with sufficient space.

Other investigations have sought to answer the question: "If children live past babyhood in slums, how safe are they then from sickness and death?" One study of this kind was made in Cincinnati (1929–31), by census tracts, by the Public Health Federation. Four groups of homes ranging from slums (group I) to the best residential neighborhoods (group IV) were investigated. Each of the four groups had approximately the same population. The average annual mortality for four of the common communicable diseases of children—measles, whooping cough, diphtheria, and scarlet fever—for each of these areas was as follows:

Group I: 127 per 100,000 population.
Group II: 63 per 100,000 population.
Group III: 40 per 100,000 population.
Group IV: 29 per 100,000 population.

Although such figures as these reflect not merely the quality of the housing but the economic and social status in general, medical authorities attribute part of the excess death rate from communicable children's diseases in overcrowded areas to the fact that slum children are frequently exposed to and get such diseases when they are extremely young. Records show that these diseases are more often fatal when contracted at very early ages. Yet because of the inadequacy of the home itself, many a slum mother finds it next to impossible to isolate her children—even at times when an epidemic is known to be raging—until they are older and their chances of withstanding such diseases have increased.

Rickets is another disease that is excessively prevalent among children of the slums. Proper diet is, of course, of the utmost importance in preventing this disease. Thus one reason for the excess occurrence of rickets in areas of poor housing is undoubtedly the fact that low incomes frequently make it impossible for slum children to get sufficient milk, butter, eggs, fats, and other foods that are a source of vitamin D, which both prevents and cures the disease.

Studies made in recent years, however, indicate that vitamin D can be supplied not only through the diet, but also as a result of the action of the ultraviolet light in sunshine upon the skin. Adequate sunshine thus becomes of primary importance in preventing and curing rickets. Children who live in the slums often fail to get enough sunshine not only because of deficiencies in the houses themselves, but also—and even more significant—because most slum neighborhoods lack areas where children can play safely outdoors in the sunshine.

Other diseases are unduly prevalent in the slums, whatever the complex of interrelated causes. Respiratory diseases communicated by spray in coughing and sneezing, and in general all diseases that result from contact infection, find more victims and take a heavier toll where there is neighborhood, room, and bed congestion; and these conditions are characteristic of slum housing.

Of 1,077 cases of tuberculosis over a recent 5-year period in Hartford, Conn., for example, more than half were in an overcrowded slum district occupying less than a tenth of the city area.

In one slum area chosen for clearance in Detroit, there were over six times as many deaths from tuberculosis, per 100,000 population, during 1930–32, as in the city as a whole.

In Cleveland, 12.5 percent of all the deaths from tuberculosis over the period 1928–31 occurred in a slum area that occupied only 0.73 percent of the area of the city and contained only 2.5 percent of the city's population.

Statistics show that these cities do not differ greatly from others in the matter. Though such complicating factors as poverty, low racial immunity, and unhygienic habits are not to be underestimated, medical science has an explanation as to why bad housing may contribute to ill health of this sort. Unlike most of the other communicable diseases, tuberculosis may develop months or even years after effective exposure to the disease. There is evidence that the more often and intimate the contact, the greater the risk of infection. Since homes afford the best opportunity for intimate contact over long periods of time, tuberculosis is primarily a family disease. In overcrowded, poorly ventilated homes, the intimacy of this contact tends to be increased.

When a person with an advanced case of tuberculosis lives in such a home, the danger of infecting others in the household is increased many times. The tubercle bacillus in sputum is destroyed by direct sunlight in about 15 minutes; in a dark, ill-ventilated room it may live for months. It is no wonder, then, that tuberculosis is a serious threat to slum dwellers, particularly to those who inhabit the thousands of windowless rooms in America and the even greater number with windows opening onto mere shafts or courts.

In Detroit it was found that pneumonia kills three and one-half times as many people in certain slum areas as in the most desirable residential sections. In addition to overcrowding, which may help the disease reach epidemic proportions, dampness and lack of heat in the home are among the conditions believed to be associated with pneumonia. But here again the housing factor is but a link in the causal chain.

Mortality rates for pneumonia and two other diseases were determined for different geographical zones in Detroit, in which the average number of persons per room was available from a special census, with the following results:

Average number of persons per room	Death rates per 100,000 population			Deaths from all causes (per 1,000)
	Tuberculosis	Pneumonia	Diphtheria	
0.9 or more	132	113	22	10.9
.8	79	87	17	9.5
.7 or less	52	77	18	9.5

In Cincinnati there is a slum district known as the Basin, which contains about 28 percent of the population of the city and covers only 6 percent of the city's area. During the period 1929–31, deaths from pneumonia among the white population in the Basin amounted to 160.5 per 100,00, while the white rate for the rest of the city was 50.3. The Negro death rate from pneumonia for Cincinnati as a whole was considerably higher than the white, but here again the rate for the Basin, 293.5 per 100,000 population, was much greater than the rate of 168.6 for the rest of the city.

Deaths among the white population from all causes amounted to 16.23 per 1,000 population in the Basin, as compared with a rate of 10.75 for the rest of Cincinnati. The Negro death rate from all causes was 23.45 per 1,000 in the Basin, while that for the rest of the city was 16.83.

Studies similar to those already referred to, but frequently less comprehensive, have been made in city after city, including Boston, Philadelphia, Richmond, Atlanta, Tampa, Birmingham, New Orleans, Memphis, Louisville, Indianapolis, Kansas City, Chicago, Des Moines, Milwaukee, and St. Paul. The general conclusions have invariably been the same.

SLUMS COST MONEY

Ill-health is costly to individuals in any walk of life in terms of human suffering, and in dollars and cents. But when sickness or death strikes slum families, they are least able to pay the doctor and lose productive workdays and breadwinners.

Millions of dollars are drained from local treasuries annually to foot the slum-swollen public health bill—particularly to meet the excess demand for free medical attention and hospital services attributable to slum areas.

Here is what a Cleveland study showed:

Area	Cost per capita for public-health work	Cost per capita for tuberculosis care	Cost per capita for fire protection
In one large slum area	$2.02	$3.04	$18.27
In the rest of the city	.64	1.21	3.12

Such figures as these, not in Cleveland alone, but for dozens of cities, lead to the conclusion that the excess sickness and death in slum areas are not only morally and socially unjustifiable; they are also economically unsound. Getting rid of bad housing will not, of course, eliminate the need for free hospitalization and medical serv-

ices, but by helping to reduce to a minimum the necessity for such curative expenditures it can free money for the greater extension of preventive measures.

THE SOLUTION

Until recently local governments were unable to do much about wiping out such frightful conditions as these. Shrinking budgets and constitutional debt limits had their hands tied. Thus, while the victims of preventable diseases that flourish in slums went to their graves needlessly and by the thousands, the localities stood by, powerless to undertake a constructive solution to the problem which they all recognized.

But in 1937, armed with an array of startling statistics about the intimate relation between the state of the Nation's housing and the state of its health, communities from the Atlantic to the Pacific petitioned Congress for Federal aid to local slum-clearance and rehousing programs.

The facts they presented got results. With the creation of the United States Housing Authority, loans, annual contributions toward low rents, and technical guidance were made available to localities anxious to wipe out disease-ridden slums and build sanitary low-rent dwellings.

Today hundreds of local housing authorities in all parts of the country are planning, building, or actually managing such projects with U. S. H. A. assistance. Thousands of low-income families from the slums have already moved into healthful new homes that have been built to rent for no more—and sometimes for even less—than they formerly paid for substandard quarters. And thousands will soon follow them from miserable, congested lodgings into projects that mean a healthier, more hopeful way of life.

The new dwellings are designed, built, and maintained with an eye to minimizing the possibility of fires, falls, and other accidents that cause an untold number of injuries and deaths every year. The buildings are well-spaced, fire-resistant or fireproof materials are used, and safe and adequate exits are provided for use in case of fire.

Recreation areas, wading pools, and other play facilities in the new projects are enabling underprivileged children from the slums to develop sturdy young bodies through wholesome activities in sunshine and fresh air, far from the dark, cheerless alleys and the traffic hazards of the slums. Open areas and social rooms set aside for recreational and educational activities on the part of adults are helping to make it possible for them to become better, more energetic, more productive citizens.

Good housing is as essential to a family's well-being as adequate food and clothing. A decent, healthful home for every American family is no less essential to the Nation's health and happiness and to our effectiveness as a democracy.

Cost of Homestead Projects

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ARTICLE BY HARTLEY W. BARCLAY

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a most interesting article in the May issue of the Mill and Factory, with respect to the extravagance incident to the Federal construction operation of the homestead projects.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Mill and Factory for May 1940]

DEAD END IN UTOPIA—DISMAL COLLECTIVISTS FINALLY ABANDON FARM-FACTORY THEORIES AT HIGHTSTOWN, N. J., AFTER $4,000,000 EXPENSIVE LESSON IN INDUSTRIAL MISMANAGEMENT

(By Hartley W. Barclay)

The red sands of New Jersey embraced a little red schoolhouse of collectivism at Jersey Homesteads, when collective theorists founded the great industrial experiment in communal life, known as the Hightstown Project, in 1933. Conceived by Rexford G. Tugwell, matured directly from the White House in Washington, and sponsored by no less than the distinguished Dr. Albert Einstein and Jonah Wise, among others, this amazing venture into sovietized farmer-laborism has for many years provided an oasis of Marxist experimentation in the "deserts of New Jersey capitalism."

What more millions of Government cash were spent than the four millions recorded here are uncounted and known only to the tightmouthed directors of the project. They refuse to make public such matters of public interest as the almost unbelievable pyramiding of governmental gifts, upon grants, upon subsidies, upon mortgages, upon special allowances, upon relief payments and alleged diversions of funds. The most that is known about the project is available through picayunish details reluctantly provided to United States Senators and Congressmen who have demanded that the full facts be revealed about the operations of this closed shop, closed town. At last, however, a summary of the conclusions drawn from continued study of the project reveals that:

1. The project was a complete failure. Utopian objectives have vanished.

2. Government and labor combined, and luxuriously subsidized, could not replace the essential characteristics of management found in private industrial management and lacking here.

3. Private capitalism has been called in to resuscitate the deceased enterprise of the community.

4. Shiftlessness and laziness thrived and prospered.

5. American taxpayers are footing the bill.

You might even get somewhat critical of the practices in Utopia if you heard newspaper reporters ask the Federal Administrator whether any financial statement had been published on the operations of these interlocked corporations and they were told: "No statements have been published and none will be published if we can prevent it."

Then you might look over the utopian houses that cost over $20,000 each to build, according to Senator HARRY F. BYRD, although almost any private contractor would swear under oath that they could be readily built by private builders for $2,900 each. You would wonder at the terms under which the Utopianists purchased the buildings—at one-fifth their cost or less—for no money down, 3 percent interest and 40 years to pay, with no foreclosure in event of default on payments. For good will, loans are said to have been made to the colonists to even buy furniture.

Then, no matter whether you approved of the worthy objectives of part of the New Deal, and no matter whether or not you had ever been an enthusiastic helper in aiding Federal Housing or industrial preparedness you would say to yourself: "It's pretty tough for F. D. R. The boys have taken him for a ride again—and what a ride. This thing smells even worse than the N. L. R. B. It's too bad that liberalism has to hang itself so crudely when there are easier ways of committing suicide."

But the administration does not take adversity without clearing up the appearances of failure. And so on October 30, 1939, 80 percent of the equipment in the plant was sold by one branch of the Goverment to another branch, to whitewash the books.

OBJECTIVES OF UTOPIANISM

After reflecting upon the mess in which Utopia finds itself, you would go back down the road 4 miles north to Hightstown proper and talk to the local citizens. You would find them pretty sore about the whole thing. They would tell you that the experiment ruined local industry, that it ruined farm values in the region, that even the local school system was spoiled by the examples of waste and extravagance found at Jersey homesteads and that local fruit packing and truck gardening had dropped to the lowest ebb in some time. You would be told that dealers who sold cement to the project went to jail for flagrant grafting.

You would hear a lot of personal opinions about America's first lady of the land who sponsored the resettlement project plan and about her failure to keep the experiment on an even keel. You would hear unprintable remarks about some ex-new dealers formerly close to the throne. You would hear that local shops and enterprise had been stifled by the spreading of collectivist notions through the Jersey cooperatives sponsored by the Jersey homesteads citizens who boycotted local merchants to try new theories of production and distribution.

INTERLOCKING CORPORATIONS

Just as a matter of recapitulation, it is interesting to itemize a few of the many interlocking corporations with interlocking directorates which do not publicly file reports disclosing the sources of their funds or their operating statements, despite the fact that their funds were obtained largely from Federal sources. The list is incomplete and is merely representative of some of the superficial data gleaned from local villagers who have been barred from participation in the Federal largess.

Borough of Jersey Homesteads Corporation.
Consumers Wholesale Clothiers, Inc.
The Jersey Homesteads Agricultural Cooperative Corporation.
Worker's Aim Cooperative Association, Inc.
The Industrial Distributing Association.
Tripod Millinery Guild.
Jersey Homesteads Industrial Cooperation Association.
Jersey Homesteads Resettlement Administration.
The Jersey Homesteads Consumers Cooperative Association.
The Jersey Homesteads Consumers Services.

While this is only a partial list of the manifold organizations set up at Jersey Homesteads, it shows how thoroughly the settlers took to heart the encouragement of the Federal spokesmen in the early days of the venture when Washington sent up expert cooperative consultants to hold lectures in the factory week after week and to drill into the heads of the cooperators the necessity for organizing a wide variety of cooperative corporations.

Whether by accident or design, the result of this complicated set-up is to make it impossible to break down the distribution of their income from Federal sources.

The factory is owned by the Farm Security Administration. It has been leased on a 5-year lease to Kartiganer & Co., New York, at $1,800 per year, the company to take possession June 1. The Government includes in the lease the sewing and pressing machines which were repurchased at the auction last fall; therefore the company will face only a small capital cost in setting up operations in the plant. This proposal was the one selected by Mayor Philip Goldstein as the one most suitable to the colonists. This arrangement makes it possible for the manufacturer and the union and the colonists to keep other manufacturers from leasing the plant on better terms.

FACTS ABOUT THE FAILURE

The most outstanding fact about this failure of farmer-labor cooperation is that every family could have been given a $5,000 farm and $15,000 operating capital as a gift if the funds had not been dissipated on the experiment.

The land was purchased at a cost of $66.89 per acre, despite other properties selling in central Jersey for less. Foreclosed properties owned by Federal land banks were apparently not considered as suitable for the project. The general administrative expense from inception of the project to 1937 was half a million dollars, or approximately $2,500 per family, despite the expenditure of $167,347 by agencies prior to the Resettlement Administration. The big expense, however, which amounted to almost $4,500 per family was the high cost of planning. Deducting the expense of land acquisition, namely $84,538, the planning cost $863,000 up to 1937 alone. No details are given as to who planned what, or how the money was spent. In other projects of equal size planned by private industry the cost of planning seldom exceeds 5 percent. Since in this case the cost of planning, exclusive of administrative costs, was 900 percent of normal planning costs, the question arises of: "Who got the money?" Since administrative expenses were ample for all administrative operations, a great mystery is involved in where this money went. Naturally, the resettlers do not wish to publish their statements of accounts.

However, that is not half of the sorry tale of extravagance, waste, mismanagement, boondoggling, and favoritism. There remains an item of $2,335,383 for land improvement and construction. Deducting the cost of the factory which has been variously reported to have cost between $100,000 and $125,000 and which is the only really useful piece of property capable of industrial uitlization, the remaining balance of the expenditure of $2,210,000 presents another intriguing mystery. The cost of the factory averaged $5 per square foot. Similar factories built by private concerns to meet similar specifications cost $2 per square foot. If the main street of the borough had been paved exclusively with silver coins, there would be something at least to show for the expenditure. However, no detailed reports concerning these expenditures have been obtained beyond those published herewith for the first time. Up to June 10, 1937, on the surface it looks as though more than $11,075 per family had been spent in land improvement. This amount, if expended for direct relief per family at the rate of $1,000 per year per family would have provided direct relief for every family on the project from 1933 to 1944. As the case turned out, the money was spent as indicated, so W. P. A. had to come along with relief money to take up where the Resettlement Administration left off when their funds ran out.

Prefabricated wall material was to be turned out in still another housing factory erected at Jersey Homesteads, but after $300,000 had been sunk in the proposal the question of patent rights held by Simon Lake blocked further work, according to a reliable report.

In consideration of these elements of failure, it should be remembered that these cannot and should not be charged to the administration of W. W. Alexander, who as Farm Security Administrator, is now in charge of the properties. He deserves only high commendation for attempting to salvage some useful elements out of the wreckage left when the Utopian planners had finished.

But this story is not one intended to criticize the lease, to object to unions determining the disposal of Government property, or to drag in the names of high politicians who have been influential in working out deals for political purposes. It is only a simple recital of hard facts—uncolored by personal prejudices; uninfluenced by personal bias. There is a real lesson in this example of the failure of utopianism. It is such a simple and honest lesson that the meaning of the alleged graft, favoritism, and political machination involved is dwarfed by comparison. The story is an exposition of the fact that all of these forces—all the political pull, all the waste of taxpayers' money—cannot defeat the strength of private enterprise as a way of life here in America. There is more to the story which will never be told, perhaps. There is the part of the story which would reveal how the press has been excluded from access to the facts in the case. There is the part of the story of how the honest new dealers blush with shame at the perversion of true democratic ideals in this example. There is the part of the story in which the Administrator of the Farm Security Administration determined to stand up and take the consequences.

But the important point is that those who worked under cover to sell Marxism to government failed in their purpose eventually. They were defeated by themselves. And in this point there is a most important lesson to America. Private industry may not have all the answers to social problems. But it has the major answer—that no substitute way has been found; no synthetic daydream can substitute for hard work.

And so we come to the end of the story, and it is not a bad story. It is a real story—a true story—of Americans at work. It was a good thing to try the Hightstown experiment; it was good for Mrs. Roosevelt to sponsor resettlement. The spokesman for the project, who called it "the American way," was right. It is the American way. We must make our mistakes and pay for them. But what a small price compared to Europe with Stalin, Hitler, and war.

It is good for us to find out that there is no substitute for hard work, no "stand-in" for successful management. Here in a free country all theories have their chance. The millions were not wasted. They have only met dead end in Utopia.

Report on allotments, expenditures, and encumbrances, projects of Resettlement Administration as of June 10, 1937

JERSEY HOMESTEADS

	Allotments	Expenditures	Unliquidated encumbrances	Total expenditures and unliquidated encumbrances
Administrative planning and land acquisition	$947,034.01	$916,545.19	$28,840.44	$945,385.63
Management	24,039.84	19,686.99	3,092.89	22,779.88
Land improvement and construction	2,335,383.21	2,064,378.98	184,559.99	2,248,938.97
Inspection	27,270.00	17,190.62	1,608.22	18,798.84
Land cost	[1] 238.76		238.76	238.76
Household furnishings	3,200.00	1,818.79	196.57	2,015.36
Payment in lieu of taxes	5,686.00	3,937.20	1,025.30	4,962.50
Total	3,342,851.82	3,023,557.77	219,562.17	3,243,119.94
Estimated general administrative expense	522,414.20			535,212.08
Expenditures, prior agencies	[1] 167,347.63	165,716.26	1,631.37	167,347.63
Grand total	4,032,613.65			3,945,679.65
Number of housing units to be constructed	200			
Average cost per unit	$20,163.00			$19,728.00
Acreage of land acquired	1,278.74			
Cost of land acquired	$84,538.76			
Average cost per acre	$66.89			

[1] The table is as follows:

Land purchases were made as follows:	*Allotments*
Subsistence homesteads (1,274.98 acres)	$84,300.00
Resettlement Administration (3.76 acres)	238.76
Total (1,278.74 acres)	84,538.76

Senator Wheeler's Labor Record

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. EDWIN C. JOHNSON OF COLORADO

Mr. JOHNSON of Colorado. Mr. President, I desire to call attention to the outstanding record in behalf of working men and women made during the 17 years the Honorable BURTON K. WHEELER, of Montana, has served in the Senate. The plain, undramatic business of casting a vote day after day tells a dramatic story of unfaltering liberalism. "By their fruits ye shall know them," and Senator WHEELER's votes on matters of interest to labor trace the growth during two decades of the principles for which labor has fought. It is, I submit, a record of which any man might be proud and which few men in public life can duplicate. Because it is a unique story that those who are interested in labor will want to read I ask consent that it be inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

VOTING RECORD OF SENATOR BURTON K. WHEELER ON LABOR ISSUES

Sixty-eighth Congress, first session: On final passage of the joint resolution (H. J. Res. 184) providing for an amendment to the Constitution giving Congress the power to regulate or prohibit child labor, Senator WHEELER was paired (jointly with Senator Dill) against Senator Underwood for passage. On seven amendments designed to exempt certain types of employment from the resolution Senator WHEELER was similarly paired against their adoption.

Sixty-eighth Congress, second session: On an amendment to an appropriation bill to strike out the funds for operation of the Railway Labor Board Senator WHEELER voted "yea."

NOTE.—The Railway Labor Board, as a result of certain decisions and actions, had earned the opposition of railway labor groups, and the move to eliminate the Board was backed by all of the Senate liberals.

Sixty-ninth Congress, first session: On a resolution (S. Res. 134) requesting the President to invite committees representing the operators and miners in an effort to settle a strike in the coal industry, Senator WHEELER was not present for the vote (absent while engaged in an investigation), but was announced by a colleague as voting "yea" if present and able to vote.

On final passage of a bill (H. R. 9463) providing for the prompt disposition of disputes between railroad carriers and their employees, Senator WHEELER voted "yea."

Sixty-ninth Congress, second session: On a motion to dismiss impeachment proceedings against former Federal Judge George W. English, which was agreed to 70 to 9, Senator WHEELER voted "nay."

On the bill (H. R. 16866) which would provide loans to ex-service men on their adjusted-service certificates, Senator WHEELER voted "yea."

Seventieth Congress, first session: On an amendment (to a resolution, S. Res. 105) providing for an investigation of conditions in the coal fields of several States which sought to impede the investigation by requiring a study of coal freight rates, Senator WHEELER voted "nay." (The amendment was rejected 60 to 15, but the resolution passed without record vote and Senator WHEELER subsequently was named a member of the investigating committee.)

Seventieth Congress, second session: On final passage of the bill providing for construction of the Boulder Canyon Dam, Senator WHEELER voted "yea."

On an amendment to the Navy construction bill giving notice to the President that the Congress favored a treaty with the principal maritime nations regulating conduct of belligerents to be held prior to the Limitation of Arms Conference, Senator WHEELER voted "yea." On another amendment which provided that in the event of an international limitation of naval armament, the President be authorized to suspend naval building, Senator WHEELER voted "yea."

On a resolution providing for a multilateral peace treaty, Senator WHEELER voted "yea."

On an amendment to the Navy appropriation bill providing for withdrawal of United States Marines from Nicaragua, Senator WHEELER voted "yea."

On final passage of the bill to bar from interstate commerce all prison-made goods, Senator WHEELER voted "yea." Prior to passage Senator WHEELER voted "nay" on a motion which sought to pigeonhole the bill by referring it to committee.

Seventy-first Congress, first session: On adoption of the conference report on a bill providing reapportionment of Representatives under the forthcoming 1930 census, Senator WHEELER voted "nay." Prior to final approval there had been votes on numerous amendments. On the Sackett amendment to exclude aliens from the total count WHEELER voted "nay"; on the Blease amendment requiring registration of aliens WHEELER voted "nay"; on the Sackett amendment requiring census employees to be brought under the classified civil service WHEELER voted "yea."

On the resolution (S. Res. 19) providing for consideration of all nominations in open, public sessions of the Senate, Senator WHEELER voted "yea." On the Borah amendment which would have required that roll calls and a statement of the question considered in executive sessions be published in the RECORD (which was rejected) Senator WHEELER voted "yea."

Tariff: During consideration of a tariff bill in this session votes were had on some 40 separate amendments. Some of these amendments affected labor directly or indirectly. Senator WHEELER'S vote on these follows:

On an amendment authorizing a general election in the Philippines for a constitutional convention to provide for Philippine independence Senator WHEELER voted "yea."

On an amendment permitting importation of literary material Senator WHEELER voted "yea."

On an amendment requiring the Tariff Commission to furnish Members of Congress information on the cost of production of imported articles Senator WHEELER voted "yea."

On an amendment to create the office of Consumers' Counsel of the Tariff Commission Senator WHEELER voted "yea."

On an amendment modifying flexible tariff provisions to give Congress power over tariff rates Senator WHEELER voted "yea."

On an amendment to fix a duty on manganese Senator WHEELER voted "yea."

Seventy-first Congress, second session: On the Norris resolution to deny William S. Vare, of Pennsylvania, a seat in the United States Senate, Senator WHEELER voted "Yea."

On the Reed resolution denying William B. Wilson a seat in the United States Senate, Senator WHEELER voted "Nay."

On passage of a resolution (H. J. Res. 133) reducing the income tax, Senator WHEELER voted "Nay." On an amendment to the above resolution to appropriate $160,000,000 for post roads and buildings (which was rejected), Senator WHEELER voted "Yea."

On the confirmation of Charles E. Hughes to Chief Justice of the Supreme Court of the United States, Senator WHEELER voted "nay."

On the confirmation of John J. Parker to be an Associate Justice of the Supreme Court of the United States, Senator WHEELER voted "nay."

On a bill to establish a national employment system, Senator WHEELER voted "yea."

On a resolution (S. J. Res. 161) suspending authority of the Interstate Commerce Commission to approve consolidations or unifications of railway properties, Senator WHEELER voted "yea."

On passage over Presidential veto of a bill granting pensions to Spanish War veterans, Senator WHEELER voted "yea."

On final passage of the bill providing for service-connected disability for World War veterans, Senator WHEELER voted "Yea."

Seventy-second Congress, first session: On final passage of the bill (Norris-La Guardia Act) barring injunctions in labor disputes, Senator WHEELER voted "yea." On five amendments preceding final passage, each of which sought modifications of the anti-injunction provision, Senator WHEELER voted "nay."

On a bill (S. 3045) which would provide Federal aid to States for unemployment relief and road construction (which was rejected by the Senate), Senator WHEELER voted "yea." On an amendment which would provide loans instead of gifts of money to States, Senator WHEELER voted "yea"; on an amendment expanding the Public Works appropriation, Senator WHEELER voted "yea"; on an amendment requiring Governors of States to certify the need for Federal funds before receiving them, Senator WHEELER voted "nay."

The legislative appropriation bill (H. R. 11267) was a sharply controversial issue because of a program to reduce Government expenses. On an amendment to reduce Federal salaries by 10 percent, but exempting salaries below $2,500 from the reduction, Senator WHEELER voted "yea"; on an amendment to set up a graduated scale of reductions for all salaries beginning at $1,200, Senator WHEELER voted "nay"; on an amendment providing that no salary shall be reduced to less than $1,000, Senator WHEELER voted "yea"; on a committee amendment reducing all Federal salaries by 10 percent (which was agreed to), Senator WHEELER voted "nay"; on a motion to strike out the title relating to reduction in veterans' benefits, Senator WHEELER voted "yea." There was no record vote on final passage of the bill.

On the resolution (H. J. Res. 230) to authorize the Government to subscribe to R. F. C. capital stock there was no final record vote, but a number of amendments were voted. Included were three providing that no business which borrows R. F. C. funds may pay an officer an annual salary of more than $100,000, $75,000, or $50,000, all of which were rejected, but on all of which Senator WHEELER voted "yea."

On an amendment to an agriculture appropriation bill which sought to eliminate a prohibition against use of Federal funds to employ convict labor, Senator WHEELER voted "nay."

On a resolution (S. J. Res. 131) to provide rehabilitation of certain storm-stricken areas and relieve unemployment, Senator WHEELER voted "yea."

On a bill (S. 4860) providing for loans to States for relief of unemployment, Senator WHEELER voted "yea."

On final passage of the Smoot-Hawley tariff bill, Senator WHEELER voted "nay." Prior to final action record votes were had on 81 separate amendments relating to various duties imposed by the tariff act. Some of these amendments affected labor directly. On amendments to fix duty on boots and shoes for a countervailing duty on coal, to fix duties on felt and straw hats, to fix duty on matches, to fix duty on rayon, to fix duty on silver, to fix duty on white lead, to fix duty on varnishes, to fix duty on children's toys, Senator WHEELER voted "yea."

Seventy-second Congress, second session. On final passage of the bill (H. R. 7233) over Presidential veto granting independence to the Philippines, Senator WHEELER voted "yea."

On an amendment to a deficiency bill prohibiting tax refunds unless they are approved by the Joint Committee on Internal Revenue, Senator WHEELER voted "yea."

On an amendment to the Treasury-Post Office appropriation bill providing a 5-percent reduction in all appropriations for executive departments, Senator WHEELER voted "nay." On another amendment to the same bill forbidding wage cuts, or other reduced compensation or furloughs, Senator WHEELER voted "yea." On adoption of the conference report of this bill (which was rejected, largely because of a mandatory 8½-percent reduction in Federal salaries), Senator WHEELER voted "nay."

On a committee amendment to the unemployment relief bill (S. 5125) authorizing $500,000,000 R. F. C. grant to States to aid direct relief under administration of a Federal emergency relief board, Senator WHEELER was announced as voting "yea" if present.

On an amendment to a railroad bankruptcy act providing that claims for personal injuries to employees shall be preferred claims, Senator WHEELER voted "yea."

On the general revenue bill, increasing income and other taxes, Senator WHEELER voted "yea." Prior to final passage there were record votes on a number of important amendments. On the amendments to revise upward normal and surtax-income rates, to reinstate the 1918 income-tax rates, to sharply increase the income-tax rate on incomes above $10,000, to provide a 4 cent a pound duty on copper, to reduce the duty on crude petroleum, to provide an excise tax of 1 cent a pound on manganese, to eliminate the tax on checks below $5, Senator WHEELER voted "yea."

Seventy-third Congress, first session: On final passage of the bill (S. 158) providing for a 5-hour day and a 5-day workweek, Senator WHEELER voted "yea." On the Robinson amendment providing for a 36-hour workweek, Senator WHEELER voted "nay."

On the impeachment of Judge Louderback charged with improper and nonjudicial conduct, Senator WHEELER voted "guilty."

On an amendment to an appropriations bill to grant the President power to modify or cancel air-mail or ocean-mail contracts, Senator WHEELER voted "nay."

On final passage of the bill setting up the Tennessee Valley Authority, Senator WHEELER voted "yea."

On a committee amendment to section 7 (a) of the N. R. A. bill, which sought insertion of a proviso forbidding a change in existing employer-employee relations (regarded as a move to write into law the "yellow dog" contract), Senator WHEELER voted "nay." (NOTE.—This amendment was defeated largely as a result of a fight led by Senators WHEELER and NORRIS.)

On adoption of the conference report on the National Industrial Recovery bill (H. R. 5755), Senator WHEELER voted "nay." On an amendment to this bill, proposing a manufacturers' sales tax, Senator WHEELER voted "nay."

On final passage and adoption of the conference report on the bill (H. R. 3341) providing revenue by taxation of beer (repeal of the Volstead Act), Senator WHEELER voted "yea."

Seventy-third Congress, second session: On adoption of a partial conference report on the bill (H. R. 7527) making appropriations for civil works, Senator WHEELER voted "nay." On the Borah motion to reconsider the vote by which the conference report was adopted, Senator WHEELER voted "yea." On the amendment providing $2,500,000,000 for civil works, instead of $950,000,000, Senator WHEELER voted "yea." When this was rejected, WHEELER voted "yea" on another amendment to provide $1,500,000,000, instead of $950,000,000, which was also rejected by the Senate.

On consideration of the conference report on a deficiency appropriation bill, Senator WHEELER voted "nay." Prior to that action WHEELER had voted "yea" on an amendment providing $4,000,000,000 for public-works projects which was rejected by the Senate.

On the resolution proposing a constitutional amendment for the popular election of President and Vice President, Senator WHEELER voted "yea." (The resolution was rejected.)

On final passage of the bill to encourage housing and set up a system of mutual-mortgage insurance for construction of homes, Senator WHEELER voted "yea."

On passage, over Presidential veto, of the appropriations bill which restored the so-called economy reductions in salaries of Federal employees and the veterans' cuts, Senator WHEELER voted "yea."

On an amendment (to a resolution modifying certain labor provisions in the N. I. R. A. Act), providing that nothing in the resolution shall prevent or impede or diminish the right to strike, Senator WHEELER voted "yea."

On final passage of the bill (S. 3231), providing a retirement system for railroad employees and providing unemployment relief, Senator WHEELER voted "yea."

On the motion that the Senate consider the bill (S. 3266) to provide for the prompt disposition of railway labor disputes, Senator WHEELER voted "yea." (This was the test vote on this measure; there was no record vote on passage.)

On final passage of the Securities Control Act Senator WHEELER voted "yea."

Seventy-fourth Congress, first session: On final passage of the bill authorizing payment of the veterans' adjusted-service certificates Senator WHEELER voted "yea." Subsequently, on the vote to pass the bill over the President's veto, WHEELER voted "yea." (Motion to override the veto failed.)

On final passage of the Bituminous Coal Mining Act Senator WHEELER voted "yea."

On the motion that the Senate consider the 5-day week bill (S. 87), Senator WHEELER voted "yea." (This was a test vote and the Senate rejected consideration of the legislation.)

On two amendments to the Government contracts bill, setting conditions for wages and hours of labor on material bought by the Government, Senator WHEELER voted "nay." (The amendments were designed to weaken the bill; there was no record vote on final passage.)

On final passage of the Wagner labor relations bill (S. 1958), Senator WHEELER voted "yea."

On concurrence in House amendments to the so-called neutrality bill (S. J. Res. 173) prohibiting exportation of arms, ammunition, and implements of war to belligerent countries, Senator WHEELER voted "yea."

On final passage of the Public Utility Holding Co. Act (Wheeler-Rayburn bill), Senator WHEELER voted "yea." On two amendments designed to eliminate the so-called death sentence, WHEELER voted "nay."

On final passage of the bill (H. R. 8651), providing for a retirement system for railroad employees, Senator WHEELER voted "yea."

On final passage of the Revenue Act of 1935 Senator WHEELER voted "yea." Prior to passage WHEELER voted "yea" on the amendments requiring full publicity of income-tax returns, increasing surtaxes in the upper brackets, and barring issuance of tax-exempt securities

On final passage of the bill (H. R. 7260) providing for old-age assistance and unemployment compensation (Social Security Act), Senator WHEELER voted "yea." On amendments designed to strike out the old-age pensions section and to exempt certain employers who have annuity plans, WHEELER voted "nay."

On final passage of the bill (S. 2357) providing for operation of the Tennessee Valley Authority, Senator WHEELER voted "yea."

On final passage and adoption of the conference report on the so-called works-relief bill (H. J. Res. 117), appropriating $4,800,000,000 for general relief purposes, Senator WHEELER voted "yea." WHEELER voted "yea" on the amendment providing for payment of the prevailing wage; on the amendment barring use of any of the funds for construction of battleships or munitions of war; on the amendment that not less than $500,000,000 shall be used for construction and improvement of schools; on the amendment proposing repeal of that part of the N. R. A. which suspends operation of the antitrust laws. WHEELER voted "nay" on the amendment to make the appropriation $9,000,000,000 instead of $4,000,000,000, and on the amendment proposing liquidation of all Federal corporations and agencies created for the emergency period.

Seventy-fourth Congress, second session: On final passage of the bill providing for payment of the adjusted-service certificates (bonus) over the President's veto, Senator WHEELER voted "yea."

On the motion that the Senate consider the bituminous coal bill (test vote because there was no final record vote on final passage), Senator WHEELER voted "yea."

On final passage of a deficiency appropriation bill, which carried $1,425,000,000 for relief purposes, Senator WHEELER voted "yea."

On final passage of the low-cost housing bill (S. 4424) to provide aid in elimination of slum conditions and aid employment, Senator WHEELER voted "yea."

On the seven articles holding Judge Halstead Ritter to be guilty of improper practices, Senator WHEELER voted "yea."

On final passage and adoption of the conference report on Revenue Act of 1936, Senator WHEELER voted "yea."

Seventy-fifth Congress, first session: On final passage of the bill to establish a Civilian Conservation Corps, Senator WHEELER voted "yea." Senator WHEELER voted "nay" on an amendment which would have limited the life of the C. C. C. to 2 years.

On final passage of the Bituminous Coal Act (second coal bill), Senator WHEELER voted "yea."

On final passage of the fair labor standards bill (Wage and Hour Act) Senator WHEELER voted "yea." On the amendments which would have limited the law to employers of 10 or more, which would have exempted certain seasonal employees from the law, which would have embargoed certain foreign shipments, and which would have provided a substitute measure, Senator WHEELER voted "nay." On the amendments which provide for exemption of certain dairy employees from the maximum-hours provision, which exempt certain employees engaged in perishable agricultural commodities work and which would eliminate child labor entirely, Senator WHEELER voted "yea."

On the motion to recommit the bill limiting the length of freight trains (a test vote because no final record vote on passage was had), Senator WHEELER voted "nay." (Had the motion to recommit carried, the bill would have been killed.)

On two amendments to a relief appropriation resolution (H. J. Res. 361), which would have required the local community to supply 40 percent and 25 percent, respectively, of the cost of a project, Senator WHEELER voted "nay." (There was no final record vote on passage of the appropriation resolution itself.)

On the resolution (S. Con. Res. 7) calling upon the Senate to condemn sit-down strikes as illegal and contrary to sound public policy, Senator WHEELER voted "yea."

On the motion to recommit the bill (S. 1392) which provided for reorganization of the Supreme Court, Senator WHEELER voted "yea."

On final passage of the bill (H. R. 2518) providing for voluntary retirement of Supreme Court Justices Senator WHEELER voted "yea."

On an amendment to an appropriation bill providing for construction of a dam and investigation for sites for others in the Tennessee Valley project, Senator WHEELER voted "yea."

On the bill (H. J. Res. 96) extending the Reciprocal Trade Agreements Act, Senator WHEELER voted "yea" on an amendment which would have required trade agreements to be submitted to Congress for rejection within 30 days before becoming effective.

On an amendment to a War Department appropriation bill (H. R. 6992) providing that no funds therein provided shall be used for the support of any compulsory military-training course in any civil school or college, Senator WHEELER voted "yea."

Seventy-fifth Congress, second and third sessions: On the amendment to the second deficiency appropriation bill increasing funds for the Public Health Service from $1,500,000 to $3,000,000, Senator WHEELER voted "yea."

On the motion for Senate consideration of the Hatch clean-politics bill, S. 847, Senator WHEELER voted "yea." (This was a test vote because no final record vote was taken.) On an amendment before passage barring any officer or employee of the Government from being a delegate to a political convention, Senator WHEELER voted "yea."

On the conference report on the flood-control bill (H. R. 10618) authorizing construction of certain public works, Senator WHEELER voted "yea."

On final passage of the bill extending the Low Cost Housing Act, Senator WHEELER voted "yea." On an amendment providing for

prevailing rates of wages for all housing construction, Senator WHEELER voted "yea."

On an amendment to the naval appropriations bill, H. R. 8993, which would have provided that in all instances where possible ships be built in Government navy yards, Senator WHEELER voted "yea."

On adoption of the conference report on the bill which would extend the classified civil service to first-, second-, and third-class postmasters, Senator WHEELER voted "yea."

On final passage of the resolution (H. J. Res. 679) making appropriations for work relief, Senator WHEELER voted "yea." On the amendments providing for use of part of the sums for public works for flood control, that no part of the funds shall be used for any political purpose, that monthly payments under work relief shall not be less than $40, that $50,000,000 of the sum shall be devoted to the Federal Surplus Commodities activities, that no person in the Government paid by these funds shall take part in political activity, Senator WHEELER voted "yea." On amendments limiting the amount of relief funds and the period for which they shall be available that the funds for the National Resources Committee be tripled, that no funds from this appropriation be used for construction of power utilities, that all provisions for construction of public works be stricken from the bill, Senator WHEELER voted "nay."

On final passage of the bill (S. 3331) providing for reorganization of Government departments, Senator WHEELER voted "nay." Senator WHEELER voted "yea" on the amendments which would exempt from the effect of the bill the Biological Survey, the Civil Service, the Forest Service, the General Accounting Office, and also on the amendments which would require a 10-percent reduction in personnel expenditures, and requiring congressional approval of an Executive reorganization order.

Seventy-sixth Congress, first session: On final passage of the bill (S. 280) prohibiting block booking and blind selling in motion pictures, Senator WHEELER voted "yea."

On final passage of the resolution (S. Res. 126) providing for an investigation of violations of civil liberties, Senator WHEELER voted "yea."

On passage of the third deficiency bill, H. R. 7462, Senator WHEELER voted "yea" on the motion which sought suspension of the rules so that a prevailing-wage amendment might be offered, and "yea" on a motion which sought suspension of the rules for offering of an amendment for wage protection of work-projects employees.

On passage of the bill (S. 1100) to make appropriations for the Florida ship canal, Senator WHEELER voted "nay."

On final passage of a bill (H. R. 3791) authorizing further expenditures for national defense, Senator WHEELER voted "yea." On an amendment seeking to increase airplane authorizations from 5,500 to 6,000, Senator WHEELER voted "nay."

On final passage of the bill (S. 572) providing for the acquisition of various strategic materials necessary to national defense, Senator WHEELER voted "yea."

On the Regular Navy appropriations bill providing funds for operation of the Navy, Senator WHEELER voted "yea."

On final passage of the bill (S. 2009) providing for regulation of all forms of transport, Senator WHEELER voted "yea."

On an amendment to the resolution providing funds for relief, House Joint Resolution 83, to increase the amount from $725,000,000 to $875,000,000, Senator WHEELER voted "yea." (There was no final record vote on the resolution.)

On final passage of the resolution (H. J. Res. 326) making appropriations for relief and work relief, Senator WHEELER voted "yea." Senator WHEELER voted "yea" on the amendments which provided that 25 percent of cost of all non-Federal projects shall be borne by the States, that $400,000,000 shall be devoted to non-Federal projects and $100,000,000 to Federal projects, that loans may be made under the Farm Tenant Act from funds provided by this bill, that the sum for rural rehabilitation be increased by $30,000,000. Senator WHEELER voted "nay" on the amendment which would have required that employment on W. P. A. projects be determined on the basis of relative need.

On final passage of the bill H. R. 6635, which increases benefits under the Social Security Act, Senator WHEELER voted "yea." Senator WHEELER voted "yea" on the following amendments before final passage: On the amendment defining "employment"; on the amendment providing for increased authorizations for maternal and child health, vocational rehabilitation, and public health; on the amendment which would grant a Federal pension of $40 a month to all citizens over 60 years of age not gainfully employed; on the amendment requiring the Federal share for old-age assistance shall be not less than $10 per month.

On final passage of the bill providing for regulation of sale of securities and trust indentures in interstate commerce Senator WHEELER voted "yea."

On final passage of the truth-in-fabrics bill, requiring labeling to disclose substitutes in woven cloths, Senator WHEELER voted "yea."

On final passage of the so-called Works Financing Act (S. 2864), to finance a program of recoverable expenditures, Senator WHEELER voted "yea." Prior to passage, numerous amendments were considered. Senator WHEELER voted "yea" on the following: On the amendment granting funds to the Export-Import Bank for financing purchase of exportable commodities in this country; on the amendment requiring that the prevailing wage be paid on all projects; on the amendment reducing the amount for public roads from $2,390,000,000 to $1,890,000,000; on the amendment permitting R. F. C. to aid in financing the purchase of railroad equipment; on the amendment giving persons who have been in need of work for 3 months or more preference in employment.

On "Passing the Buck"

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1940

ARTICLE BY C. C. ISELY, OF DODGE CITY, KANS.

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith an article by Mr. C. C. Isely, of Dodge City, Kans.:

ON "PASSING THE BUCK"

(By C. C. Isely)

Six or seven years ago, many men high in public place in America were saying, "We need a dictator."

Today, not only do we have jitters about dictatorships abroad, but we are trembling lest, in case of war, we ourselves should fall into the hands of such monsters as those who now parade our planet.

Mussolini may have been right when he asserted that democracies are an extravagance, and sneered about their blundering. Yet we dare not relinquish ours for any such reason.

Within the year it has been asserted repeatedly that only pacifism and isolation from the affairs of the world could preserve our freedom and liberty, our representative government. Recent events seem to point that isolation may be untenable.

It is no use now to lament the failure to make a program to liquidate the economic consequences of the World War, although this failure is largely responsible for the economic hurricane in which the world's ship of commerce foundered, and out of which the dictatorships emerged. It is up to us to try to establish some safeguard in our American scheme that in all times, and especially in times of war, would preserve us from such as Il Duce or Der Führer.

The Constitution was the product of the experiences of history. Its makers knew of the Athenian law to forestall dictatorships which granted command of their armies to generals for 1 day only, and that Aristides, on the eve of Marathon, moved to suspend that rule in favor of Miltiades. They were familiar with Dictator Cincinnatus, who, after a military victory for Rome, relinquished his command to return to his farm, but when problems multiplied, Rome had its Caesar, dictator for life. They remembered, too, how that John Hampden challenged the tyrannical usurpations of Charles I. They recalled that dictators waxed strong from the poisoned springs of demagogery. For such reasons they established our constitutional division of powers.

To preserve that balance, the Supreme Court has frequently ruled adversely concerning delegated authority granted to the Chief Executive or to agencies created by the Congress. These assignments of congressional prerogatives have been a concession to efficient government. It is precisely at this point, the necessity for efficiency, that Congress has often relinquished powers entrusted to it by the Constitution. However, the boards and commissions thus created by Congress, and appointed by the President, have sometimes functioned in a cumbersome manner endeavoring to represent both the Congress which created them and the Executive who selected them.

The procedure of parliamentary governments with ministerial responsibility, developed in the school of trial and error, holds a suggestion that might be grafted onto our fixed constitutional system and better preserve the concepts of the founders of our Republic. Our Cabinet, as now existing, is a creation to deal with executive matters. Its advice may or may not be heeded. Lately the President has set up an extra cabinet which has functioned through Messrs. Moley, Tugwell, Hopkins, Cohen, Corcoran, and others, and it probably is very useful to him.

Why not establish another cabinet, a representative-executive cabinet of nine members? There should be the President and two others appointed by him, three Senators and three Congressmen, chosen by each of the Houses. This cabinet should have power to review and to approve or to overrule Executive orders having to do with delegated powers, especially with the broad grants of power essential in times of war. At all times such an arrangement should make for better understanding between the two operating branches of our Government. Each representative group could report back

to their respective bodies either in public or executive session such matters as might be asked for or concerning which the cabinet required advice. A vote in either House could recall their committee. Since House and Senate leadership would sit in this new cabinet, and being assured that granted powers could not be abused without their knowledge, generally more authority would be accorded to the Executive or to the bodies created to carry out congressional directions.

A vote to recall representation would not stop the clock, as it might come from only one House, but it would be a warning. France, with an entirely parliamentary government, is an example of how inefficient parliaments can be. In distress, they grant decree powers to the executive. The German Republic did just that for Bruening and then, alas, for Hitler. We have been on the borderland of according decree powers to our President. Department rules now have the authority of law.

Gov. Henry J. Allen, in exasperation, once said, "Government is the science of passing the buck." Mussolini must have overheard that remark. Some years ago it was the custom for the House to pass a bill expecting that the Senate would kill it. Later both Houses joined in, hoping that the President would veto measures enacted at the behest of pressure groups, or, if extraordinary powers were granted him, that he would not use them. Finally the hope lay in the Supreme Court. Recently, that decorous body has given evidence of passing the buck right back to Congress, where the fathers lodged authority. Only as a spasm can we expect that the Houses will assert their authority, and that negatively. We will be again just where we are.

If a cabinet as proposed were established, it should alleviate jealousies which in the past, many times, have created an impasse between the two operating branches of our Government. The plan should be made flexible so that its utility could be developed by experience. For special problems pertinent committee chairmen from either House could be called to advise, or department heads charged with the specific responsibility could sit in council. The President might see fit to draw his appointees from the floor of the Houses. This would assure greater cooperation. Governmental procedure could thus be made more efficient, red tape be reduced, buck passing discounted, congressional responsibility increased, the "with advice and consent" clauses of the Constitution be made effective, and dangers from Executive aggrandizement minimized.

The Wagner Act is a typical law where Congress, under the interstate commerce clause of the Constitution, delegated its authority. If a cabinet as set forth above had been set up, it is hardly conceivable that the real or alleged abuses of the National Labor Relations Board would have occurred without being called to account. To preserve representative government we must not only make executive departments effective, we must keep a check on delegated powers to prevent a possible seizure of all the prerogatives of state by an individual or by a group.

The Public's Money

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

EDITORIAL FROM THE FT. WAYNE (IND.) JOURNAL-GAZETTE

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Journal-Gazette (Democrat), of Ft. Wayne, Ind., of May 7, 1940:

[From the Ft. Wayne (Ind.), Journal-Gazette of May 7, 1940]

THE PUBLIC'S MONEY

Men, sane men, usually are careful about their own money. Put them in charge of other people's money, and see how careless they become.

Consider legislators. Upstanding citizens, elected to the general assembly or to Congress, pinch a pretty penny—as long as the pretty penny is their own.

But send them to the legislative halls, and almost without exception they spend the taxpayer's hard-earned dollar with seeming ease.

Why? Pressure groups are partly responsible. Schemers who have developed fly-by-night "save by spending" notions are partly responsible.

But, at root, the fault lies with the legislators themselves.

Too much of the time, they're so confoundedly interested in reelection that they forget the voters who elected them the first time.

Do you know how hard it is to earn a dollar?

Have you ever earned one?

If so, then you are in a good position to contrast the sweat you bled in order to accumulate a little money and the suddenly acquired largesse of the legislative gentry.

Government cannot be 100 percent good unless it is economical.

Government cannot be altogether bad if the people's servants pinch a penny once in a while, the way they used to do back home.

Don't forget. Most of the liberal governments in the world have been wrecked on the shoals of loose fiscal policy.

In order to be entirely successful, democracy must be economically sound.

Citizenship Day—Rights and Duties of American Citizenship

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

Mr. SMITH of Washington. Mr. Speaker, yesterday was celebrated as Citizenship Day by proclamation of President Roosevelt pursuant to act of Congress, and everywhere fitting ceremonies were held in honor of the youth of our land who have attained voting age and of those citizens who have become naturalized. I was happy to have had the privilege of cooperating with my colleagues in the House in the enactment of this legislation and the designation of Citizenship Day.

Those actively interested in this movement suggested as a pledge of citizenship the "I Am an American" creed, which reads as follows:

I am an American!
The Golden Rule is my rule!

In humility and with gratitude
I acknowledge my undying debt
To the founding fathers
Who left me a priceless heritage
Which now is my responsibility.

With steadfast loyalty,
I will uphold the Constitution
And the Bill of Rights.

I will treasure my birthright
Of American ideals:
I will place moral integrity
Above worldly possessions.

Problems of interest to my country
Shall be of interest to me!

I will count my right of suffrage
To be a sacred trust.
And I will diligently strive
To prove worthy of that trust.

I will give my full support
To upright public servants,
But those with unclean hands
I will firmly oppose.

Each obligation that comes to me,
As a true American,
I will discharge with honor!

My heart is in America,
And America is in my heart!
I am an American!

It has always seemed to me that one of the finest expressions of a true spirit of Americanism is set forth in the preamble to the constitution of the American Legion:

For God and country, we associate ourselves together for the following purposes: To uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a 100-percent Americanism; to preserve the memories and incidents of our association in the Great War; to inculcate a sense of individual obligation to the community, State, and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice,

freedom, and democracy; to consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

The American's Creed, written by William Tyler Page, is beautiful and in more condensed form:

THE AMERICAN'S CREED

I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign States; a perfect Union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies.

As an example of today's need, the final paragraph of the dedication of senior Boy Scouts is most timely:

I will work for America and will guard our heritage—its liberties and responsibilities—realizing that the privileges we enjoy today have come as a result of the hard work, sacrifice, faith, and clear thinking of our forefathers, and I will do all in my power to transmit our America, reinforced, to the next generation.

There has never been a period in our national history when we had more reason than the present to repeat from the bottom of our hearts the words uttered by Daniel Webster at Charlestown, Mass., June 17, 1843, at the completion of the Bunker Hill Monument. "Thank God—I—I—also am an American." The many reasons why this is so are well stated in the following editorial published in the New York Sun of September 4, 1939:

HE IS AN AMERICAN

He is an American.

He hears an airplane overhead, and if he looks up at all, does so in curiosity, neither in fear nor in the hope of seeing a protector.

His wife goes marketing, and her purchases are limited by her needs, her tastes, her budget, but not by decree.

He comes home of an evening through streets which are well lighted, not dimly in blue.

He reads his newspaper and knows that what it says is not concocted by a bureau, but an honest, untrammeled effort to present the truth.

He has never had a gas mask on.

He has never been in a bombproof shelter.

His military training, an R. O. T. C. course in college, he took because it excused him from the gym course, and it was not compulsory.

He belongs to such fraternal organizations and clubs as he wishes.

He adheres to a political party to the extent that he desires—the dominant one, if that be his choice, but with the distinct reservation that he may criticize any of its policies with all the vigor which to him seems proper—any other as his convictions dictate, even, if it be his decision, one which holds that the theory of government of the country is wrong and should be scrapped.

He does not believe, if his party is out of power, that the only way in which it can come into power is through a bloody revolution.

He converses with friends, even with chance acquaintances, expressing freely his opinion on any subject without fear.

He does not expect his mail to be opened between posting and receipt nor his telephone to be tapped.

He changes his place of dwelling and does not report so doing to the police.

He has not registered with the police.

He carries an identification card only in case he should be the victim of a traffic accident.

He thinks of his neighbors across international borders—of those to the north as though they were across a State line rather than as foreigners—of those to the south more as strangers, since they speak a language different from his, and with the knowledge that there are now matters of difference between his Government and theirs, but of neither with an expectancy of war.

He worships God in the fashion of his choice, without let.

His children are with him in his home, neither removed to a place of greater safety, if young, nor, if older, ordered ready to serve the state with sacrifice of limb or life.

He has his problems, his troubles, his uncertainties, but all others are not overshadowed by the imminence of battle and sudden death.

He should struggle to preserve his Americanism with its priceless privileges.

He is a fortunate man.

He is an American.

I cordially greet the fortunate young men and women in my district who have just attained their legal majority and will vote for the first time this year and those citizens of foreign birth who have recently become naturalized. I welcome each and every one of them to the duties and obligations and privileges of citizenship in the greatest republic and grandest nation on earth.

Facts a Lot of People Want a Lot of People To Forget

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

ARTICLE BY JOHN T. FLYNN

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I want to call attention of the House to the following article by John T. Flynn, appearing in the Washington Daily News. Unlike many of the jittery gentlemen writing for Eastern newspapers, Mr. Flynn has retained his sense of proportion and his patriotic devotion to the great existing problems of the Republic. I am sure you will be interested in Mr. Flynn's discussion of what he so effectively refers to as "facts which a lot of people have a tremendous interest in keeping a lot of other people from thinking about." I am sure, too, that most of the citizens of your district and mine want us to do some serious thinking about these facts.

[From the Washington Daily News]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, May 18.—Here are a few facts which a lot of people have a tremendous interest in keeping a lot of other people from thinking about.

Unemployed: 10,000,000 people.

Business index: January 1—107; May 11—94.

Public debt: May 1939—$40,155,000,000; May 1940—$42,730,000,000.

Government deficit this year to date: $3,222,000,000.

New securities: 1930—$4,483,000,000; 1940—$371,000,000.

One might go on with this melancholy catalog, such as that bank loans are hardly more than they were in 1933 at the bottom of the depression and that new security issues are actually less than they were in 1932 close to the bottom.

Now, if you were in power and had promised to clear up and clean up all this stagnation and distress and had to look at these dismal statistics, what would you think? You would think it an excellent thing to get people to quit looking at them and fretting about them and remembering them.

And now comes Mr. Hitler and wipes this all out of the minds of people. And a vast panic is worked up by: (1) Those who think we ought to go into Europe to save the British Empire; (2) the various foreign groups and their leaders (like Mr. Van Loon, a spokesman for the Dutch in America) who think the United States ought to go to Europe to save Holland or Poland or other countries from Germany; who think not in terms of American interests but in terms of their foreign allegiances and sentiments; (3) the politicians who want to get the minds of Americans off our own domestic problems which they do not know what to do about.

I do not want to do any plugging for any candidate for the presidency, and certainly not for Mr. Wendell Willkie. But it must be said that he puts the question very well when he says: "It is useless to talk about loans to the Allies now, since they have money and cash credits here enough to buy more goods than we can possibly manufacture and sell to them for a number of months.

"It is also unimportant to raise the naval appropriation or the Army appropriation for our own country, since the orders already placed are far in excess of our own productive capacity to fill.

"What we must have in this country above everything else is prompt domestic recovery."

But suppose you do not know how to produce domestic recovery? Suppose you have been in office for 7 years and are no further along than the doleful figures at the head of this piece indicate. And suppose an election is right ahead and you are just utterly stumped what to do.

Then what do you do? You work up excitement. You clamor for billions to build ships which cannot be built because the shipyards are crowded. You yell for planes which you cannot produce because the productive capacity of the plants is occupied turning out planes for Europe—and ourselves. You holler for arms although the arms plants are working day and night. What else is there to do?

The Logan-Walter Bill—A Step Back Toward Popular Government

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

ARTICLE FROM THE WASHINGTON STAR AND EDITORIAL FROM THE NATIONAL GRANGE MONTHLY

Mr. MUNDT. Mr. Speaker, there has been a studied effort by some of the opponents to the Logan-Walter bill to confuse the issue involved. For example, these opponents have resurrected a speech by Chief Justice Hughes pertaining to local affairs in New York given in 1907—before some Members of this present House were even born. They have tried to show that this ancient speech might indicate the Chief Justice's opposition to the bill. I do not fall into the error of such opponents by trying to speak for Mr. Hughes, as only he knows what his opinion is of the bill. A recent article has been prepared, however, by the man who more than anyone else is responsible for what is now the Logan-Walter bill. I refer to my friend, Col. O. R. McGuire, a committee chairman of the American Bar Association and general counsel of the American Good Government Society. I therefore quote in the RECORD at this point this article in which Colonel McGuire cites Hughes' 1931 views on administrative law; and also another article on the same topic from the National Grange magazine:

[From the Washington Star of May 12, 1940]

ATTORNEY TAKES ISSUE WITH COLUMNIST ON LOGAN-WALTER BILL—PURPOSE IS TO PREVENT THWARTING JUDICIAL REVIEW, HE WRITES

TO THE EDITOR OF THE STAR:

The Logan-Walter administrative law bill, which passed the House of Representatives recently with 282 members in favor of it, as compared with 97 against it, is termed by Columnist Charles G. Ross in the Evening Star of May 8, 1940, as "a court-packing scheme in reverse" and a device which would "subject the administrative branch to a court censorship as disruptive of the proper distribution of governmental powers as would have been the court-packing proposal." He further says that this Logan-Walter bill would "give the courts an unprecedented and wholly unwarranted power over the day-to-day functioning of the affected agencies." These statements are such that issue must be taken with Mr. Ross.

The ill-fated court-packing scheme, which I am glad to see that Mr. Ross apparently condemns, originated in the Federal bureaucracy. That bureaucracy is fighting the Logan-Walter bill. The court-packing scheme was an attempt to enlarge the Supreme Court of the United States so as to provide places on the bench for sufficient additional judges in favor of certain administrative policies that there would be a pro-Government majority on that great court large enough to reverse some decisions with which the bureaucracy did not agree. The time-honored and constitutional method of changing the Constitution and the statutes was not attempted because it was claimed that the constitutional method was too slow, but the real fact of the matter was and is that the constitutional majorities could not be secured to support such a change, as was proven when the court-packing scheme was condemned from one end of the country to the other and was defeated in the Congress.

ATTEMPTED TO SUBSTITUTE RULE

Instead of a rule of law, the Court-packing scheme attempted to substitute a rule of men, apparently upon the pattern of Nazi Germany, where the court of appeals at Breslau has stated in an opinion that:

"Today's constitution is dominated by the principle of political leadership. The courts have, therefore, no right to decide upon the legal validity of political acts of the administration. Any such decision would be incompatible with the order of the National Socialist state."

This same political and administrative domination of the courts in Nazi Germany was expressed by the Reich law leader, Dr. Hans Frank, in an address of 1936 to the conference of German judges, as follows:

"The party program * * * is the guiding line for decision. * * * Say to yourself at every decision which you make: How would the leader (Adolf Hitler) decide in your place? In every decision to which you are obliged ask yourselves: Is this decision compatible with the National Socialist conscience of the German people?"

The American Bar Association and many State and local bar associations fought the Court-packing scheme to defeat. The same association and a large number of State and city bar associations, as well as national business, patriotic, and labor organizations, are supporting the Logan-Walter bill as vigorously as they fought the Court-packing scheme.

The Logan-Walter bill leaves the Federal administrative agencies just as free as they now are to execute, prosecute, and decide, provided always that they function within the terms of the Constitution and the statutes. Unless they travel outside the statutes the judicial review provisions of the Logan-Walter bill will not touch them. Instead of attempting to substitute a rule of men, as might have been the effect of the Court-packing scheme, the Logan-Walter bill would insure a rule of law by compelling the army of administrative officers and employees to remain within the terms of the Constitution and the statutes. These men, servants of the people, have no reservoir of undefined power. They have no power except that conferred by statutes, and what the statutes have given they may take away or circumscribe as the Congress may see fit. The Logan-Walter bill is indeed in this respect a court-packing scheme in reverse.

QUOTATIONS DO NOT APPLY

Mr. Ross has quoted from a 1907 address by Chief Justice Hughes when he was Governor of New York, but the statements so quoted from the distinguished lawyer, judge, and administrator have not the slightest application to the issue involved in the Logan-Walter bill. Governor Hughes appears to have said:

"You must have administration, and you must have it by administrative officers. You cannot have it otherwise."

This statement is, of course, too true for argument, but as I have above stated the Logan-Walter bill does not attempt to have administration by the courts. Mr. Ross confuses administration or execution of the statutes with the exercise of wholly different powers—the power to legislate, through the issuance of rules and the power to judge, through the decision of particular controversies. The legislative power and the judicial power have been conferred by the Constitution on the Congress and the courts, respectively. It is merely a matter of convenience that the administrative agencies are permitted to exercise some legislative power as to the details of statutes and that they are permitted to judge in the first instance controversies which normally would be for decision by courts. Even the lone dissenting member from the Senate and House Judiciary Committee's reports in support of the Logan-Walter bill declared in his dissenting report that one administrative agency, which he named, "has overridden the plain intent of the basic statute creating it" and "has sought to legislate and replace Congress." He was equally critical of other named agencies.

PUTS US TO NEW TEST

Chief Justice Hughes stated in 1931 before the Federal Bar Association with respect to the judging power of administrative agencies that—

"The power of administrative bodies to make findings of facts which may be treated as conclusive, if there is evidence both ways, is a power of enormous consequence. An unscrupulous administrator might be tempted to say: 'Let me find the facts for the people of my country and I care little who lays down the general principles * * *.' But these new methods put us to new tests, and the serious question of the future is whether we have enough of the old spirit which gave us our institutions to save them from being overwhelmed."

Former judge and later Gov. Nathan L. Miller, of New York, stated in an address of July 2, 1938, before the New York Bar Association that in proceedings before Federal administrative agencies:

"The decisive question involved is usually a question of fact. The members of these tribunals can observe the forms of due process and still get some evidence into the record to support what they have decided to do. Under the present practice they ought to score a hundred percent of affirmances. If they do not it can only be because of their contempt even for the forms of law. In fact the present limited review is as a rule a vain and idle effort and gives their proceedings a purely fictitious appearance of fairness."

In exercising judicial power the administrative agencies should be required to observe a few basic principles of procedure as stated in the Logan-Walter bill, and the reviewing courts should have sufficient jurisdiction to prevent the administrative agencies from doing what Chief Justice Hughes and Governor Miller have stated that they could do—and which we lawyers with long experiences within and without the Federal service know that these administrative agencies do in some cases and may do in almost all of them.

There is no sound argument to support the conclusion that these agencies should be free to follow any general procedure they may see fit in reaching quasi-judicial determinations and that when they reach such determinations they should not be reviewed by the courts to the extent that they have reviewed trial courts in equity, admiralty, and law where the trial judge hears the case without a jury.

The crux of the opposition to this bill is in this provision which would widen the scope of judicial review to the extent that the trial courts are reviewed, but not to the extent that orders of the Interstate Commerce Commission are reviewed in reparation cases.

I commend to all the statement made by Governor Miller in the above-referred-to address that there are men in this country who think that we have outgrown the Constitution and that:

"By the process of trial and error administrative law has been hit upon as the most effective weapon to destroy our institutions. Through its channels those who have been well called termites, can safely attack the foundation of our American system, for it has been discovered that administrative law screens them from judicial scrutiny. Oh, I know that when one is swelled with arrogance, oversteps the forms of due process, he may escape the judicial eye, but most of them are clever enough scrupulously to observe all the forms of due process, while disregarding the substance, of due process, and they can do it in such a way as to thwart judicial review, as we all know."

PURPOSE OF LEGISLATION

The purpose of the Logan-Walter bill is to prevent the administrative agencies from thwarting judicial review in their exercise of quasi-legislative and quasi-judicial power. That is all there is to the bill. Would Mr. Ross have less? Evidently he would, or he does not understand the bill.

Mr. Ross might well read the opinion of May 7, 1940, of the United States Circuit Court of Appeals at San Francisco as to one of these administrative agencies where the court declared that it was "grasping for power" which was "to be expected" in a philosophy of "administrative absolutism" and that it was the duty of the court "to curtail this inevitable overreaching" as "one of the first necessities of a democratic government."

Yes; the judges who wrote that opinion were appointed by President Roosevelt.

O. R. McGUIRE,
Chairman, Special Committee on Administrative Law, American Bar Association.

[From the National Grange Monthly for March 1940]

THIS MEASURE LONG NEEDED TO CURB POWER OF THE GOVERNMENT, OTHERWISE A PEOPLE'S LIBERTY IN DANGER

One of the most meritorious measures now pending in Congress, and which is scheduled to come up on a final passage in the near future, is a bill placing definite checks and limitations upon the powers of the many administrative agencies of the Federal Government. This bill was sponsored by Representative FRANCIS E. WALTER, Democrat, Pennsylvania and the late Senator Marvel M. Logan, also a Democrat, of Kentucky.

The bill provides that administrative rules implementing Federal legislation must be issued within 1 year after the enactment of the statute upon which they are based; that they may be issued only after public notice and hearings; that affected parties may obtain hearings upon requests for reconsideration of any rule; and that the Federal Court of Appeals for the District of Columbia shall have authority to determine whether any rule conflicts with the Constitution or violates the statute under which it was issued.

SUPPLIES LONG-FELT WANT

That there has been a crying need for legislation of this sort, particularly during recent years, cannot be doubted. There is entirely too much department-made law in this country. In clarifying this statement it should be said that in many instances when an act is passed the agency which is to administer it is given authority to make rules and regulations for its enforcement. These rules and regulations have the force and effect of law. Often there is no appeal to the courts from the decisions of these administrative agencies.

How these powers are sometimes abused was well illustrated recently in connection with hearings being conducted by the special House committee investigating the National Labor Relations Board. In questioning J. Warren Madden, Chairman of the Board, the committee learned that the Board made a ruling requiring a certain company to pay back wages to two men who had never been employed by the company before, on the ground that the men had been refused employment by reason of their membership in a labor union. The company was ordered to give the men jobs and also to pay them wages for the interval of time that had elapsed between the time the men applied and the time the Board made its ruling.

Under the Wagner Labor Relations Act, if the men in question had been dismissed for union activity it would have been legal for the Board to order their reinstatement, and the men would have been entitled to back pay if the Board had so ruled.

If any better way to destroy private enterprise could be conceived than the ruling of the National Labor Relations Board in this connection, it is difficult to imagine what it might be.

This is only one of many instances that might be cited to illustrate the wholly unreasonable length to which administrative officials of the Government sometimes go in making rulings and decisions in carrying out legislation enacted by Congress.

GOVERNORS MUST BE GOVERNED

In recommending the passage of the Walter-Logan bill, the House Judiciary Committee declares that the law must provide that the governors shall be governed and that the regulators shall be regulated if our present form of government is to endure. Continuing, the report of the committee declares:

"The phenomenon of the administrative officers and employees, the so-called bureaucracy, attempting to control all processes of government for their selfish ends is not new, either in this country or in the history of the world.

"The modern-day problems of government are entirely too technical to be performed in many cases by the untrained, and hence it is not possible to emulate the practice in the comparatively simple ways of President Jackson, in discharging all employees in responsible administrative positions and turning the machinery of law administration over to a newly appointed group of officials freshly drawn from the people.

"In order to secure and retain the services of competent people to man the administrative agencies of government, we have been compelled to establish a career service under civil service; but there is no gainsaying the fact that with competency and long tenure of office we also secure employees who tend in some cases to become contemptuous of both Congress and the courts, disregardful of the rights of the governed, and for lack of sufficient legal control over them, a few develop Messiah complexes. They honestly and fervently believe that their mission in life is to at least reform the United States, regardless of the terms of the statutes, the Constitution, or anything else."

There can be no doubt whatever that the enactment of the Logan-Walter bill would provide a powerful stimulus to economic recovery and would go a long way toward reestablishing respect for government among the rank and file of the people of the United States. Those who hold public office must be given to understand that they are the servants of the people and not their masters.

"Blitzkrieg" Approaches

EXTENSION OF REMARKS
OF
HON. EDWIN A. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1940

EDITORIAL FROM THE DEPOSIT (N. Y.) COURIER

Mr. EDWIN A. HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Deposit (N. Y.) Courier:

[From the Deposit (N. Y.) Courier]

"BLITZKRIEG" APPROACHES

The hour of decision for the continent of Europe, in fact, for the whole world came at dawn on last Friday, when Germany invaded Holland and Belgium in a desperate bid for victory. Discretion has been thrown to the wind. The time has now passed when we in America can say "this affair in Europe is no concern of ours." From this day until this world war is over this struggle vitally affects the dreams, the hopes, and the religion of every individual in this country.

The reckless assault on small countries, the unrestrained bombing of open towns and civilians have demonstrated that Hitler and his German Army will stop at nothing.

As a democracy, we are a people divided in thoughts and opinions on many subjects. We naturally believe in the power of public opinion, and regardless of background there have always been influential groups in the democracies who believed that Hitler in his course of destruction would shrink before this last of barbarities known to demons.

All the glorious monuments of the past, historic cities, and the homes and lives of peaceful citizens are threatened. This threat is not alone against the British Empire. It includes the United States of America. The Voice of Destruction has been set forth in no uncertain terms by Herman Rauschning. We commend to you the reading of the observations by this man, who revolted from Hitler's party because of the complete recklessness and irresponsibility, the moral insanity of the Nazi leaders. Now we know that the observations of Rauschning and others are true. You will find a copy of this book in our village library. If you would know the truth about the awful destruction that lies ahead for the civilization of the world when madmen control the instruments of science and industry, we suggest you read The Voice of Destruction when Hitler speaks.

When brutality outruns morality then our scientific advancement turns the world into a slaughterhouse instead of a haven of happiness and individual safety.

A totalitarian regime is the most efficient machine that can be devised for seizing power and converting a whole nation into a war camp, because it does not take its own people into its confidence. The processes of democracy are designed primarily for peace, not war. Therefore, it is natural to expect spectacular successes of the German arms in the early months of war, while the moral forces of democracy organize their resistance to aggression. Eventually right can and will be victorious but the price we will have to pay to preserve our liberties is colossal. This is no time for complacency in the face of the growing menace of totalitarian armaments.

The "fifth column" has been an active factor in the invasion of the Scandinavian and Low Countries. We in America are not free from an active German "fifth column." There is such a well-organized unit in every neutral country of the world.

Some of the weaknesses of democracy are inherent in the system itself. This is a time for frankness in our domestic politics. We do not know nor appreciate the truth about the trifilings with our liberties and future happiness on the part of our own leaders. Our New Deal ventures have often been cheap copies of totalitarian ideas. Fortunately, we have a chance this year to vote for a return to domestic sanity.

For several years we have abused all those who took an international view of things, under the arguments of the isolationists. An internationalist has an appreciation of the world in which we live; an isolationist is a destructionist. In this day there is no such thing as "minding our own business" and having security and peace. Witness Finland, Norway, Holland, Belgium, and Luxembourg.

The war in Europe is fast becoming our concern, whether we like it or not. The main objective seems to be to cross Holland and Belgium and thus obtain suitable bases for an invasion of Great Britain. Beyond England lies Canada and the United States. Such a statement may seem absurd to those with the outlook of an ostrich.

The lesson is clear. We must have a united domestic situation and we must go in for a real program of armament. We must grant credits and give material assistance to the Allies, who are fighting for the defense of institutions we consider essential in this Democracy. Should they fail, our borders will become the first line of defense. What is happening in Europe is of very great concern to all Americans.

National Defense

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 20 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE WASHINGTON TIMES-HERALD AND OTHER DATA

Mr. LUNDEEN. Mr. President, in this morning's Times-Herald, on the editorial page, we find a quotation from George Washington's Farewell Address. I ask that this editorial and quotation, together with information on the strength of the Army and the expenditures we have made for defense, be inserted in the RECORD.

The statement from the Farewell Address is as follows:

Excessive partiality for one foreign nation and excessive dislike for another cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other.

That statement is from the Farewell Address, and then follows the editorial, which I ask unanimous consent to have included in the RECORD. I wish to say that the Times-Herald deserves credit for so frequently printing this excerpt from the Farewell Address of that great American, the Father of his Country, warning us about excessive partiality for any foreign country—warning us not to take sides.

I ask that the editorial and the other matter I have submitted, together with an article from page 7 of the Times-Herald of today, be printed in the Appendix of the RECORD.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of May 20, 1940]

George Washington said:

"Excessive partiality for one foreign nation and excessive dislike for another cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other."—From the Farewell Address.

DEFENSE, 1933 TO 1940

The President has asked for almost $1,200,000,000 extra defense spending as fast as we can efficiently spend it.

WHERE THE MONEY WENT

His political enemies have begun to object, as loudly as they have the nerve to, that the New Deal has spent almost six and one-half billions on national defense in 7 years and that the Nation has next to nothing to show for all this outlay of money.

It isn't really as bad as all that. And it seems to us that people who try to alarm the general public by painting the national defense picture darker than it is in reality do the general public a distinct disservice.

Here are some figures, gathered by the United Press, on our national defense as it was in 1933 and as it is now:

	1933	1940
NAVY		
Battleships	15	15
Aircraft carriers	3	5
Heavy cruisers	11	18
Light cruisers	10	17
Destroyers	229	219
Submarines	82	95
Aircraft	933	2,863
Active manpower	90,150	145,400
Navy Reserves	39,935	55,085
Marines	13,600	25,000
ARMY		
Aircraft	1,497	2,700
Active manpower	134,085	[1] 241,000
National Guard	189,000	251,000
Reserves	125,000	144,714
Motor vehicles	9,505	17,791
Tanks, etc	(2)	700
Antiaircraft guns	(2)	400
Antitank guns	(2)	744

[1] This figure believed slightly in error; our best information is that correct figure is 227,000.

[2] Virtually none.

It is further pointed out that, while the net warship increase in 7 years has been 19 vessels, the Roosevelt administration has actually built 130 warships. The bulk of this construction has replaced vessels that became obsolete under the anti-Navy policy of the Coolidge and Hoover administrations.

The fact is that our Army, such as it is, is in fair shape, though it needs the thoroughgoing expansion and modernization that the President now proposes to give it. The fact further is that our Navy is in better shape and is bigger and more powerful than it ever was before in our whole history.

However, the British Navy is being whittled down a bit by land-based bombers of the German air force. We don't believe the German claims, many of which are clumsy fabrications on the face of them, but it appears to be a fact that land-based German dive bombers have sunk or badly damaged several smaller British fighting ships.

Our Navy is now out near Hawaii (exact location kept secret), which we believe is where the bulk of it should stay for some time to come.

BOMBERS VERSUS BATTLESHIPS

Since the beginning of the biggest battle in the history of Europe on May 10, 1940, the clamor has been growing in favor of sending our Navy, or a large part of it, to the aid of the Allies in the Atlantic. Some people would even like to see it take up duty in convoying another A. E. F. to Europe—though how we could raise another A. E. F. in less than 2 years is not explained.

FRONT DOOR, BACK DOOR

We should think a long time before sending any valuable part of our Navy anywhere near Europe.

Suppose we should expose it to Germany's land-based bombers. If the German claims are true, we'd lose several battleships and innumerable destroyers and quite a few cruisers. Even if the German claims are as phony as we think they are, the bombers would whittle down our Navy, as they are doing to the British Navy.

If the process went on long enough, we'd be whittled down to a naval strength inferior to that of Japan.

Where would we be then? We at least know where the Japanese Navy would be shortly after it got the glad tidings. It would be making for Hawaii, probably picking off the Philippines with a

destroyer flotilla. Having sent our sea-fighting strength out our front door, we'd have invited Japan to move in at our back door.

This is the A No. 1 argument against American intervention in the European war, we believe, and the argument which interventionists habitually never think of at all.

Two ships for one.

Armed strength of the United States, 1940

Army:	
Total Army strength as given by Secretary of War Woodring as of Jan. 31, 1940	624,200
R. O. T. C. figures given for September 1939 (latest available) by Colonel Thompson, War Department	186,750
C. M. T. C., July enrollment (does not include men that have been trained over a period of years)	35,579
Total Army strength	836,529
(NOTE.—These figures include air-force personnel.)	
Navy:	
Officers	10,454
Enlisted personnel	129,575
Coast Guard	12,928
Marine Corps, officers	1,419
Marine Corps, enlisted personnel	25,065
Total Navy strength	179,441
Total combined strength (Army and Navy):	
Total Army strength	836,529
Total Navy strength	179,441
United States armed strength, Army and Navy	1,015,970

Source: These statistics have been compiled from various statistics given by the Navy and War Departments, Mar. 2, 1940.

Hon. ERNEST LUNDEEN, MARCH 18, 1940.
United States Senate.

DEAR SENATOR LUNDEEN: Receipt is acknowledged of your letter dated March 13, 1940, in which you inquire whether the R. O. T. C. and the C. M. T. C. are considered a part of our armed forces, thus increasing the total estimated strength of the Army furnished you in response to your letter of February 27, 1940.

The strength of 624,200 men furnished you in answer to your letter of February 27 was the total strength of the Army of the United States on January 31, 1940.

The R. O. T. C. established under section 40, National Defense Act, as amended, and the C. M. T. C. established under section 47 (d) of the same act, are agencies to provide military instruction and training to civilians and are not components of the Army of the United States as contemplated under section 1, National Defense Act, as amended.

Sincerely yours,

HARRY H. WOODRING,
Secretary of War.

MORE THAN A MILLION

Mr. LUNDEEN. Why tell our people we have no army, navy, and air force, when more than a million trained men are available today—air, Army, and Navy?

I ask the Senate to examine this table and to read the letter from the Secretary of War.

BILLIONS FOR DEFENSE

The American taxpayer has poured out nearly seven billions in 7 years for defense only to be told he has no defense; he has poured out nearly $37,000,000,000 in 50 years only to be told by hysterical and ignorant people that we have no defense, and perhaps a few have a good sized profit motive in mind.

Appropriations for the Army, Navy, and Aviation, 1890–1941[6]

Year	Army		Navy		Combined services	
	Aviation[1]	Total[2]	Aviation[3]	Total[4]	Aviation	Grand total
1890		$24,316,616		$21,675,375		$45,991,991
1891		24,206,472		23,136,036		47,342,508
1892		24,613,529		31,541,646		56,155,175
1893		24,308,500		23,543,267		47,851,767
1894		24,225,640		22,104,061		46,329,701
1895		23,592,885		25,366,827		48,959,712
1896		23,252,608		29,416,077		52,668,685
1897		23,278,403		30,562,661		53,841,064
1898		23,129,344		33,003,234		56,132,578
1899		23,193,392		56,098,784		79,292,176
1900		80,430,204		48,099,970		128,530,174
1901		114,220,096		61,140,917		175,361,013
1902		115,734,049		78,101,791		193,835,840
1903		91,730,136		78,856,363		170,586,499
1904		77,888,753		81,876,791		159,765,544

(Thomas R. Baldwin, Nov. 21, 1939.)

INVASIONS CONJURED BY HYSTERIA AND PROPAGANDA

This total does not include the enormous amount now asked by the President, and that is only a beginning—more later.

No one has any intention of invading this vast Nation; no nation or group of nations can invade America in this generation.

All are busy with exhausting wars in other continents—and always a generation passes before great fighting nations, victor and vanquished alike, recover strength enough to fight another great war. That is proven by history.

[From the Washington Times-Herald of May 20, 1940]

IN THE NEWS—WITH REASON AND CAUTION, WE CAN STAY OUT

Mr. Roosevelt's message to Congress is a fine war message, but hardly a peace message.

It is a virtual declaration of alliance with the Allies.

It almost guarantees our getting into the war—Wilsonwise—before the end of the year, and probably insures our going in unprepared, as we cannot hope to be prepared in any major way in that time.

It is a message consoling to the New Deal, as it demands an enormous amount of New Deal spending between now and election on a 24-hour-a-day basis, and makes certain the election not only of Mr. Roosevelt for a third term but the reelection of most of the New Deal Congressmen, because the spending will be shrewdly and practically applied.

The message was received with immense enthusiasm by Congress because it not only allows Congress to remedy its shameful neglect of national defense but to spend money liberally during a preelection year.

Everything has worked out exactly as the administration might have wished to have it; and perhaps Mr. Roosevelt, in his amazing political sagacity, has "planned it that way," or perhaps it has been so ordained from the beginning.

The fly on the wheel often thinks that he is making the wheel go 'round, the while it is being driven by a power that he little understands.

There is no mention in Mr. Roosevelt's message of any economy anywhere to offset and compensate for the immense war expenditure.

In fact, the Congress has unloosed the purse strings—for domestic expenditure as well as for war expenditure—and there is apparent certainty that not only will additional taxes be imposed, but the debt limit will be exceeded as well.

However, we will in due time surely be prepared for defense, if that by any fortuitous chance should be our actual purpose and our genuine desire.

Therefore, the happy condition of absolute security (if our endeavor shall only be directed to that commendable end) is worth the effort and the sacrifice.

By the end of this war in Europe and of the war in Asia, the United States will have a Navy second to none, an adequate Army fully equipped as a nucleus for land defense, and possibly an overwhelming air force which will by that time be recognized to be our chief reliance for national safety.

Wherefore, if by the grace of God, Mr. Roosevelt shall have kept us out of war, he will have met the situation not only as a wise New Dealer but as a great American.

Let us hope that the Republican Party will not then come along to sink our great Navy, as it did in 1922, disband our adequate Army, and neglect our national air defense.

There are economies which are extravagances and the neglect of national defense during the Republican administrations from 1922 to 1932 is partly responsible for the frantic haste and extravagant expenditure necessary in the defense measures of today.

In expending the immense sums to be appropriated for (let us hope) defense, Congress should proceed not cautiously, but intelligently.

There is no conflict scheduled for today for us—unless we project ourselves into it.

There is no Japanese fleet at our Golden Gate, no German Army on our eastern shores, no Russian air fleet dropping parachute men in our interior backyards. So let us be reasonably calm.

* * * * * * *

As for the war abroad, one or the other side must surely win. It always has in the past.

The armies of Napoleon conquered Europe and threatened England, but never disturbed this country.

The armies of Germany swept bloodily across France and occupied Paris in 1871, and then went home to live in comparative peace until 1914, when Austria, or Germany, or France, or England, or Russia, or all of them, provoked the World War and lured us into it, to our cost.

Let us think, therefore, in terms of America.

Let us not be lulled into inaction, nor yet hurried into error.

Let us protect America not only by adequate armament, but by judicious and patriotic procedure.

Let us unite as a people, without partisanship and without prejudice.

Let us follow the advice of the great and wise founders of this Republic—especially of George Washington, the greatest and wisest of them all.

He said:

"To be prepared for war is one of the most effectual means of preserving peace."

He also said:

"Why quit our own to stand upon foreign ground?

"Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?"

"Be prepared for war," gentlemen of the Congress, but do not be unduly led into it.

Do not "quit our own to stand upon foreign ground."

Consider primarily the security and the peace of your native land.

Peace means preparedness and protection.

It does not mean partisanship and provocation.

War means the exhaustion of our wealth, the extinction of our liberties, the expenditure of the blood of our people, the sacrifice of the lives and opportunities of our happy, hopeful youth.

It means national prostration for half a century, and it probably means the permanent transformation of our free Republic into a socialistic state.

If we do not like the communistic, socialistic despotisms of Europe, let us take every precaution not to become one.

Build ships, make guns, fortify our shores, protect our cities.

Have and hold the greatest Navy in the world. Do not sink it to suit some other nation, friendly but selfish.

Finally, realize the importance of possessing the greatest air force of any nation on earth.

Construct that overwhelming air force, and rest in safety and security behind its protecting wings.

Surely in times of peace prepare to prosecute war, fearlessly and effectively—if need be.

And in times of war prepare thoughtfully and patriotically to preserve peace.

Totalitarian Ideologies and the War in Europe

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

ADDRESS DELIVERED AT MOUNT NABOR TEMPLE, NEW YORK CITY, APRIL 26, 1940, BY MR. JUSTICE JACOB PANKEN, OF THE DOMESTIC RELATIONS COURT OF THE CITY OF NEW YORK.

Mr. DICKSTEIN. Mr. Speaker, by this time, I am sure that the House is more than familiar with my definite stand with reference to totalitarian ideologies, and I therefore think it will be of interest to the Members to print in the CONGRESSIONAL RECORD an address delivered by Mr. Justice Panken, of the domestic relations court of the city of New York, on the current tendencies as they affect the war in Europe.

I, therefore, ask unanimous consent to enlarge my remarks in the RECORD by printing therein the address delivered by Mr. Justice Panken.

The European war is a death struggle between ideologies, ways of living, and philosophies governing human relationships. It is a struggle between democracy, progress, and hope for ever-better ways of living on the one hand, and totalitarianism—call it that if you will, but in effect an ideology which destroys self-reliance, self-respect, manhood, and human dignity. One constructive, the other nihilism.

We in America believe in democracy. What does that mean to us? It is the right of the individual to participate as an individual in the determination of the destinies of our country. Democracy means the right to criticize, adversely or favorably, the government and its functions. It is the right to fashion the instrumentality, called government, to serve each of us as individuals and our fellow men.

Man has looked upward and reached forward in search for an instrument which would give him the fullest opportunity for growth so that he might rise to the stature of the divine. That instrument is a government conceived in freedom and guaranteeing freedom to live, freedom of expression, freedom of conscience, and protection against the invasion by government of his individual rights.

The fulfillment of the aspirations of man is only possible in a state of freedom. Without freedom that which is manly dies.

Plato and Moses before Christ, innumerable philosophers, thinkers, patriots like Voltaire, Jefferson, Lincoln since Christ, have blazed the path for the democratic ideal. Democracy fired the imagination and gave substance to the mind of man.

The war in Europe is a struggle between two ideas; the one—that government is the servant of man; the other, that man is the servant of government. Whether authoritarian government is called Communist, Nazi, or Fascist, they are all alike. They all use the same methods.

Hitler overran Austria, raped Czechslovakia, and in partnership with Stalin massacred Poland. Russia overran Finland, strangled Lithuania, Estonia, and Latvia, and in partnership with Hitler massacred Poland. They did not outdo the Fascist, Mussolini. He brought war and destruction to Ethiopia and invaded and possessed himself to Albania. The totalitarian ideology is death to truth. It is the antithesis of decency. It is worse than that. It is the morality of the gangster who at the point of a gun requires you to deliver up, or you die.

Norway is at the mercy of the brutes in human form who call themselves men. Denmark surrendered. The Norwegians would rather die free men than live as slaves of the maniacal Germans.

Are we safe? The experience of Norway and the apprehensions of the other neutral countries in the world, demonstrate the existence of a "fifth column" in each of the neutral countries. A column made up of spies, of agents of the totalitarian governments, striking at the vitals of the neutrals.

From the lips of Hitler came the following when he discussed the United States. He has this opinion of us, he says: "In the spurious blossoming of economic progress and power politics, America has ever since been drawn deeper into the mire of progressive self-destruction."

He speaks of the Civil War and the period antedating it as follows: "The beginnings of a great new social order based on the principle of slavery and inequality were destroyed by that war (meaning the Civil War), and with them also the embryo of a future truly great America that would not have been ruled by a corrupt caste of tradesmen, but by a real Herren-Class (a gentleman class) that would have swept away all of the falsities of liberty and equality."

He speaks blithely of the organization within America of a "fifth column," of building a youth movement ready to take over the United States from the hands of the incompetent who are "in the mire of progressive self-destruction."

Every member of the German-American Bund is either a spy or a potential traitor to America.

Every Communist official appears to be a spy for the Soviets and every Communist is a potential traitor to American ideals and the American way of life.

We have native Fascists, some masquerade in the guise of Christians, profess a Christianity which is vicious and is a libel upon the teachings of the Christ.

I sometimes wonder why the Nazis desire the destruction of the Christian churches. They hate Christianity. What else could they do in face of their ungovernable and unreasoned hatred of the Jew. They must hate the churches of Christ; they must hate Christianity; they must hate its teachings; for the philosophy of Christianity has been given to the world by a Jew. Hating the Jew, they hate the Christian philosophy which he gave to the world.

Let me quote from the lips, or shall I say from the brute teeth, of Hitler to Hermann Rauschning, who was his representative in Danzig. Hitler said: "But for our people (meaning the Germans) it is decisive whether they acknowledge the Jewish Christ creed with its effeminate pity ethics, or a strong, heroic belief in god in Nature, god in our own people, in our destiny, in our blood," and I might add in our "blitzkrieg," in our inhuman, brutal rape of defenseless men and women and children, and that "after we have clothed ourselves in their uniforms and led them to believe that we belong to them and that we have come as their friends."

It is a peculiar kind of religion—a religion of treachery, a religion which raises bestiality to a spurious godliness—in fact, the demoniacal.

This is the holiday of liberation. The Jews have rejoiced for centuries because of their liberation from Egyptian slavery. And now a new slavery is being imposed upon Jew and Gentile, upon believer and nonbeliever—a slavery harder, more pitiless, more merciless than was that of the Pharaohs. A slavery which takes from man his right to choose his employment, which puts him to work building worse than pyramids, building engines of destruction, and put him to work in response to the bidding of a maniac who has taken over control of a hundred million people. Like the Pharaohs, Hitler, Stalin, and other dictators will only be memories in a short time.

Some of our people speak of isolationism. We are to wait, these say, until the war comes to our shores before we will defend our liberties. That is the attitude of the isolationists. We cannot wait until the war is brought to our shores. We must prevent it coming our way.

It is questionable whether we have the right to remain neutral. We are nonbelligerent. Our neutrality helps the totalitarians and hampers the democracies.

We are to remain nonbelligerent, but are we to deny to the men and women who are on the ramparts defending democracy and freedom the means with which to make an effective defense? As nonbelligerent we are in duty bound to make available the resources for effective war on brutality.

We may remain nonbelligerent, but not an iota of help for the totalitarians who are on the rampage to destroy the things we hold dear. America has always been idealist. Some of us are romanticists. It has become engrained in the lives of our people that it is right to aid those that suffer even at the point of self-sacrifice. But we must not aid those who inflict suffering. That is a form of sentimentality which destroys ideals.

No liberty-loving man, no forward-looking American, no one who has studied history and evaluated the forces which make for progress, can remain neutral between totalitarianism and democracy. He may call himself a pacifist; he may call himself an isolationist. High-sounding names. But in effect, he is a stumbling block in the path of the development of a greater and a finer democracy—a stumbling block in the path of progress.

A Menaced America

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

EDITORIAL FROM THE WASHINGTON SUNDAY STAR

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following timely editorial, which appeared in yesterday's edition of the Washington Sunday Star, entitled "A Menaced America":

[From the Sunday Star of May 19, 1940]

A MENACED AMERICA

Now that the dread specter of total war has materialized in Europe, now that the British and the French are reeling before its devastating fury and are fighting with their backs to the wall for their very lives, the people of the United States must cast aside the last of their illusions and face the grim but inescapable fact that our own security is seriously threatened.

This stark truth that we, too, are in peril and that the peril is imminent, must be accepted now. If we delay in grasping this, if we continue to exert anything less than a supreme and intelligent effort at self-protection in the comfortable but no longer tenable belief that we are relatively safe behind the barriers of two oceans, the time is not far off when we may be brought forcibly to the realization—when it is too late—that we are tragically vulnerable to a concerted attack.

From the outbreak of this war more than 8 months ago the Star has taken the position, and has repeatedly reaffirmed it, that our own economic welfare—even our own military security—has depended upon an allied victory. In other words, it has been and still is the Star's belief that the first and most logical effort for this country to make in furtherance of its own defense is to help check the spread of German aggression at its source, in Europe. To that end the Star has urged time and again that every support short of war should be given by us to France and Britain.

Others, including the President, while obviously thinking the same thoughts and shaping national policies to that end, have felt themselves restrained in making the open, unqualified declarations that the situation demands. The allied cause is our cause. Our best, perhaps our only, hope for peace now lies in an allied victory. The allied war councils undoubtedly know that. The German leaders know it. But do our own people know it? Do the suffering people of France and England know it? Has the time not come to proclaim it, not by indirection, not by suggestion, not by parables, but by a forthright declaration from the President himself that all our resources—save the men not now needed—are at the disposal of the Allies from now on? That is the case. Why not say it?

The menace to America that will arise with a German victory is plain. Perhaps its exact dimensions cannot be estimated at this time with fine precision, but the worst that may happen can be envisioned, and it is for that which we must plan and prepare. If the Allies should win the war or even gain a stalemate, the grave and immediate military threat to this country will have been removed. Therefore it is upon the possibility—and it is a very real one—of a quick and decisive German victory that we must base our calculations.

The first and most obvious move of a victorious Hitler would be to seize any possessions of the defeated nations which might be useful to him. The question for us to consider, then, is what these possessions are and how they might be used to our disadvantage.

It is a foregone conclusion that Hitler or one or more of his totalitarian partners will attempt to take over certain of the strategically and materially important islands and other territories of the British, French, Dutch, and Norwegians. What of Bermuda and the other Allied islands in the Caribbean area? Can we be safe if they fall into strong and hostile hands? What of Iceland, Greenland, the Azores, the East Indies, and perhaps the Philippines, not to mention Allied naval bases scattered throughout the world? These regions are of utmost importance to us from a military standpoint, and their possession by enemies of ours would indeed be a deadly menace to America. And from some of these territories we draw essential raw materials which we do not produce ourselves. Without access to them the perfection of our own continental defenses would be infinitely complicated and most seriously delayed.

A second possibility which we must face is that Hitler, if he triumphs now, may gain possession of the French and the British fleets. This is a possibility which is heavily discounted by some people who prefer to believe that the Allied naval forces never will be surrendered, that they will take refuge on this side of the Atlantic, or, at the worst, will be destroyed to prevent their seizure by Germany. But we would be foolish and reckless in the extreme to rely on that sort of wishful thinking. In the calamitous event that Germany should get possession of the Allied fleet what could we do with our present forces to defend the Western Hemisphere or even the United States?

We have a good Navy. But until it can be expanded it is a one-ocean navy. And let us not make the blunder of believing that it could hold off a combined attack of the totalitarian forces in both oceans, or even that it surely could defend this hemisphere in the Atlantic from an attack by the German and possibly another totalitarian navy, strengthened by the warships that may be taken from France and Britain. At best, the scales would be heavily weighted against us. Our Army is undermanned and underequipped. We could not place more than 75,000 thoroughly trained and adequately equipped troops in the field if called upon to fight in the near future. And what of our air force? It totals about 5,100 planes in both Army and Navy branches. But many of these are out of date and unsuitable for modern combat. The number in this category, of course, is a matter of opinion, but Major General Arnold, Chief of the Air Corps, is authority for the statement that we have only 52 planes capable of meeting the best fighting ships of the European powers. And all of our planes are obsolete insofar as self-sealing tanks and armor are concerned. Germany alone, according to conservative estimates of well-informed American officials, has 4,000 bombers capable of flying from Africa to South America or from northern Europe to Greenland and Canada.

Another contingency that we must consider is the possibility of "fifth column" activity, if not in this country in some of those nations to the south where totalitarian influence has been most strong. It is quite conceivable that through the now familiar Trojan-horse tactics Germany, for example, might establish a base somewhere in South or Central America and unless we were in position, without depending on help from any outside source, to destroy it immediately such a base could quickly be made permanent.

This leads to consideration of our prepared plans for hemisphere defense. These plans have been formulated in the belief that Britain and France would be our allies in any war in defense of the Western Hemisphere, or, at the worst, that they would be sympathetic neutrals. But if the British and the French are to be destroyed as military factors these plans become of little use and must be wholly revised.

For America all of this is a truly dolorous outlook. Strong and ruthless forces hostile to us by every rule of reason are smashing their way to power throughout the world. We are not prepared to resist them, and we will not be permitted to prepare ourselves if they can prevent it.

We must act with all our energy and act now to get ready for the appalling possibilities that the world of tomorrow holds. The first move is to open our eyes and our minds to what is portending and to do everything that is humanly possible to assure an Allied victory in Europe. The importance to us of bringing about that result cannot be overestimated. No effort must be spared to achieve it. There remains, however, the possibility that our best efforts in that direction will come too late and will fail. Should that tragic result come to pass, our work will not have been wasted, for the means of producing the defensive equipment we will have to possess here will have been vastly expended.

America is truly menaced. We have no choice but to make the supreme effort to guard those things which we hold most dear from the threat of alien attack. To that effort we must give our all and any attempt to divert us, from whatever source it may come, must be recognized for what it is and rejected as an undermining of the Nation's security.

General Johnson Places the Blame Where It Belongs

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

ARTICLES BY GEN. HUGH JOHNSON AND LUDWELL DENNY

Mr. THILL. Mr. Speaker, General Johnson discusses the situation relative to national defense and places the blame where it belongs in the following news article:

[From the Washington Daily News of May 18, 1940]

ONE MAN'S OPINION

(By Hugh S. Johnson)

This column should be and will be the last to oppose the President's object in recommending a vast outlay for motorization, mechanization, and other mechanical equipment for defense. It was the first and most strident to insist on it. Even as a member of the first New Deal family 7 years ago I thought I had sold the idea

to the President. He asked for and got $3,000,000,000 to do it with, in 1933. He used only a little of it. The very first issue of this column, 5 years ago, said: "Modern war on land requires a big and efficient industry. The Germans have a much better one than the French. Today I think the French Army, with its Allies, could march from one end of Europe to the other, but not after the Germans rearm with modern equipment. Fully equipped they would be a military nation far superior to the French, and on the slightest provocation or no provocation at all could bring down on the world a new 1914 or worse * * * he (Hitler) stops at nothing—ethics, mercy, or humanity—and he certainly would not be stopped at a political boundary by so slight a thing as the peace of the world." That was March 15, 1935.

Over and over again that year and many times every year since this column has insisted on what the President's speech now so tardily and dramatically advocates. He is late. He may be too late. Nobody can tell him anything; nothing could move him from his stubborn, ill-informed, and inept inaction but a world-shaking catastrophe.

O. K. The past is past. His 7 years' blundering in this regard may prove fatal, but it is water over dam. We must all move in and help him repair his blunders, if he makes that possible. But it is a little sickening to see the sheeplike rush to swallow whole his bid for heroic acclaim for being finally jolted by an earthquake into action so obviously vital to our security which he had neither the ability to foresee nor the will to take.

Some comment insists that it vindicates his appraisal of Europe and his interventionist policy to date. It does nothing of the kind. It does the reverse of that. If he had correctly appraised the European military situation, we should have begun armament years ago. As to his policy of dabbling, bluff, and threat in military and naval affairs in Europe and Asia, it is ended by the logic of events. We shall have all we can do to defend ourselves now. He seems at last to appreciate that. If he doesn't, the country does. If the recent frequently expressed statements that there is a growing war spirit beyond the Alleghenies mean that there is one for anything except defense, they are wrong. There always was a spirit for that, and the President's sensational conjuring up of possible air attacks in Omaha were as unnecessary as they are absurd.

Fifty thousand airplanes in a fleet. Fifty thousand a year production soon. Thirty thousand production now. It reminds one of our World War threat to "darken the sky with airplanes." At the present rate of war change in airplane design, a fleet of 50,000 airplanes would be folly. We are at a rate of nowhere near 30,000 a year now, and we couldn't get to 50,000 a year in time to be of any use. It takes much longer to train pilots than it does to build airplanes—and they are equally expendible. We are training at no such rate, and it will take a long time to reach that rate. To keep 50,000 planes in the air would require an air force of 500,000—and we are nowhere near in sight of proper balanced equipment for 500,000 men in our whole Army.

Let's do this job. It won't be done by passing an appropriation bill and a lot of boasting and big talk. It will be done by prompt action and intelligent guidance and just in this phase almost wholly on the industrial front. There is no sign yet that we are going to get either the guidance or the action.

WHAT TO DO

(By Ludwell Denny)

The administration today is still without detailed plans for expenditure of the third billion dollars on defense during the next 12 months, requested by the President.

Neither the White House, the Navy Department, the War Department, nor the congressional committees have any more than the foggiest notion of what the administration wants done or how.

The confusion is so great that the House Military Affairs Committee, unable to get answers to its simplest questions, had to adjourn yesterday until Monday.

Not only was the General Staff caught unprepared, but everyone else. On the financial side there has been no preparation whatever. Ranking members of the Senate Finance Committee were never consulted and knew nothing of the idea until it appeared in the press. The President says the method of financing is relatively unimportant.

From the lack of preparation—either on the military, financial, or industrial side—it is now clear that the President shot from the hip for diplomatic and political reasons. If the President and his military aides had been working on the larger defense plan since the Scandinavian collapse, they might have had a little more to show Congress now.

From the standpoint of defense efficiency, not to mention the administration's reputation, it would have been better to withhold the sudden plan for at least a fortnight in order to work out some of the neglected details. A week or a month cannot be decisive in an aviation and mechanization program already delayed for a decade—indeed, too much haste with a half-baked plan will cause much more delay later.

But the President's hand was forced by the Republicans and by Hitler.

The Republicans, looking for a rousing campaign issue to offset Roosevelt political gains from the war emergency, were just beginning to pick up this one. They had never been able to make the administration's aviation neglect an issue before, because the public was not aroused. The Nazi break through in the low countries gave the Republicans their chance.

But before the Republicans could organize their attack the President with his accustomed genius for scooping up his own political fumbles announced that he would ask Congress for aviation funds. Though the performance has been awkward, at least he has the ball. And that is what counts in politics.

Of course, it is considered very bad form here—almost treason—to mention politics in connection with defense. But, regardless of the self-righteous denials, there is plenty of politics on both sides. It could hardly be otherwise with the President riding a third-term movement and the Republicans trying to unseat him.

The second thing that forced the President to shoot with his defense plan before he was ready was Italy. He needed another armament plan to barb his peace plea to Mussolini.

Now that the political and diplomatic purposes of an unplanned defense plan have been served, the gigantic preparedness problem of the United States remains where it was a week ago and last September when Hitler proved our Army and Navy out of date. In the judgment of many Air Corps officers, Congressmen, and businessmen, the job will not be done by more administration pledges and expenditures until there is—

A bipartisan congressional committee of inquiry and council;
A separate unified air force and air department.
A civilian production board to speed output of all equipment.

Our National-Defense Program

EXTENSION OF REMARKS

OF

HON. WILLIAM D. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

RADIO ADDRESS BY HON. WILLIAM D. BYRON, OF MARYLAND

Mr. BYRON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following radio address which I delivered on Saturday, May 18, 1940, over station WJEJ, Hagerstown, Md. Topic, Our National-Defense Program:

These are critical and turbulent days in Washington. I, therefore, welcome this opportunity to report to you upon some aspects of the problem that is absorbing all our interest and concern—national defense. And I deeply appreciate the fine courtesy of Station WJEJ in permitting me to talk with you about some of the developments of the past few days which are of vital importance to us all. I wish each of you could have been in the House of Representatives Thursday afternoon when the President of the United States appeared before a joint assembly of Congress to deliver his national-defense message. I have never witnessed a more solemn occasion. The President's face was grave and serious, his voice deliberate and earnest. Members of the House and Senate listened attentively and when he finished, no doubt most of you heard over your radios the thundering ovation he received.

The reception given the President's message by both Democrats and Republicans is, I trust, a token or a symbol of a national unity and a singleness of purpose that is so essential in these critical times. I further hope that the acclaim and approval with which the President's message was received symbolizes the adjournment of politics and partisanship on so grave a matter.

Friday, the day following the President's appearance, the Military Affairs Committee of the House of Representatives met to consider the legislation necessary to put into action his recommendations. As a member of the committee, I have devoted my energies to a study of national-defense problems and, together with my colleagues of this committee, am prepared to act with the promptness which the President requested. This committee, I think you will be interested to hear, is composed, for the most part, of men who have a background and interest in matters relating to the Military Establishment. And I am proud to say that these men, chosen for their qualifications without regard to political expediency, are concerned only with the welfare of the Army and Navy and the adequacy of our national-defense program. Through experience and study they have become specialists in questions with which they must, as your representatives, be prepared to consider and act upon.

I am really grateful for the opportunity to serve my country and my people as a member of this committee during this period of emergency. I would be less than frank with you if I told you I believe America has nothing to fear. I have no patience with scatter-brained alarmists or uninformed sword rattlers. Yet, as I see my duty, as a member of the committee of Congress charged with making provision for adequate defense, I must be realistic. We all must be prepared to face facts and anticipate contingencies that may seem extreme or remote. To stick our heads in the sand and blindly hope for the best is to live in a fool's paradise.

So swiftly do events move abroad, so strange and unreal seem reports of new and more horrible methods of warfare that it strains our immagination to realize that again a portion of this world is being bathed in the blood of young men. And while I have no fear of any immediate invasion of America by a foreign foe, I give you my pledge that so long as I am your Representative in Congress I will not relax for 1 minute in my efforts to prepare this Democracy against the evil day when merciless men, greedy with power, may seek to extend their aggression to this continent.

Those of us who have studied the history of this country's defenses and appraised its resources, are confident that the capacity and ingenuity of our people is sufficient to meet any test. Yet there has been so much misinformation about our national-defense policy that I would like to sketch for you briefly the more important developments in this field during the past 20 years.

After the World War of two decades ago, this country lost interest in its Army and Navy. It was more than an indifference or lethargy, it was the normal reaction of a war-weary people. I know that you veterans of the last war have shared with me the emotion of the soldier after the battle is won. We all wanted to come home, get back to work and forget. And we felt that a world sick of killing and destruction would not soon want to return to the amphitheater of war. Consequently, during the decade from 1920 to 1930, Congress slashed appropriations for the Army and stopped building ships for the Navy. This seemed a sound policy at the time and it is in no critical spirit that I recite these facts.

However, the aftermath of the first World War soon created new economic tensions and the world-wide depression that followed in the early thirties paved the way for the rise of the ruthless dictators who are responsible for the present conflict. With the rise to power of these totalitarian rulers, we began to realize that America should go about strengthening its own defenses. In 1932 we began to lay keels for new battleships and since that time our Navy has been brought to a parity with the navy of any other world power. A big navy it seemed was the best insurance for the protection of our own shores. Consequently, appropriations for the Army did not keep pace with the provision made for sea power. And so the Congress until 1936 coasted along with moderate appropriations for our military plant. However, since the present session convened and the threat of a European war became a reality, more adequate provision has been made in the way of appropriations for our land forces. Without burdening you with statistics, I wish to make one positive assertion: We have the largest peacetime Army in our history, it is well equipped though small and is staffed with able and experienced personnel. This Army will provide the efficient nucleus for further expansion under the program submitted to the Congress last Thursday.

And further, let me tell you this with all the emphasis at my command: Anyone who asserts that the money appropriated during the past 6 years for national defense has been wasted is either not in possession of the facts or is engaging in deliberate misrepresentation. The truth is, in recent years the defensive power of our Army, Navy, and Marine Corps has been greatly improved. Of course, much remains to be done, and it can be done and it will be done.

Under the program proposed the protective mobilization plan will be put into immediate effect. This plan, worked out in advance by military personnel and kept current as developments require changes, will provide for an equipped force of 1,000,000 men with 27 Infantry divisions in both the National Guard and Regular Army, 37 antiaircraft regiments, 6 mechanized cavalry divisions, and the necessary complement of staff and headquarters troops. The modern equipment necessary for such an Army, including the planes, can be obtained within 18 to 24 months after the funds are available. Yet this time can be shortened and speeded up if emergencies dictate quicker action. It is obvious that to double or triple or even quadruple the size of our Army is an enormous job.

The American soldiers have always proven themselves the world's finest, but in modern warfare machines are likewise essential, such as motorized infantry units and efficient aircraft. Thus we must have industrial production and facilities for more production. Aircraft plants must be expanded. Foreign orders for American airplanes have made a vital contribution to our own national defense and without cost to this country. I visited airplane factories on the west coast last fall, and already these plants are beginning to use the assembly line technique of mass production just as the automobile industry does. This program was aided by the sale of planes to France and England and, I repeat, was a substantial contribution to our own national-defense resources.

One point I would like to make clear. I have heard a lot of loose talk about giving away military secrets in connection with our sale of planes to foreign buyers. As a member of the Military Affairs Committee, I felt it my duty to inquire into these rumors. I have talked with high officials of the Army and War Department and made independent inquiries to other sources.

I say to you tonight that these statements that we have been giving foreign countries any military secrets through the sale of this equipment are sheer nonsense. These sales have been a material advantage in strengthening our own productive capacity. Any secret devices which the Army may possess have been kept secret and, as a flier in the last war, I have the opinion that our planes are the equal if not better than those of any other power.

In conclusion, let me say that while the talk of planes and armies and preparedness may seem exciting to some, I cannot find it in my heart to be other than saddened by the necessities of the hour. My hopes and prayers are for peace, and I view this program of preparedness as essential to our own national defense and for that purpose alone. We must act—act promptly and wisely. And I pray that our action will serve to keep lighted the lamps of freedom and democracy in America. Finally, let me urge upon you to spurn and reject those who would make partisan issues of the necessity for national defense. No party has this responsibility. It is the responsibility of all Americans regardless of party. And those who undertake to make cheap political capital out of the program of national defense I regard as the "fifth column" of America and the Trojan horses of our democracy.

Celebration of Fiftieth Anniversary of Wills Memorial Presbyterian Church, Louisa County, Va.

EXTENSION OF REMARKS

OF

HON. JOHN W. FLANNAGAN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

ADDRESS BY HON. JOHN W. FLANNAGAN, JR., OF VIRGINIA

Mr. FLANNAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address I delivered at the celebration commemorating the fiftieth anniversary of Wills Memorial Presbyterian Church in Louisa County, Va., on April 27, 1940:

Tucked away in the inner recesses of every man's mind is the memory of some sacred, consecrated spot, hallowed by some association of the past, to which ever and anon his mind reverts in reverence and sweet contemplation.

As Jacob had his Penuel, as Moses had his Horeb, as Paul had his sacred spot on the road that leads to Damascus, so many of us here today have our Wills Memorial. While it may not be one of the sacred shrines from which mankind in common draws inspiration, while it may not be one of the sacred edifices whose symmetry and beauty, bedecked with frescoes and paintings fashioned by the hands of the masters, arrests the attention of mankind, yet to some of us it is sacred and dear and means more than a Bethel, to some of us its simple lines and modest spire and unembellished interior are more beautiful than a Rheims, a Notre Dame, or a St. Peter, because here in childhood's happy hour we found peace and surrendered our lives to the keeping of the One whom we are persuaded "is able to keep that which we have committed unto Him against that day."

While to some it may be only just another poor, struggling country church, there are those among us who cherish its rich heritage and glory in its achievements. Conceived in the heart of a godly woman, the sole representative of her faith for miles around, whose Presbyterian lineage numbered some of the builders of old Timber Ridge Church, the old blind preacher whose wilderness sermon was immortalized by the eloquent Wirt, one of the early presidents of Hampden-Sidney, who later became the first professor of theology at Princeton, one of the cofounders of Augusta Female Seminary, a pioneer female Presbyterian school, that later ripened into Mary Baldwin College, and some of the founders of the old Presbyterian school, known as Liberty Hall Academy, that developed over the years into Washington and Lee University, it became her dream by day and her prayer child by night during the years she labored to bring it into existence. Oh, Martha Lyle Willis, woman of great faith and wonderful works, happy am I your humble descendant, to publicly testify that you were the spiritual peer of any of your illustrious ancestors, and that in God's name you wrought mightily in your day and set in motion influences for righteousness far out of proportion to the limited sphere in which you labored. The good that has alone radiated from this humble altar, though only one among your many sacred trophies, has not only acted as holy leaven upon this community; it has blessed the State and Nation as well and made them all debtors to an humble, pious, consecrated woman.

And thou, O Wills Memorial, hast a record of service worthy of thy ancestry. While Presbyterian to the core, thou hast ever remained, like thy founder, above sect or creed, station or rank, and kept thy portals open to all the children of men. Here in thy all-embracing love, those of thy persuasion have found comfort and solace; those of a different persuasion, a spirit that brooked no intolerance; and those of no persuasion have ever caught a vision of the fellowship that should exist among the followers of the

lowly Nazarene. Here those whose ancestry linked up with the great and near great of the past and those of humble origin have alike ever been imbued with the spirit expressed by one of America's immortals that "kind hearts are more than coronets, and simple faith than Norman blood." Here in a spirit of true humility, the man of substance has forgotten his acres, and the man of poverty his hovel, as they communed together in brotherly love. Here in an atmosphere of true and genuine spiritual hospitality the stranger has known that he was in his Father's house. Here the high and low, the rich and poor, the spirited and meek have caught the true spirit of the Master, forgotten creeds and platitudes, found a common meeting place, and worshipped a common God upon a common footing. Truly here, without mixing affairs of church and state, thy democracy has entered into thy religion and thy religion into thy democracy.

And this service, O Wills Memorial, that thou hast been able over the years to render in the name of the Master, I am persuaded, has been brought about in no small degree by the character of the people that God has committed to Thy care and the character of God's servants who have ministered unto Thy flock. Where will you find a people whose history is more deeply rooted in American soil, a more intellectual people, a more patriotic people, a more spiritual people, then here in the Green Springs section of old Louisa? Where, or where, will you find the same sturdiness of character, the same intellectual honesty, the same breadth of vision, the same warmth of heart, the same love of country, the same spiritual fervor, that you find here among the Wilises, the Wests, the Vests, the Hills, the Chewnings, the Pollards, the Burnets, the Peerses, the Goodmans, the Quarleses, the McCombs, the Garths, the Hangers, the Kingstons, the Branhams, the Bostons, the Woods, the Keans, the Meltons, the Leckies, the Valentines, the Hancocks, the Grattons, the Morises, the Hensons, the Turners the Taylors, and—excluding the speaker—may I add with pardonable pride, the Flannagans? And where will you find a church, large or small, city or country, that can number among those who have ministered unto its flock, either as pastors or friends in need, men of greater piety or erudition than Dr. Little, Dr. Strickler, Dr. Moore, Dr. Smith, Dr. Rawlings, Dr. Eggleston, Dr. Petrie, and Dr. Hudson? And, let me hasten to include, thy brilliant, consecrated young servant whose morning bespeaks a glorious day of service, who has so faithfully ministered unto thy spiritual wants during the past 2 years, and who has presided with grace and charm over this assembly today, Rev. William F. Mansell.

And so, dear old Wills Memorial, as one of thy first-born, I have journeyed far that I might be here to salute thee on this thy semicentennial, and to extend to you the greetings of your flock, which is not measured in sectarian terms, and to let you know that with our greetings go our prayers that your years of usefulness and service may be extended on down through the generations yet to come.

And there are other salutations that I bring.

In the name of the people of this community, to whom thou hast ever held aloft the torch of a higher, nobler life, and hast ever ministered unto, even as a father to his children, I salute thee.

In the name of those who, like myself, in childhood's tender, formative years worshiped at thy altar and imbibed teachings that have ever restrained us on down through the years, I salute thee, and humbly acknowledge that oftimes when the clouds hung low memory's treasure chest has opened up and released thy bright rays to dissipate the clouds.

In the name of those of other faiths, true and tried friends all, who have been drawn to you by the spirit of Christian brotherhood, and who have contributed so largely to your success, I salute thee.

In the name of those old saints who shepherded thy flock, and whose memories still linger to renew our strength in hours of weakness, I salute thee.

In the name of the talented Burnet sisters whose nimble fingers and cultivated, God-endowed voices, Sabbath after Sabbath, filled this room with soul-inspiring music and song that I can still hear during my moments of retrospection, I salute thee.

In the name of our old Sunday school superintendent and Bible teacher, Arthur G. Burnet, gracious in manner, fluent in speech, whose strong mind by study, experience, and observation became encyclopedic and was the marvel of all who heard when he expounded the lesson each Sabbath morning, and whose fidelity to his trust was only excelled by his innate zeal for thy welfare, I salute thee!

In the name of that old grandmother of mine, whose name you bear, and whose prayers and vision and genius brought you into being, I salute thee.

In the name of that dear old aunt of mine, who grows more beautiful with the years, Agnes McClung Wills, through whose efforts you have been dressed in new garments befitting this your fiftieth birthday, and whose smiling face, bedecked with tears of love, I behold this minute as she sits before me in perfect peace, I salute thee.

In the name of my departed brother, thy first born, Wills Waddell Flannagan, who ever reflected thy teachings in the life that he lived, I salute thee.

And, dear old Wills Memorial, I want to give thee not only a salute but a fond embrace, in the name of the one who, to me, is thy brightest jewel, who labored not only here in thy vineyard but throughout this entire presbytery in the name of the Master, whose restraining influence has led me out of every bog and quagmire of life, whose presence, though absent, I feel whenever I enter thy sacred precincts, and who, somehow I know, has been communing with us this day as she has ever lingered close to my side, my mother!

And again, Wills Memorial, I salute thee! May God ever bless thee and keep thee, dear old altar of mine!

Acts Regulating Commerce Applicable to the District of Columbia

EXTENSION OF REMARKS
OF
HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1940

LIST PREPARED BY THE LEGISLATIVE REFERENCE SERVICE

Mr. LUTHER A. JOHNSON. Mr. Speaker, Mr. Chauncey P. Carter, an attorney of Washington, D. C., has called my attention to the fact that Congress has, especially during recent years, passed much legislation affecting trade and commerce, and has sought to get away from the old phrase, "commerce among the States," and has tended to use the word "commerce" and then to define such word as including not only commerce among the States but all other commerce subject to regulation by Congress, and he cites as an instance of this the definition in Fifteenth United States Code, page 12, from which statute I quote:

"Commerce," as used in sections 12 to 27, inclusive, of this chapter, means trade or commerce among the several States and with foreign nations, or between the District of Columbia or any Territory of the United States and any State, Territory, or foreign nation, or between any insular possessions or other places under the jurisdiction of the United States, or between any such possession or place and any State or Territory of the United States or the District of Columbia or any foreign nation, or within the District of Columbia or any Territory or any insular possession or other place under the jurisdiction of the United States: *Provided*, That nothing in the aforesaid sections contained shall apply to the Philippine Islands.

Mr. Carter points out that the word "commerce" as used in the above act is made applicable within the District of Columbia and within "any territory or any insular possession or other place under the jurisdiction of the United States" (as, for instance, Puerto Rico, Alaska, Virgin Islands, Canal Zone, Guam, Samoa, and so forth).

He further points out that many of these various acts governing commerce within the District of Columbia have not been embraced within the District Code, and that the District Code is therefore incomplete in omitting these therefrom, and that it would be advisable to have prepared a list of Federal acts regulating commerce which are applicable to commerce within the District of Columbia, commerce within the several Territories, insular possessions, and so forth.

At my request, Mr. Luther H. Evans, Director of the Legislative Reference Service of the Library of Congress, had prepared such a list, and under leave granted to extend my remarks, I include same herewith:

ACTS OF CONGRESS RELATING PRIMARILY TO INTERSTATE COMMERCE BUT APPLICABLE ALSO TO COMMERCE IN THE DISTRICT OF COLUMBIA, TERRITORIES, ETC.

Interstate Commerce Act amendment of June 29, 1906 (34 Stat. 584): Act to apply to commerce between States, etc., or within any Territory.

Food and Drugs Act of June 30, 1906 (34 Stat. 768; U. S. Code 21: 1, 2): Separate provisions regulating manufacture in a Territory or the District of Columbia, and transportation between States, etc.

Insecticide Act of April 26, 1910 (36 Stat. 331; U. S. Code 7: 125, 126): Separate provisions regulating manufacture in a Territory or the District of Columbia, and transportation between States, etc.

Interstate Commerce Act amendment of June 18, 1910 (36 Stat. 544, sec. 7): Practically same as act of June 29, 1906, above.

White Slave Traffic Act of June 25, 1910 (36 Stat. 825, c. 395; U. S. Code 18: 397, 398): Act to apply equally to transportation "in

interstate or foreign commerce, or in any Territory, or in the District of Columbia."

Locomotive Boiler Inspection Act of February 17, 1911 (36 Stat. 913, c. 103): Act to apply to railroads operating in the District of Columbia, in a Territory, or between States, etc.

Apple Standard Act of August 3, 1912 (37 Stat. 250, c. 273; U. S. Code 21: 20): Standard grades to apply to shipments in interstate or foreign commerce, and to sales in the District of Columbia or the Territories.

Act of March 4, 1913 (37 Stat. 832; U. S. Code 21: 151): Sale, etc., of virus, serum, etc., for treatment of animals in the District of Columbia or the Territories regulated on same basis as shipments between States, etc.

Federal Trade Commission Act of September 26, 1914 (38 Stat. 719, sec. 4; U. S. Code 15: 44): "Commerce," as used in the act, to include commerce between States, etc., or in a Territory or the District of Columbia.

Clayton Antitrust Act of October 15, 1914 (38 Stat. 730, sec. 1; U. S. Code 15: 12): "Commerce," as used in the act, to include commerce between States, etc., or in the District of Columbia or a Territory or insular possession.

Standard Barrel Act of March 4, 1915 (38 Stat. 1186, ch. 158; U. S. C. 15: 235): Sales in any State or Territory or the District of Columbia regulated on same basis as shipments between States, etc.

Grain Standards Act of August 11, 1916 (39 Stat. 482, sec. 1; U. S. C. 7: 72): "In interstate or foreign commerce" to include commerce within a Territory or district.

Bills of Lading Act of August 29, 1916 (39 Stat. 538, ch. 415; U. S. C. 49: 81): Act to apply equally to transportation in a Territory or the District of Columbia and between States, etc.

Food Control Act of August 10, 1917 (40 Stat. 286, sec. 26): Regulation of hoarding, etc., to apply equally to commerce between States, etc., and in the Territories or other possessions of the United States.

Export Trade Act of April 10, 1918 (40 Stat. 517, sec. 1; U. S. C. 15: 61): "Trade within the United States," as used in the act, to include commerce between States, etc., or in a Territory or the District of Columbia.

Transportation Act of February 28, 1920 (41 Stat. 469, sec. 300): "Commerce," in connection with settlement of railway-labor disputes, to include commerce between States, etc., or within a Territory or the District of Columbia.

Same (p. 474 (1, c); U. S. C. 49: 1): Practically same as act of June 29, 1906, above.

Packers and Stockyards Act of August 15, 1921 (42 Stat. 160 (6); U. S. C. 7: 182): "Commerce," as used in the act, to include commerce between States, etc., or within a Territory or possession or the District of Columbia.

Grain Futures Act of September 21, 1922 (42 Stat. 998, ch. 369; U. S. C. 7: 2): "Interstate commerce," as used in the act, to include commerce within a Territory or possession or the District of Columbia.

Naval Stores Act of March 3, 1923 (42 Stat. 1435, sec. 2 (1); U. S. C. 7: 92): "Commerce," as used in the act, to include commerce between States, etc., or within a Territory or possession or the District of Columbia.

Filled Milk Act of March 4, 1923 (42 Stat. 1486, ch. 262; U. S. C. 21: 61): "Interstate or foreign commerce," as used in the act, to include commerce within a Territory or possession or the District of Columbia.

United States Cotton Standards Act of March 4, 1923 (42 Stat. 1519, sec. 11; U. S. C. 7:62): "Commerce," as used in the act, to include commerce between States, etc., or in the District of Columbia.

United States Arbitration Act of February 12, 1925 (43 Stat. 883, sec. 1; U. S. C. 9: 1): "Commerce", as used in the act, to include commerce between States, etc., or in a Territory or the District of Columbia.

Act of April 26, 1926 (44 Stat. 326 (f. 2); U. S. C. 7: 116): "Interstate commerce" in misbranded seed to include commerce between States, etc., or within a Territory or possession or the District of Columbia.

Air Commerce Act of May 20, 1926 (44 Stat. 568, ch. 344; U. S. C. 49: 171): "Interstate or foreign air commerce," as used in the act, to include air commerce within the air space over a Territory or possession or the District of Columbia.

Railway Labor Act of May 20, 1926 (44 Stat. 577, sec. 1; amended but restated without change by act of June 21, 1934, 48 Stat. 1186, sec. 1; U. S. C. 45: 151): "Commerce," as used in the act, to include commerce between States, etc., or in a Territory or the District of Columbia.

Act of March 3, 1927 (44 Stat. 1355, sec. 1; U. S. C. 7: 491): Restrictions on dumping of farm produce "in interstate commerce, or in the District of Columbia."

Federal Caustic Poison Act of March 4, 1927 (44 Stat. 1407, sec. 2 (c); U. S. C. 15: 402): "Interstate or foreign commerce," as used in the act, to include commerce within a Territory or possession or the District of Columbia.

Act of March 4, 1927 (44 Stat. 1423, ch. 508; U. S. C. 15: 431): "Interstate commerce," in connection with prohibition of discriminations against farmers' cooperatives, to include commerce within any Territory or possession or the District of Columbia.

Perishable Agricultural Commodities Act of June 10, 1930 (46 State. 531, c. 436; U. S. C. 7: 499a): "Interstate or foreign commerce," as used in the act, to include commerce within the District of Columbia.

Securities Act of May 27, 1933 (48 Stat. 75, sec. 2 (7); U. S. C. 15: 77b): "Interstate commerce," as used in the act, to include commerce within the District of Columbia.

National Industrial Recovery Act of June 16, 1933 (48 Stat. 199, sec. 7 (d); U. S. C. 15: 707): "Interstate or foreign commerce," as used in the act, to include commerce within the District of Columbia or a Territory or "insular possession or other place under the jurisdiction of the United States."

National Labor Relations Act of July 5, 1935 (49 Stat. 450 (6); U. S. Code Supp. 29: 152): "Commerce," as used in the act, to include commerce within the District of Columbia or a Territory.

Tobacco Inspection Act of August 23, 1935 (49 Stat. 731 (1); U. S. Code Supp. 7: 511): "Commerce," as used in the act, to include commerce within a Territory or possession or the District of Columbia.

Federal Alcohol Administration Act of August 29, 1935 (49 Stat. 989 § 17; U. S. Code Supp. 27: 211): "Interstate or foreign commerce," as used in the act, to include commerce within a Territory or the District of Columbia.

Agricultural Marketing Agreement Act of June 3, 1937 (50 Stat. 248 § 2 (1); U. S. Code Supp. 7: 610): "Interstate or foreign commerce," as used in Agricultural Adjustment Act, to include commerce within a Territory or possession or the District of Columbia.

Agricultural Adjustment Act of February 13, 1938 (52 Stat. 38 § 301; U. S. Code Supp. 7: 1301): "Interstate and foreign commerce," as used in title III of the act, to include commerce within a Territory or the District of Columbia or Puerto Rico.

Act of March 21, 1938 (52 Stat. 111, § 2; U. S. Code Supp. 15: 44): Reenactment without change of provision of act of September 26, 1914, cited above.

Civil Aeronautics Act of June 23, 1938 (52 Stat. 978 (20), 979 (21); U. S. Code Supp. 49: 401): "Interstate air commerce" and "interstate air transportation," as used in the act, to include transportation between places in a Territory or possession of the United States (except the Philippine Islands) or the District of Columbia.

Federal Food, Drug, and Cosmetics Act of June 25, 1938 (52 Stat. 1040 c. 675; U. S. Code Supp. 21: 321): "Interstate commerce," as used in the act, to include commerce within the District of Columbia "or within any other Territory not organized with a legislative body."

Federal Firearms Act of June 30, 1938 (52 Stat. 1250, § 1 (2); U. S. Code Supp. 15: 901): "Interstate or foreign commerce," as used in the act, to include commerce within a Territory or possession or the District of Columbia.

Federal Seed Act of August 9, 1939 (53 Stat. 1275 c. 615; U. S. Code Supp. 7: 1561): "Interstate commerce," as used in the act, to include commerce within the District of Columbia.

Our National Defense

EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

Mr. BLACKNEY. Mr. Speaker, I have been receiving hundreds of letters from all over the sixth district of Michigan, my home district, asking for information pertaining to the national defense situation in the United States. I am, therefore, reviewing our national defense situation and calling attention to the effect that propagandists are already having upon public thinking.

On Thursday, May 16, at 1 p. m., President Roosevelt addressed the joint session of Congress at which the Senate, the House and members of the President's Cabinet were present. In the course of the President's message he recommended an immediate appropriation of $896,000,000 to be divided as follows:

1. For the Army	$546,000,000
2. For the Navy and Marine Corps	250,000,000
3. To the President to provide for emergencies affecting the national security and defense	100,000,000

In addition to the above the President asked for authorizations for the Army, Navy, and Marine Corps to make contract obligations for $186,000,000 and an additional authorization to the President to make contract obligations for $100,000,000, making a total of authorizations of $286,000,000. Therefore the appropriation asked and the authorizations requested total $1,182,000,000.

The question has frequently been asked, What has become of all the vast appropriation for national defense that has

been made during the last 7 years? Congress wants to know. The people want to know. From the Budget Bureau we learn that $6,265,000,000 have been spent for national defense since 1933. In addition to that millions of dollars have been appropriated indirectly for national defense.

Congress is willing to appropriate every dollar necessary for a complete national defense for our country both in the Army, Navy, Marine Corps, and air force, but Congress does want to know if this money is used wisely and judiciously for the purpose indicated and not needlessly squandered.

I want to give you our defense picture for the Army and Navy in 1940 as compared with 1933, as given by the Budget Bureau:

	1940	1933
NAVY		
Battleships	15	15
Aircraft carriers	5	3
Heavy cruisers	18	11
Light cruisers	17	10
Destroyers	219	229
Submarines	95	82
Aircraft	2,863	933
Manpower (active)	145,400	90,150
Navy Reserves	55,085	39,935
Marines	25,000	13,600
ARMY		
Aircraft	2,700	1,497
Manpower (active)	241,000	134,085
National Guard	251,000	189,000
Reserves	144,714	125,000
Motor vehicles	17,791	9,505
Tanks, etc	700	----------
Antiaircraft guns	400	----------
Antitank guns	744	----------

The propagandists are immediately seizing the President's request for additional money for national defense as an indication that the United States is preparing for war. There is a vast difference between the appropriation of money for adequate national defense and the appropriation of money based upon a declaration of war.

The propagandists say that America should enter into the European conflict; that this war is our war; in other words it is another war to save democracy, or, to save civilization. To the thoughtful American citizen, however, this does not appear to be the fact. We must adequately protect our own country. The finest way for the United States to keep out of war is to have a sufficient and adequate Army, Navy, Marine Corps, and air force that will be ready at all times to preserve and protect our country.

No matter where our sympathies may lie in the European conflict, our calm, sane, sober judgment tells us that America should not participate in another European conflict. The memories of 1917 and 1918 still remain with us: thousands of fine American boys dead, billions of dollars spent, thousands of otherwise happy homes rendered sad, all because we were taught to believe that we were fighting the "war to end war." If America forms the habit of participating in every European crisis, then America will be just as bad off as those European nations. For hundreds of years the pages of European history are dotted with war. America has been particularly free, in her history, from participation in European affairs, with the exception of 1917 and 1918.

We have 130,000,000 men and women and children to think about. We have the preserving of American institutions, and we have 10,000,000 men and women out of work. Can we then afford to again be induced by propagandists to enter another European struggle? Would it not be better for the United States to refrain from entering this war, to build up her own national defense, to build up her own domestic economy? Then, when the European conflict is over, we can be the good Samaritan that will help those devastated nations to rebuild themselves upon a more permanent peace basis.

The United States does not want to appear mercenary but our national debt will shortly be $45,000,000,000, the legal limit. The guaranteed obligations of the United States will add at least six billion more to that debt. Our annual deficit now, in peace times is approximately $4,000,000,000. In addition to this financial burden could the United States safely incur obligations of from ten to twenty billion dollars a year to embark in the European war?

I think the fathers and mothers of America, with very few exceptions, would send their boys to fight if the United States was being invaded, fighting for home defense, but if I judge the fathers and mothers of America aright, they do not want again to see their boys sent across the ocean to engage in a European conflict.

The European situation is critical. We cannot help but be sympathetic; but is it not our duty to disregard the incitements of propagandists, and keep cool and sane and sensible in the interest of our own country?

Relief and Work Relief

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

Mr. DITTER. Mr. Speaker, under leave to extend my remarks, I append hereto a copy of a bill which I am introducing today, which is intended to provide relief and work relief for the needy unemployed.

The bill provides for the liquidation of the Work Projects Administration, the making of direct grants to the States for the financing of direct relief and a program of public works for these several items. The sum of $1,250,000,000 is to be allocated on the following basis:

Work Projects Administration	$300,000,000
Direct grants to States for relief	450,000,000
Public works (with authorization of $200,000,000 for contract obligations for the next fiscal year)	400,000,000
Farm Security Administration	98,300,000
Indians	1,700,000

The table given below shows the amount of employment and relief that might be anticipated to result from the expenditure of this sum during the next fiscal year:

Month	Work Projects Administration	Direct relief	Public works
July	1,600,000	----------	----------
August	1,200,000	500,000	----------
September	1,000,000	750,000	25,000
October	700,000	1,000,000	50,000
November	400,000	1,300,000	75,000
December	100,000	1,800,000	100,000
January	----------	2,000,000	125,000
February	----------	2,000,000	150,000
March	----------	2,000,000	175,000
April	----------	2,000,000	225,000
May	----------	2,000,000	250,000
June	----------	2,000,000	300,000

Section 1 (a) provides for the general appropriation and specifically provides that $300,000,000 herein appropriated shall be completely obligated by December 31, 1940.

Section 3 is another specific provision terminating the authority of the W. P. A. on December 31, 1940.

Title II. This provides that direct relief grants shall be administered by the Social Security Board. It should be noted that section 201 provides specifically that this money shall be used only for needy unemployed below the age of 65. Thus the Social Security Board cannot use this money for making grants to the States for providing old-age assistance as covered in Title I of the Social Security Act.

Section 202 (a) provides the basis of allocation of funds among the several States and specifically provides that a grant to a State cannot be greater than 75 percent of the total cost of relief per case and that no more than 10 percent of the funds made available herein shall be allocated to any one State.

Section 203 provides that the payment of funds to States by the Board as herein provided shall be made only after

audit or settlement by the General Accounting Office. This will give the General Accounting Office authority to check the method of allocating funds among the several States and will thus provide another check on the discretion of the Social Security Board in allocating funds.

The provisions relative to public works in title III are based essentially on title II of the Emergency Relief Appropriation Act of 1938, which made additional appropriations for the Federal Emergency Administration of Public Works.

It will be noted that section 301 (a) provides for an authorization of $200,000,000 to be contracted for the fiscal year 1941.

Section 301 (b) specifically provides that no funds shall be allocated to any project that cannot be undertaken before January 1, 1941, and that cannot be completed before June 30, 1942.

In paragraph (c) it is provided that $100,000,000 of the sum herein appropriated shall be used for Federal public works. The types of projects to be covered are the same as that contained in the above-mentioned relief appropriation act. This also provides that the money herein appropriated shall be allocated among the several congressional districts as equitably as possible.

Paragraph (d) provides that no grant to a public board shall be in excess of 75 percent of the cost of the projects and also that no loans are to be made by the Federal Administrator of Public Works to assist sponsors in meeting the remaining cost of the project.

Paragraph (d) provides that $100,000,000 shall be used for grants for roads; it is distributed among the States in accordance with the formula set forth in the Public Roads Act of 1921 as amended; $100,000,000 for farm-to-market roads to be allocated to the several States on the basis of farm population; $100,000,000 for flood-control and water-conservation projects; and not more than $25,000,000 for hospitals, laboratories, and other public-health facilities.

Paragraph (g) provides that the projects be performed by private contractors as a result of competitive bidding. A provision is contained limiting profits to 7 percent.

Paragraph (h) provides for the application of the Bacon-Davis Act (prevailing rate of pay) to all public works herein covered.

Section 401 specifically prevents the use of any funds herein appropriated for the Office of Government Reports, the Puerto Rico Reconstruction Administration, the preparation and distribution of motion-picture films and radio-broadcasting programs, the operation of theater projects, and any projects entirely sponsored by the W. P. A.

Section 402 provides that the funds herein appropriated shall be spent to cover the whole of the fiscal year June 30, 1941, except where otherwise provided.

Section 404 gives priority to veterans in employment.

Paragraph (b) provides for the 18 months' rule on W. P. A. projects.

Paragraph (d) provides for certification of need of all persons herein provided for.

Paragraph (e) prohibits the employment of aliens.

Section 406 is the provision on administrative expenses limiting them to 2 percent unless otherwise provided for.

Section 407 makes the Federal Employees Compensation Act applicable to funds to be spent hereunder.

Resolved, etc., That this joint resolution may be cited as the Emergency Relief Appropriation Act, fiscal year 1941.

TITLE I. WORK PROJECTS ADMINISTRATION

SECTION 1. (a) In order to bring to completion projects that are now being carried on by the Work Projects Administration, and in order to liquidate the activities of that Administration, there is hereby appropriated to the Work Projects Administration, out of any money in the Treasury not otherwise appropriated for the fiscal year ending June 30, 1941, $300,000,000, together with all balances of appropriations under section 1 (a) of the Emergency Relief Appropriation Act of 1939 which remained unobligated on June 30, 1940: *Provided*, That all such funds herein appropriated shall be completely obligated by December 31, 1940.

(b) The funds provided in this section shall be available for (1) administration, and (2) the completion of projects already approved by the President under the provisions of the Emergency Relief Appropriation Acts of 1937, 1938, and 1939: *Provided*, That no new projects shall be undertaken after June 30, 1940.

(c) The funds appropriated in this section, exclusive of those used for administrative expenses, shall be so administered that expenditure authorizations for other than labor costs for all the work projects financed from such funds in any State, Territory, possession, or the District of Columbia, shall not exceed an average for the fiscal year ending June 30, 1941, of $6 per month per worker: *Provided*, That the funds appropriated in this section shall not be used for the purchase of any construction equipment or machinery that can be rented at prices determined by the Commissioner to be reasonable and his determination made in conformity with rules and regulations prescribed by him shall be final and conclusive.

(d) In administering the funds appropriated in this section, not to exceed three-fourths of the total cost of all non-Federal projects approved after January 1, 1940, to be undertaken within any State, Territory, possession, or the District of Columbia with respect to which any such funds are used, shall be borne by the United States; and not less than one-fourth of such total cost shall be borne by the State and its political subdivisions, or by the Territory, possession, or the District of Columbia, as the case may be.

(e) The funds appropriated in section 1 (a) hereof shall be available to provide, under regulations to be prescribed by the Commissioner of the Work Projects Administration, for medical and hospital facilities for work camp project employees and burial expenses of deceased work camp project employees, including the transportation of remains to place of burial: *Provided*, That deductions shall be made from the earnings of all project employees quartered in such camps in an amount sufficient to offset the estimated cost to the United States for furnishing the foregoing.

(f) When it is found that as a result of bad faith, fraud, or misrepresentation on the part of the sponsor any land, building, structure, facility, or other project, or any part thereof, upon which funds appropriated in this joint resolution have been expended, is used, transferred, or disposed of without retention and control for public use, the sponsor of the project and the person or organization to which the land, building, structure, facility, or project has been sold, leased, or given, shall be liable, jointly and severally, upon demand of the Commissioner or his duly authorized representative, to pay over to the United States an amount equal to the amount of Federal funds expended on such land, building, structure, facility, or project.

(g) The amount which may be obligated for administrative expenses of the Work Projects Administration in the District of Columbia and in the field shall not exceed in the aggregate the sum of $10,000,000 during the fiscal year 1941, of which sum the amounts so to be obligated for the following respective purposes shall not exceed these sums: Salaries, $8,000,000; communication service, $150,000; travel, $1,000,000, and printing and binding, $100,000: *Provided*, That if the President shall determine under section 1 (a) that the appropriation made by such section shall be expended within a period less than the entire fiscal year, there may be obligated for administrative expenses not to exceed $8,000,000 within the period ending February 28, 1941, of which sum not to exceed $5,500,000 shall be available for salaries; $100,000 for communication service; $650,000 for travel; and $65,000 for printing and binding. Sums made available under this subsection shall not be expended for radio broadcasting or for the acquisition, rental, or distribution of motion-picture film.

(h) The Commissioner shall transmit to Congress, on the first day of the next regular session thereof, a statement showing for each State the names, addresses, positions, and compensation of all employees of the Work Projects Administration whose compensation is at the rate of $1,200 per annum or more. For the purposes of this subsection, the term "State" shall include the Territories, possessions, and the District of Columbia.

(i) The functions heretofore vested in the Works Progress Administration and the Work Projects Administration are authorized to be carried out until December 31, 1940, by the Work Projects Administration subject to the provisions of this joint resolution and such latter Administration is hereby extended until such date to carry out the purposes of this section.

(j) The President may detail a commissioned officer on the active list of the United States Army to perform the functions of the office of Commissioner of Work Projects, without loss of or prejudice to his status as such officer. Any commissioned officer so detailed shall receive, in addition to his pay and allowance as such officer, an amount sufficient to make his total compensation $10,000 per annum while he is so detailed.

SEC. 2. (a) The Commissioner of the Work Projects Administration shall fix a monthly earning schedule for persons engaged upon work projects financed in whole or in part from funds appropriated by section 1 which shall not substantially affect the current national average labor cost per person of the Work Projects Administration. Such monthly earning schedule shall not be varied for workers of the same type in different geographical areas to any greater extent than may be justified by differences in the cost of living. The Commissioner shall require that the hours of work for all persons engaged upon work projects financed in whole or in part by funds appropriated by section 1 shall (1) be 130 hours per month, except that the Commissioner, in his discretion, may require

a lesser number of hours of work per month in the case of relief workers with no dependents, and the earnings of such workers shall be correspondingly reduced, and (2) not exceed 8 hours in any day, and (3) not exceed 40 hours in any week.

(b) The Commissioner may authorize exemptions from the above limitations of monthly earnings and hours of work to protect work already done on a project, to permit making up lost time, in the case of an emergency involving the public welfare, and in the case of supervisory personnel employed on work projects.

(c) There shall be kept from employment on Work Projects Administration projects all relief workers whose need for employment has not been certified by (1) a local public certified agency or (2) by the Work Projects Administration, where no such agency exists or where the Work Projects Administration certifies by reason of its refusal to accept certification by local public agencies.

SEC. 3. All power and authority vested in the Work Projects Administration by this act or any other act shall expire on December 31, 1940.

TITLE II. GRANTS-IN-AID TO THE STATES FOR RELIEF

SEC. 201. There is hereby appropriated to the Social Security Board out of any money in the Treasury not otherwise appropriated for the fiscal year ending June 30, 1941, $450,000,000 to be expended by the Board in making grants to the States, District of Columbia, Territories, and possessions in order to assist them in providing relief for needy unemployed persons below the age of 65, in accordance with the provisions of this act.

SEC. 202. (a) As much of the sum appropriated herein for grants-in-aid to the States to assist them in financing and administering such forms of relief that may be determined upon and undertaken by them as the Board deems necessary, shall be allocated by the Board among the several States upon the basis of the Board's findings and conclusions with respect to the facts concerning and the weight to be given to the following factors in the respective States: (1) unemployment, as determined by the latest available statistics of the United States Employment Service, (2) living costs, (3) population, and (4) financial resources: *Provided*, That the amount allocated to any State shall not exceed 75 percent of the total amount to be spent for relief in such States: *Provided further*, That not more than 10 percent of the total amount allocated under this section shall be paid to any State.

(b) The sum allocated to a State under subsection (a) shall be paid monthly by order of the Board if—

(1) The Governor (or in the case of the District of Columbia, the District Commissioners) has certified to the Board that there has been established for the administration of relief in such State a board composed of five members, not more than three members of which shall be members of the same political party, and that such board has the power and duty of receiving and disbursing sums which may be granted such State under this section: *Provided*, That this requirement shall not apply if the constitution of such State does not permit the establishment of a board with such powers; and

(2) The personnel of such State board shall be subject to approval by the Board as to their qualifications, and the Board shall have power for cause to require the substitution of new members; and

(3) The State board has certified to the Board that the State, or its subdivisions, or both, have provided or are prepared to provide an amount equal to not less than 25 percent of the amount to be spent for relief and work relief in such State, including the amount allocated to it under this section, and that the expenditures for administration will not exceed 5 percent of such total expenditures; and

(4) The State board has certified that relief is being provided in all political subdivisions of the State where necessary, and that in each political subdivision which administers relief there is a local board with the power and duty of administering relief in such subdivision and which administers relief there is a local board with the power and duty of administering relief in such subdivision and which is composed in the same manner as the State board provided for in paragraph (1) of this subsection; and

(5) The State board shall disburse its funds by direct administration of relief, or by grants to the local boards upon the basis of inquiry into the relief needs of the local subdivisions and their financial ability to provide for relief, or both; and

(6) The State board provides and uses such administrative methods, including those relating to selection, tenure of office, and compensation of personnel, as are found by the Board to be necessary for the efficient operation of a relief system; and

(7) The State board has agreed to furnish to the Board such reports (respecting the administration of relief or work relief with respect to which funds allocated to the State under this section are used) in such form and containing such information as the Board may from time to time require, and to comply with such provisions as the Board may from time to time find necessary to assure the correctness and verification of such reports; and

(8) The State board has agreed to permit the Board to make such inspection of the administration of relief in the State as the Board deems necessary and to submit to a postaudit of its financial records by the General Accounting Office; and

(9) The State board agrees that none of the Federal funds granted to it will be used to provide relief or work relief for persons who are not citizens of the United States.

(c) If the Board, after reasonable notice and hearing to the State relief board, finds that there has not been compliance by a State or the State relief board with the requirements made in subsection (b) of this section, the Board shall withhold the grants to such State until such time as the Board is satisfied that the State or State relief board has complied with such requirements. If the Board, after reasonable notice and hearing to the State relief board, finds that any part of an amount granted to a State under this section has been diverted to a purpose not reasonably within the purpose of furnishing relief or work relief, or that more than 75 percent of the amount devoted to such purposes has been expended out of grants under this section, or that more than 5 percent of the total expenditures for relief or work relief has been for administrative expenses, the amount of future grants to be made to the State shall be reduced by an amount equal to the amount the Board determines has been diverted or the amount the Board determines to be such excesses.

SEC. 203. The Board shall certify to the Secretary of the Treasury the amounts to be granted to the States under section 202 from the sums appropriated by this act. The Secretary of the Treasury shall, through the Division of Disbursement, and after audit or settlement by the General Accounting Office, pay to the States at the time fixed by the Board the amounts so certified and approved.

SEC. 204. (a) The Board shall make full report to Congress on January 15 of each year concerning its administration of the functions with which it is charged by the virtue of this act. Such report shall include detailed statements as to the amount of Federal funds allocated to each State, the formulas used in making such allocations, and the total relief expenditures and number of individuals on relief rolls in each State for the last previous fiscal year and the current fiscal year, as far as such information is available.

(b) In connection with the request for any further relief appropriation to be administered as herein provided, the President shall submit to Congress a detailed statement showing the estimated need for relief and the tentative formula to be used by the Board in dividing the cost of relief between the Federal Government and the States in making grants to the States as provided in sections 201 and 202.

SEC. 205. No more than $2,250,000 of the funds herein appropriated shall be used by the Social Security Board to administer the functions hereby vested therein.

SEC. 206. As herein used, the term "State" includes State, District of Columbia, Territory, or insular possession.

TITLE III. PUBLIC WORKS AND OTHER GRANTS

SEC. 301. (a) In order to increase employment by providing for useful public-works projects of the kind and character which the Federal Emergency Administrator of Public Works (herein called the Administrator) has heretofore financed or aiding in financing pursuant to title II of the National Industrial Recovery Act, the Emergency Appropriation Act of 1935, the Emergency Relief Appropriation Act of 1936, or the Public Works Administration Extension Act of 1937, there is hereby appropriated out of any money in the Treasury not otherwise appropriated to remain available until June 30, 1942, the sum of $400,000,000: *Provided*, That in addition to the amount herein appropriated, the Federal Emergency Administrator of Public Works is hereby authorized to incur obligations and to enter into contracts for the payment of grants to public bodies as is hereinafter provided in an amount not exceeding $200,000,000. The funds herein provided for are to be expended by such Administrator, subject to the approval of the President, for (1) the making of allotments to finance Federal projects, or (2) the making of grants to States, Territories, possessions, political subdivisions, or other public bodies (herein called public agencies).

(b) No funds appropriated under this title shall be allotted for any project which in the determination of the Administrator cannot be commenced prior to January 1, 1941, or the completion of which cannot be substantially accomplished prior to June 30, 1942.

(c) Under subsection (a) (1) of this section, not to exceed $100,000,000 shall be allotted to Federal agencies for Federal construction projects in continental United States outside the District of Columbia, and such projects shall be selected from among the following classes: (1) Projects authorized by law, and for the acquisition of lands for sites of such authorized projects; (2) projects for the enlargement, extension, or remodeling of existing Federal plants, institutions, or facilities; (3) projects for hospitals and domiciliary facilities of the Veterans' Administration (including the acquisition of lands for sites thereof); (4) projects for penal and correctional facilities under the Department of Justice including the acquisition of land for sites thereof; and (5) any river and harbor projects that have been authorized by law or that have been approved by the Corps of Engineers of the United States Army: *Provided*, That so far as possible the funds herein allotted for Federal projects shall be as equitably as possible distributed among the several congressional districts.

(d) No grant to a public body shall be made in excess of 75 percent of the cost of any non-Federal project: *Provided*, That no additional loans shall be made by the Administrator to any public body for any purpose.

(e) Out of funds available for grants to public bodies, $100,000,000 shall be available for the construction of highways: *Provided*, That this fund shall be allocated among the several States and the political subdivisions thereof on the basis of the formula set forth in the Public Roads Act of 1921, as amended; $100,000,000 shall be used

for making grants to assist in the construction of farm-to-market roads: *Provided*, That such funds shall be allocated to the several States and their political subdivisions on the same basis as their farm population bears to the total farm population of the United States; $100,000,000 shall be utilized in making grants for flood-control and water-conservation projects; and no more than $25,000,000 shall be available for the making of grants for the construction of hospitals, laboratories, and other public-health facilities.

(f) Not more than $10,000,000 of the funds appropriated in this title shall be available for administrative expenses of the Administrator during the fiscal year ending June 30, 1941. Such amount and the amount made available in the Independent Offices Appropriation Act of 1941 for administrative expenses for the Federal Emergency Administration of Public Works shall be available for administrative expenses thereof during such fiscal year for the purposes and under the conditions set forth thereof for such act and such Administration.

(g) All projects undertaken by public bodies with the assistance of a grant as herein provided shall be done by contract awarded to the lowest responsible competitive bidder after adequate public notice of such competition for bids. No person, firm, or corporation performing such a contract so awarded shall be entitled to a profit in excess of 7 percent thereon, and any profit made in excess thereof shall be refunded to the Government of the United States. The Administrator shall have the power to make such rules and regulations as are necessary to carry out this section.

(h) Section 276 (a) of title 40 of the United States Code shall apply to any project financed in whole or in part by funds appropriated by this title.

(i) The Federal Emergency Administrator of Public Works is hereby continued to the close of the fiscal year ending June 30, 1942. He is hereby authorized to continue all functions which he is authorized to perform on the date of enactment hereon.

SEC. 302. (a) In order to continue to provide assistance through rural rehabilitation and relief to needy farmers and relief to other needy persons in the United States, its Territories, and possessions, there is hereby appropriated to the Department of Agriculture, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1941, $98,300,000, together with the balance of the appropriation under section 3 of the Emergency Relief Appropriation Act of 1939 which remains unobligated on June 30, 1940.

SEC. 303 (a) In order to continue to provide relief and rural rehabilitation for needy Indians in the United States, there is hereby appropriated to the Bureau of Indian Affairs, Department of the Interior, out of any money in the Treasury not otherwise appropriated, for the fiscal year ending June 30, 1941, $1,700,000.

(b) The funds provided in this section shall be available for (1) administration, not to exceed $80,000; (2) loans; (3) relief; (4) the prosecution of projects approved by the President for the Farm Security Administration for the benefit of the Indians under the provisions of the Emergency Relief Appropriation Act of 1938; and (5) subject to the approval of the President for projects involving rural rehabilitation of needy Indians.

TITLE IV. GENERAL PROVISIONS

SECTION 401. No funds herein appropriated shall be used for the Office of Government Reports in the Executive Office of the President, the Puerto Rico Reconstruction Administration, the preparation and distribution of motion-picture films and radio-broadcasting programs, or for the operation of any theater projects, or for the operation of any projects sponsored solely by the Work Projects Administration.

SEC. 402. Funds appropriated in this joint resolution to the various Federal agencies shall be so apportioned and distributed over the period ending June 30, 1941, except where a different apportionment is specifically permitted by this act, and shall be so administered during such period as to constitute the total amount that will be furnished to such agencies during such period for the purposes herein set forth.

SEC. 403. The funds made available by this act shall be used only for work relief or relief for persons in need except as otherwise specifically provided herein.

SEC. 404. In employing or retaining in employment or in the granting of relief to any person where such is financed in whole or in part out of funds appropriated in this act, preference shall be determined, as far as practicable, on the basis of relative needs and shall, where the relative needs are found to be the same, be given in the following order: (1) Veterans of the World War and Spanish-American War and veterans of any campaign or expedition in which the United States has been engaged (as determined on the basis of the laws administered by the Veterans' Administration), unmarried widows of such veterans and wives of such veterans, who are in need and are American citizens; and (2) other American citizens, Indians, and other persons owing allegiance to the United States who are in need.

(b) There shall be removed from employment on Work Projects Administration projects all relief workers, excepting veterans, unremarried widows of such veterans, and wives of such veterans who are in need, and are American citizens who have been continuously employed on such projects for more than 18 months, and any relief worker so removed shall be ineligible to be restored to employment on such projects until after (a) the expiration of 30 days after the date of his removal, and (b) recertification of his eligibility for restoration to employment on such projects.

(c) In considering employment of persons upon work projects prosecuted under the appropriations contained in this act, the agency providing the employment shall determine whether such persons are able to perform the work on work projects to which they can be assigned and no person shall be employed or retained for employment on any such project whose work habits are such, or work record shows that he is incapable of performing satisfactorily the work to which he may be assigned on the project.

(d) There shall be removed from employment on Work Projects Administration projects, or from receipt of any other form of relief, all relief workers whose needs for employment have not been certified by, and no relief worker shall be employed on such projects until after his need for employment has been certified by, (a) a local public certifying agency, or (b) the Work Projects Administration where no such agency exists or where the Work Projects Administration certifies by reason of its refusal to accept certification by local public agencies; *Provided*, That insofar as possible in the case of any project financed in whole or in part from funds appropriated by title III of this act preference shall be given to persons certified by local authorities as being in need of relief.

(e) No alien shall be given employment or relief or continued in employment or relief from the appropriations contained in this act and no part of the money appropriated in this act shall be available to pay any person who has not made or who does not make affidavit as to United States citizenship, such affidavit to be considered prima facie evidence of such citizenship.

(f) No portion of the appropriation made under this joint resolution shall be used to pay any compensation to any person who advocates, or who is a member of an organization that advocates, the overthrow of the Government of the United States through force or violence.

SEC. 405. The provision of section 3709 of the Revised Statutes (41 U. S. C. 5) shall not apply to any purchase made or service procured in connection with the appropriations in this act when the aggregate amount involved is less than $300.

SEC. 406. The appropriations in this act for administrative expenses and such portions of other appropriations in this act as are available for administrative expenses may be obligated in the amounts which the agency, with the approval of the Director of the Bureau of the Budget, shall have certified to the Secretary of the Treasury as necessary for personal services, in the District of Columbia and elsewhere, and for contract stenographic reporting services, supplies and equipment; purchase and exchange of lawbooks, books of reference, directories and periodicals, newspapers and press clippings; travel expenses, including expenses of attendance at meetings of officials and employees of the agency on official business; rental at the seat of government and elsewhere; purchase, operation, and maintenance of motor-propelled passenger-carrying vehicles; printing and binding; and such other expenses as may be necessary for the accomplishment of the objectives of this act: *Provided*, That unless otherwise specifically provided for, administrative expenses of any agency operating under this act shall not be greater than 2 percent of funds herein made available to it.

SEC. 407. The provisions of the act of February 15, 1934 (48 Stat. 351), as amended, relating to disability or death compensation and benefits shall apply to persons (except administrative employees qualifying as civil employees of the United States) receiving compensation from the appropriations in this act for services rendered as employees of the United States: *Provided*, That this section shall not apply in any case coming within the purview of the workmen's compensation law of any State, Territory, or possession, or in which the claimant has received or is entitled to receive similar benefits for injury or death.

SEC. 408. Any person who knowingly and with intent to defraud the United States makes any false statement in connection with any application for any work project employment, or relief aid under the appropriations in this act, or diverts, or attempts to divert or assists in diverting, for the benefit of any person or persons not entitled thereto, any portion of such appropriations, or any services or real or personal property acquired thereunder, or who knowingly, by means of any fraud, force, threat, intimidation, or boycott, or discrimination on account of race, religion, political affiliations, or membership in a labor organization, deprives any person of any of the benefits to which he may be entitled under any such appropriations, or attempts so to do, or assists in so doing, or who disposes of, or assists in disposing of, except for the account of the United States, any property upon which there exists a lien securing a loan made under the provisions of this act or the Emergency Relief Appropriation Acts of 1935, 1936, 1937, 1938, and 1939, shall be deemed guilty of a felony and fined not more than $2,000 or imprisoned not more than 2 years, or both. The provisions of this section shall be in addition to, and not in substitution for, any other provisions of existing law, or of this act.

SEC. 409. No funds appropriated in this act, whether administered by the Federal Government or by the States or local governmental agencies from funds contributed in whole or in part by the Federal Government, shall be used by any Federal, State, or other agency to purchase, establish, relocate, or expand mills, factories, stores, or plants which would manufacture, handle, process, or produce for sale articles, commodities, or products (other than those derived from the first processing of sweetpotatoes) in competition with existing industries.

National Defense

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1940

LETTER FROM A CONSTITUENT AND REPLY THERETO

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received recently from a constituent, together with my reply thereto:

MILES CITY, MONT., *May 15, 1940.*

Hon. JAMES F. O'CONNOR,
Washington, D. C.

DEAR MR. O'CONNOR: Am writing you in regard to sentiment in our locality on the movement on foot to increase our national defense.

The views of our people here seems to be unanimous that our country should lose not a moment's time in stepping up our defense system to be ready for any emergency.

Most of us know that you are exceptionally well informed on world conditions.

Do you think that our country, which is extremely wealthy, is being put in readiness with sufficient speed in case we should be put to a test in deadly combat? Your views will be appreciated.

Is our air force adequate, and do we now have enough heavy artillery and antiaircraft weapons? We are not in a position to know these things, and relying on your judgment, prompted this letter.

We have two patriotic sons, aged 21 and 24 years.

We feel that it would be nothing short of criminal if, in a war, these young men should be called upon to lay down their lives on account of a shortage of, or inferior, equipment.

Let us not be fooled. We are a peace-loving people, but it seems those are the nations most likely to be attacked.

It is our humble opinion that our great Republic should lose no time in building and manning an air force second to none.

With kindest regards.

Cordially yours,

W. J. ESSLINGER,
Member, Division 761, Brotherhood of Locomotive Engineers.

MAY 18, 1940.

Mr. W. J. ESSLINGER,
611 North Montana, Miles City, Mont.

MY DEAR FRIEND: This will acknowledge your very interesting letter of May 15. Indeed, I am very glad to have it.

The President, in his message to the joint session of Congress on May 16, covered the case. He pointed out that air navigation steps up the speed of possible attack to 200 to 300 miles an hour, and called to our attention how attacks could be made on American continents in this fashion: From Greenland to Newfoundland it is 4 hours by air, 5 hours to Nova Scotia, and only 6 hours to New England. The Azores are only 2,000 miles from parts of our eastern seaboard, and if Bermuda fell into hostile hands it is a matter of less than 3 hours for modern bombers to reach our shores. From a base in the outer West Indies the coast of Florida could be reached in 200 minutes. The islands off the west coast of Africa are only 1,500 miles from Brazil. Modern planes, starting from the Cape Verde Islands, can be over Brazil in 7 hours; and Para, Brazil, is but 4 flying hours to Caracas, Venezuela; and Venezuela but 2½ hours to Cuba and the Canal Zone; and Cuba and the Canal Zone are 2¼ hours to Tampico, Mexico; and Tampico is 2¼ hours to St. Louis, Kansas City, and Omaha.

I am not at all excited about an invasion, as it is my firm belief that when those countries in Europe get through with their insane war they will be bled white. However, as a matter of insurance against possible attack, on the same day that the President delivered his message I made a speech on the floor of the House, and, among other things, I said:

"The President of the United States said in his message here today, in joint session, 'I know that our trained officers and men know more about fighting and the weapons and equipment needed for fighting than any of us laymen, and I have confidence in them.' I wish to add that I have every confidence and profound faith in the President of the United States. Though I shivered when the sum was named, I feel that every dollar he asks this Congress to appropriate will be spent for the express purpose of defense only; that there is no person in the United States, nor any Member of this House, who is more desirous of keeping this country out of war and keeping this country at peace than the President of the United States. He is striving day and night to preserve our peace. I am going to vote for the appropriation that he has asked for, and I am going to vote for it only on the theory that it is for defense purposes. My contention always has been, and is now, that we must keep out of foreign wars; but if any foreign country attempts to invade our shores, we must defend it with the last dollar we have and with the last drop of blood of American citizens to preserve our liberties."

You will see from the above that I am for the President's program, but I do not feel that there is really anything to worry about. The defense program may be likened to taking out insurance against fire.

You, like ourselves, have learned a lot in the last 2 months from what is going on in Europe. Old methods of warfare are outmoded. England may be licked because she failed to keep step with advancing types of death-dealing agencies. There is little doubt but what the time is fast coming when the major battles will be fought in the air. We have learned that ships must be protected against bombs from air. England has found this out. We must profit from her lesson.

Thanking you for your fine letter, and hoping that you will feel free to write to me at any time in the future, I am

Yours sincerely,

JAMES F. O'CONNOR.

White-Fringed Beetle Control

EXTENSION OF REMARKS
OF
HON. MALCOLM C. TARVER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1940

LETTERS AND TELEGRAM FROM STATE OF LOUISIANA AGRICULTURAL OFFICIALS

Mr. TARVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

DEPARTMENT OF AGRICULTURE AND IMMIGRATION,
STATE OF LOUISIANA,
Baton Rouge, May 18, 1940.

Hon. MALCOLM C. TARVER, M. C.,
Washington, D. C.

MY DEAR CONGRESSMAN: Please permit us to call your attention to a controversy that occurred in the House of Representatives on May 14.

We want to go on record as denouncing the few Louisiana beekeepers who have attempted to prevent funds being made available for white-fringed beetle control and eradication work, as evidenced by letters being read into the CONGRESSIONAL RECORD on the above date. These few beekeepers are acting purely from a selfish motive and are not concerned about the white-fringed beetle except to try to stop the control and eradication program in Louisiana.

With the view of attempting to clarify this situation so that reconsideration of the appropriation may be obtained, we have directed to Congressman DIRKSEN, who we are sure acted in good faith, a letter and telegram as per enclosed copies.

Should adequate funds not be made available for the next fiscal year, the work for the suppression of the white-fringed beetle will be terminated as of June 30. In that event there are reasons to expect that the 44 uninfested States would take quarantine actions against the 4 infested States, including Louisiana, to the serious detriment of the agricultural interests of these States, and the opportunity of possibly eliminating this pest, which occurs only in limited areas in the 4 infested States, would be lost.

We feel that it would be nothing but fair to permit the various commissioners of agriculture, State entomologists, and plant-quarantine officials to be heard on this very serious and important question.

Thanking you for your consideration, we remain

Sincerely yours,

H. D. WILSON,
Commissioner of Agriculture.
W. E. ANDERSON,
State Entomologist.

DEPARTMENT OF AGRICULTURE AND IMMIGRATION,
STATE OF LOUISIANA,
Baton Rouge, May 17, 1940.

Hon. EVERETT M. DIRKSEN, M. C.,
House Office Building, Washington, D. C.

DEAR MR. DIRKSEN: Our department is very much interested in the white-fringed beetle appropriation in the amount of $600,000 as approved by the Bureau of the Budget to control and eradicate this new pest that has obtained a temporary foothold in four Southern States. The white-fringed beetle has demonstrated its ability to do enormous damage to agricultural and horticultural plants and plant products in the infested areas. Based on our investigation of the damages that the white-fringed beetle is capable of doing, we are justly fearful of the results should this insect spread from the infested areas at New Orleans to adjacent territory or from any other infested area.

There are certain interests within the area under quarantine on account of the white-fringed beetle that are seriously affected as a result of the control and eradication program and will not profit from same. These interests are the beekeeping, dairy, beef cattle, and a few other minor interests. It means nothing to these interests above cited whether the beetle is eradicated or not; yet in the general farming areas of Louisiana, as well as the balance of the Southern States, the presence or absence of the white-fringed beetle means success or failure of crops grown.

The State of Louisiana recognized that in imposing restrictions in carrying out the regulations for the eradication of the pest it necessarily follows that certain hardships and privations must be imposed on citizens in the infested areas in order to protect the balance of the country from the ravages of the white-fringed beetle. In fairness to the various interests affected by the program (by causing these interests to sustain a loss) the State of Louisiana has endeavored to alleviate these losses as much as possible by appropriating money to pay claims for losses and damages.

The beekeeping industry, and I might say the balance of the industries in the infested areas of Louisiana affected by the white-fringed beetle control and eradication program, are infinitesimal in value when compared to the value of other crops that will be protected not only in Louisiana but in other States from the ravages of the white-fringed beetle if the Bureau of Entomology and Plant Quarantine in cooperation with States affected, is permitted to carry this program on to a successful conclusion.

The testimonials of the Louisiana beekeepers in the infested area that were read into the CONGRESSIONAL RECORD May 14 presented a one-sided, selfish picture in order to obtain the avowed objection of a few individuals to stop the program of white-fringed beetle eradication. If the program could not be stopped, then to harass those in charge of the work in every way possible through individual efforts as well as through the so-called organization of Louisiana Beekeepers Association, who, with the exception of less than a dozen, keep bees as a hobby or a side line.

Beekeepers, dairymen, and beef cattle owners have been paid in excess of $35,000 for losses that they have sustained. The beekeepers have been paid on the basis of $7.50 per colony, totaling more than $30,000. Permit me to suggest that you verify the fact from the beekeepers of your State that this is a good price for a two-story colony of bees.

In view of the foregoing facts, we respectfully request and urge that you reconsider this entire matter, with the view to assist to obtain a concurrence in the Senate amendment.

From the knowledge we have obtained with regard to the damage the white-fringed beetle will cause to a wide range of agricultural and horticultural crops, we feel that it is a pest of major economic importance. We hope that the Bureau of Entomology and Plant Quarantine will be provided with funds with which to eradicate this pest in cooperation with the various State departments of agriculture that are affected by the presence of the white-fringed beetle within their respective States.

Sincerely yours,

W. E. ANDERSON,
State Entomologist.

BATON ROUGE, LA., *May 17, 1940.*

Hon. E. McK. DIRKSEN,
United States Congressman, Washington, D. C.:

Our State Entomologist W. E. Anderson is writing you at length a'r mail today in reference to the elimination from appropriation bill funds to carry on work of controlling or eradicating white-fringed beetle in several Southern States. We believe this action was based on letters, telegrams, or other information received from a few disgruntled and selfish beekeepers in the section around New Orleans, La. From our observation and from information from the United States Department of Agriculture, the white-fringed beetle is a major pest and if not controlled or eradicated will do untold damage to practically every crop that is grown in Southern States and perhaps will eventually get a foothold north of the Ohio River. This work did damage some beekeepers, and the Louisiana Legislature appropriated moneys to take care of these losses. Would appreciate if you would further investigate this unfortunate situation.

HARRY D. WILSON,
Commissioner.

Exploitation of Child Labor

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1940

TELEGRAMS FROM CONSTITUENTS

Mrs. ROGERS of Massachusetts. Mr. Speaker, it seems almost unbelievable that there is an obvious attempt on the part of the present administration to encourage and to subsidize the exploitation of child labor. Yet the Secretary of Agriculture, in a letter approving of the passage of Senate bill 3237, advocates that we legislate the payment of benefits—cash out of the Treasury, many thousands of dollars—to those sugar-plantation owners who have been caught during the past 3 years employing children, contrary to the provisions of the Sugar Act.

The most ironical feature of this legislation which I shall oppose in every possible way is the fact that these sugar-plantation owners ask for payment of these many hundreds of thousands of dollars on the grounds that they did not know that the children they employed were under 14 years of age. These same sugar-plantation owners allege that they are favorable to the payment of a penalty of $10 per day when the Government finds that they have or are employing children. Is it fair to expect that the Children's Bureau will be any better able to enforce such a penalty than they have been to prevent the employment of children under 14 years of age when by so doing the employing sugar-plantation owner faced the loss of many thousands of dollars in cash payments out of the public treasury?

With millions of our people unemployed, and with the American people appropriating billions of dollars for relief, surely one would expect these beneficiaries of the Sugar Act to cooperate with the Government by providing employment for persons of mature years.

When this legislation was up for consideration on the floor of the House this afternoon and also 2 weeks ago I strongly objected to its passage and now we find that the proponents of this legislation are seeking a special rule to have this class legislation and misleading measure considered by the House. Since I raised objection on the floor of the House to the enactment of this vicious legislation, national organizations have notified the House leaders of their objection to the enactment of this legislation without the full facts becoming known at a public hearing. It is my understanding that such organizations as the National Congress of Parents and Teachers, and the Young Women's Christian Association have already petitioned the Speaker of the House for a public hearing on this bill before it is considered by the House. I have already asked for a hearing if and when a rule is considered. I sincerely believe that once the Members of the House are acquainted with the full facts behind this proposed legislation they will vote to protect the child life of America by rejecting any proposal that calls for the payment of public funds to those who, contrary to the provisions of existing law, employ and exploit the labor of children under 14 years of age.

The following are two of the telegrams of protest I have received against this legislation, also a copy of a telegram written to some of the leaders in the Congress from the board of managers, National Congress of Parents and Teachers:

Hon. WILLIAM B. BANKHEAD,
Speaker, United States House of Representatives, Washington, D. C.
Hon. SAM RAYBURN,

W. P. A. Project Highly Praised

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 20, 1940

LETTERS FROM HON. THOMAS E. DEWEY AND JAMES W. TURNER

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include a letter from the Honorable Thomas E. Dewey, district attorney of the county of New York, N. Y., highly commending the effective work done by those assigned to a W. P. A. project in his office. This letter was written by District Attorney Dewey on April 7, 1938, at a time when the continuance of the project mentioned therein was in doubt.

It is a splendid and deserving tribute to those persons who were and equally applies to those who are now assigned to this project, persons who have contributed greatly in the work of the district attorney's office in the detection of crime and in the prosecution of criminals, and who, in all probability, if it was not for the W. P. A., would be receiving straight relief, with the "pauper's oath" test, directly or indirectly, as the basis for receiving assistance. Instead, under the work-relief program put into operation by a Democratic Congress under the farsighted, courageous, and humane leadership of the great humanitarian, President Franklin D. Roosevelt, those assigned to this project and all other W. P. A. projects are contributing their abilities, mental and physical, or both, in some necessary activity and at the same time are receiving relief, and in a manner where they retain feelings of self-respect for themselves.

The opinions and feelings of District Attorney Dewey, as expressed in his letter, are typical of the opinions entertained by countless of public officials throughout the country in connection with projects which, sponsored locally, are under their jurisdiction or supervision.

The letter of District Attorney Dewey is a splendid and deserving tribute to those assigned to the project in his office. It is just as applicable to all persons who are beneficiaries of the great and humane work-relief program brought into operation under the leadership of President Roosevelt.

I also include in my remarks a letter received from James W. Turner, chairman of the Board of Selectmen of the Town of Scituate, Mass., showing the opinion of the members of the board in relation to this great work-relief program, under which the unfortunate victims of the depression, capable of working, willing to work, unable to obtain work, and who are in distress, receive relief, not subject to the "pauper's oath" test, either directly or indirectly, but in a manner which enables them to retain their feelings of self-respect. The importance of this angle from the broad aspects of citizenship have been too long overlooked.

COUNTY OF NEW YORK,
DISTRICT ATTORNEY'S OFFICE,
New York, April 7, 1938.

Mr. CORRINGTON GILL,
Assistant Administrator, Works Progress Administration, Washington, D. C.

MY DEAR MR. GILL: I am gravely concerned at the possibility of interruption of the W. P. A. project now attached to this office, the news of which you conveyed to me yesterday. The discontinuance of the project would be nothing short of a calamity in the administration of criminal justice.

For the past 2 years this project has been continuously assisting in racket investigations of great importance. These successful prosecutions would not have been possible, with one exception, without the tremendous volume of accounting labor expended in each. Unless intimately connected with the office, no one could have any conception of the work done by the 25 W. P. A. accountants and the 10 staff accountants regularly attached to my office. Literally thousands of full sets of books have been examined, the suspicious items isolated, and their histories developed in form to compel the testimony of reluctant or intimidated victims of organized crime.

By way of illustration, my office has been working for more than 2 years upon an organized monopoly in the electrical industry maintained by fraud and violence. This contractor's monopoly has, in my judgment, cost the National, State, and municipal governments for electrical work in the city of New York many millions of dollars in the past decade.

This investigation involves the exhaustive examination of the corporate books and records of several scores of contractors whose total annual business aggregates many millions of dollars. Only in this way can the evidence be procured. With a small staff burdened with many other duties, I think I can fairly state that this investigation would break down completely without the assistance of the W. P. A. project. The savings to the Federal Government alone, after the monopoly has been broken, would in my judgment pay for the continuance of the W. P. A. project for 10 years.

One other illustration may be helpful. For more than 4 years a group of professional criminals directly connected with the notorious Lucky Luciano have, under the guise of a legitimate labor union, extorted money from workers and employers in the taxicab industry in New York City. Officers of four of the largest companies and many of their employees have been intimidated or beaten and their cabs seriously damaged or destroyed. By combining the extensive and skilled accounting work largely performed by men on the W. P. A. project with an investigation by my office, this racket has been broken and the defendants are either in custody or fugitives from justice. The economic loss to the community as a result of this racket has been tremendous, and its destruction by arrests during this past week made an important contribution to the peace and security of industry and labor in New York.

In each of these two illustrations, the work is going forward, with a vast amount still to be done. There are at least a dozen other situations of almost equal magnitude, in each of which it is imperative that the accounting work be continuously available.

This need for additional accountants, I hope, is not permanent but will continue for another year or more. It is a project of the highest social value to the community. While the expense of the project does not appear to me to be substantial, on a comparative basis, it might be possible to make some reduction in cost if that would be helpful.

Should any further information be useful to you in presenting this matter to the President, I will be happy to provide it. It is my sincere hope that authority for the continuance of the project can be procured.

With kindest personal regards,
Sincerely yours,

THOMAS E. DEWEY.

BOARD OF SELECTMEN,
Scituate, Mass., May 14, 1940.

Hon. JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

MY DEAR MR. McCORMACK: The board of selectmen approve favorable consideration of the W. P. A. appropriation bill which comes before Congress for debate on Thursday of this week.

Each year our citizens have voted substantial sums for the purchase of materials and supplies for constructive W. P. A. projects to meet allotments of funds granted by the Federal Government for work relief, which has utilized the services of many needy persons who would have otherwise been unemployed. These funds also made possible improvements of permanent value to the town at a greatly reduced cost, which could not have been considered in these times.

Not only have these projects been of distinct benefit to the town, but they have been a source of security for our citizens and have been a great factor in keeping relief costs down.

Yours respectfully,

JAMES W. TURNER,
Chairman, Board of Selectmen.

Further Suggestions To Remedy Unemployment

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 7, 1940

Mr. MURDOCK of Arizona. Mr. President, after a period of studying natural resources and unemployment, I wish to include, in addition to other reports, a statement of my belief that new mining developments and also new agricultural developments are possible, and even prospective, in such a way as to afford a considerable measure of employment. I believe that proper assistance afforded by the Government

to aid small-mine operators would result in an unprecedented impetus of mining development, and would afford employment to 200,000 men now unemployed, and would probably save the taxpayer $45,000,000 cut of the Federal Treasury over a 5-year period in supporting those now on relief. This legislation would stimulate new mineral production, especially of the strategic materials on which the prosperity and the defense of our country depend.

I further believe that by proper legislation and governmental aid thousands of farmers can be given employment, or can be enabled to establish themselves in partial self-support, through the growing of new crops and the tilling of new land, which agricultural development would not interfere with present crops or present cultivated lands. The new crops referred to are those that have never been extensively cultivated in this country, but whose products are needed, command good prices and have heretofore been imported. The new lands referred to are limited in area, but are those in certain favored spots on the public domain where men who have a small income and a knowledge of agriculture, such as many ex-service men, can make a part of their living from the tilling of the soil.

I. AS TO AID OF SMALL-MINE OPERATORS

The explanation of one proposal has been already well made by W. J. Graham, president of the Arizona Small Mine Operators' Association, in his analysis of the bill H. R. 8206. This analysis will be found in the Appendix of the CONGRESSIONAL RECORD, page 2254, as an extension of the remarks of the gentleman from Arizona, Congressman JOHN R. MURDOCK. This enactment would enlarge the powers of the Reconstruction Finance Corporation to make mining loans up to $5,000 on class C properties, and would extend the R. F. C.'s powers in regard to the types of mining loans permitted. It would also make available more funds for such loans by impounding the Government's seigniorage on silver domestically produced since July 1, 1939, over a 5-year period. The bill recognizes mining as a hazardous investment, but provides ample security for the total loans, and looks toward ultimate repayment through royalties from producing properties. A future amendment to the bill will provide that only unemployed men shall be given employment by this means.

It is estimated that 200,000 men will be furnished employment by this act in operation without the cost of a penny to the Government, and with a consequent decrease over a 5-year period of forty or more million dollars in relief rolls for these same 200,000 men now on relief. While some mines would not pay out, others will prove profitable and make the repayments; and, better still, the great untouched fields of mining will be opened up and set in a course of proper development by this legislation, whereas now practically no new developments are taking place whatsoever. All this is possible through the aiding of these small-business men and the furnishing of employment in private enterprise at productive work.

II. AS TO AID TO FARMERS

The suggestion outlining the beginning of this statement contemplates new farm employment and opportunity especially throughout the Southwest. Although earnestly advocating the general policy of reclamation and irrigation, and although often asking for large appropriations to build great dams and irrigation works under the Bureau of Reclamation, it is not that type of thing I now have in mind. Rather it is a type of subsistence farming, subsistence with a new meaning, and not with the former meaning of the term. As explained in the beginning, there are only certain spots in the public domain and only certain conditions under which this can be done, and only certain individuals who would be capable of benefiting from this proposal. Some areas may be better than others, some products may be better than others, and of course some individuals would be be better than others. However, I sincerely believe that the following is a worthy suggestion toward ending unemployment for many men now seeking "a way out."

What kind of men might be interested in this proposal and likely successful? First, ex-service men who have some compensation from the Government, but hardly enough to support themselves and their families and who are anxious to bring their abilities and resourcefulness, in a spirit of self-reliance and independency, to better their condition in life. Let it be remembered that when a tract of land containing six or seven thousand acres in the great Northwest was opened for settlement and ex-service men were given preference and only 65 could be provided for, more than 1,500 applied. This shows the land-hunger of our ex-service men.

There are tracts of land lying along the Colorado River not susceptible of extensive irrigation plans, but susceptible to watering by pumping and the first proposal is that such lands be made available by the Government in 5-acre tracts to be leased to qualifying persons at a nominal rent with the view of the occupant making intensive use of the 5 acres in the most profitable way he can and having first option on the purchase of the land eventually. Truck gardening or chicken ranching, or the like, would seem to lend themselves to this use.

There are other portions of the public domain where a considerable number of 5-acre tracts might be developed at less expense and with less water than the ones just referred to. Many valleys, and even so-called desert stretches in various parts of the Southwest, could be made to produce new products which would likely be quite profitable. For instance, it is very likely that safflower seed can be grown with a fourth the amount of water which would be required for vegetables, alfalfa, or cotton; and safflower seed oil would be more valuable than any of the above-mentioned production. Just prior to his death Thomas Edison gave a great deal of thought to the American production of rubber. It is a well-known fact that certain desert vegetation of the Southwest produces a good quality of rubber, and if war abroad or other factors made it necessary and prices high, we could probably produce our own rubber. Perhaps we ought to produce a small part of it, even under peace conditions. We have it on good authority that rubber can be grown in Texas, New Mexico, Arizona, and southern California.

For several months a gentleman who is producing a high quality fiber for binder twine and many other such purposes has been suggesting the harvesting of yucca plant leaves on the public domain. He has stated repeatedly that if we will make a slight change in the Taylor Grazing Act permitting the harvesting of yucca leaves—not the plant, but the leaves only—that he will establish a factory, using his newly invented machinery to process this valuable fiber, at Deming, N. Mex., Willcox and Kingman, Ariz., and Searchlight, Nev., as well as at Van Horn, Tex. The harvesting of yucca leaves from the public domain may not seem to fit in very well with the above proposal, but we are reliably informed by botanists at the University of Arizona and the Thompson Arboretum, in Arizona, that yucca can be cultivated, and that its fiber is far superior to that which we now import.

In addition to the above, there are other farm possibilities which are more than mere possibilities. There are many families on the outskirts of Phoenix and Tucson and other southern Arizona towns, who are now doing quite well on small ranches raising chickens, squabs, rabbits, and other specialties. Many of these men need to live in a mild climate and to have plenty of sunshine in order to prolong their lives. Of course, ex-service men are more likely to fit into this scheme, but also some elderly folk who have a little income but who wish to retire from farm homes in the north and east and make their homes in a land where they can be outdoors every day of the year. Such persons could very likely take advantage of this program.

This will be more especially true as old-age pensions and benefits come more and more into use, and elderly folk who would not think of running a large farm in the colder part of

our country will find profit and pleasure supporting themselves in the warmer part of our country. With a larger contribution from the Federal Government some of the many thousands of families fleeing from the Dust Bowl toward the west, into Arizona and California, could take root and establish new homes for themselves.

Marvel Mills Logan

MEMORIAL ADDRESS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. MARVEL MILLS LOGAN, late a Senator from the State of Kentucky

Mr. SPENCE. Mr. Speaker, in the death of Senator MARVEL MILLS LOGAN, not only Kentucky but the Nation has sustained a great loss. He served the people of his native State in positions of trust and responsibility for many years, and in the discharge of the duties of the various positions he held, he brought to himself great honors and the confidence and the affectionate regard of his people.

He was nominated for the office of attorney general of Kentucky in 1915 without opposition, and was elected and served until June 1, 1917, when he resigned to be appointed chairman of the first State tax commission of Kentucky, which put into effect a new system of taxation. A progressive and enlightened tax system that does equal justice to all is one of the great fundamentals of our constitutional government. He served in this position with great distinction and rendered splendid service to his State in this new field of economic research and legal progress until November 1, 1918, when he resigned to engage in the private practice of law. In 1926 he was nominated and elected judge of the court of appeals—the highest court of the State. He served as a member of the court until January 1, 1931, when he became chief justice. He held this position until he became United States Senator for the term ending in 1937. He was reelected on November 3, 1936, for a second term. He died on October 3, 1939.

Senator LOGAN was a man of great ability. He was devoted to his profession. He was an able, hard-working, painstaking lawyer, and no one stood higher in that great profession in the State of Kentucky than he. Because of his well-known ability, his services were eagerly sought, not only by the people of Kentucky, but when not holding public office and engaged in private practice, by numerous clients who entrusted him with many important matters. His services on the State tax commission were outstanding, and have been generally recognized.

As Senator of the United States, he immediately obtained and has held the confidence and respect of his colleagues. He was an indefatigable worker, and I presume no Member of the Senate wrote more reports than he. Senator LOGAN did not resort to any of the arts of the politician to obtain publicity or to seek popularity. He was a man of simple tastes, modest in his demeanor, easily approachable, and always willing to render what service he could to all who sought his help. He was a devout man. For years he taught a Bible class in his church at home; and when he came to Washington he immediately connected himself with his church here, and his services were immediately sought as a teacher of the Bible class in Washington. He gained a great reputation as a profound student of the Bible; and his private life as husband, father, brother, and friend, and his public life, was entirely in accord with the religious precepts he taught. As a Senator, because of his indefatigable energy and because of his profound knowledge of the law and because of the great confidence of his colleagues, he was most successful in securing the passage of legislation which he sponsored. In every relationship of life, Senator LOGAN measured up to the highest standards.

The State of Kentucky will miss his splendid services. His colleagues will miss his eagerly sought assistance, and the Nation is poorer because of the passing of this able, kindly, hard-working man. When the history of Kentucky is written in the future, the name of MARVEL MILLS LOGAN will be inscribed in bold letters on its pages, and a grateful people will cherish his memory and will recount his good deeds and his many great services.

More Support for H. R. 8748—Jones-Wheeler-La Follette-Bankhead Bill on Farm Credit

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

LETTER FROM BORROWERS OF FEDERAL LAND BANK

Mr. VOORHIS of California. Mr. Speaker, once again I am glad to insert in the RECORD evidence of support for the Jones bill on Federal land-bank loans, which bill will have the effect of substantially reducing the rate of interest paid by farmers on such loans:

To the Honorable JERRY VOORHIS,

House of Representatives:

We, the undersigned, being borrowers of the Federal land bank and/or the Land Bank Commissioner, do hereby request your wholehearted support of H. R. 8748—Jones—and we urge you to exert your efforts to secure its passage for the following reasons:

1. We believe the interest rates on Federal land-bank and Commissioner loans should be permanently reduced.
2. We believe Federal land-bank borrowers should be relieved of stock liability.
3. We believe the functions and responsibilities of national farm loan associations should be increased.
4. We also believe that the objections to this bill as voiced by its opponents are exaggerated.

National Defense

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, May 21 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. CHARLES O. ANDREWS, OF FLORIDA

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address on national defense delivered by the Senator from

Florida [Mr. ANDREWS] over the Columbia Broadcasting System on May 18, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One by one the lamps of democracy are being extinguished in Europe today; one by one the smaller nations, whose only wrong was in being too small, are being ruthlessly destroyed by the greatest juggernaut of military might since the days of Attila the Hun.

While I speak to you today over this Nation-wide Columbia hook-up, at this very moment, thousands of men are being slaughtered on practically the same battlefields where soldiers have fought and died for ages; and the very fate of civilization in Europe hangs in the balance today.

Many of you have been listening to news broadcasts from this station today which describe the bloody battle being fought at this moment near the very fields where Napoleon met his great defeat at the hands of Wellington and Bluecher. But the war today is a different war. Secret and despicable devices unknown to the soldier of other days now spell the difference between victory and defeat and the war is not just a war between nations, but a war waged by mad dictators against the principles of democracy.

As a Member of the United States Senate, I had the honor and privilege of personally hearing last Thursday that stirring speech by the President of the United States. At that joint session of Congress, I was impressed with the dynamic statement of the President that the Congress and the Chief Executive constitute a team where the defense of our land is concerned. I would go further and add that in our democracy every citizen can be truly considered a member of that team.

When the President mentioned the danger in the Caribbean area and the fact that from a base in the outer West Indies the coast of Florida could be reached by enemy aircraft in 200 minutes, I recalled the conversation I had on this very matter at the White House several weeks ago, when I discussed this potential danger at great length with the President. I agreed with him then. I hope you will agree with him now.

As a member of the Naval Affairs Committee of the United States Senate I have continuously stressed the importance of an invincible air force. In Florida we have long recognized the importance of aviation, and I can report to the rest of the Nation that in my State we have in Pensacola, the naval air training station, aptly called the "Annapolis of the air"; at Tampa, we have under construction, McDill Field, the southeastern Army air base; near Jacksonville we are building the Southeastern Naval Air Base, with an auxiliary air base on the Banana River, part of that historic Indian River section of the tropical east coast; while near Miami, we have the Opa-Locka Naval Reserve Air Base.

Most of this program was initiated in the first session of the present Congress, and having just returned from a personal tour of all of these bases, I can report to the Nation that as far as Florida is concerned, the original air-expansion program is being carried out by your Government in a very successful and efficient manner.

When these air bases are completed, they will act as a secure defense unit, not only for the entire southeastern seaboard of this Nation but for the Panama Canal Zone and the Caribbean area as well.

Democracy is being challenged in Europe today, and democracy must answer in America, not with an armed force that seeks to invade and destroy another nation across the sea but an armed force strong enough to tell the dictators that we in America will defend the right of our people to decide upon their own form of government.

The torch of liberty is growing dim in Europe today, and if our civilization is to continue, it must continue and be protected in the Americas. At no time in history have the 21 American republics been so united in purpose, policy, and action to preserve freedom.

If the dictators are successful in Europe today, the Dark Ages may again descend upon every country across the sea, and it will remain for this hemisphere, at the proper moment, to be ready to rekindle the light of civilization again for the rest of the world.

I am in entire accord with the statement of the President that immediate action is essential, and I pledge my full support to any and every piece of legislation necessary to carry out the national defense expansion program. I am certain that this Congress will immediately pass the legislation asked for by the President.

We in this great Nation do not desire war; we look only for peace; but as the President has well stated, in order that the ways of aggression and force be banished from the earth, this Nation requires a toughness of moral and physical fiber. We must make our defenses invulnerable and provide complete security against potential developments and dangers of the future.

We know the dictators have declared their determination to wipe democracy from the face of the earth, and we must stand ready to spend millions for defense, so that our liberties and the liberties of our children can be ever secure. The most economical policy we can follow at this time is to provide ample appropriations for air defenses, antiaircraft guns, and an invincible Navy on and under the sea.

Had we been prepared in 1917, as we shall be under the plan proposed by the President, the Germans would never have submarined the *Lusitania*, which precipitated this country into the last World War; thousands of lives and billions of dollars would have been saved.

There was never a time in our history when the age-old adage of "a stitch in time" was more appropriate. Genuine preparedness is the only way to keep this Nation out of war.

Tomorrow in our churches let us pray that this Nation will continue to be a Nation at peace, a Nation of tolerance, and a Nation whose faith in God will enable it to remain the stronghold of those persons who believe "that all men * * * are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

Troublesome days are ahead of us, but with our people united, we shall not fail.

American Association of University Women

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, May 21 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SEÑORA MARIA SALDAÑA DE JULIÁ

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief address delivered by Señora Maria Saldaña de Juliá, of Puerto Rico, before a group of members of the International Relations Committee of the American Association of University Women and women members of the Pan American Scientific Congress at the Women's University Club on May 20, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It has been my pleasure recently to participate in a small way in some of the activities of the Pan American scientific assemblage, not as a scientist but as a guest at some of the social gatherings. I met at these affairs many women of my own race—women from the various countries of South and Central America. I met also many women of North America—women of our own United States. As a result of this intercourse with women of the Americas, one conviction has impressed itself firmly in my mind, namely, the fact that all of us—whether we are from North, South, or Central America—all of us who live in the Western Hemisphere, are convinced that the democratic form of government under which we live is that which is best suited to our welfare and our happiness. I am not going to speak of the natural beauty of our dear island, called the Island of Enchantment, nor of its sky, its blue sea, its mountains and valleys, of different shades of green all the year round.

We in Puerto Rico are proud of the fact that our little island has been made an important link in the chain of national defense. We are Latins by race and by tradition, and as such we like to feel that we are the important link between the United States and Latin America. And we are as proud of the achievements of men like Bolivar, St. Augustin, Juarez, and others who fought for the liberty of Latin Americans as we are of the achievements of men like Washington, Jefferson, Hamilton, and others, who fought for the liberty of the people of North America. And we are prepared to demonstrate our appreciation of their sacrifices by dying for liberty if necessary. This, my friends, is no idle boast; I know my people. I know their devotion to democratic institutions. And I am certain that when and if the call comes, the immediate response will be, "Puerto Rico is ready."

I have been asked to explain briefly the aims of the Puerto Rican American Women's League. The league is a nonpartisan, nonprofit organization of feminine United States citizens, some from Puerto Rico and some from the continent, committed to the task of creating a better understanding between the people of the island and those of the continental United States. It is a work which is close to the heart of those of us who desire closer affiliation with the United States; those of us who desire that the ties be drawn closer; those of us who love the American flag.

Puerto Rico has been an insular possession of the United States for close to half a century. During that time we have demonstrated both our fitness to govern ourselves and our unflinching loyalty to the American flag. Puerto Rico is now being fortified and becoming the Gibraltar of the Caribbean. It thus becomes the watchdog of both Americas against foreign aggressors. Thus in a very practical

as well as a cultural way Puerto Rico becomes the link between the Americas.

We feel that statehood for Puerto Rico is sure to become a reality some day, and the act of admitting her to statehood on the part of the United States would manifest to the Latin-American nations that it is the policy of this country to recognize the political rights of all within her borders.

It costs nothing to affiliate with the league. There are no dues, assessments, or other costs, merely the willingness to assist, in whatever manner is best suited to the talents of the member, in the effort that will be made to accomplish the league's objectives.

And in closing I am going to take the liberty of asking all of you to say every day a prayer to the Creator and Ruler of Nations so that He may enlighten and guide our dear President of the United States as well as the head chiefs of all other nations of this Western Hemisphere, so that the world in which we live may be a better one and that, as the immortal Lincoln said, "The blessings of liberty will not perish from the earth."

I thank you.

Intervention in War

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 21 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. BENNETT CHAMP CLARK, OF MISSOURI

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely address by the Senator from Missouri [Mr. CLARK] expressing his opposition to intervention in the European war. The address was delivered on May 17, 1940, over the National Broadcasting System, station WMAL.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, we are in the midst tonight of a very dark period of the history of modern civilization. The territories of the lowland peoples—Holland and Belgium—have been ruthlessly invaded by a wanton aggressor, armed with tremendous mechanic equipment—which is the direct and inevitable result of the refusal of the Allies to carry out the disarmament provisions of the Versailles Treaty which threw Germany into the hands of the unspeakable Hitler.

We are faced tonight ourselves as a Nation with the danger of a rush of hysteria, calculated or uncalculated, designed or undesigned, equally potent in either event for us to allow our sympathies to carry us into the war. I speak tonight with full realization of the great force of sympathy for these little countries to urge my own countrymen to remember the fact that the greatest service that we can render to democracy and civilization in the world is to defend and protect the institution of democracy in the United States of America. We can best accomplish that task by remaining out of European embroilments.

Nearly every decent American, almost every decent citizen of the world, has been profoundly shocked by the news of the wanton and ruthless invasion of the heroic little nations of Holland and Belgium. But we must not forget in our righteous indignation that the unfortunate geographical position of those countries has made their lands from time immemorial the cockpit of Europe. Neither England, nor France, nor Germany, nor Spain, nor the old Austrian Empire has ever been too good to adjourn the violent settlement of their own disputes to the fertile acres of the lowland countries. Holland under the great William the Silent defied and, after many years of sacrifice, defeated Spain when it was the most powerful nation in the world. Belgium in the last World War defied Kaiser Wilhelm and emerged as more than conqueror at the end of the war.

All Americans sympathize with Belgium and Holland. But every American who knows anything also knows that their situation at the present moment emerges from their unfortunate location in the strategic cockpit of Europe. This is something which cannot be changed by act of Congress, approved by the President, until such time as we have the power to change the facts and geography and the laws of nature. The physical fact that they inevitably sit in the lap of contending great powers is something that neither the Congress of the United States nor the President of the United States nor even the people of the United States can change, no matter how honestly we might try.

So we have the German mad wolf gobbling Holland and taking a large bite out of Belgium. I might remark that my reading of history leads me to believe that these bites might prove exceedingly indigestible, as Charles V of Austria and Philip of Spain and even the great Napoleon found out aforetime. Napoleon set up his own brother upon a puppet throne in Holland, but the Kingdom did not last beyond the exile of Napoleon to die upon a desert rock in the South Atlantic. The present royal house in Holland does not trace descent from Bonaparte, but from the heroic house of Orange.

With these tragic circumstances going on in the world, the President of the United States is well advised when he asks every responsible citizen to take a realistic view of our own situation.

We are already being deluged with the arguments of kept columnists, subsidized radio commentators, and other editorial influences urging that intervention upon the part of the United States is our plain duty and the path to safety.

I utterly repudiate any such doctrine. I do not believe that it can be sustained on any grounds whatsoever.

Let me say that I am now and have always been in favor of appropriating every dollar, every dime, necessary—even reasonably necessary—for the defense of the United States. During the present administration the Congress has done precisely that, as we were advised of the facts by the experts of the executive departments. During that time we have actually appropriated more than $7,000,000,000 and authorized the appropriation of two billion more. If we are now as unprepared as some of those experts now say we are, the Congress should find out what has happened to the vast sums which we have appropriated in the last few years. If the expenditure of seven billions has not made us safe, what assurance have we that the expenditure of a couple of billion more will make us any safer?

The question with us tonight is not a question of sympathy. That is undoubted and undeniable. The question is one of intervention. By intervention, of course, I mean the entrance of the United States into the war. We cannot possibly pursue the policy of making faces and thumbing our noses indefinitely without being involved ourselves. The pursuance of policies "short of war" inevitably lead to war.

If we regard it as our national destiny to go into this war, it is my opinion that we should go now—immediately. So far as I am concerned, I do not agree with this viewpoint, and I repeat again my statement, often made before, that I will never, never, never vote for an American war on foreign fields in foreign quarrels.

Why should we undertake to engage in a war 3,000 miles from home in a futile attempt to rectify the diplomatic mistakes of power politicians such as Chamberlain and Daladier? Why should we give up the tremendous advantage of our natural position—admitting that the crossing of the oceans has been shortened by modern invention. We are still the most remote, the most invulnerable, the most invincible Nation in the world.

If we should go abroad again to fight we would again be called upon to inject the vital life blood of gallant men into the arteries of jaded and defeated forces. Americans, trained and untrained, were sent into the battle line in the last war. Both the French and the British demanded the relief of General Pershing because he was not willing to permit the breaking up of American organizations and their treatment as mere relief reserves to be fed individually into the British and French lines.

I am in favor of everything necessary to our national defense. I am opposed to the idea of using a particular military situation in Europe either as a means of promoting the granting of blank checks in this country or as a means of whipping up hysteria with the idea of getting us into the war abroad.

I think the United States ought to be fully, completely, more than merely adequately, prepared to resist attack from any quarter of the globe. And being so prepared, I think that we should keep our mouths shut and our pores open.

I do not think that we should again engage in European wars, because I have always had in my head and in my heart a dream of America, a great and lofty belief in the future of our America, which I do not wish to see gassed to death or run over by tanks on ancient everlasting battlefields in a quarrel about lands and power unworthy of being the death place of American ideals.

I do not think America should enter into this war, because I do not think that we need depend upon the help of the British Navy or the French Army to defend this Nation or this hemisphere. I think that there would be less damage to the hopes of our young men—our hope for the future—to their belief in our Nation, to their respect for us as their advisers, if we did not peddle their blood in return for military help which, in the first place, might never be given us; in the second place, might under the changed techniques of modern warfare be of no use to us; and, third, which, in order to have at our disposal, would obligate us to fight in Europe or around the world whenever either the British Navy or the French Army or the far-flung colonial empires of either France or England were endangered.

The safety and well-being of this Republic are paramount to any other consideration. To my mind the most overwhelming proof of the capacity of the great American people for self-government will be their indication to their employed servants, of whom every public official is a part, that we do not wish to, we will not, engage in war.

Anniversary of Signing of Civil Service Retirement Law

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 21 (legislative day of Wednesday, April 24), 1940

LETTER FROM THE PRESIDENT OF THE CIVIL SERVICE COMMISSION

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a letter I have received from the President of the United States Civil Service Commission with respect to a celebration in observance of the twentieth anniversary of the signing of the original civil-service-retirement law.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., May 16, 1940.

Hon. HARRY FLOOD BYRD,
United States Senate.

DEAR SENATOR BYRD: The Civil Service Commission and the various employee organizations have planned a celebration in observance of the twentieth anniversary of the signing of the original civil-service retirement law, to be held at the departmental auditorium, Constitution Avenue between Twelfth and Fourteenth Streets NW., Thursday evening, May 23, at 8 p. m.

There will be one or two brief addresses and a word of greeting from each of the Commissioners. Music will be furnished by the United States Marine Band and vocal selections by a symphonic choir.

The Commission especially desires the presence of the members of the Senate and House Civil Service Committees, and it is sincerely hoped that you will be able to attend.

Cordially yours,

HARRY B. MITCHELL, *President.*

Logan-Walter Bill

EXTENSION OF REMARKS
OF
HON. SHERMAN MINTON
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 21 (legislative day of Wednesday, May 24), 1940

LETTER FROM TOM W. CHEEK AND DR. M. F. DICKINSON

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter sent to me by Tom W. Cheek, director, National Farmers' Union, and Dr. M. F. Dickinson, president, Arkansas Farmers' Union, for the legislative committee of the National Farmers' Union and the National Federation of Grain Cooperatives, dated May 17, 1940, on the subject of the Logan-Walter bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FARMERS EDUCATIONAL AND COOPERATIVE UNION OF AMERICA,
Washington, D. C., May 17, 1940.

Senator SHERMAN MINTON,
Senate Office Building, Washington, D. C.

DEAR SENATOR: This letter is to call your attention to the effect upon our Federal agricultural agencies and upon our farmers which the Logan-Walter bill, H. R. 6324, would have if passed in its present form. This bill which is now pending on the Senate calendar would provide for judicial review of administrative orders and decisions.

Except for lending agencies and grading services for farm products which are exempted by the bill, a list of the agricultural agencies which would be seriously affected is practically the list of important programs which farmers have labored to attain and perfect during many years, and which Congress has declared to be national policy for agriculture. The agencies most seriously affected would be: Agricultural Adjustment Administration; Agricultural Marketing Service, nongrading activities; Commodity Exchange Administration; Farm Security Administration, nonlending operations; Federal Crop Insurance Corporation; Federal Surplus Commodities Corporation; Soil Conservation Service; Sugar Division.

It is our fear that passage of this bill would tie up in the courts for months and years many of the activities of these agencies serving farmers, with the result that farmers and their cooperative organizations would suffer tremendously. Further, it is our belief, after a careful study of the bill, that powerful interests opposed to the farmers could directly or indirectly undo the clear intention of Congress and of our farmers by pettifogging legalities, disrupting all competent administration of these laws.

For example, take the effect of this bill, if passed, upon the Commodity Exchange Administration. We have worked for over 20 years to get some regulation of gamblers in farm commodities. The rules and regulations issued by the C. E. A. govern trading in 14 important farm commodities on 16 licensed contract markets, on which futures trading averaged $23,000,000,000 annually from 1928–37.

Since the regulations of the Commodity Exchange Administration were all made in the last 3 years, under the Logan-Walter bill any person "substantially interested" could attack any of these rules. Without any clear authority provided in the bill to maintain present rules pending an initial decision by the Secretary (see subsecs. (A) and (C), sec. 4), and with enforcement automatically withheld pending judicial review (sec. 4 (B)), it is clear that the entire activity of the C. E. A. could be effectively hamstrung by persons seeking to manipulate the markets.

Even though very adequate provision is now made for hearing fully all interested parties before issuing rules and regulations, this bill (sec. 4 (e)) would require the members of the Commodities Exchange Commission—the Secretaries of Agriculture and Commerce and the Attorney General—to personally conduct public hearings before a decision could be made on any examiner's report to which objection had been taken. This would not only be burdensome on their time but would soon become a physical impossibility.

We have no doubt that the usefulness of the Commodities Exchange Administration would be at an end following approval of this bill, since any interest which has large amounts of money for lawyers' fees could keep litigation going for years. It would give virtually limitless opportunities to destroy the intent of Congress to protect farmers from commodity gamblers.

In view of such glaring dangers, we most respectfully urge you to oppose this bill in its entirety—to defeat it or to refer it back to committee for protective amendments. If exemptions are provided in the bill for some agencies, then we urge the elimination at least of all agricultural agencies.

While we are in favor of eradicating governmental bureaucracy, and are favorable to the general aims which the proponents of this bill claim to seek, we are unalterably opposed to the bill as it now stands. We represent in this stand some 350,000 farm families who are members of our two organizations—the National Farmers Union and the National Federation of Grain Cooperatives.

Trusting you will give this matter your attention,

Most respectfully yours,

TOM W. CHEEK,
Director, National Farmers Union,
M. F. DICKINSON,
President, Arkansas Farmers Union,
For the legislative committee of the National Farmers Union and the National Federation of Grain Cooperatives.

P. S. For your further information we attach a more complete analysis of the bill's effect upon the administration of the Commodity Exchange Act.

British Purchases in the United States

EXTENSION OF REMARKS
OF
HON. ROBERT R. REYNOLDS
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 21 (legislative day of Wednesday, April 24), 1940

ARTICLE BY JOHN T. FLYNN

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the pen of Mr. John T. Flynn, entitled "Plain Economics," which I clipped from the columns of the Washington Daily News of April 19.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of April 19, 1940]

PLAIN ECONOMICS

(By John T. Flynn)

NEW YORK, April 19.—Strange reports are going about the grain and commodity markets of New York. If they are true, then we have to believe that a British purchasing commission is in this country to buy foodstuffs, and that it has been at work in Washington trying to make arrangements to buy here on credit.

This would mean an amendment to the neutrality law. And the strangest part of these reports is that this commission has been making some headway with this plan.

If there was one resolution we took to high heaven before this war started, and after, it was that we would not make the mistake of selling to the warring nations on credit. That is the way we moved head over heels into the last war.

I do not mean the American people went to war to save those credits. I mean that by becoming implicated in the Allied cause to the extent of billions of dollars of credit we became economically all bound up in their cause and their victory.

We may recall now the prophetic words of the late Senator Borah when he opposed the weakening of the neutrality bill. He said Congress proposed to help England and France by permitting the sale of everything but munitions, "provided they pay cash."

The Senator said: "You say you want to do this because civilization is at stake. You want to save civilization; but, you say, the Allies must put cash on the line. But suppose that 6 months or a year from now the Allies are in trouble. The odds turn against them. Will you say, 'We want to help you save civilization—but you must lay the cash on the line'?

"No," he exclaimed, "you are Americans; and if you believe civilization and democracy are at stake—if you really believe that—you will not only grant credits, but you will be willing to give them food and munitions and, finally, men. You will have to do that if you really believe that civilization is at stake. The whole error comes from insisting on what is not true, that this is a fight for democracy. It is a fight for empire."

This is a free-hand quotation. But here we are now, with the tide seemingly against the Empires. And the commission is here to get credit instead of cash and "is making headway." It is being subtly managed, apparently.

England has cut off tobacco purchases here. She is buying but little cotton. She is not buying grain from us in the quantities we would like to sell. The farmer wants to sell his goods. He is in trouble. Therefore what about selling food—food for women and children whose men "are fighting our battle" on credit? Can you not hear the speeches now?

Having amended the Neutrality Act to permit sales on credit for farm products, we will be ready to take the next inevitable step and sell all sorts of things, including war materials.

To do this we will have to sell our people the proposition that civilization and democracy are at stake; that we are in danger; that there is an emergency; that the Germans are about to invade Greenland; and so on.

Washington is leading us step by step. Little by little we shall go on.

Foreign Policy

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 21 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. ALF M. LANDON

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered May 17, 1940, over the National Broadcasting Co.'s network from Warrensburg, Mo., by Hon. Alf M. Landon on the subject of our foreign policy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The thin crust of the kind of civilization we believe in is cracking over most of the world. The result of the war in Europe has vast implications for America's future. Inevitably, and immediately, the people of America face a grave responsibility. And while we want to keep partisan politics out of our foreign affairs as much as possible, after all, we are facing the most important American job of selecting a new Chief Executive.

This is a difficult and depressing time to be discussing foreign policies. The chief point I would drive home to every American citizen is that our policy must be flexible and open. No man or group of men is capable of laying down a fixed and final policy, when a battlefield may change America's position overnight. But this does not mean a drifting policy; nor does it mean keeping the American people in the dark as to the direction the administration's foreign policy is taking us.

Our illusions of safety are being shattered. More than ever we must watch our step now; our steps toward national defense, and the steps in our foreign policy.

We have a manifold duty to perform. We owe much to ourselves as a people and as a nation. And we also owe a duty to humanity and our civilization. The course we pursue as a nation must be weighed carefully, taking into account the relative value and importance of everything involved. The gravity of this situation requires the highest order of statesmanship and devotion to national unity. We must as a nation pursue a policy which will be in our own self-interest, knowing that if it is sound it will also be in the interest of humanity and civilization.

In the first place, we are going to keep out of this war. The American people, despite the horrifying developments of this last week, still are opposed to armed participation in it. They do not want to send American soldiers to fight a foreign war on a foreign soil. No one will come here to fight us if we are prepared to meet them on equal terms. Our responsibility, however, does not end with keeping out of the war. There is a great deal to do besides that. We must prepare immediately a modern and impregnable defense. And we must also prepare for a constructive role in the ultimate peace and in its preservation. The need for proper defensive measures should be obvious to every American citizen. It is also obvious that we have much to gain, both individually and collectively, from a stable world. Therefore, we should not assume automatically and in advance that we have no opportunity to exert ourselves for peace in the world without injuring our own peace through entangling commitments. In general, all candidates—Republican, Democrat, or new dealers—say they would keep us out of war. Practically all candidates recognize the responsibility of America in the world. Practically all candidates promise a degree of forbearance from any active participation in dangerous international relationships.

We must have a President who will encourage the American people to stand together in working out dangerous and delicate questions involving foreign policy. It is not conducive to good feeling at home or respect abroad when our President repeatedly attempts to make bitter partisan capital out of every grave issue. One day our President speaks of the spreading horror confronting us in foreign affairs. The next day he starts a political attack aimed to drive people into antagonistic camps, and plans a political swing around the circle.

We Republicans are willing to go a long way for unity on our foreign policy. But the Chief Executive, now as always in the past, must lead the way in the creation of that national unity. The proper national unity has never been established by sharp partisanship. If the President wants the national unity he needs and should have, his political trip across the country should obviously be called off. I notice in the press dispatches today that the President has postponed his western trip. That is as it should be. Unity is not to be had with politics. The adjournment of politics must be by both sides, and it is always up to the Chief Executive to lead the way. It is tragic that this nightmare foreign situation should develop at the time of our national election, when political activity is always at its peak.

In this fateful hour the grave questions of foreign relations and national defense must be discussed, free of the usual invectives that characterize most of the New Deal discussions, and, as far as possible, free from partisan bias.

I said last September that the spirit of unity in America was with the President for the asking. But it was up to him to fuse it together. This he has tragically failed to do. Even up until now he has tended to produce antagonisms when he should have been welding a national unity in American thinking about foreign relations.

However, the President, in his splendid address to the Congress yesterday, spoke as the leader of all the people. He is acting in the spirit of unity for which American citizens have been waiting and in a spirit which will bring him a united support in preparing our defenses. I pledge to support our President in his announced efforts to strengthen the Nation against attack and to continue to cooperate with him in all efforts for complete unity on foreign policy.

We must think in terms of what the duties of this country are now and what they will be when the war ends. We must be prepared, whatever the eventuality and regardless of what person or what party may be governing the Nation. But if we are going to be prepared, whatever the eventuality, we cannot continue to go deeper and deeper into debt. We cannot continue to flirt with inflation. And, above all, we cannot afford to continue the breakdown of human morale and self-reliance.

There must be no political consideration of this problem. But, also, there must be no blindness of the American people to the defects of our national defense. We in the United States are committed to the view that war is destructive of all the finer things in life desired by mankind, but until all governments join in this

realistic view I recognize the necessity of being prepared to defend our freedom.

We have got to face the possibility that the democracies may be defeated. This contains threats of such a character to us that we must consider their significance. The developments of the past week are a real threat to the peace and security of the Western Hemisphere. Those who are afraid to face this menace, for fear of being called warmongers or interventionists or internationalists, are doing a disservice to their country. The obligation to speak plainly and fearlessly is inescapable. We must face the grim realities. For our own safety we can no longer rest on the assumption of a stalemate with an exhausted Germany. The invasion of Denmark, Norway, Belgium, and Holland presents a real problem to the United States. Their possessions bring the war much closer to the Western Hemisphere. No longer can America feel complacent about her security or peace.

We must, as a public duty, plant in the public mind not only the will to go on but the determination to go on if we are challenged.

A big Navy and a big Army are not all there is to a national defense. The big thing in any defense program is to have behind the armed force a united nation, an efficiently functioning industry, and a healthy agriculture.

We cannot afford to continue to incite class feeling at home. We cannot by violent speeches set business apart from the rest of the Nation. We cannot set agriculture against business, nor labor against business, nor business against agriculture and labor. Such incitements are a blow at national safety. "A house divided against itself cannot stand."

If the resources of this country are to be mobilized in the most effective manner behind a great program of national defense, it is essential that Government, management, and labor must be able to move forward promptly in a spirit of complete confidence in the development of all necessary plans.

I consider that the greatest effectiveness and efficiency can be attained only if our American system of free enterprise is encouraged in every appropriate way to make its maximum contribution to the task ahead. Of course, there will be restrictions and legislation, if necessary, to prevent profiteering.

In this hard-boiled world in which we find ourselves today we must be strong enough to have other nations respect our desire to stay out of war. No matter how much you appropriate for armaments, these funds must be vigorously, efficiently, and promptly administered. We are tragically late in the appropriation for national defenses. And we are even more tragically late in execution. There is now a sad lack of definite policy on the part of the administration toward preparedness. The deplorable condition of our national defense is almost unbelievable. The Army is in a pitiful state of unreadiness by reason of being inadequately armed, inadequately munitioned, and almost devoid of modern war planes, antiaircraft defense, or mechanized equipment. In spite of threatening developments, practically no attention was paid to our Army until the last few months. It is true that a few new men were added to our National Guard last fall, but it took practically 8 months to obtain even the uniforms for these new men in Kansas. The equipment now in the hands of the National Guard is so obsolete that it would be almost useless in modern warfare. This equipment is so obsolete, and we have been so slow in replacing it, it would be a joke if it were not so tragic.

There is notorious friction in the War Department, at the top, interfering with its efficiency. We have a great Navy, but the Secretary has confessed to the vulnerability of our battleships to air bombing. We are woefully deficient in strategic war material.

I think the lesson of the European war is preparedness. We are living in a world overrun by a swift plague of brutality, and in a world in which force makes power. We cannot be a power for peace unless we have force. We have no ambitions that require force for their attainment, but we need force to maintain our own safety and security.

If we are going to coast with the problems as the Allies have done in the past years, if we are going to continue to live, as they have done, in the security of the past, we are evidently going to meet the same fate as the Allies in the face of a superior force.

We have a lesson to draw from them, as long as the dictators reign. We must build up facilities that will permit us to go into production of the most important war material in sufficient quantity at any time it appears to be necessary. It will take us some time to build such facilities. But we do not want to be 2 years behind the eight ball, as the English and the French seem to be. The condition of our national defense, in the light of developments in Europe, is alarming, and these developments have taken place during the life of this administration. For the first 6 years the New Deal, instead of building up our defenses, wasted our money on projects like the Florida canal, or the attempt to harness the tides at Passamaquoddy. As everyone knows, these projects have been abandoned as failures. But think of the thousands and thousands of airplanes the money wasted on these failures—and other purely vote-buying projects—would have purchased, or would purchase now if we had it.

Spending for adequate preparedness would truly have been "spending to save."

With nations breaking up like ice in the spring, we need alert, dynamic leadership, capable of pushing military preparedness now.

Of course I favor the additional appropriations proposed for national defense. But it is plainly evident that we cannot continue pursuing our leisurely pace in putting them into effect. We must rush their availability, to begin production now rather than next year, or the year after, as is planned. Even the naval and military improvements now planned are not to produce any worth-while results in new and modern fighting equipment for several years.

At the same time we must pursue friendly international relations, because it is to our interest to do so. We do not want to see Europe disintegrate, for a disintegrating Europe threatens to start a world disintegration. We are concerned as realists with what happens to the world at large, because restoration of healthy economic conditions in America would be greatly enhanced by restoration of healthy relationships with the world at large.

Within the term of the next administration this country will be forced to make decisions far reaching in their effects on world civilization and the future of popular government. These decisions will be enormously difficult and complicated. Our wealth of natural resources and our size will be of decisive influence in the future course of world events.

We do have a vital interest in the survival of those standards of civilization and human rights, which will allow us to pursue peacefully our own manner of life under our own institutions.

There are those who feel that our safety lies in imposing a self-instituted boycott in the way of a strict isolation policy. But, stripped of all idealistic motives, two world wars in a generation require a new kind of solution when peace is made. Obviously the solution following 1918 was not the correct one. If the system of free economic enterprise, free religion, and free speech, and free peoples are to be preserved, we must help to make them safe. Free enterprise and democracy will not survive unless peace and popular government are preserved on more than a year-to-year basis.

World peace and good times, when the average man has the opportunity to make a decent living, go hand in hand. Peace in the world, as well as good times, is built on political stability, and political stability is built on economic stability. It is to our interest to plant America's moral and economic strength on the side of a just and realistic peace if the opportunity presents itself. Our idealistic motives go hand in hand with our material interests in helping to restore an enduring peace in the world.

It is not a question of our emotional friendship for popular governments or our natural and inherent animosity to dictators. It is a question of leaving the door open so that if the opportunity presents itself we can promote healthy world-wide trade. This is the only alternative to a state-controlled trade, barter, and war.

To that end we can well enter into international discussions of economic questions. We are not concerned with boundary lines and political arguments, but we are concerned in broader and more liberal economic relations among the nations. Most emphatically, we can and should, as a nation, work unremittingly to expand the area of American trade, and open up American markets wherever the opportunity exists. We cannot, of course, join in a league of nations or other associations which will involve us in the purely political problems of Europe and Asia. But whatever contributes to the economic stability of the world after the war contributes to our own future and the stability of popular government everywhere. Of course all this depends on what kind of a world we will be living in and doing business in. It is possible, no matter who wins, that we will be in a world doing business on a barter basis, with a definitely lower standard of living. So our program, in the nature of these things, should not be stiff, dogmatic, and inflexible, save only, of course, our immovable determination to stay out of this war unless the United States and its possessions are threatened.

This country has voiced its determination to stay out of war. But, based on all recent experience, determination is not enough. We have seen many countries equally determined who found war thrust upon them. If this determination is to have any meaning it must be implemented with a policy of preparedness permitting us to take all the necessary steps to make it effective.

America is in the mood in which armed participation may come through the carelessness or the impulsiveness of a Chief Executive who does not realize the necessity of giving the American people a steel backbone to resist the pull of their natural sympathy and emotion for the Allies. Despite all our sympathy and emotions for the kind of civilization we believe in, we cannot undertake to preserve the boundaries of all the democracies of the world.

It is futile to think we can escape the financial and political scars of war. First war; then chaos; then fear; then vanished confidence; then depression; then frozen trade; then war again. Who can say we have no interest in collaborating to prevent such a devil's cycle? How long can the already faltering system of free enterprise and free government survive such a devil's parade?

People everywhere cry for peace and the revival of employment that can come on a healthy basis only when peace comes. I recognize that in the critical period which must follow the laying down of arms, the demobilization of millions of men, and the slowing or stopping of war-materials production there must be a peace which offers hope to all the world's peoples. When this time comes America alone may expect to be economically strong and relatively financially sound. But even we cannot expect to be economically and financially sound unless our domestic policies in the meantime are themselves sound. America should encourage and help to realize the aspirations of people for strengthening international law and for revalidating international morality. We cannot be a hermit nation.

I favor the Republican platform permitting the incoming Republican President to cooperate with other nations, if the opportunity presents itself, to banish militarism, to reopen the channels of trade, and thereby relieve the use of financial pressures as weapons in threatening the peaceful independence of small nations. The Republican President must be left free to move vigorously and effectively in these matters when the war ends.

With malice toward none of the people engaged in the present struggle, in the firm determination to preserve our own free institutions, I favor the Republican Party's pledging the United States to collaboration, whenever that may effectively be given, toward the setting up of an economically sound and just peace.

The Republican Party more than any other political agency has brought America through the years to a position of world leadership, and I think it should pledge itself to continue that leadership by a realistic recognition of our place in a changing world, a place that must be held by our determination and ability to protect our own peace.

The Lawyer Looks at the War

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1940

SERVICE LETTER OF THE NEW YORK STATE BAR ASSOCIATION

Mr. SHANLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following service letter of the New York State Bar Association:

THE LAWYER LOOKS AT THE WAR

This double issue of the Lawyer Service Letter is devoted entirely to an analysis of a number of questions of international law arising out of the present war. It is hoped that such analyses will be helpful to all members of the bar. In times of public stress and difficulty the layman turns instinctively to the lawyer for his interpretation of the course of events. Every lawyer therefore possesses a high degree of power in influencing the thought and action of his community. Especially today, when so many alien ideas are on the loose in our own country, is the lawyer expected by the more sober elements to think clearly and dispassionately, and to arrive at sound conclusions based upon American ideals and interests, and unaffected by emotional, political, or other appeals.

REALITY OF INTERNATIONAL LAW

The statement is commonly heard that international law does not exist, that among sovereign nations the wager of battle is the sole appeal. Such views, however, lose sight of some of the most important facts of international life. It has been well said that no matter what some layman may think or say, no statesman would deny the existence of international law.

The view that such law lacks reality often springs from the failure to perceive that international law is still in the primitive stage of development. Roman law and the English common law took centuries to develop. An even greater period of time will be required for the full flowering of international law which, broadly speaking, came into being as recently as the seventeenth century.

In the second place, those who see only the breaches of international law should strive also to become cognizant of the many instances of its observance. Indeed, John Bassett Moore, dean of American publicists and a former judge of the Permanent Court of International Justice, speaking from his profound study and wide experience, has given his opinion that "international law is on the whole as well observed as municipal law." Nor may anyone today hold any brief as to the certainty of municipal law as contrasted with the uncertainty of international law. The ever-growing list of notable landmarks of constitutional law that have been recently overruled in favor of newer doctrine attests to the present uncertainty of American fundamental law.

* * * * * * *

GOVERNMENT LOANS TO BELLIGERENTS

A direct loan by a neutral government to a belligerent is clearly prohibited by international law. As early as 1798 the United States refused a loan solicited by the French Government on the ground that it would constitute a violation of neutrality. Likewise in 1816 our Government denied a loan to the Government at Buenos Aires because of the civil war then existing between Spain and the Spanish-American colonies.

As to indirect aid to a belligerent by means of a loan through a government instrumentality of a neutral state, the rule of international law would seem to be that the neutral is forbidden to make such loan in any capacity or through any agency. Thus during the World War the question was raised as to the propriety of the Federal Reserve banks rediscounting bills arising from contraband sales with the resulting permission of short-term loans. An opinion on the subject was rendered by John Bassett Moore to Governor Strong, of the Federal Reserve bank, in which opinion Judge Moore called attention to the French mint's refusal to coin Spanish silver while Spain was at war with the United States. Judge Moore also referred to Secretary Olney's opinion on national banks holding the funds of Cuban insurgents.

Whatever opinion may be held today as to the relation of the Federal Reserve bank and of national banks to the Federal Government, the status of the Export-Import Bank of Washington and the Reconstruction Finance Corporation is clear. The former was organized by an Executive order, and the latter was created by statute. Both are District of Columbia corporations, all the officers being officials of the United States Government. The entire capital stock of both is owned by the Government, and the funds for the purchase of the same were taken from congressional appropriations. Furthermore, the statute (49 Stat. 4) explicitly refers to the Export-Import Bank as an agency of the United States, and the District Court has held the R. F. C. to be an "agent and instrumentality of the United States" (*United States* v. *Arthur*, 23 F. Supp. 537).

It would therefore seem clear that if the Export-Import Bank or the Reconstruction Finance Corporation should make a loan to or for the benefit of a belligerent government, such act would constitute a violation of the neutrality of the United States. Such is the position taken by the Harvard Research in International Law in its draft convention on the Rights and Duties of Neutral States in Naval and Aerial War, published by the American Society of International Law in July 1939.

SALE OF GOVERNMENT SHIPS TO BELLIGERENT

The question may arise at any moment whether it would be a violation of neutrality for the United States Maritime Commission to sell one or more of its vessels to a belligerent state. As indicated above, a neutral state may not legally give direct aid to a belligerent. This rule was recognized in 1826 when Sweden, a neutral, declined to sell certain warships which might pass into the hands of Mexico, a belligerent. Similarly, during the American Civil War in 1864, Great Britain refused to allow the Anglo-Chinese Fleet to be sold, lest her neutrality be compromised if such vessels fell into the hands of one of the belligerents.

As to merchant vessels owned either by a neutral state or an instrumentality thereof, it should be noted that Elihu Root in 1915 opposed on the floor of the Senate a bill authorizing the Government of the United States to buy German merchantmen which were then laid up in American ports. To the argument of Mr. Lansing that the purchase of such vessels by a corporation, whose stock was owned by the Government, would not involve the neutrality of the United States Senator Root bluntly replied that such is not the law as understood and applied by the United States Government. He added that "The real and serious affairs of this world are not conducted in that way. Whatever we do through this corporation that we create and own we do as a government and are responsible for as a government" (52 CONGRESSIONAL RECORD, 2217).

If it were proposed today that the United States Maritime Commission transfer the title of one of its vessels to or for the use of a belligerent state, the reasoning of Senator Root would undoubtedly be relied upon by those who would oppose such sale. It would be pointed out that the members of the Maritime Commission are appointed by the President with the advice and consent of the Senate; that the President designates the Chairman of the Commission; that the members are paid by the Government and give their exclusive time to their duties; and that the Commission can purchase and operate a vessel only after receiving the certification of the Secretary of the Navy that such vessel is suitable for economical and speedy conversion into a naval or military auxiliary. Since it would therefore appear that the United States Maritime Commission is an agency of the Government, a sale of one of its ships to or for the use of a belligerent would be deemed by many to be a violation of neutrality.

* * * * * * *

SHIPMENT OF AIRCRAFT FOR USE AGAINST BELLIGERENT

It is a recognized principle of international law that a neutral state shall use the means at its disposal (a) to prevent the fitting out or arming within its territory of any vessel which is intended to engage in hostile operations against a belligerent, and (b) to prevent the departure from its territory of any vessel which is intended to engage in the hostilities and which, within its territory and during the war, has been adapted for use in war. The above obligation on the part of a neutral has been recognized since the time of the Treaty of Washington and the *Alabama* decision at Geneva after the American Civil War. The same principle was also recognized in article 8 of the Thirteenth Hague Convention (1907).

The question now arises, and arose during the World War, whether the foregoing rule applying to vessels is to be applied to aircraft. The view was advanced during the World War by Ambassador Bernstorff that "hydro-aeroplanes must be regarded as war vessels whose delivery to belligerent states by neutrals should be stopped" under the Hague Convention. This view was not accepted by the American Secretary of State, who contended that such aircraft was in the nature of contraband which could be shipped by individual

exporters subject, of course, to seizure by a belligerent. The Secretary of State at that time pointed out that Germany had included in its list of contraband "balloons and flying machines."

On the other hand, there is a respectable body of authority holding that military aircraft should be assimilated to warships and that therefore the neutral must use the means at its disposal to prevent the fitting out within or the flight from its territory of any aircraft intended to engage in hostilities.

The Harvard Research in International Law takes the position that the departure of such aircraft from neutral territory constitutes the "dispatch of a hostile expedition which the neutral state is bound to try to prevent." (Draft Convention on Rights and Duties of Neutral States in Naval and Aerial War, 33 Amer. Jour. of International Law, supp. 771.) The same position was taken by the Commission of Jurists, who drafted the Hague air rules in 1923. These rules, however, were not adopted by the governments. The same view was also taken in 1938 in the uniform neutrality rules adopted by the Scandinavian and Baltic states and Iceland.

During the present war the United States has already taken the position adopted by it during the World War, namely, that military aircraft is merely contraband. Such aircraft has been listed as absolute contraband by Great Britain, France, New Zealand, and Germany, since the beginning of the present war. On the other hand, the Department of State has announced that it will not authorize fly-away deliveries of military aircraft purchased by belligerent countries "since it would appear to be inconsistent with the neutral obligations of the United States to permit such aircraft to be flown within or from the territory of the United States" (Department of State Bulletin, Dec. 9, 1939). The State Department, however, pointed out that the above reasoning was not applicable while the legal title to such aircraft remained with a citizen of the United States. It is at least arguable, however, that the determining factor from the international point of view is not the ownership of the aircraft at the time of its departure but rather the use to which the aircraft is destined.

SEIZURE OF GERMAN EXPORTS

On November 28, 1939, a British order in council proclaimed that after December 4, 1939, every merchant vessel which sailed from an enemy port might be required to discharge in a British or Allied port any goods on board laden in such enemy port. The order further provided that after the said date every merchant vessel which sailed from a port other than an enemy port having on board "goods which are of enemy origin or are enemy property" might be required to discharge such goods in a British or Allied port. Goods so discharged are, according to the order, to be placed in the custody of the prize court either for requisitioning or sale. It will thus be seen that this order in council subjects to seizure, as contraband, enemy goods on a neutral vessel sailing from a neutral port, as well as enemy goods on a neutral vessel sailing from an enemy port.

On December 8, 1939, the United States protested the legality of the foregoing order in council. The American note, while conceding that a belligerent government has a right to visit and search neutral vessels on the high seas for the purpose of determining whether the vessel is carrying contraband to an opposing belligerent or is attempting to break an effective blockade of an enemy port nevertheless denied the validity of any present interference with American vessels or their cargoes on grounds of breach of blockade. Moreover, our Government stated, the question of contraband does not arise with respect to goods en route from Germany to the United States. This would, of course, be true whether such goods were carried on American or foreign neutral vessels (note published in Department of State Bulletin, December 9, 1939).

The identical situation arose during the World War, at which time Secretary Bryan held that the British seizure of German exports was a course of action "unknown to international law," and that "under the rules governing enemy exports only goods owned by enemy subjects in enemy bottoms are subject to seizure and condemnation." The dispute with Great Britain continued until the entry of the United States into the war. After the war the Privy Council held that the order in council was a reprisals order and was justifiable on the ground of right of retaliation (Noordam case in 1920, A. C. 904, and Leonora case in 1919, A. C. 974).

In its recent protest during the present war, the United States has anticipated the argument of the British based upon the right of retaliation. On this point the American note of December 8, 1939, contains the following paragraph:

"Whatever may be said for or against measures directed by one belligerent against another, they may not rightfully be carried to the point of enlarging the rights of a belligerent over neutral vessels and their cargoes, or of otherwise penalizing neutral states or their nationals in connection with their legitimate activities."

This leads us to the next subject, dealing with the question of belligerent reprisals and the effect thereof on neutrals.

REPRISALS

Both Great Britain and Germany during the present war have sought to justify certain acts, otherwise illegal under international law, on the ground of a right of retaliation. Thus, Great Britain seizes German exports on the ground that Germany has sunk British merchant vessels in violation of the Submarine Protocol of 1936. And Germany, similarly invoking a right to retaliate against the extensive British blockade, sinks British and neutral merchantmen en route to the British Isles. As a result of the counterplay of these and similar measures of reprisal, the rights of neutral states have been frequently abridged.

The United States Government has always held that a belligerent is not relieved of its duty to respect the rights of a neutral state, even when engaged in reprisals for the illegal acts of its enemy. The same opinion was also voiced as early as the seventeenth century by the famous publicist Bynkershoek, who asserted that retaliation "can only be exercised against one who has inflicted wrong, it cannot involve a friend."

The first occasion when it became necessary for the United States as a neutral to protest against the mutual reprisals of European belligerents arose during the Napoleonic wars. The Berlin and Milan Decrees of Napoleon establishing the continental system, and the British retaliatory Orders in Council, are familiar history and furnish a striking analogy to present-day circumstances. At that time Secretary Madison protested against measures of reprisal that went far beyond the extent of the suffering sustained by the retaliating party; Madison further asserted that every retaliating step, which affected a neutral, should be preceded by an unreasonable failure by the neutral to put an end, if possible, to the inequality wrongfully produced. In other words, Secretary Madison recognized a limited right of retaliation affecting neutral rights, but only where the neutral has failed to take reasonable steps to make its rights respected by the belligerent first violating the neutral's rights. The British, however, in a note to Madison (February 23, 1808) contended that the right of His Majesty to resort to retaliation cannot be questioned, and that the suffering occasioned to neutral parties is incidental. (3 American State Papers, Foreign Relations, pp. 209–210.)

In the World War Great Britain retaliated against the German sowing of mines in the North Sea by adopting a similar policy and declaring the establishment of a military area in the North Sea. Germany in turn retaliated by declaring an area of war around the British Isles, where neutral shipping would proceed at its peril. Moreover, in 1917 Germany began her policy of unrestricted submarine warfare on the ground of a long list of grievances against Allied methods of warfare.

The United States protested to England that her measures of reprisal were "without precedent in modern warfare." One of the American notes said (United States Foreign Relations, 1915, supp., p. 154):

"If the course pursued by the present enemies of Great Britain should prove to be in fact tainted by illegality and disregard of the principles of war sanctioned by enlightened nations, it cannot be supposed—and this Government does not for a moment suppose—that His Majesty's Government would wish the same taint to attach to their own actions or would cite such illegal acts as in any sense or degree a justification for similar practices on their part insofar as they affect neutral rights."

Likewise to Germany on July 21, 1915, the United States declared (ibid., p. 480):

"* * * A belligerent act of retaliation is per se an act beyond the law, and the defense of an act as retaliatory is an admission that it is illegal. * * * Illegal and inhuman acts, however justifiable they may be thought to be against an enemy who is believed to have acted in contravention of law and humanity, are manifestly indefensible when they deprive neutrals of their acknowledged rights, particularly when they violate the right to life itself * * *."

Both the British and the Germans took issue with the United States. Great Britain argued that (ibid., 1916, supp., p. 368 ff.):

"It would seem that the true view must be that each belligerent is entitled to insist on being allowed to meet his enemy on terms of equal liberty of action. If one of them is allowed to make an attack upon the other regardless of neutral rights, his opponent must be allowed similar latitude in prosecuting the struggle, nor should he in that case be limited to the adoption of measures precisely identical with those of his opponent."

Germany argued that (ibid., p. 259):

"* * * Neutrals cannot expect that Germany, forced to fight for her existence, shall, for the sake of neutral interest, restrict the use of an effective weapon if her enemy is permitted to continue to apply at will methods of warfare violating the rules of international law. Such a demand would be incompatible with the character of neutrality * * *."

The question of the effect of belligerent reprisals through the sides of the neutrals was passed upon after the World War by the German-Portuguese Arbitral Tribunal of Lausanne in the case of the Cysne. (The case is digested in Lauterpacht. Annual Digest of Public International Law Cases, 1929–30, p. 487 ff.) In that case Portugal claimed damages against Germany for the sinking of a Portuguese ship carrying pit props to Great Britain. Under German law pit props were absolute contraband. The tribunal held Germany liable on the ground that, since pit props were not invariably used for war purposes it was contrary to international law for the Germans to make them absolute contraband, except by way of reprisal. On the subject of reprisals the tribunal held that retaliation, however legal as to the enemies of Germany, was not admissible against a neutral. "There is no legal justification for reprisals except when they have been provoked by an act contrary

to international law. This means that they are not admissible except against the state held guilty of the original violation of international law * * * in the present case the reprisals were aimed directly and deliberately against neutral subjects. As Portugal had not violated, in relation to Germany, any rule of international law, acts of reprisals directed against her were contrary to international law."

On the other hand, after the World War, the German Reichsgericht held that unrestricted submarine warfare was legal as a measure of retaliation (4 Völkerrechtim Weltkrieg (1927), p. 337 ff.), and the British prize courts held that the only question was whether the form of retaliation entailed a degree of inconvenience to neutrals which, under the circumstances, was unreasonable (The Leonora (1918), pp. 182, 228).

Professor Brierly, of Oxford University, a few years ago criticized the views of the British prize courts and stated that their decisions went far toward depriving neutrals of their rights, and making such rights dependent on the discretion of the belligerents. He added: "The truth seems to be that the problem of reprisals in naval warfare is one that defies a satisfactory solution by judicial methods; it may even be that it marks the vanishing point of law as a means of regulating the conduct of war." (Brierly, International Law in England, 51 Law Quarterly Review (1935), p. 27.)

During the present war the United States is adhering to its early position maintained during the Napoleonic wars—namely, that the rights of a neutral cannot be invaded or abridged by acts of interbelligerent reprisal (supra, p. 187, note of December 8, 1939).

In this same connection it should be remembered that, if a neutral state violates its neutrality, it may no longer consistently urge the observance of its neutral rights either when abridged incidentally through interbelligerent reprisals or when invaded directly through reprisals by an offended belligerent.

America, Wake Up and Live!

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

ADDRESS BY HON. KARL MUNDT, OF SOUTH DAKOTA

Mr. CURTIS. Mr. Speaker, last Saturday it was my privilege to hear an address entitled "America, Wake Up and Live!" delivered by my colleague the gentleman from South Dakota [Mr. MUNDT] before an audience of over a thousand men and women attending a luncheon in the Commodore Hotel of New York City. I was so favorably impressed with the content of that address that I have asked the gentleman's permission to reprint it in the RECORD, and I take pleasure in recommending it to the attention of the Members.

If you cannot take time to read the entire address, may I suggest you begin with the subheading "Democracy is now facing its greatest perils." In these times of stress and strain and of what sometimes approximates unreasoning hysteria it may help us all to give some thought to the following reasoning:

Ladies and gentlemen, as a Republican, I am a member today of an indispensable element of a self-governing society—the opposition party. Just as democracy needs a majority party at any given time in its existence it also needs a strong, virile opposition party, which operating for the time as a minority group exercises its perfecting influence upon Government by subjecting to critical analysis and careful examination every policy or program advanced by the party in power. It is neither good politics nor good patriotism for the opposition party to block legislation simply because it is the creature of the party in power, but it is equally bad politics and unpatriotic to shirk its duties of painstaking analysis and public-serving criticism to the end that Government policies may be seasoned and perfected before becoming operative upon the destiny of a free people.

Every citizen in America at every stage of our country's development should be an active influence in shaping the program of the party in power or in sharing the responsibilities of analysis and study which repose upon the party or parties out of power. Politics in a great Republic such as ours is more than a profession; it is an essential element in the life of any citizen worthy of the right of being free. All of the things which we hold most dear in life in a representative democracy are the products and the privileges we receive as a result of politics. Politics—the art of government—in America is a responsibility of every citizen, and the rights to worship God as we deem wisest, to maintain our families, to earn and to spend the products from our labor, to attain fame or friends or social standing, all depend upon our success as politicians and the results of sensible politics. In self-government, when there is no vigorous, patriotic, determined opposition party, politics cannot function as it should and all that man holds dearest is jeopardized.

A LESSON THE ENGLISH CAN TEACH US

In 1215 King John of Engand was forced to sign the Magna Carta which gave Englishmen their first taste of self-government and which put in written form for the first time the thesis that men have certain rights which even their own governments cannot supersede. Self-government in England is therefore more than seven centuries old, whereas in its constitutional form in America it is barely older than a century and a half. Perhaps it is because self-government in England in its development is more than four times as old as it is in the United States that we Americans have not yet learned the lesson Englishmen understand so well, which teaches that in times of greatest emergency opposition parties become the most important and must function most effectively. In war or peace, England seeks to profit from the strength or suggestions emanating from logical and constructive programs of the opposition party. We have recently witnessed England's replacement of Chamberlain by a new leader in time of war, mind you, because the opposition groups in England had convinced the people there that his leadership was inept, his program unsatisfactory, and that new leadership would bring new hope and new unity to a battle-ridden nation. Perhaps one reason the English have always muddled through centuries of warfare and danger is because when hazards and difficulties are greatest the opposition party contributes the most to reshaping government policies and to reviving national strength.

THE RESPONSIBILITIES THE OPPOSITION PARTY DARE NOT SHIRK

In America, when faced with grave domestic or international situations, surface thinkers and strongly partisan incumbent office holders too frequently run to the public with the idea that politics should be adjourned (mind you, that means the adjournment of self-government in such a land as ours); that all should blindly follow the leadership whether it be good or bad, effective or ineffective, of the majority party of the moment and that opposition denotes a lack of patriotism because it refuses to go along with anything or everything the party in power proposes. Such a fatalistic concept of the art of self-government in this Republic is a tragic disservice to America. It would deprive our country, when its needs are the greatest, of the most effective device it has to successfully meet the challenges it confronts.

At a time when every decision or policy may mean the success or failure of America it is essential that every move be tested in the fierce light of public debate and forged in the crucible of honest discussion and controversy before it is accepted and adopted as the policy upon which a nation's destiny is to be gambled. A time of emergency or crisis is no time to accept untested recipes or to resort to the devitalizing practice of taking orders instead of formulating decisions.

Out on the plains of my native State of South Dakota we have opportunity to witness the activities of herds of sheep when faced with peril. Sheep have no opposition party. When a storm swoops down upon them or some danger approaches which they cannot understand, they mill around aimlessly for a time and then strike out, head to tail, following blindly after some leader from their midst. They do not discuss or analyze the course they have chosen. They do not seek to know whether their leader is intelligent or only impetuous. They do not know or seek to know where their leader is taking them, and they do not care whether or not he knows the answer to that question. They simply go along with an adjournment of politics, hoping for the best. But the creed of a herd of sheep is scarcely the formula by which a free people should practice the art of self-government. Seldom, in fact, does the man of the moment become the man of the hour.

With this background, good friends, I want to discuss for a time the New Deal, and Rooseveltism, and the destiny of America, not as a partisan or as an obstructionist, but rather as a voter, a politician, an oppositionist, inasmuch as I am a Republican, charged with the grave responsibilities of having to help form one flank of our body politic which is just as important to the protection of the Nation as it is that the majority flank fulfill its responsibilities.

NOW—AS NEVER—WE SHOULD ANALYZE NEW DEALISM CAREFULLY

For over 7 years, America has been living with or under a philosophy of Government called the New Deal. At the moment, the New Deal is the majority party of America—it is the party in power. Its oppositionists include Republicans of which I am one, Democrats of the school of thought of Thomas Jefferson, independents who distrust the growing power of Government with its encroachments in the field of private business and individual initiative, and liberals who honestly believe that a liberal government is one which protects its citizens alike against the injustices of entrenched power whether that power be economic or political. During these 7 years most of us have been so busy studying the new adventures of the New Deal we have not had time to settle down to analyze the basic principles upon which these policies are founded. To that extent, we oppositionists have failed America, and to that

extent the New Deal, too, has failed because the lowliest citizen in the land has a right to understand the fundamental concepts upon which his government depends. Or, as Seneca said so long ago, "If you would speak with me, define your terms."

UPON WHAT CREED IS THE NEW DEAL BASED?

The New Deal loudly talks about providing a collective security for all America. But, unfortunately, it has tried to provide that security collectively. By collectivizing the functions of economic enterprise and the powers of government in the central city of the land, it has to that extent imported the foreign formula of communism, nazi-ism, and fascism into a free America. And it has gone the second mile. History has always taught that when a party in power (be it an individual or a political group) has centralized authorities in the capital city of the land, it always, and perhaps inevitably, begins to personalize that power. To this lesson of history the New Deal is no exception. Economic rights which the people had, the Government now exercises. Political rights which the Congress had, the Executive now operates. When the Supreme Court resists, the cry goes out to change the court; when the Congress resists, the call is to delegate more power to the President; when the people resist, the purge is called upon to turn out of authority the obstructionists. Today's President has more personal power than yesterday's prince. Today's free economic enterprises are in many cases as subject as were yesterday's operators under the mercantile guilds of Europe. In degree, communism, nazi-ism, and fascism have gone further; in substance they are linked with the New Deal in putting the state above the citizen and subjecting the whole to the part.

THE TWIN FALLACIES OF NEW-DEALISM

Twin fallacies bedevil the thinking of the new dealers: One is a distrust of individual citizens (especially if they are successful operators) and the other is a deification of the Central Government and the central figure in that Government.

To the extent that these fallacies are present, and each of you in your private thoughts can analyze the trends of the past 7½ years and determine for yourselves how extensively these fallacies exist, the New Deal is in itself reactionary. It has dipped back into history to the Middle Ages to find examples of countries being run from the top down; it has circumvented human liberties after the fashion, although not to the degree, of the modern Moscow, Berlin, Rome, or Tokyo. It is Jeffersonism in reverse. It feels that government is best whose citizens govern least. It cannot permanently succeed. To continue to give synthetic semblance of success it must continue toward the goals its contemporaries in Europe and Asia have already reached. A planned economy with a free people cannot prosper—too many planners spoil the pattern just as too many cooks spoil the brew. And if too few people do the planning, the people are no longer free.

ONE HUNDRED AND THIRTY MILLION PEOPLE AND THIRTY MILLION AUTOMOBILES

Just as the Honorable Samuel B. Pettengill, Democratic former Congressman from Indiana, says in his remarkable book, Smoke Screen, the difference between the American system and the totalitarian technique is the difference between a country of 130,000,000 people driving 30,000,000 automobiles and a country of 130,000,000 people riding in one automobile driven by one man. There may be fewer highway accidents in the latter alternative, but when an accident occurs it betrays the destiny of an entire people.

The past 7 years have given America more governmental propaganda and less prosperity than any other like period of our Nation's history. The reason is not hard to find. It results from the conflict caused by a free people resisting the fixed pattern of a planned economy. It will perpetuate depression and retard recovery until the people or the planners win the struggle. If the people win, 30,000,000 drivers will make mistakes again, but the traditional American progress will flow on with each incoming wave taking us a little further upward than the last. If the planners win, we shall have security until our one driver makes his first big error, carrying the whole governmental omnibus with all its people into the sudden death of the world's greatest economic crack-up.

DEMOCRACY IS NOW FACING ITS GREATEST PERILS

Democracy now faces throughout the world its greatest trials of history. In Europe, it is threatened by waves of aggressive armies driven forward by one-man planners toward goals the people do not comprehend. In America, it is threatened by socialistic waves of well-intentioned planners, by waves of hysteria about foreign affairs, by waves of abdication of the peoples' powers to the executive branches of our Government. It is today impossible to prophesy the destiny of Europe. It is also impossible to predict the future of America unless we focus our attention upon our great, unsolved domestic problems of unemployment, underprivileged citizens, underpaid farmers, idle capital, and continued economic paralysis. We must first set our own house in order if we are to be of service to our neighbors across the seas.

On its record in the domestic scene the New Deal and its leadership has failed. It has failed to restore recovery. But more serious than that by far, it has failed to protect the American processes of economic opportunity and self-government by which, alone, recovery can ever come and our productive capacity to set up an adequate national defense can ever be restored. As a member of the opposition group, I charge the New Deal has run its course and a change is necessary if we are to resume our march toward better things ahead. The economic stagnation resulting under the New Deal is now even hampering our national defense.

BUT WHAT OF THE NEW DEAL'S FOREIGN POLICY?

But with a world on fire with war, we must look beyond the domestic scene to analyze the New Deal leadership and to evaluate its record. What of the foreign policy of the New Deal? What has been its success in foreign affairs? Has its failure on the domestic scene been offset by success in international relations or does the same death rattle of defeat plague its practices in that connection? These are no times for partisan attack. Let us examine the record carefully and well and judge it fairly and faithfully by what we find. To do more than that would be unduly partisan; to do less would be shirking from our patriotic duty.

WHAT CONSTITUTES WISE AMERICAN LEADERSHIP IN FOREIGN POLICY?

To honestly evaluate the New Deal's record in foreign affairs we must first of all do more serious thinking about what we should want or expect of such a leadership than is our customary habit. What, may I ask, constitutes sound leadership in foreign affairs? What should Americans expect of their President in his relations with other nations? I have studied this question many years. I think I can suggest the answer and I give it to you for your consideration. It is simply this—sound American leadership in foreign affairs demands that the President project a policy which best protects the interests of America in the family of nations in which we live. To do more might lead to intervention, to meddling, and to war; to do less would be to neglect his duty to the most important member of the international family.

IN FOREIGN AFFAIRS NEW DEALISM HAS FAILED ON ALL FOUR FRONTS

Much as I wish the record were different for the welfare of America and the future of the world, I must submit that the Roosevelt administration has failed us fearfully on all four fronts in its policies affecting our international relations in this world crisis. As it has failed to provide security at home it has also failed at this crucial period to give us security from dangers from without.

First, let us consider the preparedness front as a strong national defense is fundamental to American group security. During the more than 7 years of the New Deal over $8,000,000,000 have been asked and given to perfect our national defense. With what results? On May 16, President Roosevelt addressed a joint session of Congress, asking for a billion dollars more for national defense, and painting a very sorry story about the status of our defense program. No man could hear that speech and feel that this country is well prepared. While billions have been spent and such experiments as the Florida ship canal and the late lamented Passamoquoddy project have been tried, money which should have been spent on protecting our Panama Canal and in modernizing our fortifications has been diverted.

ROOSEVELT HAS FAILED US ON THE PREPAREDNESS FRONT

Military men for years have been asking that our defense program be modernized; that we streamline our Military Establishment to meet the methods and machinery of modern warfare. But after $8,000,000,000 have been spent, horse-and-buggy preparedness prevails and we are unprepared to protect ourselves with modern military equipment of today. Having taken to himself many of the prerogatives of Secretary of the Navy during much of his regime, and having influenced greatly the program of the Army, there is no one to whom the President can pass the blame for antiquated methods or unwisely expended funds. He has been in power since the very first days of Hitler's rule in Germany and has watched the growth of that military machine. But with good intentions always, he has failed to give us a modernized defense. Another billion dollars or another multi-billion-dollar appropriation will not solve our defense problem if we spend it by the same formula and with the same procedure used in spending the past eight billions. The time has come to reexamine our whole program of national defense, to find its holes and plug them up, to bring in experts in industry as well as experts of the Army, Navy, and air force, and to profit from their findings. We cannot longer continue to fail on a front where continued failure might prove so final and so fundamental.

The President's own defense message to Congress proves the point that personalization of power defeats its own ends. No matter how great and good the individual, such a joint problem as national defense calls for study by a joint congressional committee—even while action is being taken—and for the assistance of the best brains in America to join in the undertaking. Witness the following extract from the President's defense message. He said: "Since the first day of September 1939 every week that has passed has brought new lessons learned from actual combat on land and sea. I cite examples: Where naval ships have operated without adequate protection by defending aircraft, their vulnerability to air attack has increased." Very true. But also very late.

As Capt. Eddie Rickenbacker said in New York the following day, the recognition of this fact "came 5 years too late." Colonel Lindbergh told the President and the country about the effectiveness of foreign fighting planes long ago. Billy Mitchell, 20 years ago, pointed to this situation. Arthur Brisbane stressed this need in

his column almost every day during the first years of the Roosevelt regime until the time of Mr. Brisbane's death in December of 1936. It should not take a war to demonstrate that ships without protection in the air are more vulnerable than ships with escorts of fighting planes. Such a conclusion should be inescapable even to a man who had never seen a ship or heard the zooming of a plane. To get a dollar's worth of defense for a dollar's worth of defense appropriations, more of the last eight billion might well have gone for a modernized defense against modernized warfare in the air, on the sea, and on the land.

OUR FIRST LINE OF DEFENSE IS OUR WORST

On the financial front, however, the President's failure is most definite. America's financial front is its first line of defense. And our first line of defense is admittedly our worst. With the more than sixty billions spent by the New Deal in 7 squandering years, our national $45,000,000,000 debt limit has been reached. There is no denying that. There is no evading it. But spend we shall and spend we must because our national defense must be strengthened, streamlined, modernized, and that without delay. Developments abroad have united this country in a desire to stiffen our defense program with a realization that the best guarantee today that no American boy need ever again die on foreign battlefields is to make ourselves so strong that no boy need ever die defending his country on battlefields at home. But as a result of the New Deal's neglect of the first line of defense we face the dilemma today of having to improve our military equipment without imperiling our national economy.

THE NEW DEAL FAILED AMERICA ON THE HOME FRONT

On the home front, in his protection of American interests in foreign affairs, the President has also failed us seriously. A wise leadership, to safeguard America in a jealous and angry world, would unite our citizens in a fellowship of good will and friendly feeling between employers and employees, between farmers and city dwellers, between rich and poor. Of even greater importance, wise leadership in crucial times like these, would have divorced all Government offices and services from employment of Communists, bund members, parlor pinks, socialistic theorists, and other misdirected enthusiasts lacking faith and confidence in the American system. But the President has coddled these malcontents. Communists have headed movements given reception at the White House. Earl Browder, indicted and convicted communistic chief, was third-term advocate No. 1. Bund members have gained in number and increased in strength. While "fifth column" leaders in other countries have sapped the vitals of national defense by secretive stealth, in America we have invited them into the headquarters staff, and, according to a statement made by MARTIN DIES on the floor of the House yesterday, we have virtually turned over to them our merchant marine.

In his defense message to Congress the President rightfully called for a speed-up of American industrial production so we can build more planes and other implements of war and peace. Industry can and must meet that challenge. But what a sad commentary on these last 7 years that the greatest industrial nation of them all should now be criticized for insufficient industrial productivity. Were it not for the incessant sniping of New Deal theorists and the socialistic invasions of Government into business, America's industrial capacity would still lead the world. In spite of everything, I think it still does. If the driver will take off the brakes and turn on the green light, this country will jump into an industrial revival which all of Europe, both conquered, conquering, and unconquerable, cannot duplicate.

Such a record on the home front reveals the partisan reasons for men like Ickes and Minton, like Wallace and McNutt, and others who are already gloatingly using the European situation as argument that a third term is now demanded or desired. For what reason? And by whom? Third termites are in bad taste in their hurried attempt to make political capital of the lack of national defense for which they are themselves responsible.

THE FAILURE ON OUR FOURTH FRONT IS MOST FRIGHTENING

On the Government front, the New Deal has perhaps made its greatest failure from the standpoint of foreign relations. When much of the World is fighting to resist the onrush of totalitarian techniques of government, a farsighted American leadership would long ago have recognized that dictatorship was menacing democracy by the infiltration of its agents as well as its armies. Such leadership would therefore have reversed the trend toward dictatorship at home. It would have restored to American citizens their democracy-protecting rights of individual enterprise, private profits, freedom of initiative, protection from monopoly, and the check and balance system of political activity upon which our democracy has grown great, and upon which alone it can continue to maintain its greatness. By making democracy work here, such leadership would have made its retention or recovery seem more attractive to the people over there. As the menace of that man developed overseas, the importance of government by law rather than government by men should have been recognized at home.

Only by reposing in the people more of the responsibilities of self-government can the process of self-government be nurtured and strengthened in this Republic. The present crisis in which democracy finds itself calls for the full development of the great innate and inherent powers of democracy in its greatest proving ground in all the world. Thus, by our successful example of self-government can we show that dictatorships are not the answer to the peoples' needs.

AMERICA—WAKE UP AND LIVE

America—wake up and live. Too many of us have slumbered while the things which make America American have lost their luster. The dullness which we see upon them now is not decay but the surface rust of disuse. Let's meet the challenge to America with American courage and in an American way. Let the people speak. Let parties in and out of power unite in building us an impregnable national defense. The real American frontier as our own JOE MARTIN has so vividly said is "at the factory door and the farmer's gate." Let the New Deal give way for a New America; for effective leadership—Democratic or Republican—which will hold high the torch of freedom here, so that when peace comes again we can help bring light and hope and freedom to the weary people of a war-torn world.

American sympathies in the present conflict are almost universally united. It is a disservice to our peace for public officials to emphasize them, but it is a credit to our Christian ideals that we are so solidly united. The question which we must answer in considering our national policy today is not, What will happen in Europe if the wrong side wins? but rather, What could America write into a peace treaty which would preserve peace and promote justice in Europe if we entered the war and won? In the World War we won the war, but we so badly lost the peace that our Senate refused to ratify what it considered to be an unwise peace treaty. We refused to police the world after the fighting was over. We withdrew from the European scene rather than be drawn into the endless and ageless conflicts overseas. No sooner had we left the scenes of battle than the rechoosing of sides began anew, and political intrigue coupled with a race in armaments was in full swing.

Would we now be willing to maintain standing armies abroad and battleships in foreign ports to enforce a peace? And what could be written into such a peace after a thousand years of failures in Europe which would not again become the seed for a greater conflict than it stopped? These are serious, practical questions which hysterical news commentators ignore but which mean much to the mothers of America whose sons would become the bloody pawns of battle.

WE NEED A BETTER PREPAREDNESS FOR A BETTER PEACE

Until and unless these questions are answered honestly and accurately and in our American interests, it would be both foolhardy and futile to send our boys across the seas to senseless sacrifice. Rather than helping to defend America, such action might well contribute to our decay. War will not come to America unless America goes to the war, provided we sufficiently tighten our national defenses, cooperate in making the Western Hemisphere an impregnable continent of peace and freedom and disband our fifth columns by sending their conspirators to jail or deporting them to the foreign lands from whence they came.

America must disband its Bund camps, its Fascist Silver Shirters, and its communistic cells. We have coddled subversive groups too long in this country and under the New Deal the Attorney General and Labor Department have shown them too much leniency. We have too long kidded ourselves that the disclosures of the Dies committee were far-fetched figments of the imagination, "America, Wake Up and Live!" But we must do more than clean up America—we must develop an efficient and effective military defense for it. We must spend additional billions for such peace insurance. But we must spend it wisely. We must modernize our equipment. We need tanks for defense. We need planes with armored cockpits and self-sealing gas tanks, we need antiaircraft guns. We need to separate politics entirely from preparedness. Our problem is to defend ourself against the methods and machinery of modern warfare; to do this we should create a commission of industrial experts to assist our military men in mobilizing American industry so it can best assist in the modernization of a defense system which has too long measured its adequacy in terms of billions of dollars spent for preparedness rather than in terms of results in the form of up-to-date fighting equipment and military units.

Yes; American sympathies have crystallized. Our hearts go out to freedom where it fights or falters. But we do not want to support these sympathies by sending American sons to rot and die on foreign fighting grounds battling for a peace no man has yet been bold enough to define or wise enough to propound. Let us face the issues squarely. Europe has bent before its Alexander the Great, its Caesar, its Napoleon, and has risen to new heights after the collapse of every leader who would rule the world. It will outlive and outgrow its Hitler, its Stalin, and its Mussolini. And with our aid, when peace has come again, Europe will move into another era of peace and happiness. But from our vantage point 3,000 miles removed we cannot direct the destiny growing out of century-old disputes in Europe.

Unless we annex the continent or patrol the battle fronts until eternity, we cannot control the destiny of Europe—and to undertake such a colossal task might dim the destiny of all the world by bringing the blackout of human liberties to the Western Hemisphere.

By making democracy work at home we can best give service to the world. By protecting what we have on the continent on which

it functions we can do by our example of success that which our armies could not permanently achieve. Right ideals can move eastward from this continent to Europe as readily as wrong ideas can move westward from Europe over here. Let us give devotion to our right ideals at home. In so doing we can keep bright the light of Christian brotherhood and help right the wrongs of human avarice once the dove of peace has again replaced the war dogs now on the loose in Europe.

The Science of Peace

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

ADDRESS BY DR. PHILIP MARSHALL BROWN ON THE OCCASION OF THE ONE HUNDRED AND TWELFTH ANNUAL MEETING OF THE BOARD OF DIRECTORS OF THE AMERICAN PEACE SOCIETY, HELD IN WASHINGTON, D. C., MONDAY EVENING, MAY 20, 1940

Mr. HINSHAW. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address which I was privileged to hear last evening. While peace seems to be a futile objective at the moment, yet peace must some day come again. Dr. Brown has ably set forth the foundational requirements for a lasting peace and gives us a clear view of the true path to world peace.

The address follows:

Nietzsche says that "man is something that must be surpassed." It would seem that man has now been surpassed by modern science. He is not only grateful for the comforts and enjoyments which science has given him; he is its docile creature. He is even beginning to believe that social redemption will be achieved solely through science.

The tragedy of science is that its main trend has been toward the perfection of power and force. The intrusion into the private life of the atom has been animated largely by the desire to measure its energy and exploit its power of destruction.

The supreme expression of modern science is the war machine. But once this machine is set in motion it soon gets out of control. The god of the machine takes command. It runs wild, destroying men, nations, and vast material resources. It also destroys cherished institutions and standards of values. Confusion of thought and, worst of all, destruction of moral character follow in the wake of this Frankenstein monster which science has created. Men lose their mental equilibrium. They cannot anticipate and discount the course of events. The war machine rolls ruthlessly on. Civilization reels and chaos threatens.

The war machine has no respect for democracies. They can defend themselves against dictatorships only by being less democratic. The organization of democracy for war demands great concentration of power and serious limitations on freedom. All the resources of the state, human as well as material, must be surrendered to the government. State capitalism results and in turn produces social revolution. The masses of the people become restless and readily susceptible to subversive influences. A war between nations breeds social revolutionaries.

Under such disintegrating conditions created by the war machine it is obviously impossible to plan intelligently for peace. We do not know on what kind of foundations we may restore the temple of peace. We cannot be sure that the present war may not prove to be only one of a long series. Definite plans for international organization at the present time are futile. They are as derisive as small fountains playing in a deluge.

What then can the advocates of peace hope to accomplish in this hour of world tragedy? We cannot acknowledge defeat and remain silent. The lighthouse is most needed in darkness and storm. We must hold the faith and fight on. But not blindly. Not with empty phrases and slogans. Our immediate duty is to dedicate ourselves anew to the apparently insoluble problem of international peace. We must do so in a scientific spirit. The science of power expressed by the war machine must be opposed by the science of peace.

Now science in its essence is nothing else than knowledge. And knowledge is gained by realistic logical processes of thought. We are warranted in believing that through honest research comparable to the investigations of modern science we may discern the principles that control this science of peace.

The reasonable approach to this problem would seem first to recognize the errors and failures of previous experiments in the laboratory of peace. The lamentable experience of the League of Nations, in particular, should have most important lessons for us. There must be no emotional wishful thinking. Too much of fateful import to humanity is at stake. We are engaged in a scientific research infinitely more significant than the study of the atom.

The basic error in the peace experiments would seem to have been in a false analysis of the causes of war and in the methods proposed to end war. And this error, strangely enough, has been due to the very same error that created the war machine. Both have been produced by a materialistic, mechanistic age. Both have been dominated by a blind belief in force. Both have believed that men can be coerced to behave as desired by gangsters, statesmen, and reforming idealists alike.

The peace advocates have placed their faith too much in institutions, in organizations, and in systems of government. They have persisted in the ancient error that men can be compelled to cooperate and live at peace with one another. The logical goal of this school of thought has been the creation of a gigantic international peace force to impose peace on single nations and on blocs of nations.

The peace movement has been obsessed by this faith in force, in the inexorable power of the machine. It found feeble expression in the attempt to apply economic sanctions against Italy at the time of the invasion of Ethiopia. The League of Nations, when used as a means of coercion, collapsed miserably in dealing successively with Japan, Germany, Italy, and Russia.

No lesson in recent times could be more impressive and poignant than that the way to peace does not lie along the road of force. The god of the war machine can never insure peace. Whether in personal, domestic, or international relations, mankind will always abhor coercion of any kind, be it physical or moral. You may win a temporary and a precarious peace by force, but you cannot reason with men by force.

A most serious mistake of the peace movement has been to urge peace because of the increasing horrors of modern warfare. This argument has been as unrealistic as it has been ignoble. Heroic men never shrink from any call of duty because of the fear of suffering and death. It is an inspiring tribute to the character of the men facing the horrors of hell in Europe and China that they have not faltered in the defense of what they believe to be sacred rights and obligations. The appeal to fear has sadly discredited the peace movement. It has paralyzed normal thinking and obscured the distinctions between right and wrong. It would be difficult for a Finnish, Dutch, or Belgian soldier to understand the reasoning of the professional pacifist. Men who are defending their hearth and home value duty and honor above life itself. The span of life is all too brief, but men still believe in eternal values. They will not be deterred from laying down their lives for others by fear of the horrors of war. This argument has done the peace movement great harm.

Another error of the peace advocates has been to stress unduly the idea that wars are caused by a state of mind. It is true that wars result from a state of mind and emotion. Men do have profound convictions, be they right or wrong, concerning the justice of their cause. They think in terms of national interests, of pride of race, of religious freedom, and material needs. They plan wars deliberately for the sake of their convictions, whether high or low, reasonable or fantastic.

Calling this a state of mind does not serve to clarify the problem. It requires much more than denunciation, derision, or argument. The fervid belief of the German people in a pure race which shall dominate Europe cannot be eradicated by either war or ridicule. The British interest in Gibraltar and Singapore, the demand of Italy for greater economic freedom, the claim by Japan for predominance in the Far East—these all must be considered realistically. Such debatable issues disclose something much deeper than an emotional state of mind. They reveal the motives that inspire and control the actions of men and nations. We must know the philosophy of life that determines conduct. We must know the compelling motives that make men selfish or generous, cruel or kind. What most matters in the science of peace is the basic philosophy that actuates the conduct of men and nations.

It is painfully apparent that our present civilization too long has been dominated by a materialistic, mechanistic attitude of mind. The hard and dangerous work of society has been done not because men and women wanted to but because they had to. Society has been strangely indifferent to many social and economic injustices. The economic law of necessity has prevailed over the law of love. It is easy to understand why the economic determinists have so profoundly affected the thinking of all ranks of society, including many social-welfare workers and members of the clergy. They rightly believe that modern scientific discoveries should make human existence more comfortable and enjoyable. They believe that men will cease to be miserable and rebellious if economic injustices are corrected. This, they hold, is the right way to find peace.

The leading exponents of this philosophy of life are the Marxian socialists. Their idealism may not be questioned though their class hatred and their methods lay them open to serious criticism. The inherent vice of this philosophy is that it restricts man within the narrow limits of economic determinism. They believe that man is merely the product of his economic environment. It is essentially a materialistic attitude toward life. In common with less radical reformers they would solve social and economic prob-

lems by legislation, institutions, and systems. They are substituting one mechanism for another. They would submit man to external controls of a different nature. The freedom they seek is economic. They have slight regard for his intellectual freedom and none for his religious freedom. Such a philosophy of life is too restricted to satisfy his whole nature.

This philosophy of life is also vitiated by its failure to take into account the conflicting desires of men. It ignores the greed, the lusts, the hatreds, as well as the ideals, that animate and control human conduct. It is based on the false assumption that these desires and motives can be regimented by clever regulations and mechanistic systems devised by the state. In his instinctive search for complete freedom man has never been willing to submit to a social control over his desires and ideals.

The ultimate problem in the science of peace is to discover how the desires that control human conduct, whether in the family, in industry, politics, or international affairs may be reconciled and guided into right channels. If these desires are irreconcilable; if men and nations are resolved to take by any means, fair or foul, what they feel entitled to, there is no use in attempting to seek peace by the arbitrary use of force. You may secure a temporary semblance of peace by force but you fail ignominiously to eradicate the basic cause of war.

The advocates of peace through justice are now facing the stark, ugly reality that civilization is rapidly reverting to the law of the jungle. Our materialistic philosophy has been tending more and more to the idea of the survival of the strongest. Disguise it as you will, it is present everywhere—in business, industry, politics, and, saddest of all, even in the church—wherever men find it possible by a sufficient show of strength to gain their ends by means other than reason and moral suasion. There is evident a general cynicism that makes light of ethical standards. We are aware of a prevalent social attitude that demands privileges but denies obligations. The freedom men seek is in the main individualistic and irresponsible.

The plight of the liberal in these times is most tragic. A sense of defeatism and the inadequacy of his convictions make him inclined too often to compromise—to accept restraints and restrictions imposed by both doctrinaires and dictators. He is in desperate need of a fresh renewal of faith in what Walter Lippmann has termed "freedom of personality and inviolability of the soul of man." He cannot be content with any human institutions and devices which, in aiming at social betterment, actually fetter mankind with restrictions on his desire for the freest development of his highest nature. He knows very well that the legitimate desires and ideals of men can never with safety be restrained by any schemes of social reform.

What, then, is the complete solution of this problem of peace? Are we to confess ourselves to be hopelessly defeated? Must we accept fatalistically the prospect of unceasing contentions and wars? If that be our answer, we might as well eat, drink, and be insanely merry before the resounding crash of civilization. But if we are committed in our personal lives to a philosophy that can give contentment, alter profoundly the desires of men, and reconcile them, then we have an adequate answer which we must proclaim resolutely, with undaunted faith.

But this will exact much more from us than intellectual conviction or moral dedication. We must first demonstrate in our own lives, in every relationship, both within and without the family, those standards of behavior which we believe should control the actions of other men and nations. We should acknowledge the simple painful truth so fully expressed many years ago: "Whence come quarrels and conflicts among you? Come they not from your uncontrolled desires that contend within you?" It is axiomatic that if we cannot have peace at home or in our other relationships we cannot expect it between nations. This demands immense discipline and sacrifice. We would much rather seek external controls on human conduct than inner compulsions. We would resort to resolutions, petitions, denunciations, legislation, and punishments to constrain men to keep the peace. But this is to continue the old discredited fight between conflicting philosophies of life, whether Marxism, capitalism, collectivism, or any other form of social reform. The fight is most clearly drawn between materialism and idealism—between those who deny and those who affirm the right of man to freedom of personality and the inviolability of his soul. All other warfare has but little meaning beside this unending battle. Either we must thoroughly alter and reconcile the conflicting desires of men or abandon the fight for world peace.

How can these desires be altered and reconciled? How can they be harmonized into one sole objective, one supreme goal, one great faith to animate and satisfy mankind? If we have the courage of our convictions and the willingness to sacrifice something, the answer may not be as difficult as we imagine. The only adequate, rational, unifying philosophy must be our faith in the actual brotherhood of man and ultimate spiritual purpose in social evolution. Paul, the first of the great internationalists, proclaimed this truth to the sceptics of Mars Hill: "For God hath made of one blood all nations of man to dwell upon the face of the earth, and hath determined the periods and the bounds of their habitation." Rejecting the paltry philosophy of the materialists we must hold to the faith that there is a divine plan of evolution that promises the utmost freedom of personality and the complete inviolability of the soul. We cannot be content with lesser and baser objectives.

I am not pleading for any sectarian creed. Each must be loyal to his own convictions. I am challenging those millions of Protestants, Catholics, Jews, Mohammedans, and all others who accept the authority of God in human affairs to present a militant united front to promote the only kind of righteousness that can insure peace throughout the world. Thus a united front would be irresistible. As President Roosevelt has so eloquently said, "There is no problem—social, political, or economic—which would not melt before the fire of a great spiritual awakening." This is the true science of peace which can triumph over the science of war. This has been the great aim of the American Peace Society since its founding 112 years ago by William Ladd, himself a great spiritual leader.

We are definitely challenged to dedicate ourselves to this crusade to check the rising tide of war and to lay the foundations for a sound and enduring peace. After all the yearnings, the strivings, and searchings after peace we must take up the task in a venturesome pioneering spirit.

"All the past we leave behind:
We take up the task eternal, and the burden,
and the lesson!
Conquering, holding, daring, venturing, as we
go the unknown ways—
Pioneers! O pioneers!"

Regional Financing

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 21 (legislative day of Wednesday, April 24), 1940

ADDRESS BY JEROME N. FRANK

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the Honorable Jerome N. Frank, Chairman, Securities and Exchange Commission, before the Kiwanis Club of Cleveland, Ohio, April 25, 1940, in which he describes in detail the creation of regional finance institutions.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I find that no member of the S. E. C. has visited Cleveland since former Chairman Douglas was here in 1938. That is much too long a time. As it is one of the leading financial and industrial centers of the Nation, we are very much interested in Cleveland and its problems. In fact, we have, as you know, opened one of our few branch offices here within the past 18 months, under the direction of your distinguished former State securities commissioner, Dan T. Moore.

Mr. Justice Douglas, when he was here some 2 years ago, addressed the Cleveland Chamber of Commerce's committee of the banks and investment bankers of Cleveland. I wonder if you recall what a resounding challenge it was to the financial leaders of your city. He pointed out that the proportion of the magnitude of your industry and wealth in the fourth Federal Reserve district far exceeds your geographic proportion of the Nation, but that your financial leaders were not obtaining their pro rata share of the Nation's financial business. He pointed to the concentration of financial business in New York and showed that, although in the 2 years just preceding his talk, the Cleveland Federal Reserve district had been the domicile of corporations offering 12 percent of bonds and stocks, dealers in the Cleveland district had participated in only about 5 percent of all issues and had actually managed the distribution of only a little over 2½ percent of all issues.

In conclusion he said:

"Undoubtedly, then, there is a considerable supply of funds available for long-term investment and a large demand for long-term funds originating in the fourth district. Much of this might be matched regionally, but now goes to New York to be matched there. Suppose a part of these amounts were handled locally to form the basis of a regional capital market. What would that mean to you and to the fourth Federal Reserve district?

"I hardly need to tell you that it would mean more business for the investment bankers of the district, for the trust and registrar departments of your commercial banks, and for lawyers and auditors of the district; for printers of the prospectuses, etc. It would, indirectly, mean more business for your banks in the form of loans on new securities and wider opportunities for investment. All of

this is an important aspect of the problem, no doubt. To me, however, there are other aspects of at least equal or greater consequence, though they may seem somewhat intangible.

"First and foremost, I should expect simpler and more conservative finance, where finance is brought closer to the locus of business and where investors are brought closer to finance and investment.

"Second, I should hope regional financing would produce better-planned financing, since under that system there might be greater freedom from the scramble in the capital market for the issues of temporarily popular industries.

"Third, I should hope that regional finance might be able to develop an adequate organization for the supply of long-term capital, particularly in equity form, to enterprises of moderate size.

"Fourth, I should expect that a reduction in absentee financing would result in a reduction of absentee ownership and management, with all of the advantages which flow from keeping business at home for the home folks.

"Finally, I should expect that the development of regional capital markets would bring new capital and new brains into the investment banking industry and the financial management of local business. This is not meant as a reflection on its present personnel. But regional capital markets of sufficient stature should help retain and employ the best of its own sons at home.

"The development of regional capital markets seems to me to be eminently desirable but it will not come just by talking and writing. Regional capital markets, even under the best of conditions, can grow up only if local bankers and local businessmen want them. With local patronage development of regional capital markets is possible. Without it, it is impossible. The problem, therefore, at this stage is largely in your hands."

I understand from friends of mine in Cleveland that Mr. Justice Douglas' talk made a great impression here and, what is more important, that at least some leaders in your community decided to do something about it. I understand that, as a result of their activity, the pro rata share of the Cleveland district's participation in stock and bond issues has substantially increased.

I entirely agree with what Mr. Justice Douglas said about the importance of regional finance, and not only as to its importance, but as to the fact that the initiative in fostering it must, in the final analysis, rest with the leaders in those regions. They have it in their power to give more substantial aid in promoting the promising small-business enterprises in their respective localities. And many small businesses need and deserve such aid.

When I say that I am not to be understood as being opposed to all bigness in business. I believe that there are some industries where bigness is today almost indispensable. But to say that bigness is necessary and desirable in some industries is not, by any manner of means, to say the same thing of all industries. There are many areas of American life in which there is no need for bigness. It is foolish, therefore, to make an antithesis between big business and small business. Each has its legitimate place in the American scheme of things.

Do you remember the first-grade reader story of the little pig and the big giraffe? The little pig said it was better to be small and the big giraffe said, "No; it was much better to be big." They argued all morning, but neither could prove his point. Finally, as they walked along, still arguing, they passed a high wall. Now, on the other side of the wall there was an orchard, and both the little pig and the big giraffe wanted to go inside and eat the apples and the tender leaves. The little pig looked and looked, but could find no entrance. But the giraffe had no trouble in reaching his long neck over the wall and eating all the leaves he wanted. "You see," he said, "it is much better to be big." Then they walked on until they came to another orchard enclosed by a high wall. This time the giraffe found he could not stretch his neck over the wall to eat the leaves. But the little pig found, at the bottom of the wall, a hole which was just large enough for him to squeeze through. Into the orchard he went and ate his fill of the apples. Then he returned to the giraffe and said, "It is really much better to be small."

Bigness as such is not a virtue. Neither is littleness. To worship either, as such, is a neurotic obsession. To fear either as such is a neurotic phobia. The fear of size as such is silly. The worship of littleness, as such, is equally silly. In some situations bigness is more desirable. And the situation in which it is better varies with technological conditions. Bigness and littleness are relative terms. Life is not static, and no size formula can be static. Moreover, there can be no perfection: There is, usually, not a "best" but merely a "better." And when bigness is preferable, devices must be sought which will offset, if possible, its defects. It will not do to show the defects of bigness in any given context without asking whether littleness in that same context would not be worse. And when it comes to reducing bigness one must ask, How much reduction is now desirable? There is need for scepticism concerning the dogma that the biggest is always the best. There is also need for scepticism as to the opposing dogma that littleness is always the best. Both dogmas are equally fallacious. As to any specific industry, the question is always pertinent, What, at this particular moment, is the most desirable size?

It is, accordingly, folly for anyone to say either "I am for big business" or "I am for small business." It is wiser to say, "I am for both, each in its proper sphere." The result of not recognizing the folly of any basic antithesis between the two is that a false issue is presented and that, as a consequence, many persons, who quite rationally defend the rights and needs of big business in certain industries, pay altogether too little attention to the rights and needs of small business. In many sectors of American life, small- and medium-sized businesses will always be the backbone of American business. They often receive insufficient consideration from financial leaders and government.

Local industries and regional industries must thrive and prosper. It is imperative that they, as well as the giant corporations, should have credit and capital facilities. And, with Justice Douglas, I feel that, as a general rule, the fountain head of capital and credit for most local and regional industries should, as far as possible, be in the locality or region where they are located.

Now, I know that you have heard a great deal of talk about how the S. E. C. interferes with small business, and you may wonder how I, as a member of what is said to be such an obstructionist agency, can consistently express sympathy with the needs of small- and medium-size business. The answer is a simple one: By and large, the S. E. C. has practically no effect on small business. That it has is a popular misconception. The fact is that, out of the million or more businesses in this country, the S. E. C. has in its entire life come in contact with probably no more than a few thousand. By and large, we affect only those who want to sell their securities to the public.

Naturally, I think you here in this audience know that those are not small businesses. They are medium-sized businesses. As you know, issues under $100,000 are exempt from the S. E. C. requirements. And a one hundred thousand dollar issue is a small issue only from the standpoint of a big company. From the standpoint of the very great majority of businesses in America, such an issue is a big issue. I assume that most of you are representatives of small- and medium-sized business, and I am sure that few of your companies have much more than $100,000 of stock or bonds outstanding in the hands of the public.

But very likely there are many of you who have felt that your capital and credit facilities were not what they should be. You have felt that it is much too hard to obtain the money you need for the legitimate expansion of your business—even when you have orders on the book which would justify such an expansion. That, at least, has been the problem of thousands of small-business men all over the country. And there is no possible question that it is a very serious problem, not only for the particular businessman but for the country as a whole.

We have stories of retailers and small manufacturers who could not obtain bank loans without pledging as collateral so much of their inventory that to conduct business became virtually impossible. We have stories of other businessmen who have had to go to the commercial loan companies or to the factors or even in some cases to actual usurers to obtain vitally necessary capital at interest rates so large as to be literally staggering. And we have other stories of businessmen whose crying need was for partners to invest equity capital and who could find only creditors who piled the business debt so high that the shadow of bankruptcy was often visible around the corner. I am not to be understood as blaming all those who make such loans for the harsh terms they may exact; for frequently the nature of those loans by ordinary lenders justifies such terms.

There are two distinct problems involved: The first has to do with relatively small loans for working capital. The second has to do with funds to be used for plant expansion. It is with the latter, because of my S. E. C. experience, that I am primarily concerned.

As I have said on many occasions, I am in favor of seeing a great deal more equity money and a great deal less debt money go into business, especially where funds are needed for plant expansion. There is very little elasticity in debt. Interest charges are fixed, regardless of economic conditions. American business is a growing, changing thing. But an excessive amount of interest charges, on funds used for capital expansion, is a static thing. The two are, to my mind, often incompatible. Let me give you a word picture of what I mean. On the one hand you have a spirited horse (American business), rarin' to go. On the other, you have a huge stake in the ground, representing debt created in the past. Tying the horse that wants to go forward to the stake which holds him to the past, you have the stout rope of fixed interest charges on the debt. On the other hand, to carry my picure further, if you release the horse and give him an able rider in the form of a partner with equity money, he will really go places.

It is significant that for many years since the last World War, an increasing number of our giant industrial corporations in our prosperous expanding industries have issued few, if any, bonds, but, instead, have done their financing largely through stock.

The following editorial in the Wall Street Journal for February 5, 1940, is apposite: "A news article in a recent issue of the Wall Street Journal recorded the fact that many corporations are now applying cash in excess of immediate working-capital requirements to the reduction of debt, retirement of preferred stock, or reduction of arrearages in cumulative dividends on senior issues. Better net

earnings of the latter part of 1939 have accelerated these processes and it is anticipated that good earnings of the current quarter will carry further this work of simplifying and improving the capital structures of a considerable number of corporations. Reduction of mortgage or floating debt obviously fortifies any unit of business enterprise, both for the performance of its economic functions and for the compensation of those who have committed their investment funds to the use of its management. Retirement of preferred shares and reduction of accumulated unpaid dividends are measures of a somewhat different order, but still they help materially toward a stronger capital structure, one better adapted to meet contingencies either of suddenly expanding operations and the borrowing that may entail or of contracting business volume and resulting smaller earnings.

"It was noted in the article referred to that these applications of earned income will in many instances bring nearer the time when dividends on common stock may be resumed or begun. That means more than merely the pecuniary benefit of common-stock holders. A large corporation of which the common shares are so remote from dividend possibilities as to be little more than trading chips is far from an ideal set-up from any point of view, whereas a corporation able to pay common dividends not only enlists the active interest and support of all its security holders but also, under favorable general conditions, may obtain needed capital for expansion without incurring the potential disadvantage of fixed interest charges."

Once that would have been considered heresy; once it was thought that it was always good business for a corporation to issue an immense amount of bonds at low interest rates to procure money which the corporation could employ to earn a much larger rate of return for the stockholders. That kind of margin trading was once considered invariably wise.

But many of those who manage many of our prosperous big companies no longer adhere to that business doctrine. And if it has proved unsound with reference to many big business, surely it is even more unsound for a small or medium-sized business, which frequently has less capacity to stand up under the impact of a business slump at a time when it has a large amount of interest to pay or a large amount of debt principal to refinance. A proportionately large amount of bonded debt for big business, and even more for small business, is a constricting thing. It produces lack of elasticity, the inability to adjust to bad business weather.

Since much big business has found it wise and possible to avoid the constriction resulting from a large proportion of bonded debt, every effort should be made to make the same possible for small business. And that means that there must be more equity financing of the small, promising business enterprises.

A large proportion of financing by such enterprises through bonds involves dangers to the investors in those bonds and to the owners of the stocks in those enterprises. The chief danger is that if, because of a default in interest payments or the arrival of the maturity date, the bonds come due in a period of recession, bankruptcy, or reorganization is precipitated; and bankruptcy or reorganization is generally harmful to all investors.

More and more that fact is coming to be recognized. In October 1938 a committee consisting of some of our leading conservative bankers, insurance company executives, and other businessmen, publicized such views in an important book called Debts and Recovery. I earnestly recommend that you read it. (You will find that theme expanded in a speech of mine, Too Much Interest in Interest, which I made on September 22, 1938. See also my book, Save America First (1938), pp. 385–386.)

To avoid any possible misunderstanding, let me say, parenthetically, that my preference for increased equity financing is personal and must not and does not affect my conduct in helping to administer the statutes which the S. E. C. enforces. Under the Public Utilities Holding Company Act of 1935, the question of lawful financing of gas and electric utilities companies does come before us frequently. But there we must make our decisions in accordance with the standards set forth by Congress in that particular act, and the application of those standards does not authorize us to disapprove of bond financing of such utility companies, if it conforms to those statutory standards. In other words, if the management of a utility company elects to issue bonds, we have the power and duty to interfere with its judgment only to the limited extent that its judgment flies in the face of these statutory standards; on a few occasions we have been required to hold that a proposed utility bond issue was excessive and violative of that act; our position in such cases was substantially the same as that of the Interstate Commerce Commission, which, under somewhat similar provisions of the Transportation Act of 1920, has not infrequently, over the past 20 years, refused railroad companies permission to issue an excessive amount of bonds in violation of the standards of that act. But except for cases relating solely to bond issues of utility companies within our jurisdiction under the 1935 act, the S. E. C. has no power whatever to pass upon the amount of bonds a corporation may issue. Accordingly, when I express a preference for increased equity financing, I am merely stating my personal nonofficial attitude. That is, however, an attitude based upon a study of a very large number of cases involving insolvent corporations which have gone into bankruptcy. For under the Chandler Act the S. E. C. makes advisory reports to the courts in connection with reorganizations of bankrupt corporations; and in connection with such reports, we learn much about the disastrous consequences of excessive bond financing.

I know the problem of equity financing for the prosperous small or medium-sized business is not simple of solution. But I believe the solution must, in considerable part, be regional. And I believe that communities like Cleveland, with its great financial, industrial, and human resources, can solve it. I would like to relate to you one suggestion which I have made on several occasions. It pertains to the establishment of something which, for lack of a better name, might be called regional industrial capital institutions.

You are probably thinking at once in terms of further Government control over business. If that worries you, let me say that it also worries me. If I felt that what I have proposed could not be worked out without giving the Government ownership or control—either direct or indirect—of American business, I would be opposed to it myself. The institutions which I propose might require some financial support from the Government. That would depend upon how much support could be obtained in the community. Under no circumstance would the Government contribution be made in such a way that the Government might eventually take over any businesses which the institution might have aided. But I am getting ahead of myself.

In short, I know from my experience on the S. E. C. that there is no way in which most small business enterprises can raise capital in amounts from $50,000 up to even $1,000,000 unless they have some special connection with an underwriter. Most individual underwriters are not equipped to handle security issues of this size, except at an excessive cost to the issuer. This is not a criticism of the spirit or motives of the underwriter, but it is a frank analysis of their capacities. Our figures show that for small issues of common stock registered with the S. E. C., the underwriting charges alone run to nearly 20 percent of the issue. When the cost runs that high, even I, with my predilection for equity financing, must acknowledge that debt financing is unavoidable, no matter how unfortunate that may be.

I do not deny that it costs the underwriter a great deal to market securities of little known enterprises and that his risks may be high. I am not, therefore, blaming him for charging a large price for his services.

But I feel that money which costs that much is too expensive for most small American business. And for that matter, the underwriting charges for small bond issues and small preferred stock issues are also so very much larger than for big business that little and medium-sized businesses are placed at a terrific competitive handicap in their race for their proper share of the Nation's business.

So I have proposed the creation of these regional institutions. The plan has not been worked out as to detail, but roughly it is as follows: In each of the Federal Reserve districts, a financial institution would be set up, with the common stock owned by private persons in the district. In order to stimulate private investment in the stock of these institutions, the Government would invest in their preferred stocks, carefully safeguarded so as to have little if any voting power. But, the privately owned common stock would control the institution and elect the officers and directors. Each institution would, in turn, buy the stocks of deserving and growing local business enterprises, in good financial condition, which needed money for capital expansion. Generally speaking, the institutions would not make loans. They would supply equity capital instead of debt.

In other words, each of these institutions would be a sort of speculative finance company or investment trust. I want to emphasize that I believe they should not be eleemosynary institutions. They should be run for a profit. We all know that there are hundreds of persons in every community who think they ought to get capital for everything from making gasoline out of salt water to operating a rocket service to Mars. But we also know that there are plenty of good promising businesses which, with a little additional capital, can prosper. And you businessmen in the community know those situations better than anybody else. That is the principal reason why I believe so firmly in localized control of the proposed financing companies. An investment committee made up of local businessmen can judge better than anybody else which are the deserving situations and which are not. They can also judge the likelihood of success of a given venture in their particular community. They can know, for example, that a giant market might succeed in one neighborhood because of competitive conditions, while it would have very little chance in another. Those are judgments that cannot, nearly as well, be made from a distance.

Those regional finance companies, as I envision them, would not merely themselves invest in the securities of prosperous small business enterprises, deserving the opportunity to expand, but would also, in appropriate circumstances, participate with underwriters in the distribution of the securities of such businesses.

Naturally, it would be too much to expect that all the investments of the finance companies would succeed. Some, of course, would not. But I believe that, with a wise selection, most of them would. And I believe that, from time to time, it would be often found that some expert management advice, such as could be supplied by the institution, would pull a business, in which it had invested, into the black when it had gone into the red.

That at least has been the experience of private groups which, on their own initiative, have attempted that kind of project on a small scale. Not long ago I was talking to a man in New York who does almost exactly what I believe these institutions could do. He takes a stock interest in a small business which appears promising at a price agreed upon as fair. He then sends one of his own men out to study the business and give management advice for as long as may be necessary—a month or 6 months. He supplies that management service at no charge. His only profit comes from an improvement in the value of his stock through an improvement in the affairs of the company. He tells me that, of course, he turns away a great many unworthy applications; but he also has to turn away many very promising situations. He is an enthusiastic supporter of the regional finance company idea. He says, incidentally, that he has put none of his money into enterprises in New York City—all in small business on Long Island, New Jersey, Connecticut, etc.

As a matter of fact, the investment trust bill now before the Senate makes provision for this type of company—frankly speculative—frankly for special situations. I believe that finance companies of this nature will aid materially in filling the gap, but I doubt whether such companies, managed from New York, can get down into the local situations. By and large, I think they will have to place their funds with companies a little larger than those I have in mind. But size is no measure of potentiality. A small business venture, in many industries, has relatively as much chance of success as a large one. I would be worried about America if I did not believe that. And I think it requires a knowledge of local conditions adequately to know the prospects of the local industry.

There are two things I want to say about my proposal. First, I do not regard it as a panacea; I am not a perfectionist and therefore do not believe in panaceas. I merely regard it as a step in the direction of filling the gap in our underwriting machinery which presently makes it too difficult for small- and medium-sized companies to obtain capital. Second, I do not suggest it as an alternative to, but rather as supplemental to, the plans sponsored by Senator MEAD, of New York, which would provide governmentally aided credit facilities for small business.

I want, once more, because it is so important, to stress the desirability of regionalization. Greater regional autonomy is important because, I repeat, in many areas, local needs are best known to those in the locality. Regionalization, as to security issues for capital expansion, seems to me to be of very considerable importance. For not only is there need, in general, for assistance to the growing small business enterprise, but there is specific need for stimulating business activities in the several regions of our country where today there is too little such activity.

Now, if I am correct in thinking that there are internal frontiers which call for development, then it seems to me that it follows that, insofar as such internal frontiers are to be opened up through financial assistance to business enterprise, it is necessary that there be localized or regional finance companies for that purpose, so that the regional possibilities will be studied by those who are interested in and sensitive to them. Centralization of all such financial institutions in any one city is likely to foster insensitivity to local potentialities almost to the same extent as now exists as the result of excessive centralization of investment banking in New York. The urge for regional development must come from, and will receive its most intelligent encouragement in, the several regions.

What I have been discussing is, of course, part of the larger problem of stimulating an increase of the flow of savings into capital expansion, in order to add to employment and to our national prosperity. In connection with that entire problem it is well worth considering whether some form of tax exemption should not be given to those who make investments that augment capital expansion which would not otherwise occur. That is a large topic, and I can do no more here than suggest it for consideration.

And while I am talking of tax laws it may be well to refer to another pertinent problem: One deterrent to equity financing is to be found in provisions of the income-tax law which permit the deduction of bond interest (as distinguished from dividends) from gross income in determining taxable net income. There would seem to be a need for considering some revision of that provision of the Revenue Act so as to stimulate equity financing; that is a problem not too easy to solve, and I shall not attempt to work out a solution of it here.

I have said that the Government could stimulate interest in the regional industrial capital companies by subscribing to their preferred stocks. It is by no means certain that such governmental participation will in all cases be needed. There is no reason under the sun why a group of Cleveland men should not get together and do the job themselves—form a corporation to be known as Cleveland Enterprises, Inc., or Cleveland Industries, Inc. If you did, I believe it would succeed. I believe it would also increase the prosperity of Cleveland and reveal again the private initiative that has made Cleveland the great city that it is. And I would like it better if done entirely by private funds than if with Government participation. I am not urging it on you, because it is not my business to do that. But I would be happy to discuss the idea with any of you to whom it appeals.

National Labor Relations Board Versus Bradford Dyeing Association

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, May 21 (legislative day of Wednesday, April 24), 1940

OPINION OF SUPREME COURT

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix the text of the opinion handed down yesterday by Mr. Justice Black for the Supreme Court of the United States in the case of *National Labor Relations Board* v. *Bradford Dyeing Association*. This represents the eighth successive victory for the Labor Board in the present term of the Supreme Court.

In the 25 cases decided by the Supreme Court involving the Labor Act, the Board's position has been fully upheld in 20 cases, modified in 3 cases, and wholly reversed in only 2 cases. In 16 additional cases the Supreme Court, by denying writs of certiorari, has left in force decisions of circuit courts enforcing N. L. R. B. orders. There are only 2 cases in which the Supreme Court, by refusing certiorari, has left in force circuit court decisions setting aside N. L. R. B. orders.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States. No. 588. October Term, 1939. *National Labor Relations Board, petitioner* v. *Bradford Dyeing Association* (*U. S. A.*). On writ of certiorari to the United States Circuit Court of Appeals for the First Circuit. May 20, 1940]

Mr. Justice Black delivered the opinion of the Court.

The circuit court of appeals declined to decree effective enforcement of an order of the National Labor Relations Board upon the ground that the Board's order, in material respects, rested upon findings that were not supported by substantial evidence.

In its petition for certiorari, the Board took sharp issue with the court of appeals, asserting that some findings upset by the court were supported not merely by substantial but by "uncontradicted" and "undisputed evidence." The petition also pointed out that the court's opinion was "ambiguous and inconclusive" and "left unclear the court's holding as to whether the Board had jurisdiction." Our inspection of the court's opinion and decree disclosed that the court deemed the Board to be wholly lacking in jurisdiction. Nevertheless, the Board was ordered to proceed in accordance with the opinion which concluded with the indecisive statement that "if the case should not be dismissed for lack of jurisdiction" a large part, but apparently not all, of the Board's order should be vacated. The court's decree did not direct enforcement even of those parts of the Board's order not expressly vacated. The Board's petition further pointed out that its motion for rehearing in order to clarify the question of its jurisdiction and to establish the status of "those portions of the Board's order which the court neither vacated nor enforced" was denied without explanation. Because the Labor Board's petition in challenging the action of the court of appeals thus raised questions of grave public importance affecting the administration of the National Labor Relations Act and judicial review as provided in the act, we granted certiorari.[1]

This proceeding was initiated upon charges filed by the Textile Workers' Organizing Committee of the C. I. O. Thereupon, the Labor Board served a complaint and notice of hearing on the Bradford Dyeing Association (U. S. A.), respondent here.

In the complaint, it was alleged that respondent in order to discourage membership in the C. I. O., had discharged and refused to reinstate its employees, Edward Nelson and Percy Schofield, because of their affiliation and activities in the Textile Workers' Organizing Committee of the C. I. O., (T. W. O. C.); respondent had dominated and supported the Bradford Dyeing Association Employees' Federation, a labor organization, and had refused to bargain collectively with its employees through the T. W. O. C. after a majority had selected it as their bargaining representative.

[1] — U. S. —; *cf. Labor Board* v. *Waterman Steamship Co.*, — U. S. —.

The Board's jurisdiction was unsuccessfully challenged on the ground that respondent's business involved no activities in or affecting interstate commerce within the meaning of the act. And, answering, respondent alleged that Schofield was discharged because he smoked during working hours; "that * * * Nelson was not discharged, that he was insubordinate and defiant, that he did not work and refused to work during the times when he was supposed to be working, that he was on the premises during hours when he was not supposed to be on the premises of respondent and was taking up the time of other employees who were supposed to be working during such time, that * * * Nelson went upon a vacation and has not returned to work after such vacation nor made any statement of his readiness to return to work or made any request that he be put to work again"; that respondent had not dominated or coerced the Federation; and that any labor disputes at its plant were attributable to the conduct of the T. W. O. C.

The Federation was allowed to intervene in the extensive hearing held by the Board.

After this hearing, the Board found that "a labor dispute" in respondent's plant would widely affect "the flow of commodities in interstate commerce", with consequent jurisdiction in the Board, and that the charges of the complaint had been substantiated.

The Board accordingly ordered respondent to cease and desist from (1) interfering or coercing its employees in the exercise of their rights to self-organization; (2) dominating and interfering with the federation or any other labor organization; (3) discouraging membership in the T. W. O. C.; (4) refusing to bargain collectively with the T. W. O. C.; and (5) ordered respondent affirmatively to offer reemployment to Schofield and Nelson and to make them whole, to withdraw all recognition from and completely disestablish the federation, to bargain collectively with its employees through T. W. O. C., and to post the usual notices throughout its plant stating that the company would cease its unlawful and unfair labor practices and would treat its agreement with the federation as of no effect.

In its final decree the circuit court of appeals directed that "until a new election has taken place by order of the Board, and the employees have expressed their preference as to what group or body shall represent them in any labor dispute between them and the respondent, the order of the Board, except as to paragraphs (1), (2), and (3) of the cease-and-desist portion of the order, and the entire paragraph ordering affirmative action, shall be vacated, the Board then to proceed in accordance with the opinion passed down this day." As phrased, the decree is not clear, but apparently the court vacated subdivisions (4) and (5) of the Board's order. The court's opinion did make clear that under its decree the company was left free to bargain collectively with the federation and to decline to bargain with the T. W. O. C. Discharges of Schofield and Nelson were approved, and the company was released from publishing notices which, if warranted, were "essential if the employees were to feel free to exercise their rights without incurring the company's disfavor."[2] Although those portions of the Board's order prohibiting the company's interfering with its employees' union affiliations were not expressly set aside or modified, neither were they ordered enforced.[3] Thus the court's decree gave the Board's order no effect at all.

It did not explicitly so decree, but the court of appeals evidently was of the view that evidence was lacking upon which the Board could have found that respondent's business was in or affected interstate commerce. The court expressly found a lack of evidence to support the Board's conclusion that Schofield and Nelson were discharged for union activities and stated its belief that Schofield was discharged for smoking in the plant and Nelson for insubordination, and that "the finding by the Board that the T. W. O. C. had a majority of the employees of the respondent signed up even to become members of a union under that name is without substantial evidence on which to rest."

Without specifically passing upon the Board's finding that respondent had unlawfully dominated the federation, the opinion of the court stated, "* * * assuming that the president or officers of the respondent influenced its employees to join the federation, so-called, it does not appear by clear and substantial evidence that a majority of the employees ever joined, or indicated an intent to join, the T. W. O. C., * * * ." Since the court did not vacate that part of the Board's order directing the company to discontinue domination of the federation, we might infer that the court accepted the Board's finding that the federation had been so dominated. But this inference is opposed by the court's action in vacating the order of disestablishment. The uncertainty in which the court has left the questions of jurisdiction and company domination of the federation makes necessary a review of the evidence on both, along with other evidence which we think amply demonstrates the justification for the Board's order in every respect.

First. As to jurisdiction:

A major portion of the opinion of the court below is devoted to its expression of doubts about the Board's jurisdiction—i. e., "there is no substantial evidence to warrant a finding that the transportation of these materials by the respondent was ever in interstate commerce"; "there is also lacking substantial evidence that 40 percent of the supplies consisting of chemical and dyes, which were contracted for in Rhode Island and delivered by the sellers to the respondent's plant in Bradford, were transported by the respondent in interstate commerce, or that they were used by the respondent except at Bradford, though the Board assumed without evidence that they were shipped by the respondent in interstate commerce, but its assumption lacks substantial evidence on which to rest, that would compel this court to accept it as a fact"; "the respondent, according to uncontroverted testimony, neither sells, transports, nor arranges for transportation of the goods into or out of Rhode Island in interstate commerce which is done in each instance by the customer, * * *"; and "the Board apparently assumed that the respondent transported goods to its plant and from it, which the uncontroverted evidence disclosed were not the facts." Referring to waste products which respondent sells in interstate commerce, the court noted that they did not "exceed 1 percent of the total goods processed" and said that they were but "a mere incident * * * [of the business] to which the maxim de minimis might well be applied, even by the National Labor Relations Board." And the conclusions of the opinion were only stated subject to the condition "if the case should not be dismissed for lack of jurisdiction."

There was evidence before the Board which showed:

The Bradford Dyeing Association (United States of America), as stated by its president, is "engaged in the dyeing and finishing of cotton, rayon, and acetate piece goods." These piece goods reach the plant at Bradford, town of Westerly, R. I., as unfinished "gray goods." Customers of Bradford, known as "converters," ship the gray goods to the plant, retaining title, and direct shipment of the goods when processed. Bradford owns no goods or means of transportation, and its customers pay the cost of transportation to and from the plant. A New York office is maintained, however, "where * * * solicitors (who contact converters) make their headquarters," and advertisements are run in New York papers and trade journals. A majority of Bradford's (converters) are located in States other than Rhode Island, in Baltimore, Boston, Philadelphia, Trenton, and principally in New York City. There are "very few customers" in Rhode Island. In 1936, 57,000,000 yards of goods were processed and for the first 6 months of 1937, 29,000,000. About 90 percent of all goods processed, the processing taking "an average of between 2 and 3 weeks," are shipped out of Rhode Island. "More than half" of the goods processed come from beyond the borders of Rhode Island.

Incidental to its business of processing, respondent accumulates and acquires title to remnants which are ends of cloth processed and goods damaged in processing. In 1936, 558,000 yards of remnants were sold by respondent, 90 percent of which was shipped in interstate commerce. These remnants represented roughly "just less than 1 percent of the yards processed in that year. For the same year respondent purchased $355,856 worth of colors and dyestuffs, weighing over 235,111 pounds, of which 40 percent came from outside of Rhode Island. The company during 1935 averaged 688 employees, with wages of $604,614.68, and its gross income from processing was $2,026,156. In 1937 the employees on the pay roll were nearly 800.

That this evidence was abundantly sufficient to justify exercise of jurisdiction by the Board is not now open to controversy. It is settled that the act is applicable to a processor, who constitutes even a relatively small percentage of his industry's capacity,[4] where the materials processed are moved to and from the processor by their owners through the channels of interstate commerce,[5] and it is not material, as the court below thought, that respondent's customers might be able to secure the same services from other Rhode Island processors if a labor dispute should stop the interstate flow of materials to and from respondent's plant. Since the purpose of the act is to protect and foster interstate commerce, the Board's jurisdiction can attach, as here, before actual industrial strife materializes to obstruct that commerce.[6]

---

[2] *Labor Board* v. *The Falk Corporation*, — U. S. —, —.

[3] Section 10 (e) of the National Labor Relations Act gives the Board power to petition any circuit court of appeals of the United States for the enforcement of its order; grants these courts exclusive jurisdiction and provides that "Upon * * * [the Board's filing a transcript of the entire record in the proceeding], the court shall cause notice thereof to be served upon such persons, and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to * * * make and enter upon the pleading, testimony, and proceeding set forth in such transcript a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Board." (49 Stat. 449, 454.)

[4] The record indicates that respondent does roughly 1 percent of the national total of business in its industry.

[5] *Labor Board* v. *Fainblatt*, 306 U. S. 601.

[6] *Edison Co.* v. *Labor Board*, 305 U. S. 197, 222; cf., *Labor Board* v. *Jones & Laughlin*, 301 U. S. 1, 43. A strike at respondent's plant in 1929 apparently did result in a stoppage of the flow of the interstate movement of materials to and of processed goods from respondent's plant.

Second. Discharge of Nelson.

In its answer to the Board's complaint, the company contended that Nelson was not discharged April 3, 1937, but was merely "laid off," and on April 2, "went upon a vacation" and did not return or indicate a willingness to go back to work. However, the company insists, as it has throughout, that Nelson was not a diligent worker and was insubordinate; that he trespassed upon company property after work hours Thursday, April 1; that "one or two mornings that week he started work a little late and quit a little early"; that he did not start work Saturday, April 3, until 7:30, a half hour late.

Some of the evidence supporting the Board's finding that Nelson was actually discharged for union activities on April 3, was:

Prior to Saturday, April 3, 1937, when Nelson was "laid off," he had worked for the company 2 years as a carpenter. He had become actively interested in organizing the employees in a C. I. O. union the preceding Monday, March 29, 1937. On that day he had obtained 350 T. W. O. C. cards from a fellow employee (Schofield), who, he heard, "had some applications for joining the union, the C. I. O." His distribution of the cards met with quick response and many signed, so that on Friday the company official "who does all the hiring," approached him and said, "You're a ringleader of the C. I. O., but you are not going to be fired for it." Nelson refused to tell this official the names of his collaborators in forming the union and also told him he would not reveal their names to Mr. Summersby, the company's president and general manager. Later that day, Nelson observed Schofield talking with Summersby and was introduced to the latter as "helping * * * [Schofield] to organize and get these pledge cards signed in the mill." He was, that same day, Friday, refused admission to a meeting in Summersby's office between some employees and Summersby, but that afternoon, after work, he was called to Summersby's office. There Summersby asked "why didn't we form a local union of our own?" and "thought it was a much better plan to form a local union." And Summersby asked that the question of a local union be put up to a C. I. O. committee meeting to be held that night.

All day Friday and Saturday morning his foreman "didn't speak one word to" Nelson. Saturday morning, April 3, this foreman asked him "when [he] * * * intended to start work," but added that he "didn't hold anything against" him. When Saturday's work was over Nelson was sent for by Summersby, who was affable at first, but who became hostile when Nelson indicated he would not go along with a local union. Summersby then asked Nelson if he had been stealing on an occasion when he had returned to the plant after hours to get some T. W. O. C. cards, and asked him if he had begun work promptly that day (Saturday, April 3). Nelson was told by Summersby "to take two weeks off and cool off." Nelson insisted he was ready to go back to work Monday morning. His testimony narrated this conversation in part as follows:

"A. * * * I said, 'As far as being excited about it, you are more excited than I am and you are worried about it and I ain't.' He says, 'Sure, I am excited about it, but you are the cause of all it.' I said, 'I can't help that.' He said, 'You take the 2 weeks off and then come back and see Mr. Pierce.' I said, 'Meaning what, that I go back and see Mr. Pierce? I am not sure of a job when I come back? Or is this just a matter of beating about the bush to fire me?' He says, 'I won't give you nothing definite.' I says, 'I want something definite. I want to know whether or not you are firing me. If you are not telling me whether I go to work when I come back or not, I want to know whether you are firing me.' He says, 'I won't give you nothing definite.' I says, 'I can't go out without money. If you are going to fire me, I can't live without money.' He says, 'Silvia, get his money.' Mr. Silvia went out and got me my money and came in and I thanked Mr. Silvia for my money and went out. When I was halfway across the outer office I heard laughing, and I saw Silvia swing his arm down, and Mr. Silvia and Mr. Summersby were laughing for all they were worth, as though they had pulled a big joke."

"Q. Did you ever go back after that for your job? A. No, I didn't. Mr. Summersby told me if I stepped foot on the premises within 2 weeks he was going to have me arrested."

Nelson never went back because a T. W. O. C. official who conferred with Summersby said Summersby would not take him back. This T. W. O. C. official and a Conciliator of the United States Department of Labor said Summersby wouldn't take Nelson back because "there would be a question of his authority." In fact, a fellow employee told Nelson that Summersby had said something about firing Nelson and Schofield and "that he would find some way of getting around it." On the morning of the day Nelson was fired he had spent a "couple of minutes" telling other employees about a C. I. O. meeting of the previous night.

From the testimony of the T. W. O. C. official in question, a T. W. O. C. director for Rhode Island, Summersby would not rehire "especially Mr. Nelson." And Summersby himself stated that he told the Federal conciliator, "I couldn't take back either of them because it would break down the discipline of our plant."

Nelson's foreman testified as a witness for respondent—

On Friday, April 2, "I could see that he (Nelson) was talking around more or less, and so I had him come in the shop to work on the trucks. I thought that would be the place where I could watch him better." He saw Nelson talking to the men early on April 3, before work and until 7:30, although work begins at 7. He reported to his superior that Nelson was "talking to different ones," and went with Nelson to Summersby who asked Nelson "if he decided, on some question that they were talking about the afternoon before * * * (Nelson) said, "No," and Summersby said, "Well, then, if you can't give me a satisfactory answer on that I have thought it over and I have decided to lay you off for 2 weeks and let you think it over." This foreman "knew * * * (Nelson) was interested in the C. I. O., but * * * didn't know anything he said" to the men Saturday morning. On other occasions he had seen Nelson start late or quit early without ever reporting the fact, and had seen Nelson talk around like that "quite often" but "this is the only time * * * (the foreman) ever got mad at him." This time he was aware that Nelson had been connected with the C. I. O. for the past week "and * * * supposed he was still at it." The foreman admitted that Nelson was "a very good workman," that he may have worked between 7 and 7:10 on this particular Saturday morning, and that on Saturday, April 3, Nelson, after having been spoken to, "said he hadn't any feelings but what he would go on and do his work all right. And he did after that."

According to the chief engineer, who ranked above Nelson's foreman—

Nelson previously "did a whole lot of talking." In his 3 years with the company, he had seen others talking but never laid any one else off for talking. In his view "when men are talking with one another there is very little work done," but the foreman did not report the men to whom Nelson was talking on April 3, although they also were "surely" wasting time. The plant rules do not forbid talking.

Summersby, the president and general manager—

On April 2, "inquired as to who (Nelson) * * * was and what he did and if he had been active in the C. I. O. as an organizer." Nelson, he stated, "automatically forfeited his job" by not coming back at the end of his 2 weeks' lay-off, which was without pay. And if he should apply for work, his forced vacation "would be on his record and would always be a black mark against him."

Third. Discharge of Schofield.

The court below saw no evidence supporting the Board's finding that this employee was discharged for union activities and accepted the company's contention that he was discharged for smoking in the plant contrary to rules. Respondent admits that Schofield was discharged.

Schofield, a machine operator, or "jigger," testified—

On Saturday, March 27, 1937, he attended a C. I. O. meeting, obtained 8 application cards for the C. I. O. and talked to some of his fellow employees about the C. I. O. All 8 cards were signed that night. By Sunday, March 28, he had asked for and obtained 700 cards which he used during the following week, giving Nelson about one-half on Monday, March 29. By Wednesday, the cards gave out. On Friday, April 2, he and Summersby discussed certain difficulties with the piece work of "jiggers." Summersby talking there in the plant, brought up the C. I. O. and said "he couldn't see anything in an organization outside * * * (with) * * * big shots * * * running big automobiles and hotel expenses."

Summersby then suggested "a union of our own in the shop." Schofield attended a meeting in Summersby's office as a member of a committee of "jiggers," and the subject of the C. I. O. arose again. Summersby said he wouldn't recognize an outside union. When Nelson attempted to enter this meeting Summersby turned him away and referred to him as a "troublemaker." Sunday, April 4, there was a C. I. O. meeting at which Schofield and Nelson were both on the platform. Schofield went to work on Monday, the 5th, continuing to distribute C. I. O. cards. On Tuesday, the 6th, at 2:25 (Nelson had been "laid off" on the 3d), a "charge hand" notified Schofield that Summersby wanted to see him "in his office right away." He left his work and went directly to the locker room to wash and change from work clothes. While there he and two other employees were smoking. An official of the company—a boss dyer—whom he had never seen "in the locker room, not while the men were changing their clothes"—caught Schofield smoking and said, "So that's it, you damn fool." Schofield then went to Summersby's office as he had been directed, but did not find him there. Summersby's first words, on entering the office about 20 minutes later, charged Schofield with smoking, but Summersby refused to tell Schofield why he had originally been sent for—before he was caught smoking. Schofield was told to "take a couple of weeks off." He had been laid off once before for smoking.

On the Friday before the Tuesday on which this employee would, he thought, have been taken back to work, a Federal conciliator and C. I. O. officials conferred with Summersby about Nelson and him. The C. I. O. official told Schofield that Summersby refused to rehire either, and as a result he never went back. Although he "wanted to go back the first week," he took the word of the Federal conciliator and the C. I. O. official that he would not be rehired. The two other employees who were smoking when he was caught were not disciplined, although the accosting official could see them. Despite "No Smoking" signs, it was the practice of the men to smoke on the sly. Other men have been laid off 2 weeks for smoking, but Nelson was caught and "others" have been seen by foremen and no lay-offs resulted. Schofield didn't "know of anyone being dis-

charged" for smoking. He was made Textile Workers' Organizing Committee local financial secretary.

In the words of the C. I. O. official, "Mr. Summersby saw red the minute I mentioned Schofield's and Nelson's names."

As told by the boss dyer who found Schofield smoking—

This official had sent an employee to notify Schofield of Summersby's desire to see him; he himself went to the locker room to deliver the message. He asked one of the other employees in the locker room to remember the scene because he "knew Percy Schofield's character." It was his duty to detect smokers and he usually laid off, himself, any man found smoking. He had time to lay off Schofield while walking with him part of the way to Summersby's office, but he did not do so. "It was a peculiar case and I wanted to think before I did anything." This was the only case in which he had ever reported a smoker to a higher up. He had laid Schofield off for 2 weeks twice before for smoking. In 6 or 7 years he had caught seven or eight smokers, of whom, excepting Schofield, only one was discharged. He didn't go to the washroom "very often." "A very short time before" he had heard that Schofield was somewhat active in the C. I. O.

One of the fellow employees present in the locker room where Schofield was found smoking, stated that he also had been smoking but was not doing so when the boss dyer came in, and that the third man was smoking at that time but wasn't observed. He got the impression, then, that the boss dyer said something to the effect that he at last "had" Schofield after having been after him for some time. He "had never seen * * * [the boss dyer] go to the locker room" before.

Summersby testified that he had been told by Schofield that he was "interested in organizing the C. I. O.;" and that he discharged Schofield for smoking.

Fourth. Domination of the federation.

As already noted, the Court of Appeals opinion did not especially pass upon this contention. Since, however, the Court did not enforce the Board's order to cease dominating and to disestablish the federation, as we think it should have, appropriate evidence on this issue will be pointed out.

A machinist, employed 11 years by respondent, testified—

He attended a meeting in Summersby's office on April 6, the day of Schofield's discharge. Summersby "said that he wouldn't recognize the C. I. O. and that it would be much better for us to join our own union than to be bothered by this C. I. O.," which would require the men to go out on sympathy strikes. This employee saw federation cards and literature "on the table" in the company's office. These were "handed around," and one or two were picked up by the employees present; when Summersby and the vice president of the company left the room, the employees "seemed to pick them up more frequently." Temporary officers of the federation were chosen there, in Summersby's office. A day or so later, the federation met in the company's shipping room with 150 to 200 men present; Summersby addressed the meeting and said he would not recognize the C. I. O. and that it was "better to have our own union." The machinist distributed in the plant the federation cards which he had "picked * * * up" in "Summersby's office"; the federation cards "were there."

From testimony of other employees, it appeared that—

At the meeting on the 6th (the day Schofield was discharged) in Summersby's office, federation cards and circulars were seen, and an employee distributed these cards; Summersby said "he would like to have this local union" and "wouldn't recognize the C. I. O." Three "jiggers" had seen Summersby on April 5 about wages and conditions of employment; he "thought it would be better if we had our own union" instead of paying outside fellows. "Someone" suggested that cards be passed out for a local union. Word was passed out by fellow workers that the company would pay for time spent at the meeting in the shipping room, at which Summersby "said he wouldn't recognize C. I. O. or A. F. of L.—no outside union," that it would "be better if we had a local union" instead of paying others to ride around in big cars and that "he would not tolerate C. I. O." Workers were seen passing out federation cards in the plant during working hours. Pay was given for the half-hour spent in the shipping-room meeting, and this time was included by instruction of the "boss of the frames." Federation cards were passed out "openly" by men on the day of the shipping-room meeting. Bosses were seen with cards. One employee was given his federation card by the boss of his department. Another was asked by his foreman whether he had joined the federation.

An employee testified:

"Summersby sent for him on April 6 (the day of Schofield's discharge). The paymaster came to his house for him and said he was glad that this man wasn't 'deep * * * in the C. I. O.,' and took him to the office. There Summersby told him he was sorry that men in his line of work (in the gray room) had been left out of the meeting that morning in Summersby's office. This employee had told the men in the gray room that they shouldn't sign cards from a meeting at which they had not been represented. Summersby told him the C. I. O. would take money out of the plant and that a 'committee had gotten together * * * to form this local union because he informed them that he wouldn't recognize the C. I. O., and they started to organize a union that he would recognize. He said he would recognize the local.' He and Summersby then went into the meeting in an adjoining office ('one is Mr. Pawson's (respondent's vice president) and the other is Mr. Summersby's'). A leader at this meeting in company offices and attended by Summersby said 'a few of them got together and decided they didn't want a C. I. O.; that they thought they would be better off if they had a local union; that they had a talk with Mr. Summersby, and Mr. Summersby wouldn't recognize the C. I. O., and rather than have trouble he was going to see if we couldn't have a local union.' Summersby explained advantages of the local union and spoke of the B. D. A."

Another employee supplied evidence that a week or two after Nelson was fired the timekeeper took him to see Summersby, who asked about a C. I. O. card which had been on the back of this employee's car, and that Summersby then said he "wouldn't recognize it" and could close the plant down.

The financial secretary of the federation stated:

He was given a temporary appointment at the meeting in Summersby's office, April 6, when Summersby said "he didn't like the idea of bargaining outside." The men present in the afternoon meeting in Summersby's office "asked for the privilege of using the office to find out how we had made out on our cards." The meeting in the shipping room was a day or so later. After the morning meeting in Summersby's office on the 6th this temporary federation official started passing out federation cards, for which Summersby had given permission. Federation circulars were posted on plant bulletin boards. Federation application cards were passed out by "all of us that were in the office at that first meeting." Officers of the federation were subsequently elected (April 11). "All us men who were in the office the first day, I think we acted as a committee." Between April 6 and 11 Summersby permitted the temporary committee to meet in an old company office in the plant. The paymaster gave them a list of the men in the plant by which to determine the necessary 51 percent. On April 9, prior to the election of the federation's officers on the 11th, this temporary committee presented a letter to Summersby stating that they represented 51 percent of the men. That same day Summersby granted recognition to the federation. This employee felt no need for organization, except for "better feeling," which he thought "was necessary, because the C. I. O. was going to do the same thing." He helped form the federation "partly" to stop the C. I. O. and because the C. I. O. had already started. A company car was used by him on one occasion for purposes of the federation. Meetings of the executive committee of the federation were held in a clubroom "on property owned by the B. D. A." This witness engaged as attorney for the federation one who he knew "had represented * * * (the company) on some cases"; he himself lives in a house owned by the company. Some federation dues were collected on the company's premises; members were not suspended for dues delinquency and may also be members of any labor union or society. The federation started about a week after the C. I. O. drive; it had no income of its own prior to the last week in April. Eventually it affiliated with an outside union still designated "as the B. D. A. Employees' Federation" "to bring a little more prestige and to prove to the ones that were skeptical that we were not a company union."

The first vice president of the federation testified—

He negotiated recognition of the federation, April 9 (3 and 6 days respectively after discharge of Schofield and Nelson), as its acting president. On that day he called a meeting of the organizing committee in "the little office in the gray room," showed them that they had 51 percent signed cards, and then went to Summersby's office. In Summersby's office the witness and company officials counted the signed cards and checked them against a list of employees which Summersby asked the paymaster to get. The cards were not checked to see if each signer was eligible; the management took the temporary committee's word for it. And the cards were left with Summersby. The witness didn't know that the federation planned to do anything that "was any different" from what the employees previously could have done by grievance committees. He had heard rumors that a boss had federation cards or spoke to employees about them, and believed one man quit work as the result of posting C. I. O. handbills. He spoke at the shipping-room meeting and asked Summersby to speak there. Summersby did speak. Along the lines of his conversation at the two previous meetings in his office, Summersby told this gathering of employees that he preferred a local and "was not in favor of bargaining with the C. I. O."

T. W. O. C.'s State director for Rhode Island stated—

On April 7 he saw Summersby and told him T. W. O. C. had "about 75 percent" of the men signed. Summersby refused to say then that he would recognize T. W. O. C. April 16 the director, a Federal conciliator and a T. W. O. C. organizer saw Summersby again and were told by Summersby that "he had a union" and wouldn't recognize the C. I. O. as he was "afraid of an outside union." It was agreed that he would hear from Summersby's attorney after the first (April 7) meeting, but he never heard. A form contract was submitted to Summersby on the 16th, but by that date "he had definitely decided that he would refuse to bargain with the C. I. O."

According to the company's vice president—

He was present part of the time at one of the meetings in Summersby's office on April 6, where cards and literature were present

and a union was discussed. Summersby was heard to express the opinion "that he would prefer to deal with a union of his own employees rather than to deal with outside influences."

One of the men present when Schofield was found smoking testified that a salaried employee who reports "things which are done wrong" came around and asked everybody if he had joined the local union; at the meeting in the shipping room, Summersby said he would not recognize the C. I. O., but would recognize a local; the witness was paid for the 15 minutes spent at that meeting; the men were told by the timekeeper that they would be so paid. An official of the federation said, "The impression was that Mr. Summersby probably wouldn't recognize" the C. I. O.; this official was "one of the first" organizers of the federation and conveyed to people the impression that Summersby wouldn't recognize the C. I. O.

As related by Summersby, president and general manager of respondent:

A wage increase was announced March 31. After he met in his office on April 6 (the day of Nelson's discharge) with the committee of "jiggers," later the same day he was asked for a place in which the federation's temporary committee could meet. He answered the request by saying, "You can have my office and make yourselves comfortable." That afternoon, as he was ready to leave, the temporary committee met in his office and he was "advised that they were organizing a local union * * * I told them that I would grant them the same privileges I would grant any other union * * * ." Two days after recognizing the federation, he placed and paid for an ad in a local paper, entitled "The Strike That Failed" because in part, as he said, "the B. D. A. Employees' Federation had formed and had taken the organization into their own hands, and had shown that they were still real citizens." Respondent is owned by an English concern, and a statement by him appeared in the local paper on April 25, disclosing the possibility of the company moving the plant out of the United States if there were to be "labor uncertainties."

He recognized the federation April 9, and on April 13 told the Federal conciliator that an election could not be held, since the federation had already been recognized. And on the 16th, Summersby told Salerno that his proposed T. W. O. C. contract would be taken up with Summersby's lawyer.

Fifth. Designation of T. W. O. C. as bargaining agent.

The court below found no substantial evidence to support the Board's finding that a majority of respondent's employees joined the T. W. O. C., or that "the T. W. O. C. * * * ever came into actual existence with authority to negotiate a contract with the respondent." Much of the testimony already referred to bore upon the genesis of T. W. O. C. at respondent's plant.

Schofield said:

By April 4 he had "465 or 467" signed application cards "marked down." The cards were sent to Boston. A few men paid dues but collection was stopped. "* * * we had a majority of cards signed." Dues are not collected until management grants recognition. No local C. I. O. (T. W. O. C.) entity had been formed for the plant; "we had the 51 percent, but this company-union stuff and discharge and everything came along, and we have just had to wait for this hearing * * *."

Nelson stated that he told the timekeeper, on April 2, "It's all over but the shouting. * * * We have well over 60 percent signed up already." And from the testimony of an officer of the federation it appeared that the C. I. O. drive resulted in a number of signatures, and that both organizations could possibly claim 51 percent of the employees signed up.

As explained by the T. W. O. C. State Director—

A charter or local is unnecessary for membership in T. W. O. C.; no charter to a local is granted until after recognition. Members of the federation are members in good standing of T. W. O. C., even if they have not paid dues or initiation fees. The T. W. O. C. cards were brought to him during the first week in April. Summersby, April 9, refused to agree to have the Federal Conciliator, or a third party, count the T. W. O. C. cards. Employees are eligible to membership in T. W. O. C., without formation of a plant local.

The T. W. O. C. director's secretary stated that the T. W. O. C. cards were brought in before April 12. It was agreed at the hearing that, after respondent checked against the original signed cards, T. W. O. C. had a list of 482 names taken from those cards. And it was stipulated that these cards were signed "on or before April 10, 1937."

SHIFT IN MEMBERSHIP

Respondent has contended before the Board, as here, that if the T. W. O. C. did actually represent a majority of its employees on April 4 (as the Board found), a shift in membership had given the federation a majority when the company on April 9 recognized it as exclusive bargaining representative. However, the Board found that "the record is clear that, had it not been for the unfair labor practices of the respondent in organizing and fostering the federation and in persuading, intimidating, and coercing its employees to join the federation and leave the T. W. O. C., the respondent's employees would have remained members of the T. W. O. C." In view of the substantial support in the evidence for the Board's findings that the company intimidated and coerced its employees and dominated the federation, the Board properly concluded that "The unfair labor practices of the respondent cannot operate to change the bargaining representative previously selected by the untrammeled will of the majority."[7] And, accordingly, the Board was justified in its finding "that on April 4, 1937, and at all times thereafter, the T. W. O. C., pursuant to section 9 (a) of the act, was the exclusive representative of all the employees in the appropriate unit for purposes of collective bargaining * * *."

Sixth. The "sit down."

As one of the apparently alternative grounds of its decision, the circuit court of appeals declared the Board without authority to order reinstatement of Nelson and Schofield because of so-called unlawful conduct and the alleged incitement of a "sit down" strike within the meaning of the Fansteel case.[8] The opinion stated that "Nelson even threatened truck drivers delivering materials to the plant with violence, and to destroy the spur track over which materials were delivered to the plant. * * * The affirmative action that is authorized is to make these remedies effective in the redress of the employees' rights, to assure them self-organization and freedom in representation, not to license them to commit tortious acts or to protect them from the appropriate consequences of unlawful conduct. We are of the opinion that to provide for the reinstatement or reemployment of employees guilty of the acts, which it is not denied were committed in this instance, would not only effectuate the policy of the act but would directly tend to make abortive its plan for peaceable procedure."

We find no such issue raised by respondent's pleadings before the Board. Respondent made request for special findings by the Board, but included none that Nelson and Schofield had been guilty of any unlawful conduct. Nelson categorically denied having made threats of violence. The court was apparently referring to the testimony of a truck driver which appears in the record. An objection of the Board's representative to the introduction of this particular testimony was overruled by the trial examiner when respondent's attorney made the following statement: "If Your Honor please, may I point out that while Mr. Nelson was on the witness stand in cross-examination, I asked him if he did not say certain things at this time and place, that this witness has been referring to, which the witness Nelson denies. The testimony of this witness that Nelson did say those things is in contradiction of Mr. Nelson's testimony and is clearly admissible as tending to impeach the veracity of Mr. Nelson's testimony. Aside from that, I also submit it as bearing on the type of conduct and the attitude of the representatives and organizers of this T. W. O. C. getting membership and conducting the affairs of this organization."

This truck driver's helper testified that on the morning of April 8, after Schofield and Nelson had been laid off, he saw Nelson, Schofield, and a third "little fellow from the C. I. O." "outside the mill yard." He noticed Nelson "going up and down motioning * * * going like this [illustrating by waving arms, squatting, and standing]." As this truck driver recollected, Schofield was not "doing anything." "If anybody was looking out the east door they could" see Nelson or Schofield moving their hands that morning; Nelson "made a motion to sit down, that is all," out "on the main road going to the plant." He "couldn't say that" any workers would have seen Nelson; he "couldn't say that, whether they could see out or not. I don't know." An employee, not Nelson or Schofield, who "went through the department shouting 'Sit-down strike,'" was taken for an automobile ride by the company's vice president, talked to, given lunch, and sent home to bed without loss of pay, and was still working for the company at the time of the hearing. When asked, "You remember you said, 'Well, we can blow up the railroad?'" Nelson answered, "No; absolutely not."

In vacating the Board's order of reinstatement on the ground that undenied evidence showed that Nelson and Schofield had, after their unlawful discharge, incited or threatened unlawful conduct, the court acted without any justification.

Congress has placed the power to administer the National Labor Relations Act in the Labor Board, subject to the supervisory powers of the courts of appeals as the act sets out. If the Board has acted within the compass of the power given it by Congress, has, on a charge of unfair labor practice, held a "hearing," which the statute requires, comporting with the standards of fairness inherent in procedural due process, has made findings based upon substantial evidence and has ordered an appropriate remedy, a like obedience to the statutory law on the part of the court of appeals requires the court to grant enforcement of the Board's order. Until granted such enforcement, the Board is powerless to act upon the parties before it. And the proper working of the scheme fashioned by Congress to determine industrial controversies fairly and peaceably demands that the courts quite as much as the administrative body act as Congress has required.

Mindful of the separate responsibilities Congress has imposed upon the Board and the courts, we have carefully scrutinized this entire record. Within the range of our examination has appeared not merely the testimony but also the procedure followed from the filing of the charge before the Board to final decree of the Court of Appeals. The Board and its representatives solicitously guarded respondent's and intervenor's right to a full and fair hearing; manifested liberality in ruling upon evidence proposed by both sides; and conducted the proceedings in a manner calculated to bring about a just result. And as we have pointed out, substantial evidence sup-

[7] Cf. *Texas & N. O. R. Co.* v. *Ry. Clerks*, 281 U. S. 548, 557, 571, affirming 33 F. (2d) 13, affirming 24 F. (2d) 426; 25 id. 873; 25 id. 876, 877–878.

[8] *Labor Board* v. *Fansteel Corporation*, 306 U. S. 240.

ported the result which the Board did reach.[9] Notwithstanding, the court below declined to order enforcement of the Board's order, and the implications of its opinion are that the Board without a proper regard for either the limitations on its power or the evidence made findings all of which had no substantial support.

But in reaching this conclusion the Court of Appeals itself failed to give proper regard to the evidence which was before the Board, which appeared in the record before the court and which we have set out in this opinion. In refusing to enforce the Board's order, the court exceeded the power given it. The cause is reversed and remanded with directions to enforce the Board's order without conditions or qualifications.

Reversed.

Mr. Justice McReynolds took no part in the consideration or decision of this case.

Medical Aid for the Needy

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

SPEECH OF HON. ROBERT A. TAFT, OF OHIO

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Senator ROBERT A. TAFT, of Ohio, before the Ohio State Medical Association, Cincinnati, Ohio, Thursday, May 16, 1940:

I appreciate greatly the honor of addressing the Ohio State Medical Association, which for so many years has upheld the standards of the medical profession in this State. It is a pleasure to address you in Cincinnati. You have most conveniently arranged to hold your annual meeting here, and given me an opportunity to spend at least 1 day in my home city. Between sessions of the Senate and occasional trips to all parts of the United States, I don't get much chance to see anything of my home town. I am sure that Mayor Stewart and the rest of my fellow Cincinnatians have given you a warm greeting to the most hospitable city in the United States.

The world is shocked today at the outrageous aggression of Hitler in Europe; at the frightful suffering and destruction brought on innocent and courageous peoples by acts contrary to every principle of justice and humanity and mercy. Compared to the terrible havoc of modern war, our own troubles are easier to bear. But we must not let our concern with what is going on in Europe check the efforts to improve the condition of our own people here. We must show to the world what a democracy at peace can do for its own people, and hold aloft in a distressed world the picture of a goal to which all may return.

The worst cases of hardship which we have to deal with are those produced by sickness, and particularly where sickness is aggravated by poverty. Nothing arouses our interest and sympathy so much as movements of all kinds to prevent and relieve the suffering produced by illness. It is all the more essential that the measures which we take be carefully thought out; that they be based on sound principles and not on an emotion so easily aroused. I believe that government should do more to furnish medical aid to the needy than is now being done. But I also believe that unless it is properly planned, it in the long run may do more harm than good.

There is no question which concerns the medical profession more today than that of medical aid for the needy, and the extent to which government shall enter into the field. We have before us in Congress today the Wagner health bill and many other proposals to spend Government money in connection with health activities. Great emphasis has been laid on assertions that health care in America is inadequate. There have been signs of an organized propaganda to socialize the whole field of medicine.

There is no new principle involved in the extension by the Government of medical aid to the needy. Every State in the Union has considered that field as a proper one for Government activity. Public-health work, particularly in the prevention of communicable disease, has been undertaken without question or doubt. In the field of hospitalization nearly all the States and many cities have provided free general hospitals, and other hospitals for the mentally ill, the tubercular, the epileptics, and other special groups. In connection with general hospitals, local governments have long provided free medical care in greater or less degree. The large field of providing medical care to the needy in their homes has been more difficult to deal with, and has not been undertaken to any great extent.

Of course, free medical aid to the needy has also been the function of private charities and private hospitals. Even more has free aid to the poor been given in tremendous volume by the medical profession itself, the financial value of which is impossible to estimate. All of us have known the typical American family doctor, ready to go to any call at any time of day or night, by horse and buggy, by Ford car. He refuses no service because the patient cannot pay for it. He forgets to send his bills, or he makes no effort to collect them. The Nation cannot repay, and is not asked to tax itself to repay, the services which have been so generously donated by thousands of doctors.

It is probably true that health work has not been very systematically organized to reach every possible citizen. It has been to some extent a patchwork of public and private charity, but it is also true that the field has been well covered in most parts of the United States. Few persons who are really sick have been unable to obain proper medical care. It is hard to believe the general conclusions of the interdepartmental committee when we find that the health of the Nation has never been as good as it is now. This Interdepartmental Committee to Coordinate Health and Welfare Activities of the Federal Government was a typical New Deal set-up, created to justify and publicize a preconceived plan for extending Federal control over the whole problem of health. Its reports exaggerate the need, and try to present a picture of neglect and medical inefficiency, which is very far indeed from the truth. As a matter of fact, the accomplishments of medicine in the United States in the past 50 years have been extraordinary and have not been exceeded in any other country in the world. The average expectancy of life has been lengthened by 12 years between 1900 and 1937. The death rate has fallen to 11.2, which compares favorably with any of the large nations of the world, and there is still a steady improvement. There are more doctors per population and more hospital beds per population that in any other country. Undoubtedly there is plenty of room for improvement. I venture to think, however, that the difficulty is a social difficulty and arises much more from the inadequacy of the income of millions of families than it does from any faults in the medical profession or lack of medical facilities.

I have pointed out that there is nothing revolutionary in the proposal that the Government provide medical care for the needy. In the same way we have long recognized that Government must provide poor relief, and must see that none of its citizens go without adequate food or clothing because of inadequate income. Every State has laws which provide for such relief by cities or counties.

Many States, even before 1933, adopted old-age pension systems. It has always been recognized, however, that wholesale public aid to large groups of citizens contains certain dangers which must be dealt with. It is easy for people to develop an attitude of mind in which they do not make a sufficient effort on their own account. Such an attitude is demoralizing to the recipients of aid, and if the principle is expanded in practice until it becomes a dole to great masses of the population, without adequate safeguards it may well demoralize an entire nation.

The need for medical aid is more difficult to judge than the need for food and clothing. Therefore, without care, a medical dole may become even more demoralizing. The expense is also very considerable, and unless restrained will become a tremendous tax burden. The proper and natural sympathy for the unfortunate leads to a steady increase in cost once the work is undertaken. This has been true in relief and is likely to be true in the medical field.

In short, the program must be undertaken with care and with economy. After all, the only people who can pay for this aid to the needy are those who are working at or about the same time. With the tremendous scale of Government expenditures in all fields today, additional taxes cannot come from the wealthy alone but must be spread over the entire population. The confiscation of all income over $10,000 a year would not pay our present tax bill for 6 months in any year. The average workman today pays 15 percent of his income in taxes. We cannot make the tax burden so great as to discourage him from the very enterprise which must pay these taxes. And yet the average workman, as well as those of our people better off than the average, are and should be willing to contribute the small additional percentage necessary to help those unfortunate families whose suffering otherwise may be insupportable.

There has always been free medical aid to the needy, and it should be more systematically organized, and Government should spend more money on it than is spent today. But should that money be spent by the State, local, or Federal Government? What principles should govern the increased Government aid?

HEALTH INSURANCE

There is one substantial difference between relief and medical aid. Many families are perfectly able to pay their ordinary expenses, and should be able to pay for medical care, and yet when they run up against an emergency of sickness they have no reserves with which to meet it. Such families should not have to be supported by taxes paid by other families less able to bear the burden than the family which is assisted.

In order to avoid the necessity of extending free medical aid to many more families than actually require it, it is desirable to develop some form of health insurance. Families of intermediate income ought to be able to put aside a weekly amount which will insure them adequate medical aid in any emergency. All kinds of experiments have been made, and there is not much doubt that we

[9] Accepting the underlying findings of the Board, as we do, it was within the province of the Board to draw the inferences that the guarantees of section 7 of the act required disestablishment of the Federation (Falk case, supra, p. —, and cases cited), and that posting of appropriate notices was necessary. Id.

will develop satisfactory voluntary plans, though I claim to be no expert on the subject. Men have shown their willingness to pay premiums for life insurance. If they are willing to set aside money to pay the undertaker, they ought to be willing to set aside money to pay the doctor.

But compulsory health insurance is another thing. Deductions from pay roll or otherwise to support compulsory health insurance really destroy the whole character of the plan as insurance. Such payments are in fact taxes, and they are shortly absorbed in costs and passed on as taxes to all the people. The assistance which is received comes finally from a Government bureau. Look at the pay-roll taxes we already have for unemployment insurance, so heavy and complicated in administration as to hamper and restrict the development of private industry and increase unemployment. Health insurance should certainly be developed on a voluntary basis.

Furthermore, it should provide for the right of the insured to select his own physician, if his physician is willing to enter into the general plan. There should be no Government doctors on a fixed salary taking care of as many cases as the Government chooses to assign to them.

SOCIALIZATION OF MEDICINE

The socialization of the medical profession is a danger which must and can be avoided in any extension of medical aid to the needy. If that aid is confined to the needy the danger is not so great, but even then methods can certainly be developed to give the man entitled to Government aid the right to choose his own doctor and have him paid by the Government. We have such a plan for workmen's accident insurance in Ohio.

But if the Government undertakes to cover the whole field and extend aid not only to the needy, but also to those quite able to pay for it, there is real danger. Compulsory health insurance for all employees, similar to unemployment insurance, would gradually result in a large proportion of the total payments to doctors coming out of the Government fund. In effect, the bulk of the medical profession would be employed by the Government. That is socialization of medicine. We might try to guard against it by provisions allowing the patient to choose his own doctor, but it is not likely that we could long maintain such a restriction.

Once a profession is paid with Government money for the bulk of all its work, it takes its orders from the Government. Gradually most doctors would come to be in effect Government employees. Nothing like that has ever happened to a profession in this country. The American system has been built on independent businessmen, on independent farmers, and on independent professional men, particularly lawyers, doctors, scientists, and professors. Much of the independent thought has originated with professional men. They are largely responsible for the great creative accomplishments of the last century which have so tremendously increased the living standards and happiness of the people. In surgery, in preventive medicine, in methods of treatment, in bacteriology, the steady growth of new ideas has come from an independent profession. In spite of unfortunate exceptions, the average professional man does his own thinking, and is less subject to the influences of power and propaganda than any other group of the people. In a socialized world not only does the Government regulate all prices, wages, hours, and practices but it employs all the doctors, lawyers, and scientists. The world becomes a great bureaucracy, and a progressive democracy dies through hardening of its arteries.

I have said that our difficulties today are rather social than they are medical. It is essential that we confine our free medical care to those who are really needy; that we treat the problem as a relief problem, and work out the difficulties of the intermediate income groups through plans of voluntary cooperation.

PLACE OF THE FEDERAL GOVERNMENT

The specific proposals under discussion today relate to the activities of the Federal Government in the field of health in its attempt to improve general social conditions of the country. From a health standpoint alone, there is little justification for the Federal Government concerning itself in a field which has always been recognized as one for local government. But during the past 10 years we have come to realize that the resources of the local governments to deal with relief and other aid to the needy are inadequate, and that Federal financial aid is absolutely essential. The depression of 1929 created a great unemployment problem which has never been solved.

We thought that in America any man who was willing to work could get a job and support his family—even take care of his old age. But we found we had not achieved that millennium. We found, furthermore, that the cost of proper care for the needy was so great that it could not be provided by the States and local governments. They had limited powers of taxation. They could not tax the wealthy without the wealthy moving to other States. They could not tax local industry without discouraging its development in that locality. Most of the State tax systems were heavily burdened to provide for the normal activities of cities, school districts, counties, and States.

And so the Federal Government was called upon to give financial aid to activities which, under our Constitution, have always been regarded as of State or local concern. In the field of relief the Federal Government, as a condition of financial assistance, and I think very wrongly, insisted on taking over most of the administration, instead of assisting the States to do the task which was really theirs. The Federal Government has undertaken to assist in ordinary relief, in old-age pensions, unemployment insurance, and housing. Its assistance has been sought and given simply because the States have not been able to raise the money to handle the social distress of many million families.

I believe that the Federal Government should also aid to some extent in the field of medical care for the needy, and for the same reason. That field has not been largely developed by the States, and in most cases the financial provision has been inadequate. Historically the bulk of local and State tax funds were allotted to the schools, the roads, and other activities of more immediate local demand than relief. On the other hand, we should certainly recognize that many States do provide a large measure of medical aid, and have always done so, and provided the funds for it. The States which have not provided any funds should do so before leaning on the Federal Government. Federal aid should be merely auxiliary—even more so than in the field of relief, old-age pensions, and unemployment insurance, in which fields the States had made almost no provision in their tax systems. Each State should be encouraged to work out its own problem in its own way, the Federal Government merely providing funds to supplement State funds and encourage an orderly and comprehensive plan.

But the dangers of extending free medical aid in the wrong way are intensified when the Federal Government enters the field. At least, under the present administration, there is not the slightest conception of the necessity for economy. They don't seem to realize that sooner or later the whole people, rich and poor alike, have to pay for what they spend. What is the validity of the argument that the Federal Government can afford to pay when the States cannot so long as the Federal Government is $4,000,000,000 a year in the red? Why complain of the inadequacy of State tax systems when no one has the nerve to devise a Federal tax system to pay the Federal bill? Furthermore, if all health control is centered in Washington, the whole Nation may be suddenly subjected to experiments proposed by any group of cranks who may obtain the ear of the Executive or Congress. Socialized medicine is only one of the changes which might be effected overnight because someone knows where to apply pressure at the right spot. Even greater care is necessary in extending Federal aid to health than in the case of local and State government.

The Wagner health bill, in particular, seems to me an extraordinarily dangerous way of dealing with the whole subject. It is true that it purports to be a mere assistance to States which set up the proper plan. But, in the first place, it is immensely complicated. It provides aid in six different categories—two categories of maternal, infant, and child health under the Children's Bureau; two, of public health work and hospitals, under the Surgeon General; and two, of general medical care and health insurance, under the Social Security Board. Each State is required to set up six elaborate advisory committees and deal with three different departments and six different bureaus of the Federal Government.

The bill is typical of New Deal technique. Whenever an abuse occurs or a need arises in any field, the only solution which the New Deal offers is a complete regulation and supervision of every detail of that field by the Federal Government. In the Securities and Exchange Commission, in the National Labor Relations Board, in the Wage and Hour Administration, we see great bureaucratic machines set up, on the theory that you must remedy every evil by giving a Government bureau discretion to pass on every act in advance. Bureaus are created and given power to issue regulations increasing their own power. Instead of the law prohibiting certain definite actions which have produced bad results, and giving the Federal bureau power to enforce, the law gives the bureau arbitrary and discretionary power to tell the industry concerned just how it must run every detail of its business.

So also in this health field. Instead of picking out a particular problem, and attempting to relieve that problem with some Federal financial assistance and a suggestion to the States as to how with that assistance they can eliminate a serious evil, the Wagner Health bill proposes to blanket the whole field with an expenditure of $275,000,000 a year, increasing gradually to $800,000,000 a year. It encourages compulsory health insurance. It provides the funds with which the State, otherwise unable to do so, may socialize the entire medical profession.

In my opinion, each step taken by the Federal Government should be taken with care and to meet a demonstrated need. There should be an effort first to encourage the States to develop sound methods of medical aid to the needy, and the demand for Federal assistance should come from the States instead of that assistance being forced upon them.

Our Senate Committee on Education and Labor has just recommended one step which I think is sound, which illustrates the manner in which the Federal Government should proceed. We are proposing to appropriate $10,000,000 a year for several years to assist the States to build small hospitals in rural sections where those hospitals do not exist. The amount involved is not sufficient to permit any considerable development except where it is very badly needed. The appropriation, one-tenth of that proposed in the Wagner health bill for hospitals should have an equal effect in encouraging States to survey their entire hospital situation and work out a comprehensive plan. The money provided is not sufficient to encourage any competition with existing private facilities. The Wagner health bill apparently contemplated a State plan in each State, entirely disregarding the extensive hospital facilities which ought to be considered in working out any plan of hospital aid for

the needy. It is rather interesting that the original little hospital bill proposed by the President contemplated the construction of a chain of federally owned hospitals with W. P. A. labor. As finally worked out at my suggestion, all the hospitals built are to be transferred to the State, and operated as part of a State or local system. The construction is to be made by contract in the usual way, and some aid is to be given toward maintenance during the first 5 years. It is an experiment, but it should meet the hospital problem to the extent, and in the places, where the need really exists.

In the same manner in which the hospital problem has been met, I believe that Congress should consider as soon as possible the appropriation of Federal money to assist in the development of direct medical aid for the needy. I would like to see specified in the bill the kind of aid which the State and local governments shall give.

I would like to see the assistance so restricted that the funds could not be used toward the general socialization of the medical profession. In my opinion, we owe a duty to the unfortunate members of society who, without fault of their own, or even perhaps with fault of their own, are unable to provide a decent living for their families. We owe the children of such families an equal opportunity to make a success of their own lives. They cannot do so in a family overwhelmed by poverty and illness. No system will work to relieve all hardship. No system will be 100 percent perfect. But I believe that at a reasonable cost the Federal Government can stimulate interest and assist the development of plans that will reduce the hardships of many unfortunate families. In a Federal Budget of $7,000,000,000 the ultimate expenditure of several hundred million dollars a year to supplement the work of States, of local communities, and of private charity does not seem to me an unreasonable sum in comparison with the tremendous good which it can do.

The medical profession in the last hundred years, increasingly in the last generation, has worked miracles. Preventive medicine has checked and destroyed epidemics, and lengthened the span of years. Surgery saves thousands of lives annually. The lives of mothers and infants are more secure. Now we are concerned that society shall be able to share these boons with all; that children be freed of physical handicaps; that the usefulness of the middle-aged be prolonged; that old age be made more comfortable. We all desire that pain, the universal enemy, be frustrated; that we achieve a happier, healthier America.

But let's do it in the right way. Let's not do it at the cost of the independence of the medical profession, which has given so unselfishly of its time and talents. Let's not do it in a way which will only give the needy the kind of treatment a poor citizen gets from a Government bureaucrat in Washington. No human suffering should go unheeded. But let us see to it that self-reliant Americans retain their freedom to cooperate voluntarily in health insurance plans if they want to, and their liberty of choice in the matter of the family doctor. We want an America free as well as healthy. There is no necessary contradiction.

Louisiana Votes for Cotton Marketing Quota

EXTENSION OF REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

LOUISIANA STATE TABULATION OF 1940 COTTON MARKETING REFERENDUM

Mr. MILLS of Louisiana. Mr. Speaker, 78,816 farmers in Louisiana voted for the 1940 cotton marketing quota and 2,676 voted against the program. Therefore, I submit as part of these remarks a tabulation by parishes showing the results:

Parish	Votes cast		
	Yes	No	Total
Acadia	2,229	110	2,339
Allen	395	154	549
Ascension	45	0	45

W. P. A. Recommendations

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

Mr. GILLIE. Mr. Speaker, there came to my desk this morning a very impressive petition, signed by approximately 700 employees of the Work Projects Administration in my congressional district, recommending that Congress make certain changes in the W. P. A. law.

These recommendations, coming as they do from the "men in the trenches," not high-salaried bosses or comfortably situated relief "experts," deserve to receive the sympathetic consideration of Members of this body.

The petition is as follows:

We the undersigned voters of the Fourth Congressional District, and W. P. A. workers, most respectfully request you to use your influence and vote to amend the Woodrum Act, appropriating funds for the W. P. A.

(1) To remove the 18-month lay-off provision of the law.

(2) To provide for 120 hours' work for W. P. A. workers per month.

(3) To increase the wage scale commensurate with living costs.

(4) To make it a felony for W. P. A. officials, supervisors, and foremen to discriminate against W. P. A. employees on account of race, color, or creed.

(5) To make it a felony for any W. P. A. supervisor, official, or foreman to solicit funds, or offer for sale any food or commodities of any kind to employees working on the project of such person.

Mr. Speaker, some of these suggestions, particularly (4) and (5), should not even be subject to debate. In honesty and fairness to the workers and their families, they should be unanimously incorporated in the bill under consideration.

A year ago, when the Woodrum bill was passed by the House, I expressed my opposition to the 18-month lay-off provision of the law. I said at that time that I thought it would work unnecessary hardship and suffering on worthy relief families and that it ought to be eliminated. Subsequent developments have proved my prediction to be correct. In too many instances, the lay-off has not been for 30 days, but has been for a much longer length of time. I believe this provision should be stricken from the law, or greatly modified to exempt workers with dependents and workers of advanced age.

Concerning the recommendations for a longer work month and a more reasonable wage, I wish to repeat what I have said many times before. If less money were wasted on high salaries for political bosses, traveling expenses for W. P. A. officials, and general inefficiency, more funds would remain to be distributed among the deserving needy who, after all, are the ones intended to be benefited by this law.

The recent investigation of the maladministration of the W. P. A. proves beyond a doubt that this money is being wasted. I recommend that this Congress take immediate steps to eliminate this waste, so that the money will go into the pockets of certified workers and not into the grasping hands of well-to-do politicians and relatives of relief bosses. [Applause.]

The Man Over Forty

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

RADIO ADDRESS BY REV. B. F. ROGERS

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following talk made over KWKH Shreveport, La., Sunday, May 5, 1940, at 9:15 p. m., in behalf of American Legion Unemployment Week, May 1 to 8, 1940, by Rev. B. F. Rogers:

Good evening, friends. Permit me to make a request that you go immediately to your telephone and call some business executive or manager of some industrial plant, or other employer of labor of any kind, and ask them to tune in on KWKH for the next 15 minutes. You can do this and not miss more than 1 minute of what I shall be saying. I hope no one will think me presumptuous in making this request, because I am making it in the interest of a larger group of our citizens who are in distress, and I am particularly anxious that those who may be in a position to do something to aid in relieving that distress may hear the appeal that I shall make.

This is not to be an appeal for a donation of funds to assist some worthy object of charity, for the average man over 40 does not fall within that realm at all. He is able and willing, yea, anxious, to be a self-sustaining and productive member of society.

At the request of President Roosevelt the Nation is asked to observe what is termed "National Employment Week." In compliance with that request the American Legion, with more than a million members in the various posts of the country, is seeking to draw the attention of all employers to the fact that there is really and truly a forgotten man in this great country of ours. He is the man over 40. Every American Legion post is expected to have an employment committee which is specially charged with the duty and privilege of assisting members of the Legion who are unemployed to find work in order that they may take proper care of their families and meet their other responsibilities as citizens. Mr. J. T. Ringenback is chairman of that committee of Lowe-McFarlane Post No. 14, of Shreveport. But not only is the American Legion interested that men over 40 should receive fair consideration at the hands of employers. There are numerous other groups who have come to the conclusion that the establishment of an arbitrary age limit in business and industry is neither fair nor reasonable. Certainly the church which seeks to minister to the spiritual needs of all men regardless of age, rank, or condition in life is and should be concerned about the whole problem of unemployment. It is all right to say that spiritual needs are of paramount importance and that the destiny of the human soul should receive primary consideration, nevertheless, man is so constituted that it is virtually impossible for him to give much attention to spiritual matters when the voice of physical hunger shouts in his ears, "I am hungry, I am cold, I am thirsty." Therefore, as a representative of the church, not in an official capacity, but simply as a humble minister of the Gospel, I am tremendously concerned that all men shall have employment to the end that they may live happy, useful, and productive lives.

The problem of unemployment is not a new one, though it has been most acute in our country for the past 10 years. The exodus of the children of Israel from the land of Egypt was largely a labor movement and Moses was the first great labor leader. Jesus Christ knew about the unemployed when He was here on earth. Read the parable of the laborers in the vineyard found in the twentieth chapter of Matthew. There the owner of the vineyard is represented as going into the market place where were gathered the unemployed. The third time he went at the eleventh hour and said to them, "Why stand ye here all the day idle"; and they said unto him, "Because no man hath hired us."

And that generous-hearted employer said to them: "Go ye, also, into the vineyard; and whatsoever is right, that shall ye receive." This employer did not say, "Let me see your birth certificate. We have established an ironclad rule in the interest of efficiency that no man over 40 shall be employed on our grape farm." He manifested a quality of character, I am glad to say, that many modern employers have. At the close of the day, when the workers filed past the pay window, those who had worked only 1 hour received the same amount as those who had gone to work at the first hour of the day. I am not saying that modern employers could remain in business and follow literally the example of this grape farmer, but I am saying that the cold, calculating Shylocks of the business and industrial world would greatly profit by laying in a supply of the same milk of human kindness which he so generously manifested.

Now, I recognize the fact that there are many aspects of the employment problem which manufacturers and business executives must consider in connection with the operation of their respective organizations, one of which is that stockholders and boards of directors demand and have a right to expect some profit from their investments. They are not like the Government in that they cannot year after year pile up deficits and continue in business. Under our system of economics, while profits are not always the chief aim of those engaged in any kind of business, it is absolutely essential to continued existence that at least a reasonable profit may be earned, and I think no far-seeing or thoughtful person will deny that this is true. But in the face of keen competition, many employers of labor during recent years have become somewhat panic-stricken and hastily have arrived at the conclusion that only men under 40 can be of profitable service to them, and so this "40-phobia" has become a sort of epidemic which business and efficiency experts have done but little to check.

As a result there is a large number of men over 40 who are well qualified to fill a great variety of positions, and yet they are not even considered, simply because the calendar is against them. To me and to many other citizens it is little short of ridiculous to say that at 39, 1 minute before midnight of his next birthday, a man is well fitted for a job. At 1 minute past midnight he is 40, and cannot be employed. How in the name of high heaven did business and industry ever come to the conclusion that a rule like that is necessary or desirable? Fortunately, all business executives and employers of men do not believe that to be true, and the purpose of this appeal is to induce all who may be listening in tonight to realize that these men over 40, many of them, who are unemployed, are genuinely capable of filling satisfactorily a great variety of jobs which you may have to be filled in the future. Give them an opportunity to demonstrate their ability. If you want proof that older men can and do produce, read the survey of the 19 leading office-equipment companies made by Mr. Henry Simler, of the Sales Executive Club of New York City, wherein it is revealed that the average of the top salesmen, 183 of them, employed by these firms, is 42.8 years, the average in the

top company being 44.5 years and the runner-up 45.3 years. The average age of 137 branch managers was 44.6 years, and the group close behind these in efficiency averaged 46 years of age. Of course, we all realize that there are certain types of work which make heavy demands upon the physical strength of man for which the average man over 40 is generally not able to perform as well as a younger man, but in all fields of mental, clerical, or supervisory work, the man over 40 is preferred by many executives because of his experience, better judgment, and general poise. I saw recently a picture of 5 men who have been in the employ of a large electric and manufacturing company's lighting division, who have a combined employment service of 179 years and they are still on the pay roll rendering efficient and satisfactory service. Six thousand three hundred and fifty-five employees of this company have been with the company more than 20 years, which means that most of them are men over 40. If this great company finds it a wise policy to retain these men, then is it not reasonable to assume that many other companies could and should follow their example?

Numerous employers have stated that their hiring policy is determined by the suitability of the applicant and that age has little relation to efficiency, although older men are better adapted to some jobs than others. Many believe that workers over 40 or even 50, if in good health, are just as efficient as younger workers. Especially is this true where quality is important. They also recognize the fact that men over 40 are more settled and dependable, thus reducing the labor turn-over, which certainly is an important aspect of employment. A report by the Work Projects Administration covering 1,444 skilled workers shows that the average workers whose output is considered excellent, was 47½ years, while the average age of those in the inferior grade was 41. Only 13 percent of those in excellent grade were under 35.

I realize that when employers manifest a preference for men under 40 that they may have some reasons for doing so, among those being increased rates of compensation insurance; higher accident rate in some industries; greater susceptibility to occupational diseases; increased rates of group insurance; increased rates for employers under their own pension plans; younger men can be employed for smaller wages and trained more readily; public demand for younger people in certain occupations; lack of educational qualifications on the part of older men and pressure from some insurance companies to employ younger men.

It is doubtless true that some of the reasons assigned for giving preference to younger men are valid and tenable with respect to certain types of work, and it is also true that most young men can afford to work for less monetary compensation than the man over 40, because he has oftentimes no dependents looking to him for support. Most of the men over 40 are married and have children to rear and educate. Many of them are trying to pay for a home on the installment plan. Not many of them have wives who work and contribute to the support of the family. On the other hand, there are many young men whose wives do work, and thus some man who is struggling to support his family may be deprived of any job at all.

Please do not misunderstand me; I am not speaking against the employment of younger men, but I am most emphatically trying to impress someone, some manager, some director of personnel, some executive, that we have a lot of men between the ages of 40 and 50 who are unemployed, not because they are physically unfit or mentally decadent, but largely because of this "forty-phobia" which has spread all over our country. Most recent estimates indicate that there are at least 175,000 members of the American Legion in the United States who are able to work, and yet they have no job. These men who, 23 years ago, left our farms and colleges and offices and shops and enlisted in the American Army to fight for what they were told was the noble purpose of preserving democracy to end all war. They are the men that we delighted to honor for a brief time and to pin medals on for courage and patriotism and sacrificial spirit. Can it be true that we have forgotten the sacrifices which they made? Will American business and industry now say to them, We can find no place for you? Wherever you go you will find some of these noble patriots and they are fighting a grim battle with want and hunger and deprivation. They are just as willing to do their share of the productive work of the country as they were to shoulder arms in its defense. Some of them have about lost their courage in this bloodless battle, because deep down in their souls they have a feeling that they are no longer appreciated. Has American business become so mercenary and so absorbed with the idea of technical and theoretical efficiency that all sense of gratitude to these men has been destroyed? I cannot believe that this is true, and so I call upon all employers, large and small, to do what you can to open a place for these men over 40. Do it now. If you can only use one man, call the employment committee of the American Legion of Shreveport, or of the post where you are, and let them know you are ready to give these honorable men an opportunity to earn an honest living for themselves and their families. This will be close kin to the brand of patriotism which they manifested in 1917 and 1918.

Eliminate Politics? Sure; But Not by Way of a Dictatorship

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

EDITORIAL AND TWO ARTICLES FROM THE WASHINGTON DAILY NEWS

Mr. HOFFMAN. Mr. Speaker, if the President wants to eliminate politics from national defense, let him take his hat out of the political ring. That the President is not fooling anyone by his latest political move—that is, by his public appearance before Congress and his demand for new appropriations for defense and his plea for additional power to spend millions—is apparent from current editorials and the writings of columnists who, while personal friends of the President and new dealers in their sympathies, are themselves frightened by the President's latest attempt to establish himself as a dictator. Note this editorial from today's Washington Daily News:

WE NEED TWO PARTIES

Mr. Roosevelt's effort to form what would have the outward appearance of a coalition government is as clever a political maneuver as any he has ever initiated.

If, as is reported to be his design, he prevails upon Col. Frank Knox and three or four other influential Republicans to take Cabinet posts at this time—in the teeth of the national conventions and elections—it will be a neat job of interring Republican opposition without benefit of clergy or even a wake.

We are in an emergency, arising from the turn of the war in Europe and from our lamentable unpreparedness, which the impact of European events has brought dramatically to light. Mr. Roosevelt is appealing to Colonel Knox et al., on the basis of patriotism, asking them to place country above party. Their natural inclination is to accept the summons.

But a cool appraisal of the situation should raise some doubts in their minds as to whether they serve either party or country by abandoning bipartisan government in times like these.

First, let them ask themselves whether such a coalition Government in appearance be a coalition Government in fact. On that point the record of this administration should give them pause. Would this administration, which has tried so energetically to purge dissident opinion within its own party, be more tolerantly inclined toward conflicting views of coalitionists drawn from another party?

Would Colonel Knox, for instance, have a free hand to function as Secretary of the Navy any more than Secretary Swanson had, or Secretary Edison has? Would either Col. William Donovan or Fiorello LaGuardia be in fact more of a Secretary of War than Mr. Woodring has been? Or would they be just window dressing?

Another question, one that has been asked loud and long, is newly pertinent in connection with this coalition talk. That is: Will the President run for a third term? If he sincerely wants a political truce, he can get it, completely and unqualifiedly, by answering that one in the negative.

To go all the way in coalitionism the President would have to renounce the third term, devote himself solely to his duties as head of a nonpartisan Government for the rest of his time in office, refuse to be a partisan in the coming campaign, and call upon the people to elect the best man to the Presidency and the best men to Congress, regardless of party.

But there would be no quid pro quo to Republicans whom he now bids lay aside politics if, instead, he intends to take the Democratic nomination and run on the issue of national unity, expecting his coalitionists to remain loyally mum.

Before they accept political sterilization Colonel Knox and the others probably will want to know the answers.

Then there is an even more important consideration—whether our country, in the long run as well as the short, would be better served by coalition, even though it be a coalition in fact. European governments resort to the coalition device in times of peril or stress. But our Government, though it has been through some tough times, has always stuck to the bipartisan form. Indeed, our Government usually functions best when the minority is most effective—when it is most alert in challenging the errors of the majority.

If we have come upon bad days now, with inadequate national defenses and industry apparently unable to supply weapons of war in the quantities and at the speed needed, then where should the blame be laid? Certainly not with bipartisanship. The minority in Congress has been nonpartisan—indeed, almost coalitionist—in voting the defense appropriations the administration has asked. If the Republicans are to be blamed for anything, it is that they have not functioned effectively as an opposition party. They have voted the money, but they haven't followed through and to make sure that the money was spent as it should have been. And they have been too weak in numbers and leadership to check the headlong administration policies which have been at least in part responsible for the flabby condition of the country's industries.

We have had too much one-party government and too much unrestrained dominance by one faction within that one party. Instead of absorbing all opposition into the New Deal, the country's crying need is just the opposite—a minority strong enough and intelligent enough to keep the majority always on its mettle. In short, a return to real bipartisan government.

Here is another by Gen. Hugh S. Johnson:

ONE MAN'S OPINION

(By Hugh S. Johnson)

Our problem is in production and not in politics. There is a crisis in national defense. It is a need for immediate rearmament. It is a problem of industrial production and it is that alone. The record of this administration and the published programs of both the Army and the Navy are absolute proof that it is moving to a solution far too slowly to be of any use. It can be made to move much more rapidly. Ours is the most efficient industrial production machine in the world. It has the best production managers—men amply able to get this vitally necessary increased speed for the Government. But this Government has no such men.

The screamingly obvious necessary first step is to get them—right now. They don't have to hold office. They will come on request. They will see what is needed. They will get their fellows in industry to cooperate voluntarily.

Are we doing that? We are doing just the reverse of that. It is well known in Washington that the President is planning to put three Republicans on his Cabinet in the vital posts of War, Navy, and Commerce. Names mentioned are Frank Knox, Alf Landon, and Fiorello LaGuardia. Is that a production measure or a defense measure? It is not. It is pure politics. It is third-term politics.

It is said to be to "unify the country" on the rearmament program. The country doesn't need any unification on that. It is almost unanimous on that. The real purpose is plainly to break down our two-party system, using this as an excuse—and to regiment the election. With the trend toward dictatorship the greatest threat in the world, this is the last thing the head of a democratic party should be trying to do. The two-party system is the essence of our democracy and the American way of life. This is a blow at its heart.

Mr. Roosevelt pleaded for the adjournment of politics. He himself is the hottest political issue. If he wanted to adjourn politics, he would announce himself in public as he has to some people in private as not available for a third term. His failure to do so establishes clearly enough that the only politics he wants adjourned is politics opposing him.

Nobody can believe even Mr. Roosevelt's assurances, except in writing and in public, that he is not a third-term candidate, yet no self-respecting Republican could accept a place on this Cabinet without believing that. If any did, he would be exposing himself to sucker stultification after a third election of Roosevelt, after the powers of a dictator had been granted the President, after the party of opposition had been suppressed, and after he himself had been kicked heels over head into the gutter to the raucous "razzberries" and laughter of the White House jannissariat, which is already gloating over what they regard as the steady progress of this strategy. Some of their intimates tell me that their glee over this progress would raise goose-pimples on the corpse of Andrew Jackson.

In the direction of a real solution of the overwhelmingly vital problem of production to bring an uninstructed political amateur into the War Department, for example, to take the gimp and tucker out of Louis Johnson, would be a catastrophe. It would paralyze progress for weeks. Mr. Johnson has now been educated. He has always had great energy. He now has understanding. If he were freely permitted to create an advisory staff of industrialists, he could do the job. To replace or smother him on the plea of political unity, notwithstanding productive paralysis, would be an act of sabotage in national defense.

This barefaced use of a national crisis for the purposes of a partisan political attempt to perpetuate a particular President and increase his powers is the blackest mark with which this administration has yet smirched its own record—more impudent and impious than the 1937 conspiracy to revolutionize this to a personalized government by the court-packing and other defeated legislative plans—worse than the purges and the W. P. A. political bribery and coercion of 1938. As in those other cases, there is strong hope that its stench is so great that it can't be swallowed.

Still another by Ludwell Denny:

SUSPICIONS AROUSED

(By Ludwell Denny)

The situation here is nasty. The President is getting the kickback from the fear and hysteria created by his bellicose Pan American speech and his panicky congressional message.

The public demands action. The President is revealed without detailed plan or organization to produce his "four alarm" defense. He personally is blamed on all sides. So, instead of the quiet confidence and unity which he needs from Congress, industry, labor, and the defense services, he is meeting much suspicion.

Typical of the industrial distrust are off-the-record statements of several manufacturers after attending yesterday's weird meeting here to throw the aviation industry into high gear. After listening to Army chiefs confess "that this whole thing was thrown at them so fast they didn't have a chance to prepare," some key industrialists left charging, "It's all an administration publicity stunt."

The groggy attitude of military officers is indicated not only by this incident but by the plaintive inability of the Deputy Chief of Staff, General Gasser, and his aides to answer simple questions at the House military hearing. Because the President gave them no warning, they are made to look silly, which hurts.

Labor leaders are furious about the alleged run-around they are getting. Some administration leaders are supporting bills to modify labor standards of the wage-hour and Walsh-Healey laws, and some defense chiefs are pledging such modification to industrialists, while other administration leaders and Mrs. Roosevelt deny it.

The suspicion on Capitol Hill is indicated by demands of the Vandenberg Senate group for the President to give Congress the "suppressed" Stettinius War Resources Board report of last fall. They make this a test of the President's "fair play and good faith."

Yesterday the Army Chief of Staff, General Marshall, told a congressional committee what the President's critics have been shouting for a long time. "It is becoming more apparent every day that the big question is not how much you appropriate but how much can we spend at the present time," the general said. He had testified already that the Army was "totally and completely inadequate" for war.

G. O. P. leaders are suspicious of the President's reported attempt to lure prominent Republicans into his Cabinet as an alleged Trojan-horse move in the third-term campaign. Even Alf Landon, who has hitherto cooperated with the President in foreign affairs and has just been called here for conference, denounces moves for any "party alliance or coalition."

Then there are nonpolitical experts, such as Colonel Lindbergh, whose reaction to the President is that we should "stop this hysterical chatter of calamity and invasion," stop meddling abroad, and efficiently get on with our own defense job.

In fairness to the critics—congressional, industrial, labor, political, military, and civilian experts—it can be admitted that the President brought much of this on himself. In deliberately trying to shock the country into awareness, he overplayed his sensational hand.

But in fairness to the President and for the sake of national confidence in an emergency, it is essential that the public understand the truth. The truth is that the President, far from being hysterical as he appeared, is operating with a cool if somewhat grim efficiency.

He is suffering from past mistakes—such as his naval-mindedness at the expense of aircraft and Army mechanization, the lack of a strong Secretary of the Navy, and the notorious conflict at the War Department between Secretary Woodring and Assistant Secretary Johnson. But it is also true that the President never has been sincerer, stronger, and surer of himself than in these last world-shaking 10 days.

The fact of the matter is that the President has taken advantage of the war situation in Europe; of the disaster which has befallen Finland, Norway, Denmark, the Netherlands, Belgium, as well as France and England, to add to his drive for a third term and a dictatorship for himself.

An administration which will spend money appropriated to relieve the misery of the sick and the suffering, as the present Administration has spent relief funds, does not hesitate for a second to use the present European situation to promote its political fortunes.

Some of the President's advisers, his political adherents, and his friends are too anxious to remake America, too closely connected with the Communist Party, which would overthrow our Government by force, to permit any patriotic American advised of the situation to look with complacency on the President's ambition for a third term.

Shortly, we hope the whole country will become aware of the President's real purpose, the continuation of a Roosevelt in power.

Toward the Goal of Balanced Economic Development

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

Mr. BRYSON. Mr. Speaker, at the beginning of the twentieth century our Nation stood on the threshold of a great era of technological development. Many new, important inventions, such as the telephone, the airplane, the radio, the motion picture, the automobile, were then destined to set the pace for a period of amazing growth in American industry.

Aside from the new inventions which resulted in the creation of entirely new industries, there were during that 30-year period (1900–30) other inventions which enabled established industries to expand and increase their output. According to the National Resources Committee the available mechanical power rose from 70,000,000 horsepower in 1900 to approximately 1,231,000,000 horsepower in 1935—an increase of 1,659 percent.

EXPANSION OF PRODUCTION

Mass production ushered in and with it the economic phenomena of men producing greater quantities of better-quality goods with less expense of time and effort suddenly appeared. The effect of mechanization on human labor is reflected in the fact that 43 men in 1933 produced the volume of goods that required 118 men in 1899. Thus, in 1933 one man, with the aid of the machine, could do almost three times as much work as he was able to do at the turn of the century. During this same period production of manufactured goods rose over 240 percent.

Did the fact that only 43 men were needed in 1933 to produce the same volume of goods as 118 produced in 1899 curtail employment opportunities in industry? The answer would seem "No," since it has been reported by the National Conference Board that from 1870 to 1930 the proportion of gainful workers in the total population rose from 32.4 to 39.8 percent, an increase of 7.4 percent.

It is explained that during the period 1899–1929 technological change aided in the multiplication of employment opportunities, because, through mechanization, costs were lowered drastically, and as costs were lowered more goods were sold, and as more goods were sold, more and more workers were required to make, service, and distribute them. Thus, when a technological improvement is followed by lowering of prices, workers who would otherwise be displaced are required to assist in producing a larger supply of goods which are needed to meet the increased demand. Here we see what happens when the benefits of mechanization are passed on, so that everyone from the consumer back to the manufacturer profits. So far as our study of the problem of technological change and unemployment is concerned, the most important thing to note is that passing along the benefits of mechanization usually results in increased employment.

In reading this report one might readily conclude that your committee has argued the case for technological change. We have done just that. And as we develop the second part of our report we shall still be arguing the case for and not against technological change, although our analysis must shift to the other side of the question. We now examine the damaging, destructive effect of technological change on employment, not because we wish to discredit the possibilities of the machine, but because we wish to expose certain abuses in its use and then recommend ways and means to check those abuses.

CHECKING THE ABUSES IN USE OF MACHINES

What happens when the benefits of mechanization are passed on has already been demonstrated. But what happens when these benefits are withheld? The answer is most important: Withholding of the benefits of mechanization leads to unemployment. When a given technological change is not followed by a lowering of prices, consumption does not register any notable gain; the public purchases the same quantity of goods; fewer men are needed to turn out the same quantity of goods, so the final result: Fewer men at work; more men relegated to the ranks of the unemployed.

The question of whether a given technological improvement or new labor-saving device serves to increase or decrease employment opportunities is decided largely by the subsequent presence or absence of price reduction. If prices are not reduced as new machines are introduced the theory of increasing employment by increasing the total of productivity breaks down completely. It is the significant failure, in recent years, of prices to go down with the introduction of new machines that has created the need for certain adjustments at this time.

In striking at the problem of unemployment as related to technological change, we must adopt either of two courses of action: First, set aright the factors which have prevented price reductions from taking place as new machines were introduced, or, second, throttle the invention of new machines. Since, as it has been noted, the introduction of labor-saving devices accounted largely for the doubling and redoubling of America's volume of production and consequent rise in living standard during the years 1900–1930, junking of new machines would not seem an enlightened or sensible approach to this problem. It would seem best to move in the direction of increased employment by setting aright factors which tend to prevent price reductions from taking place as new machines are introduced.

What has done most to thwart the proper functioning of that process by which new machines lower costs drastically, and as costs are lowered, more goods are sold, and as more goods are sold more and more workers are required to make, service, and distribute them? What, in other words, seems to be the principal factor preventing the necessary price reduction which starts the ball rolling toward increased volume of productivity and employment? More than anything else, the unchecked growth of monopoly has made prices fixed and rigid—so fixed and rigid, in fact, that the introduction of new machines has ceased to be followed by lowering of prices. In the absence of competition producers have little inclination to pass on to the consumer savings wrought by the installation of labor-saving devices. Hence the necessary rise in consumption fails to occur and the reemployment of those thrown out of work by reason of new inventions does not take place.

MONOPOLY AND MACHINES DO NOT MIX

During the past decade technological development has been notable but little has been accomplished insofar as lowering of prices is concerned. In a number of industries, such as that of the automobile—which made tremendous increases in its labor requirements between 1920–30 because of increased consumption realized through constant reduction in prices—labor requirements are no longer increasing in proportion to technological advancement. Consumption has leveled off because prices have not been reduced as new machines have been introduced. And, as already pointed out, if prices are not reduced in accordance with the introduction of new machines, the result is curtailment of employment opportunities or—unemployment. These findings suggest mainly one thing: Monopoly and machines do not mix.

Since the committee on monopoly has already addressed itself to a careful consideration of ways and means to attack the problem of monopoly, further discussion is not necessary here. It is felt that, as suggested by our committee on

monopoly, special attention should be given to the undertakings of the Department of Justice, Federal Trade Commission, Securities and Exchange Commission, Temporary National Economic Committee, and other agencies striking at the problem of monopoly.

Thus far, we have been considering the effect of technological change on employment in general. We now, briefly, touch upon the effect of technological change on specialized fields of employment. The number of men and women who are thrown out of work because particular technological developments render their special skill or trade obsolete may constitute only a small percentage of our total unemployed but their individual problems are the most acute. What happens to the glass blower when the machine comes in and takes his job? If the glass blower is young when this technological advance hits him, he probably will experience less difficulty than some elder associate in making an adjustment, but still he is forced to change his occupation which is certainly no easy task for a man whose whole background of training and experience has been in one field.

TO MINIMIZE PROBLEM

The Federal Security Agency offers the most immediate hope of minimizing the problems of temporary dislocation among workers who are caught in situations similar to that of the glass blower just depicted. Unemployment insurance and old-age pensions are important, as well as Government-sponsored employment offices. The committee recommends careful consideration of legislation which will increase the effectiveness of the Federal Security Agency. The committee also recommends a series of conferences with officials of the Federal Security Agency and Department of Labor for the purpose of fashioning a well-coordinated attack on the related problems of technological unemployment.

Norway's "Fifth Column" Experience

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

EDITORIAL FROM THE RICHMOND (IND.) PALLADIUM-ITEM

Mr. SPRINGER. Mr. Speaker, we have read of the bitter experiences suffered in European countries with the "fifth column" during the crisis of war. It is a sad commentary, indeed, when the people of any nation will assume to aid the enemy in time of war to carry out its plan of invasion or to conquer. We, in this Nation, have been forewarned of the active subversive influences which are now operating and which, in the event of our involvement in war, would seek to destroy our form of government and would seek to give aid to our enemy. This plan of unholy alliance on the part of any of our people should be detected and terminated. We have room in our land for those who are wholly American and who in time of distress will fully support and fight for our Nation, and we have no place within our borders for those people who enjoy our freedom and liberty yet who would participate in the overthrow of our Government if the opportunity should be presented. We have our grave problem within, which must be solved; this problem must be solved for our country, and to the end that our form of government may be perpetuated.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD, and to include therein a brief editorial which appeared in the Palladium-Item, of Richmond, Ind., on the 19th day of May 1940, which editorial follows:

NORWAY'S "FIFTH COLUMN" EXPERIENCE

Several weeks ago, following the German invasion of Norway, a correspondent for the New York Times wrote an article describing the Nazi "fifth column" methods in the invaded country.

Going back to that period immediately following the first World War, the correspondent told how the homes of Norwegian families had been opened to thousands of undernourished and homeless German children, victims of the great conflict in 1914–18.

These children were fed, clothed, and schooled in Norway, many of them being nursed back to health by their foster parents. Naturally, they learned the language of their benefactors and were familiar with many sections of the country.

The writer declared that just before the German invasion these children, now grown to adulthood and having returned to their native land, were visiting in Norway in large numbers. Like the "merchantmen" aboard German ships in Norwegian harbors when hostilities opened, the male members among the "visitors" quickly revealed themselves as members of the German Army and aided in seizing vital positions. Norwegian defenses were fatally weakened.

It is not difficult to believe this story after reports of German "visitors" in large numbers in the Low Countries before they were invaded, and of the Balkan states being overrun with "guests" as the danger of war in that sector threatens.

Great Britain has imposed restrictions on persons of all foreign nationalities now in the British Isles as a measure of self-defense.

During the past 48 hours the British have interned several thousand enemy aliens as a precautionary measure.

Chairman MARTIN DIES of the House Un-American Activities Committee has announced he will offer legislation that will enable the United States Government to deal with "fifth column" problems in this country "in a constitutional way."

An Answer to the Farm Problem

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

Mr. HOUSTON. Mr. Speaker, we have two new situations today, both of which are important and either of which is a peril to the farmers of my district and of the Nation:

The first of these new situations is the growing reluctance on the part of the Congress to make huge annual appropriations for so-called parity payments. We are all painfully aware of that fact. If we take a realistic view of this we must conclude that the day is approaching fast, if not already here, when the farmers cannot depend upon the Congress to make these huge appropriations particularly affecting parity payments and crop control under title III of the Agricultural Adjustment Act.

The second and most dangerous of these new situations is the fact that the war in Europe is certain to end some day—it may be soon—or that day may be far away. It may be within 3 months or 3 years. It may be within 6 months or 6 years. But we know with certainty that each day brings us 1 day closer to the end of the European war. Under our present system the end of the European war will bring a post-war deflation—a deflation that hits farm prices first. Up to this day we have not provided the farmers with worth-while safeguards against that day of post-war deflation and collapsing farm prices.

I am sure that every Member of this House knows well the history of deflation following the first World War. The bitter experience of that depression burned deep into the hearts and minds of the farming class. Their holdings and homes were either immediately swept away from them or were so severely devalued that they had to give them up and look for others and a new kind of employment within short periods. That deflation was the staggering blow to agriculture, for farm products were practically without value, land had no salable value, and thousands of farm communities were disintegrated. We can prevent a recurrence of the

worst features of another post-war deflation if we will only set ourselves to the task of enacting the principles set out in H. R. 2371 into law. We know that when farm prices collapse the little-business man at the country crossroads suffers a decline in business, industrial production slows down, unemployment increases, business stagnation follows, and national income rapidly declines. We are not prepared financially or otherwise to deal with this peril when it comes, but we are intellectually prepared to prevent it.

It is the duty of Congress, it is the duty of this Congress, to enact into law an honest answer to the unsolved farm problem. In my judgment, it is the duty of the House Committee on Agriculture to cooperate with the House and report H. R. 2371, a bill which will put a legal floor under farm prices of products consumed in the domestic market from the unnecessary invasion of foreign competing agricultural products. This bill is safe for the farmer, because it puts a legal floor under farm market prices of products consumed in the domestic market. It is safe for the Treasury, because it requires no huge appropriations or subsidy payments to the farmer. It is safe for labor, because it gives them assurance of employment opportunities. It is safe for business, because it gives business an opportunity to sell an additional $5,000,000,000 worth of goods to our 6,800,000 farmers. It is safe for the 130,000,000 people of the United States, because it assures all of us of prosperity based upon agricultural prosperity.

Now, let us examine the provisions of this bill; let us see what it will do if enacted into law:

First. It would aid and protect the producers of 50 of the 78 agricultural products produced by the farmers of this Nation.

Second. It would aid and protect 98 percent of the value of our total agricultural production.

Third. It would place a legal floor under the market price of these 50 agricultural products consumed in the domestic market.

Fourth. It would assure farmers minimum market prices for the products we consume here in the United States.

Fifth. It would give farmers the world price on the percentage of their production in excess of domestic requirements.

Sixth. It would make agricultural products gilt-edged security for loans, public or private, at nearly 100 percent of the minimum price.

Seventh. It would prevent the importation of competitive agricultural products.

Eighth. It would give our farmers 100 percent of our domestic market.

Ninth. It would protect our domestic market and domestic price level against foreign competitive imports.

Tenth. It would repeal crop control or title III of the Triple A but would leave undisturbed the soil-conservation part of the act, commodity loans, and crops insurance.

Eleventh. It would eliminate the necessity of annual appropriations from the Treasury.

Twelfth. It would provide an annual cash income from marketing to the farmers of the United States of about twelve to twelve and a half billion dollars and would raise the national income to about $85,000,000,000.

Thirteenth. It would eliminate Government control and operation of the farmer and his farm and substitute Government aid and protection of the farmer's market price, his income, and his domestic market.

Fourteenth. It would be self-financing, self-maintaining, without appropriations or subsidies or processing taxes by making agricultural products sell for not less than their actual worth in the domestic market.

Fifteenth. It would stabilize agricultural prosperity—the base of our economic pyramid.

The Committee on Agriculture did not pass the bill out because of protests filed against the bill by officials of the Farmers' Union, who stated that the farmers did not want the bill, and the bill is now pending in the House Committee on Agriculture. In order to assist in getting the bill from before the committee and to the House for consideration I have signed petition No. 5. This petition now has about 120 signatures on it. I trust that every Member who has not signed this petition and who wants enacted into law a legislative program of some kind for the farmer will sign it.

The enactment of this bill into law would give the farmers of this Nation an annual cash income of about $5,000,000,000 more than the farmers received in cash farm income in 1939. This additional $5,000,000,000 in income would increase their own consumption of food and fiber, and it would increase the farmers' consumption of industrial products, which increase in consumption would necessitate an immediate increase in the employment of labor. I dare say that it would produce an immediate reemployment of idle men and women in private industry of not less than four and one-half million workers at American wages. This, my friends, is a sincere approach to a solution of the unsolved farm problem. This is also an approach toward solving the unsolved unemployment problem. I believe the passage of this bill will aid us in finding a market within the United States for the products of industry that is at least five times greater than the elusive and vanishing market which our industrialists are seeking to find abroad. If we will trade wisely with prosperous people among ourselves, we will have the employment, the goods, the money, and the prosperity. We can then trade with the world, not as dependents, but as independents.

H. R. 2371 is in perfect harmony with the historical policy of the United States; it is in harmony with the Constitution; it is in harmony with our democratic principles and our republican form of government; it is in harmony with the principles enacted into law by this Government to aid and protect others of our economic groups since the beginning of the Government. It has been the policy followed by the Government from that day to this.

There are 23 valid laws on the statute books designed to help our several economic groups. These 23 laws have been enacted by the Congress. Each of these 23 acts of Congress authorizes and directs certain Federal agencies to fix by regulation prices, rates, wages, and services. This covers the field of business, industry, transportation, communication, public service, and the wages and hours of labor.

Congress has fixed the administration of these acts and vested the administrators of them with regulatory powers to fix prices, rates, wages, and services, with commissions, boards, bureaus, departments of Government surrounding this very Capitol on every side; and for your information let me just name a few of them. There is the Commissioner of Indian Affairs, the Secretary of War, the Maritime Commission, the President, the Interstate Commerce Commission, the Federal Power Commission, the Secretary of Agriculture, the Tennessee Valley Authority, the Federal Communications Commission, the Security and Exchange Commission, the Secretary of Labor, the National Bituminous Coal Commission, the Tariff Commission, and the Administrator of Wage and Hour Division. These are just a few of the many. This list does not include the governmental powers to fix interest rates or insurance rates, or the price of gold, or the value of money, or the Federal Trade Commission, or many other agencies and institutions of this Government which, directly or indirectly, are engaged under authority of law to regulate prices and enforce fair-trade practices among and between the citizens of the United States. But the laws which I have named for you in principle and application furnish complete authority for all that is proposed to be done under H. R. 2371. We are at long last proposing now to come to the aid of the farmers with the historical aid of Federal law when we should have come first to the farmers' aid. It is the business of the Government and it is the duty of the Government to protect the weak against the strong. We have in times past been aiding the strong against the weak. Now let us fulfill our duty to the farmers; let the House Agriculture Committee report out the bill. The Senate Committee on Agriculture and

Forestry unanimously reported this cost-of-production bill April 7, 1939, and made this general comment:

GENERAL COMMENT

This bill is a protection to agriculture in general. It may work some hardship on the large producer, but for the average producer it will do the job; and if agriculture is put on the proper base the large producer will adjust his production to the law of supply and demand, and agricultural labor will be taken care of in increased wages and compensation. Purchasing power will put farm labor on an equitable basis, and the farmer will be able to pay his farm labor adequate wages.

This is the best proposal yet offered to solve the farm problem. Our American farmer has sold his crops in the open market at world prices in competition with low-priced labor and very low living standards. Everything the American farmer has bought has had to pay the costs of production plus a profit and be protected against outside competition by the tariff laws. In short, the American farmer sells in an open market and buys in a closed market.

It is either this bill, or one like it, or free trade, which would have the same effect on the industrial worker that the present system has on the farmer. The industrial worker sells his product to the American consumer in a protected market and works only part time. He could sell a greater volume and work practically full time if the farmer, too, had a protected market.

This bill is an attempt to equalize conditions.

Your committee recommends S. 570 as a well-thought-out and seasoned legislative attempt to solve the agricultural problem, and by solving it induce national prosperity. Your committee believes that the American farmer is entitled to the American market at a profit.

Let us pass an honest farm bill which will raise the domestic prices of farm products to at least 100 percent of parity.

If this bill were enacted into law, we would raise the domestic market price of cotton per pound to 17 or 18 cents, the domestic market price of wheat per bushel to about $1.20, corn around 85 cents per bushel, hogs to $9.50 to $10 per hundredweight, butterfat to around 38 to 40 cents per pound, wool to about 25 cents per pound, lambs to about $8 per 100 pounds, and so on down the list of 45 or 50 agricultural products in every section of the United States and in every State in the Union.

There is no use of us begging the question any longer. There is no use of us dodging the real issue. We have 150 years of precedent, and for 150 years we, as a Government, have been engaged in applying this same principle of Federal legislation to aid and protect practically every other economic group in our society. Let us now apply this same principle of Federal legislation to aid and protect the market price of our farmers throughout this Nation and give our farmers 100 percent of cost of production; certainly not less than parity prices, if you please. Let us enact this law in this session of Congress. Let us protect the farmers of our Nation against the peril of inadequate appropriations and the perils of a post-war deflation, which will come upon us like a thief in the night unless we enact into law now an honest answer to the unsolved farm problem.

There will be no prosperity in America until there is prosperity on the farms, and there will be no prosperity on the farms until there is restoration of buying power on the part of the wage earners of the Nation. Furthermore, there will be no prosperity in America until the farmer gets a fair price for his products and has a purchasing power of his own. H. R. 2371 is the honest basic answer to this problem.

Students and Poll Taxes

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

POST CARD FROM STUDENTS AT THE UNIVERSITY OF CALIFORNIA AT LOS ANGELES

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the contents of a 2- by 4-foot post card sent to me by students of the University of California at Los Angeles. Addressed to Congressmen and Senators of California, this extraordinarily large-sized post card contains the following message:

CIVIL RIGHTS IN AMERICA

To end lynch law and abolish poll taxes, which are endangering our democracy, we, students of the University of California at Los Angeles, urge immediate consideration and passage of the Wagner antilynch bill and the Geyer anti-poll-tax bill.

The post card is signed by 431 students of the university. I was very glad to receive this message from the young men and women who are the future voters and citizens of California. The interest taken by them in support of the Wagner antilynch bill and my anti-poll-tax bill shows how sincere they are in seeing that democracy shall be preserved here in the United States.

Drainage Project, Big Creek, La.

EXTENSION OF REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

LETTER FROM BRIG. GEN. THOMAS M. ROBINS AND ONE FROM HON. NEWT V. MILLS, OF LOUISIANA

Mr. MILLS of Louisiana. Mr. Speaker, considerable interest has been manifested toward the drainage of Big Creek, located in Richland, Franklin, Caldwell Parishes, La., and rightly so, as this stream runs through a very flat alluvial country and almost each spring, without exception, overflow water results in a tremendous loss to the farmers of these parishes.

Presently a survey is being made by the district engineer's office, Vicksburg, Miss., to determine what remedial measures should be placed into operation that will safeguard the lands from overflow, therefore I include as part of my remarks on this subject a letter I received from Brig. Gen. Thomas M. Robins, of the War Department and a letter to Mr. Bennie Goyne, Rayville, La.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, May 17, 1940.

Hon. NEWT V. MILLS,
House of Representatives, Washington, D. C.

MY DEAR MR. MILLS: Reference is made to your telephone call to this office on April 20, 1940, regarding a proposed drainage project on Big Creek which is a tributary of Boeuf River, La. At that time you inquired as to whether or not Big Creek is being covered in the Department's pending report on the Ouachita River and tributaries, and you requested that a representative of this Department confer with Judge Summerlin, of Rayville, and Mr. George Franklin, of Holly Ridge, on the subject of drainage problems.

Information has now been received from Brig. Gen. M. C. Tylor, the division engineer, lower Mississippi Valley division, and Lt. Col. R. G. Moses, the district engineer, Vicksburg, Miss., that Big Creek is being given consideration in the comprehensive report on the Ouachita River and its tributaries which the Department is now making pursuant to a resolution adopted February 10, 1938, by the Committee on Flood Control of the House of Representatives. They state also that a representative of the district office at Vicksburg conferred with Judge Summerlin and Mr. Franklin on May 3, 1940, at which time the drainage problems of Big Creek and possible remedial measures were discussed. Judge Summerlin and Mr. Franklin showed a keen interest in the problem and furnished information which substantiated the data previously obtained by the Department's field investigations.

It is expected that the afore-mentioned review report will be received in this office on or about December 1, 1940. The Department will be pleased to notify you when this report is received and to afford you or your secretary access to it at your convenience in this office.

Very truly yours,

THOMAS M. ROBINS,
Brigadier General, Assistant to the Chief of Engineers.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 18, 1940.

Mr. BENNIE GOYNE,
Rayville, La.

DEAR BENNIE: You recall I introduced the necessary legislation which was passed by Congress proposing a survey of Boeuf River and its tributaries; however, it is first necessary that a report be submitted by the Mississippi River Commission, Vicksburg, Miss., as to the proper drainage procedure.

As shown by the enclosure, it is hoped to have a report in the Washington office by December 1, 1940, after which it will be my aim, if reelected to Congress, to secure the necessary appropriation to carry out the War Department's recommendation to drain your section.

When I came to Congress the necessary legislation had been passed to construct the Eudora floodway, which was supposed to have been constructed through the parishes of East Carroll, Madison, Tensas, and Concordia, so my delay in not having made more progress toward the drainage of your section is because the necessary legislation had to be adopted divorcing the Eudora floodway from the Morganza floodway. Therefore I am sure you remember the fight all interested parties had to divorce these two floodways.

I talked with Capt. Miles Reber, War Department, this week and he advised me that the main levees of the Morganza floodway were practically completed; therefore I believe that rapid progress is being made toward helping solve the flood question, as it is held the Morganza floodway will probably lower the backwater area of your section 1½ feet.

I have worked diligently in interest of flood protection for the Fifth District, and I believe in 2 more years we will have made rapid progress.

As ever,

NEWT V. MILLS, M. C.

The United States Has Met the Challenge of Other Nations in Air Supremacy

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1940

ADDRESS OF OSWALD RYAN AT THE MORGANTOWN, W. VA. CELEBRATION OF THE "FLYING FORTIES"

Mr. RANDOLPH. Mr. Speaker, Saturday, May 18, was an outstanding day in the history of Morgantown, W. Va. On that date more than 25,000 persons visited the million-dollar airport which is nearing completion there. From morning until night events were staged which thrilled and interested our people who are intensely cognizant of the swiftly moving development of aviation.

Six of the latest type bombers from the Navy flew from Anacostia to this splendid West Virginia airport which is now ready to take its place, not only in the progress of civil aviation, but also in the plan of national defense. Oswald Ryan, member of the Civil Aeronautics Authority, spoke at a noon luncheon, where more than 300 civic leaders gathered. He praised the foresight of those individuals who contributed to the building of an airport which is strategically located for close coordination to our defense measures. In the same vein Gill Robb Wilson, president of the National Aeronautic Association, spoke to the air-minded populace. It was gratifying to hear J. J. O'Donovan, vice president of Pennsylvania-Central Airlines, tell of the plans of his company to include Morgantown on a proposed Pittsburgh-Atlanta route.

On behalf of the Morgantown trading area, and voicing the thoughts of its splendid citizenry, I can say we all join in pledging our full cooperation in these trying days. At this point I include the excellent address of Mr. Ryan.

The United States, in the field of civil aviation, in the past decade has met the challenge of the five greatest aeronautical nations of Europe and has won unquestioned supremacy over the rest of the world in this field. If we Americans are now forced in defense of our liberties and our way of life to turn our aeronautical genius from the pursuits of peace to the art of war in the air, that same American genius will be equal to the task of achieving supremacy in the field of aerial defense.

CIVIL AVIATION IS BACKLOG

Nor will it be correct for any nation to assume that nothing has yet been accomplished by this country for aerial defense. Civil aviation is the backlog of military aviation and Congress, realizing the terrible price a democratic nation might be called upon to pay for neglecting its civil aviation, adopted the Civil Aeronautics Act of 1938. That statute, passed months before Munich, established a national policy for the development of a civil aviation adequate to the needs of our commerce, our Postal Service, and our national defense.

Under the authority of that national law measures have for nearly 2 years been in process of fulfillment, the significance of which now becomes clear to all. The forces of civil aviation have been on the march. We are not compelled to start from scratch.

In the first place we have, already established and in operation, an aircraft industry which will be the sound foundation for the expansion that must necessarily come as a result of the present defense program. Those little sheds where American airplanes had their beginnings have given way to vast manufacturing plants where scientific research joins with engineering and mechanical skill to produce the best civil and military airplanes in the world. The problem of producing the skilled and semiskilled labor necessary to operate our aircraft manufacturing facilities also has not been overlooked. For more than a year an interdepartmental committee, established by the President of the United States, has been engaged in study upon this vital problem of a labor supply sufficient to take care of the aircraft expansion program and to meet the needs of a national emergency. As chairman of that committee I can say that substantial progress has been made and that the essential plans for the solution of the problem have already been formulated and for months have been in process of fulfillment.

PILOTS TRAINED IN PROGRAM

In addition to the problem of aircraft production and the problem of skilled-labor supply for the aircraft industry, there is also the problem of the civilian pilot. And here also we can report substantial progress in civil aviation. In the second semester of the 1938–39 college year the Civil Aeronautics Authority conducted an experimental training program for the training of civilian pilots in some 13 selected colleges and universities of the country. That trial program was a success and last fall we instituted a Nation-wide training program in some 437 colleges and in a number of non-college training centers. Some 330 pilots were graduated from the initial program and within the next 2 months we expect to add 10,000 more trained pilots to the Nation's supply. The machinery for this vast training program is already established and in operation and its expansion would be a simple problem.

In the last World War it was necessary to train military pilots in terrific haste. The casualty list was enormous. The emergency pressure was so great that more men were killed in this country in the training process than died afterward in battle in France. The British and the French were forced to send some of their boys to the front with only nine or ten hours of training, and the human waste was tragic. We Americans will not be faced with such a terrible choice. The safety record thus far attained by the Civil Aeronautics Authority's pilot-training program is without parallel. Civil aviation is in a position to offer to the military services, in the event of emergency, young men who have already proved their worth. They have taken the first hurdles; they are fit; they have demonstrated their ability to fly safely. They are ready for the additional training which would be required to make them military pilots, and their chance of safely and successfully completing that military training has been enormously increased.

TRANSPORT AIR LINES GO AHEAD

There is still another contribution which civil aviation can offer to the national defense—the development of air transport. Reliable reports from the scene of European military operations within the past week testify to the essential value of civil air transport in moving troops with tremendous speed. American scheduled transport lines have outdistanced all the other nations of the world. Even in normal times our American air transports fly almost twice as many miles and carry more passengers and more mail than do the combined air lines of Germany, Italy, France, Great Britain, and the Netherlands, and in speed and safety they surpass the air lines of any other nation.

An equally notable achievement has been accomplished by our international air carriers. Our pioneers of air commerce have linked the United States with Bermuda in the Atlantic, with the countries of Central and South America, with far-off Asia across the Pacific, and within the past year they have established regular air transportation with Europe.

In the event of our involvement in war, these civil air lines would be of invaluable service. Nearly 75 percent of our air-line pilots are graduates of service schools; many of them have kept their reserve commissions, which means that they have kept in training for combat work. Short of dire emergency, however, these pilots would be required for transporting troops and supplies and assisting in the maintenance of the air-transportation system which would be required by the national defense.

NATIONS COME CLOSE TOGETHER

Our international air lines especially would have particular value to the continental defense. It is 7,000 miles from Miami to Buenos Aires in the Argentine—over twice the distance from New York to London or Paris. Before the close of the present summer you will be able to fly that distance in 3½ days, instead of the 5 which is now required. The North and South American continents have shrunk to the measure of man's hand, and it is the hand of good neighborliness, the symbol of all-American unity. Nothing has contributed more to the development of our close and harmonious relations with our fellow Republics of Central and South America than have our American-flag air lines. It would be difficult to overestimate their value to the national defense.

Let me repeat that in these anxious days, while the world awaits the verdict from foreign battlefields, it is worth remembering that American civil aviation has already successfully met the challenge of the greatest aeronautical nations. If a challenge now comes to us in the arena of military aviation, we can meet that challenge in the confidence that the same genius, skill, and courage that gave us air supremacy in the civil field can be relied upon to establish our supremacy in national aerial defense. Although a vast task lies before us, the foundations have already been laid and substantial progress has already been made toward its successful fulfillment.

Recreational Demonstration Areas Are in Peril

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

LETTER FROM ARTHUR J. FREUND

Mr. ANDERSON of Missouri. Mr. Speaker, the people of this country are faced with the grim duty of spending billions of dollars for rearmament. We have no alternative but to be ready for any eventuality; but it is not sound economy to neglect and abandon projects and programs that contribute just as much if not more to national solidarity and well-being as the Military Establishment.

Among the very praiseworthy functions of the Federal Government have been the recreational demonstration projects of the National Park Service. Yet, because we failed to authorize a comparatively insignificant sum of money, these projects will of necessity be discontinued after July 1 of this year.

I feel certain that this House would have provided the necessary funds if the true value of these projects were known.

The recreational demonstration projects were first authorized under the National Industrial Recovery Act of 1933 as part of a vast program of public works. Congress saw to it that these projects were continued out of funds provided in the Emergency Relief Appropriation Acts of 1935 and 1937.

The National Park Service of the United States Department of the Interior is responsible for the administration, operation, and maintenance of these projects, and it has done a splendid job.

There are at present 43 projects in 24 States, comprising 341,655 acres of land, which have been improved and made ready for recreational uses, on which there are improvements valued at $30,000,000. There are 70 organized camps, which accommodate 7,500 adults and children every single day.

Most all of these areas are located in the densely populated sections of the country where there is a great deficiency in recreational facilities. No other camping facilities are available in these parts of the country to serve the hundreds of thousands of children who use these camping areas. It is estimated that upward of 3,000,000 people will visit these areas this year, exclusive of campers.

Every Member of this House who lives in or near a big city, or any person who has been a public prosecutor, as I have been, or a juvenile-court official, knows how the lack of proper recreational facilities contributes to delinquency and crime. Any person who is acquainted with living conditions in crowded and congested cities knows that lack of recreational facilities contributes noticeably to health problems. Therefore it would seem obvious that the comparatively small sum needed to continue the recreational demonstration projects is money well spent. This Government of ours has spent millions upon millions of dollars for undertakings and projects of doubtful and dubious value. We have in these recreational demonstration projects something that is contributing immeasurably to the children of this country, and now it is proposed to abandon this great work.

The Government over a period of 7 years has acquired a substantial investment in these areas; the children of this Nation during that same period of time have acquired immense benefits from these facilities that are not otherwise available. Let us spend the few dollars that it will take to carry on this great program which is contributing so much to a better America.

In order to show just how much this program can mean to your district, I want to give you a concrete example of what it is doing in mine. Therefore I ask unanimous consent to include in my remarks a letter which I have received from Arthur Freund, St. Louis attorney, who has been active for a number of years in child-welfare programs.

ARTHUR J. FREUND, ATTORNEY AT LAW,
St. Louis, May 17, 1940.

Hon. C. ARTHUR ANDERSON,
House of Representatives Office Building, Washington, D. C.

DEAR ARTHUR: I understand that the bill for the appropriation of funds for the administration, protection, and maintenance of the recreational demonstration areas of the National Park Service ($250,000 for the areas and $10,000 for vehicles) is to come up before the House of Representatives Tuesday, and I should like to write you in behalf of the measure.

The recreational demonstration areas included in 1939, 56 camps in 23 States with a total area of approximately 400,000 acres. Last year, the attendance in the camps of all classes of campers was approximately a million, and it is estimated that in 1940 this figure will rise to double the amount of last year. Income to the Treasury in 1940 is estimated to be $45,000.

In St. Louis the organizations participating in the camp project are: Girl Scouts, Park and Playground Association, Colored Y. W. C. A., and the Y. M. H. A.-Y. W. H. A. Approximately 2,500 local children, most of whom come from low-wage scale families, are looking forward to the privilege of having a wholesome and healthful vacation out of doors under trained leadership and in safe surroundings. To deny the children the opportunities for healthful outdoor living would, in my opinion, be most unfortunate.

At the present time the "Y" is making plans for the operation of its camp on the Lake of the Ozarks similarly to plans being made by the other above-mentioned agencies. We have had to contract for supplies, employ counselors and other help, and have incurred considerable expense, based on the use of the camp by our constituency, all or part of which would be lost. The situation of the St. Louis agency camps is probably no different from other communities. While I recognize other demands on the Treasury of the United States, I believe the amount requested is comparatively small and will bring excellent results.

Last year a bill (H. R. 3959, 76th Cong.) designed to give the Secretary of the Interior authority to transfer some of the areas to States or municipalities was vetoed by the President. There were certain objections which were raised at the time, and even if the legislation had been enacted, the entire problem of the camp areas would not be solved. There are some States that are not in a position to assume responsibility at the moment for the camping areas and there are other areas of national recreational importance that should be permanently administered by the National Park Service.

In the above communication I have attempted to give you some of the facts of our camping problem, which I trust you will find helpful. I have not overemphasized the humanitarian aspect involved in the possible discontinuance of the camps, but to me this is the most important feature of the entire appropriation. I feel certain that if I were to voice the sentiments of the many thousands of children who are looking forward to their camping experience, you would receive the most appreciative expression of gratefulness that could be given to any person.

If there are any additional facts that you would like to have, please wire me and I will see that you secure the data immediately.

With appreciation for your efforts and kindest personal regards.

Sincerely,

ARTHUR J. FREUND.

The Poll Tax

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1940

TESTIMONY OF HENRY H. COLLINS, JR.

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks I include the testimony of Henry H. Collins, Jr. Mr. Collins appeared before a judiciary subcommittee for the Descendants of the American Revolution in behalf of the Geyer anti-poll-tax bill.

Mr. Chairman, members of the subcommittee, at my appearance before this body last month, members of the committee asked certain questions, the answers to which I said I would be glad to supply upon the preparation of the necessary background material.

The first of these questions dealt with the power of Congress to take action eliminating the poll tax as a prerequisite to voting in Federal elections. The Descendants of the American Revolution feel not only that the Congress has such a right but that it also has such a duty. From section 2 of the fourteenth amendment to the Constitution of the United States we read:

"Representatives shall be apportioned among the several States according to their respective numbers, * * *. But when the right to vote at any election for the choice of electors for President and Vice President of the United States, Representatives in Congress, * * * is denied to any of the male inhabitants of such State, being 21 years of age, and citizens of the United States, or in any way abridged * * * the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State." Section 5 of the fourteenth amendment states, "the Congress shall have power to enforce by appropriate legislation the provisions of this article."

Consequently, it is clear that Congress must pursue either one of two alternatives. Either it must eliminate the poll tax on account of its abridgement of the right to vote; or else it must reduce the representation in Congress of those States that require the payment of such a tax as a prerequisite to casting a ballot.

In the non-poll-tax States in 1936 an average of 119,500, and in 1938 an average of 100,600, votes were cast in each district election. If this is a normal exercise of the franchise in the average district of 280,000 people without a poll tax, as it seems to be, then we may estimate the degree by which these figures differ from the 32,400 and 15,040 votes cast in the average poll-tax district election (in 1936 and 1938, respectively) as the degree by which the poll tax abridges the right to vote. This difference was 73 percent in 1936 and 85 percent in 1938. Should the above provisions of article 14 of the Constitution be enforced, therefore, as we firmly believe they should be, the representation of the poll-tax States would be reduced in the following manner:

	Present number of Representatives	Reduced number of Representatives based on elections in—	
		1936	1938
Alabama	9	2	1
Arkansas	7	2	1
Georgia	10	2	1
Mississippi	7	1	1
South Carolina	6	1	1
Tennessee	9	3	3
Texas	21	7	4
Virginia	9	3	1
	78	21	13

Thus, instead of 78 Representatives in the House, the poll-tax States are only constitutionally entitled to 21 or 13. If this bill eliminating the poll tax is not passed, then we ask that Congress carry out the injunction laid upon it by the fourteenth amendment and reduce the representation of these States accordingly.

The second question raised by one of the Members was whether degrees in the exercise of the franchise between different districts might not be occasioned in part by their relative wealth or poverty. If I am not mistaken he expressed the thought that as a rule poor people were less apt to vote, everything else being equal, than were their brethren who were better off. We know that many of the poll-tax States are not wealthy and if this contention were true it might suggest one reason for the small number of persons in them exercising the franchise. To answer this question, it is necessary to study States where the franchise is relatively unrestricted and which contain both depressed and non-depressed areas. Using as criteria for determining relative degrees of prosperity figures from the 1930 and 1937 unemployment censuses and from the lists of those receiving Federal relief in 1935, it has been possible to select in certain States congressional districts that may be described as depressed and others that may be described as not depressed or relatively prosperous.

In the depressed Twenty-fourth district of Illinois 49 percent of the people voted in the last congressional election. In the relatively prosperous 17th district only 42 percent cast a ballot. In depressed district 12 of Michigan, 41 percent voted as against 35 percent in good district 2. A similar correlation is true for Minnesota's eighth and second districts. New Jersey shows that 50 percent of the population of depressed district 2 voted as against 35 percent in non-depressed district 8. The same is true of my State, Pennsylvania, where depressed district 13 showed 41 percent of the people voting as against 38 percent in the relatively prosperous tenth district. On the other hand California's districts 2 and 8 show the reverse; but this was the only eligible State that countered the trend. The evidence, therefore, is not all one-sided but I believe the final averages will sustain the theory that, everything else being equal and the franchise relatively unrestricted, depressed areas tend to cast a somewhat higher percentage of votes than those areas which are not so unfortunate. At least it is clear that the opposite is not true and that poverty does not lead to a neglect of the ballot. I hope to supply later a table showing the details of this study, which may shed further light on this problem.

The third question asked by the committee was whether the sharp decline in the last 60 years in the votes cast in the poll-tax States might not also be reflected in some other States; and what had been the general trend during that period in major Presidential elections. Study of the figures, however, has shown that the decay of democracy in the poll-tax States has been paralleled by a great extension of democracy in the rest of the Nation. Whereas in 1876 18 percent of the people in the poll-tax States voted, in 1936 this had been reduced to 12 percent, a loss of over one-third. But in the non-poll-tax States where 23 percent had voted in 1876, 44 percent voted in 1936, almost twice as many. Adjusted for women's suffrage to show the percentage vote of the sex with the franchise, we find that the potential population voting in the poll-tax States has dropped from 37 to 12 percent, more than two-thirds, whereas in the non-poll-tax States it has remained relatively stationary at 44 to 45 percent.

Taking the percentage of the total population voting, we find that in Arkansas, where 100 voted in 1876, only 49 do today; in Mississippi only 41; and in South Carolina only 26. When we adjust for women's suffrage, however, we find that in every poll-tax State the percentage of potential population voting has dropped practically in half. In Alabama, Arkansas, Mississippi, and Virginia it has fallen even further, for where 100 males voted in 1876, less than 31 males and females do today; and in the outstanding case of South Carolina, barely 13 persons voted in 1936 where 100 voted 60 years before. And this in a Presidential election.

During this same period, however, the percentage of the population voting in Pennsylvania, New Jersey, New York, and Iowa had followed the non-poll-tax average and gone up from 23 percent in 1876 to 44 percent in 1936, while such States as Indiana, Maine, Illinois, and Delaware showed a much sharper rise from 21 percent to 48 percent.

Now, on the subject of primaries. Supporters of the poll tax frequently claim that election figures mean little in the poll-tax States on account of the one-party system. Of course, if there were no poll tax and true democracy there would be no one-party system. But these people tell us, "You must go to the Democratic primaries to see how many people take part in politics down there." Now, Mr. Chairman, going to the primaries is more easily said than done. Primary figures are not consolidated and gathered together in one place either here in Washington or in many States. However, researches made have given us exact figures on 64 different primaries and the 64 ensuing elections. These are taken from 3 election years, 1934, 1936, 1938, from 4 States, Alabama, Georgia, Mississippi, and Tennessee, and from 33 different congressional districts. These figures are quite startling. We find, for example, that less than 50 percent additional votes are cast in the Democratic primaries than in the general elections; and the election figures are so small that, even with this 50 percent added, fewer than 23,000 persons voted in the average poll-tax district primary; and this is less than a quarter of the 100,000 who voted in the average non-poll-tax district election.

Going into these figures further, we find that the total primary vote of all 7 successful candidates from Mississippi in the Presidential year 1936 was 105,000. Yet in South Dakota that year 1 successful candidate received 108,000 votes. One Congressman from Oregon obtained 114,000 votes and one from California 119,000. Two Congressmen from Ohio, 5 from Illinois, and 7 from New York each received in the 1936 election more than the 105,000 votes that the entire Mississippi delegation obtained in the primary.

Yet the Mississippians have 7 votes, and each of these others has 1. Now, what kind of a democracy is that?

You have been told of the shocking condition by which 29 Members of the House from the poll-tax States did not receive a single opposition vote in the last election. Not one. You might assume, however, that these gentlemen always had spirited primary contests. Mr. Chairman, that is not the case. Out of 64 Democratic poll-tax primaries, 22, or more than one-third, were absolutely uncontested. Thirteen of these 22 faced no opposition in the election, either. In Alabama in 1934, 4 out of her 9 Representatives received no opposition in the primary; in Georgia, in 1936, 5 out of 10 primaries were absolutely undisputed. In Mississippi they don't even go to the polls, apparently, where there is no opposition, and the winning candidate who, in 1938, received the record low of 2,172 votes in the election *received no opposition in the primary at all.*

The Representative from the Second district of Georgia, who has such a commanding position in the Rules Committee, is supported by an almost invisible electorate. In the last election he received 5,187 votes; 4 years before he received 3,369. His primary vote last year was only 14,802. Almost no one outside of the poll-tax States got such a small vote in either election. In fact, 149 Members of the House each received three times as many votes in the last election as this Representative from Georgia did in his primary, and these 149 represent almost the entire delegations of 25 States—Arizona, California, Colorado, Connecticut, Delaware, Idaho, Indiana, Iowa, Kansas, Maine, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, New Hampshire, New Jersey, New Mexico, Rhode Island, Utah, Vermont, Washington, West Virginia, and Wyoming. Fifty-six more Members, representing almost half the delegations from Illinois, New York, Ohio, and Pennsylvania, received over four times as many. What is worse, this Representative from Georgia is not alone in the small number of votes he received, for 11 others of the 64 received less than 15,000 votes apiece in the primaries.

Mr. Chairman, I have, of course, the statistics to support all the figures mentioned and as soon as they can be put in the proper form I should like to add them to the record for your reference, for the more deeply one studies this problem the more thoroughly is one convinced that as long as there is a poll tax in eight States there can be no real democracy in those States or anywhere else in the country. The Descendants of the American Revolution, whose forefathers fought for democracy in their day, urge you to aid in the fight for democracy in the present day by favorably and speedily reporting the Geyer bill to the House.

Census Enumerators

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

LETTER FROM BEATRICE E. McINTYRE

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD a letter that I received from an enumerator in my district. This letter is typical of many that I have received from census enumerators.

SAN PEDRO, CALIF., *April 26, 1940.*

Hon. LEE E. GEYER,
Washington, D. C.

DEAR MR. GEYER: Permit me to congratulate you on the type of supervisors chosen for the census, and then, in turn, for the enumerators selected from the seventeenth district.

Some of these were doubtless political appointments (if we can believe the newspapers), but I have never worked with a more conscientious group of people. Mistakes were made by all of us and the going wasn't always smooth, but on the whole the spirit of cooperation and the desire to do the job right was so unusual that I marvel at your capacity for picking your keymen.

Mr. Pawl was the instructor in the room to which I was assigned during the 3-day instruction course, and he certainly gave us everything he had. In fact, both he and Mr. Pierce wore themselves ragged trying to complete the course in three easy lessons.

It was certainly no easy task trying to cover the text and 36 analytical minds straining to find the reason for all the correct answers.

I was grateful for the opportunity of earning the money and the experience would have been worth anybody's time. In addition, I learned, too, in comparison our standard of living is much lower than those receiving less wages than my husband, and yet, strangely enough, our standard of living is much higher than those in our same wage bracket. So it would seem if we draw a conclusion from 1,102 people enumerated that the average wage earner doesn't use his dollar to the best advantage.

Frankly the above observations gave me a jolt, and I was ashamed when I saw how beautifully others do manage on fifty or sixty dollars a month.

The projects of the S. R. A. and others have enabled people to keep their self-respect, and they do appreciate it. My territory was in the lower wage bracket group, and from all accounts I had the easiest district to work, while the homes of the professional class were the most difficult.

But perhaps it was as one enumerator remarked to me after an unusually trying day, "No wonder you have it so easy, your people are used to being brow-beaten." (After seeing Grapes of Wrath last evening, I wonder.)

In closing, may I also thank you for the cookbook sent me last week.

Very truly yours,

BEATRICE E. McINTYRE.

Proposed Amendments of Labor Laws

EXTENSION OF REMARKS

OF

HON. LAWRENCE J. CONNERY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

RESOLUTIONS BY THE GENERAL EXECUTIVE BOARD OF THE UNITED SHOE WORKERS OF AMERICA

Mr. CONNERY. Mr. Speaker, I herewith submit for the information of the House the all-important resolutions adopted by the general executive board of the United Shoe Workers of America, of the C. I. O., urging opposition to any relaxation or elimination of the provisions of the Walsh-Healey Act, the Wage and Hour Act, the Bacon-Davis Act, and the National Labor Relations Act, as a result of the present war hysteria:

Whereas labor legislation passed by Congress since 1933 has set only a minimum standard for health and decency for millions of American workers; and

Whereas millions are still unemployed and receive inadequate income to maintain human existence on any scale approaching an American standard; and

Whereas these millions of unemployed are anxious and willing to work if opportunities for employment are available: Therefore be it

Resolved by the general executive board of the United Shoe Workers of America of the C. I. O. in session duly assembled in Washington D. C., May 21, 1940, That the efforts of anti-labor, anti-New Deal forces to relax and eliminate the labor laws properly known as the Walsh-Healey Act, the Wage and Hour Act, the Bacon-Davis Act, and the Wagner Labor Relations Act be condemned and opposed by every trade unionist; and be it further

Resolved, That Members of Congress be urged to resist every effort to eliminate parliamentary Democratic procedure in an effort to amend these laws quickly under the war hysteria; and be it further

Resolved, That a copy of this resolution be sent to President Roosevelt, Secretary of Labor Perkins, Representative MARY NORTON, chairman of the House Committee on Labor, Senator ALBERT THOMAS, chairman of the Senate Committee on Education and Labor, and to Members of Congress in the shoe-producing districts.

The School-Building Program of the Public Works Administration

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

ADDRESS BY HON. JENNINGS RANDOLPH, OF WEST VIRGINIA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by

myself at the dedication of the new Berkeley Springs, W. Va., High School last evening:

I am delighted to be with you tonight and to bring you the best wishes of the Public Works Administration.

It has been my pleasure to be present at the dedication exercises for several P. W. A. projects, and it has always been of particular satisfaction to take part in the dedicatory ceremonies of a new school. But it is of particular significance to me when I realize that it is the final stage in the realization of a long-cherished hope—adequate educational facilities for your children.

Education is the first line of mental defense of any nation, and the greatest asset of any nation is its youth, and how true this is of America. From the beginning of the Republic, school construction has always been a major objective, but it has never kept pace with the growth of student population.

The trend of student enrollment has been growing year by year in the face of erratic and inadequate provision for the annual increase in the number of students. In 1918 it was 20,800,000; in 1924 it was 24,300,000; in 1930, 25,700,000; in 1934, 26,700,000; in 1936, 27,300,000; and in 1937 it was nearly 28,000,000.

CONSTRUCTION SLOWS DOWN

During recent years, particularly during the period 1930 to 1933, school construction was not only slowed down but fell far below the actual needs of the Nation. Over a period when educational facilities should have been expanded, expenditures for new school construction were generally curtailed throughout the entire country. In most cases this curtailment was necessary due to a lack of funds. The result, however, was an accumulated shortage of school accommodations, which began in 1926 and reached serious proportions by 1933.

In 1926 school construction had dropped from a normal outlay of $400,000,000 annually to less than $100,000,000 in 1933, with indications of an almost complete discontinuance in 1934. Two out of every five schools in the country had been built before the turn of the century, and a large number of buildings were obsolete. Many of these were unsafe, unsanitary, and dangerously susceptible to fire. Moreover many buildings were overcrowded and far too many communities, particularly of the suburban type, were without their own school facilities.

When the Public Works Administration was established in 1933 President Roosevelt insisted that the thousands of applications which poured in from every section of the country for loans and grants toward the construction of new schools be given priority, and it might be of interest to know that of the more than 34,000 applications that have been received over the past 6 years for P. W. A. projects 43 percent have been for school facilities, and P. W. A. is proud to have been able to aid materially in overcoming the acute shortage of adequate schools throughout the Nation. Over a period of nearly 7 years there have been 7,316 educational building projects involving 12,690 buildings offering 59,522 classrooms with accommodations for 2,380,880 students, the cost of which has been $1,181,536,010, for which the Federal Government, through P. W. A., made direct grants of $481,253,841. In addition to classrooms, P. W. A. projects have added to the educational plant of the Nation 4,300 auditoriums, 3,500 gymnasiums, 1,000 libraries, 1,350 shops, 800 cafeterias, and approximately 12,000 other units, including laboratories, study hall, and science and commercial classrooms.

P. W. A. LEADS SCHOOL PROGRAM

All in all, P. W. A. has accounted for more than 70 percent of all school construction carried on in the Nation since 1933.

In general, P. W. A. allotments for school construction have served four main purposes:

(1) To provide new facilities to meet the needs of existing populations and growing enrollments;

(2) To replace unsafe and obsolete small buildings with modern consolidated schools;

(3) To provide new structures with modern equipment to replace obsolete and overcrowded buildings, without proper heating, ventilation, lighting, and sanitation; and

(4) To provide needed additions and improvements to existing buildings.

Largely due to the Federal Government's willingness to share the cost of local public works, in order to put men to work, a number of communities which had no school facilities whatever for large groups of children undertook to build schools. For example, in Grand Isle County, Vt., there have existed for generations primary schools, but no high school. Students have always been forced to journey to high schools many miles away. However, with the aid of a P. W. A. grant of $28,000, Grand Isle County was able to build a $63,000 building—the first high school in the county. At the other end of the country, in Palm Springs, Calif., a new P. W. A. high school was constructed to save the children a daily bus trip of 50 miles to the nearest school in Banning.

There are many other instances of P. W. A. aid in bringing schools where none existed before. Far more typical is the work done to bring modern consolidated schools in place of one-room structures.

The little red schoolhouse, like McGuffey's Reader, is a product of a bygone era, yet while the reader has disappeared, except as a collector's item, the little red schoolhouse is still present in many localities. There are 142,000 of them out of a total of 246,000 schools, and in these little structures a single teacher most often teaches children of all ages and all grades, and these children must prepare themselves under such handicaps for the future. Despite the appearance of economy, educators point out, the little one-room schools are expensive anachronisms, for it may cost less to do a better job in a centralized modern school.

Lyme, Conn., was one of the first communities to seek P. W. A. assistance in bringing its school facilities up to current times. In 1789 a one-room schoolhouse was built in Lyme. The town added four more one-room structures by 1847. They were good schools according to the standards of those times. However, they lacked ventilation, proper lighting, and other necessary facilities. Heat was provided by cast-iron stoves. Long before 1933 everyone was ready to admit that Lyme had gotten its money's worth out of its century-old schools. However, something better was needed for the children, but it was not until P. W. A. was set up that the school districts could get together with the hope of a new building. An application to P. W. A. brought them an outright grant of $8,400 for a $32,700 modern school plant. The new building, adapted to local architectural style, accommodates 160 pupils, a few more than the total capacity of the five one-room buildings it has replaced. Lyme offers a typical example of what P. W. A. had been doing to help in the movement toward consolidation. In a number of instances P. W. A. has cooperated with State educational authorities and planning boards toward this end.

By providing assistance for the construction of 790 consolidated schools throughout the Nation, P. W. A. eliminated 1,582 obsolete structures. Moreover, the movement has been given impetus by the construction of new and improved P. W. A.-financed roads and highways, on which school busses can travel. P. W. A. also made allotments to school boards and other school bodies for school busses. For example, one Southern State received a grant of $197,000 to provide more than 750 busses, costing $655,000, for school children of that State.

PUPILS NOT PROPERLY HOUSED

When P. W. A. arrived on the scene there were 2,700,000 pupils going to school in temporary shelters. Hundreds of thousands of others were attending on the platoon system, one set arriving very early in the morning and rushing through their lessons by noon to make way for a later shift.

To overcome this deficiency and also to provide facilities for modern education such as laboratories, shops, and auditoriums, communities participating with P. W. A. in a public-works program, not only built new schools but also built additions and improvements to existing structures.

The West Virginia P. W. A. school program, of which this new building in Berkeley Springs is a part, was made up of 43 projects involving the construction of 202 buildings offering 706 classrooms for 28,240 students. The cost of the West Virginia schools in which P. W. A. has cooperated was $12,728,000, for which P. W. A. grants of $5,619,300 were made.

I do not want to burden you with statistics, but I have quoted these figures in order to show that the communities of the Nation have considered adequate school facilities their primary need in the matter of public works.

And Berkeley Springs is no exception. Like many another community, you had the will but not the wherewithal. The old building had become inadequate, resulting in overcrowded conditions, and in some cases extremely hazardous, and there was a serious shortage of certain important facilities. There is no question, of course, but that the old building was adequate in its day and that it has served its purpose and served it well. But today it is a different story.

Your new building now adequately houses your children. It represents the last word in modern construction and equipment and in its construction was incorporated features to promote safety of the school children. Unfortunately, in the years gone by the question of fire prevention and protection was not given enough consideration. Shortly after the turn of the century America became fire conscious, and there was a general improvement in all types of construction aimed at the prevention of the loss of life and property by fires. Gradually the firetrap school began to disappear, but this disappearance has been too slow, and it is safe to say that we have today in the United States at least 75,000 school buildings that do not afford ample fire protection.

While the school construction portion of the P. W. A. program during the past 7 years has been of great importance, we must not lose sight of the fact that the Public Works Administration was created primarily for the construction of useful and permanent public works, the relief of unemployment, and the stimulation of the country's industries. And in this aid to national recovery Berkeley Springs has had a share. Your new school, costing $198,500, provided an estimated 150,000 man-hours of employment here in Berkeley Springs.

EMPLOYMENT IS HELPED

But the stimulus that your project provided to labor did not stop here. According to the Bureau of Labor Statistics of the Department of Labor, every man-hour of what is called site employment provided 2½ hours of indirect labor behind the lines in industrial plants and in the transportation of finished materials. So, according to this formula, the construction of the Berkeley Springs High School provided approximately 375,000 man-hours of indirect employment in industry.

The matter of distribution of labor, direct and indirect, as the result of any public-works construction is of interest. Not long

ago my friend, David Lynn, Architect of the Capitol, went to the trouble to trace back to their origin the materials and fabricated parts used in the construction of the New House Office Building in Washington. My recollection is that he found that 37 of the 48 States enjoyed some advantage from the building of that single structure. The same principle also goes for practically every Public Works Administration project of the past 7 years, and it is true of your new school building. The homely example of dropping a pebble into a quiet pool and watching the ever-widening circle of ripples is indicative of the far-reaching results to industry that a single project such as yours can have. I dare say that the brick, cement, steel, tile, and other materials that went into your new building came from at least a dozen States. Thus you can see that various industries will be affected as well as the transportation companies. In the same manner materials produced in the State of West Virginia are, no doubt, used in P. W. A. projects in all other sections of the country.

And so you good people of Berkeley Springs should be doubly proud in not only the fact that you have solved your school problem, but that you have, along with several thousand other communities, helped rebuild America.

In making grants for the construction of new schools, the Federal Government has made an investment in human values that will pay dividends to the Nation manyfold. Tonight we are dedicating this new building. Literally this is the formal turning over of the building to those who will use it, but here dedication ends and consecration begins—consecration to the ideals of education and learning—ideals which are an essential part of our American form of patriotism which is so evident in West Virginia.

And I want to offer, for P. W. A. and myself, congratulations to not only all those of you who dreamed and planned and carried out to this successful conclusion a new high school, but to all those who had a part in the construction of this building. I am very grateful for the privilege of being here. May God bless you all and the work that your school will perform.

America's State of Unpreparedness and the European War

EXTENSION OF REMARKS

OF

HON. FREDERICK C. SMITH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

EDITORIALS FROM THE BUCYRUS (OHIO) TELEGRAPH-FORUM

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two editorials from the Telegraph-Forum, Bucyrus, Ohio. The Bucyrus Telegraph-Forum has a splendid record of being nonpartisan in its editorial policy. The editor, Mr. Roland Peters, is fearless in his support of principles, regardless of party.

These editorials show a wide and comprehensive grasp of the more fundamental problems that now confront our Nation. They represent the type of thought he has been expressing for a number of years. If America is to be saved from the totalitarian disease that is now so rapidly consuming the other nations of the earth, it will be due to the clear thinking, to the fearlessness, and to the abiding faith in the age-old and thoroughly proven principles of sound economy and government that are the sustaining basis of all that we term civilization, which Mr. Peters so ably expresses in his editorials.

I wish every Member of Congress might find the time to read these editorials.

[From the Bucyrus (Ohio) Telegraph-Forum of May 17, 1940]

MR. ROOSEVELT ADMITS HE HAS THE UNITED STATES IN A CORNER

When President Roosevelt requested Congress Thursday to enact a defense program costing from a half to a billion dollars and at the same time told Congress that it would be up to Capitol Hill to find a way to finance the program he admitted that he has put the United States in a corner and that he does not know how to get out of it. Congress faces the alternative of creating new taxes to raise funds to equip our national defense as it should be equipped or of lifting the legal limit of the national-debt total.

Neither avenue of action would have been necessary if Mr. Roosevelt had kept the public trust that he assumed in the 1932 election. He entered into the campaign that year on a program of empty promises of how he would save the millions that he charged his predecessor had spent. He campaigned on a platform dedicated to economy and to finding work for the jobless. Carefully he guarded against his communistic plans to employ and pay them with public funds.

Then the billions began to roll out of the public's purse without regard for the inevitable day that always catches up with extravagance beyond ability to keep faith. Four years later he went about the country crying about how he had seen war and of how "I hate war." Fact is, he had one of the most sheltered posts during the World War that anyone could have. Four years ago he could see that world affairs were heading into an eventual conflict, but he did nothing to put the domestic house in order to be prepared for such an eventuality. Instead, he and his spenders kept bearing to the left and continued to spend the public's billions for something common sense tells anyone is impossible—prosperity by way of indebtedness.

Now, the time of which Mr. Roosevelt talked so much at Chautauqua, N. Y., is here. The war he hates is spreading across the countries of Europe. But he has not hated it enough to prepare by holding public expenditures in check in anticipation of the day that appeared inevitable a long time ago. Nor has he hated war enough to refrain from bringing America closer to it by his official blasts at the totalitarian powers and by holding for no sensible reason the liner *Bremen* to further antagonize the Nazi Government. Now the day is here when America must prepare itself for its own defense—and there is nothing with which to, other than new taxes or further jeopardization of the country's welfare by increasing the debt limit. Upon Franklin Roosevelt's shoulders rests the sole blame for America's state of unpreparedness at a time when preparedness is vital. Contrary to his every other message for spending money, each one accompanied by a plan, or rather theory for paying the bill, he now tells Congress to accept the responsibility. He is in the corner clear-thinking people have been telling him for 7 years he would eventually be in.

[May 16, 1940]

THE AMERICAN PEOPLE'S DUTY OF THE DAY

The increasing startlingness of Europe's war news presents a challenge to the people of the United States to take immediate cognizance of their duty to America's boys. Not many months ago a person would have been called an oaf had he advanced an opinion that Adolf Hitler could successfully seize Poland, Norway, Denmark, Holland, Luxemburg, and Belgium and at the same time launch a drive into France.

Today we are witnessing such a seizure of nations. What next will happen cannot be foretold. In Washington preparations are being made for war, but hopes are for peace. Combined, the news from Europe and Washington is of the kind that creates emotionalism. It is our duty today to subdue this emotionalism and to keep within our minds a clear track for thoughts of the welfare of the millions of American young men who would be the first to be slaughtered were we to permit emotionalism to overpower common sense as we did back in 1917.

Within a fortnight the high schools of every American community will send into the world new crops of boys. Ninety of these lads will be graduated from our high school here. These boys are entitled to the pursuit of what has been and still are their life's dreams—a job, marriage, success. They are entitled to the fruits of democracy as we of other generations have enjoyed them. Those who would survive deserve more than stupendous taxation which would be forced upon them to pay for the war that killed their classmates. They deserve democracy as we have known it instead of the dictatorship and bossism which, without doubt, would be the lot of a nation entering a war with a $45,000,000,000 deficit.

These boys feel differently today than those of 1917. The last World War is still fresh in the minds of those who passed through it. From all sides the boys of today have heard of its hell. Today they are saying, "I won't go unless the war comes here." These are not the words of what was known in 1917 as slackers. They are an expression of self-conviction that patriotism begins and ends at home. They say they won't go, but they would. They would have to go just as the boys of 1917 had to go. They have no choice, but we of other generations can choose for them. We can prevent America's entrance into the war in Europe. We can protect the dreams of these boys until, and if, we are attacked. Then there would not be one real American who would shy away from defensive duty.

Yes; we'd wave goodbye to them. We'd wave flags as they passed on their way to a living hell, but what good would all that do them? What these boys want is a job, security and a future. Now is the time for us to be cool, push aside emotionalism and work hand in hand to keep them from Europe and to build in this America an adequate defense system to protect them even from attack at home.

President Roosevelt has not kept faith with them. Secretary of the Interior Ickes has not nor has Secretary of State Hull. From the hour war clouds began to gather in Europe, these three high representatives of the American Government have lost no opportunity to take a jab at totalitarianism and at the leaders of totalitarian states. As recently as 48 hours ago both Mr. Roosevelt and Mr. Hull told the world again that America is against Adolf Hitler. Instead of soothing the stormy waters they are agitating them. If America's boys of today are to be protected against foreign war it is going to be the task of the American

people to protect them. So far nothing but a belligerent attitude has been shown by the Government's keymen who should possess sufficient intelligence to know that name-calling is the first step to actual fighting.

Celebration of Foreign Trade Week

EXTENSION OF REMARKS
OF
HON. JERE COOPER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1940

MESSAGE FROM THE PRESIDENT AND ADDRESS BY HON. CORDELL HULL

Mr. COOPER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message of the President of the United States (read by Secretary Hull), and radio address of Hon. Cordell Hull, Secretary of State, in connection with the celebration of Foreign Trade Week, on May 19, 1940:

It gives me great pleasure to read the following message of the President of the United States:

"As on similar occasions in the past, I am happy to extend again my most cordial greetings to all those who are participating in the observance of Foreign Trade Week.

"This important annual observance is becoming traditional in our national life. It is a valuable occasion for renewing our appreciation of the essential significance of foreign trade for the economic well-being of our Nation. It is a reminder that vigorous and mutually beneficial trade relations among nations are essential for the maintenance of enduring world peace.

"Today we are all profoundly conscious of the black cloud of war overhanging so much of the world's surface. The devastating and widespread wars now being waged have far-reaching economic and spiritual effects. Some of these effects fall heavily upon our our county.

"The tragic events now transpiring bear eloquent testimony to the fundamental need for liberal economic policies in international relations, if, in the future, frictions, conflicts, and wars among nations are to be averted. They serve also to emphasize the inescapable fact that our Nation cannot enjoy sustained and satisfactory prosperity unless adequate foreign markets exist for our exportable surpluses and unless our necessary imports are unhampered by adverse developments at home and abroad.

"The promotion of liberal economic policies has been—and will continue to be—a vital part and a dominant purpose of the foreign policy of the United States. In this way, and in this way alone, can the United States contribute to the economic reconstruction of the world when the destruction now going on shall have ceased.

"FRANKLIN D. ROOSEVELT."

The observance of Foreign Trade Week occurs this year at a time when the international situation is extraordinarily grave. Large portions of two continents are being ravaged by violent and destructive warfare. The repercussions of these titanic struggles extend to the uttermost corners of the earth. They will have a profound influence, in innumerable ways, upon the future of this Nation and of every nation.

The disorganization and disruption of the normal processes of life in important areas of the globe have already produced serious effects upon our foreign trade and upon our shipping, and, through them, upon many other phases of our economic life.

As regards current trade, both exports and imports are involved. Apart from the other 20 American republics, all of the foreign countries which are the principal customers for our products are affected by war. Some of them have ceased their purchases from us almost altogether because of the exigencies of wartime controls. Others have had to subject their foreign trade to stringent regulation, which has had the effect of changing substantially the composition of our exports.

The result of all this is that while some of our exporting branches of production are experiencing temporarily an intensified demand for their products, others are subjected to a slackening of foreign demand. Our total exports have increased substantially during the war months. They amounted to $2,607,000,000 during the period from September 1939 to April 1940, as compared with $1,952,000,000 during the corresponding period of 1938–39. Obviously, the increases have far outweighed the decreases. Nevertheless, the decline of foreign demand for some of our important export products has naturally created hardships for the agricultural and manufacturing industries involved. We must frankly face the possibility that these difficulties may become greater. The Government is constantly engaged in most earnest efforts to reduce these difficulties as much as possible through negotiations and conversations with foreign governments.

On the import side, too, the effects of war are felt in our economic life. In some cases, disordered conditions abroad give rise to situations in which domestic industries face the impact of additional competition from imports. Where this is the case, the Government, of course, takes appropriate measures to deal with the situation. But there also are other, and entirely different, ways in which the war is affecting our imports. Wartime exigencies have made it more difficult for our manufacturers to secure some of the raw materials which they must bring in from abroad for their operations. War has made it more difficult for our consumers to obtain some of the commodities produced abroad to the use of which they have long become accustomed. Here, too, the Government is making most earnest efforts to eliminate or reduce some of the war-created obstructions to a continued inflow of imports essential to the functioning of our economic life, to our national defense, and to the comfort of our people.

In part, the difficulties experienced in both our export and our import trade are due to dislocations of shipping caused by the war. In this connection, I should like to say a word about our own shipping problem, a reference to which is particularly appropriate at this time, because foreign-trade week traditionally coincides with the observance, on May 22, of National Maritime Day.

In pursuing a course of policy designed to reduce the risks of our possible involvement in war, it has been deemed wise to forbid our merchant vessels from entering certain designated zones of danger. This measure, adopted with the view to safeguarding our highest national interest, has obviously imposed handicaps on our merchant marine, which has been compelled temporarily to abandon some of its most valuable trade routes.

It is immensely gratifying to observe the energy and initiative with which our shipping industry has sought to adjust itself to the new emergency conditions. Some new routes have been mapped out and arrangements have been made for new ports of call. Government effort and private enterprise have worked, each in its own sphere, to bring about the necessary adjustments. Today, most of the merchant fleet flying the American flag is again busily employed in passenger and freight traffic.

Some of the tonnage formerly used for trans-Atlantic sailings now plies in the waters of the Western Hemisphere. This is a consequence of the fact that, as between our country and the other American republics, trade has, in recent months, substantially increased.

In trade, as in shipping, the difficulties to which wars abroad have given rise cannot be adjusted by Government alone or by business alone. The Government, through the various avenues of action open to it, can and must, create conditions in which private enterprise can function most effectively. It alone is capable of inducing other governments to moderate the severity of the restrictions which they impose to the detriment of American trade. In time of war, the Government's tasks in this respect multiply with the multiplication of restraints on trade. But, beyond that, whether in war or in peace, the prosperity of our foreign commerce must depend upon the vigor and ingenuity of those actually engaged in the process of trade, upon their initiative and enterprise.

From this point of view, I have every confidence in the ability of our businessmen to make the adjustments necessitated by the war emergency. They have already shown their capacity in this direction. I have equal confidence in their ability to resume vigorous progress in the foreign-trade field when peace is restored—if our Government and other governments will have the wisdom to create sound conditions for the functioning of international trade.

The qualities I have enumerated—energy, ingenuity, initiative, enterprise—are traditionally American. By possessing them and by using them, in a political system based on democratic institutions and on individual freedom under law, our farmers, our workmen, and our businessmen have been responsible for the vast economic expansion which has characterized so vividly the history of our Nation. Our further national-economic growtn requires the greatest practicable development both of our domestic economy and of our foreign commerce. Neither can function satisfactorily or soundly without the other.

What has happened in the last few months has brought out strikingly—perhaps more strikingly than ever before—the effects of foreign trade upon our national well-being. For the present the difficulties experienced by those of our surplus-producing branches of agriculture and industry, which are being affected by the sudden wartime curtailment of foreign markets, are being relieved to some extent by the general economic improvement in the country, resulting, in part, from the expansion of other exports. But it must be increasingly clear—to everyone who would but open his eyes to what is going on today—that permanent and stable prosperity for our surplus-producing branches of both agriculture and industry—and therefore for the country as a whole—is possible only in a world which is at peace and in which expanding economic activity in all countries makes possible increasing employment and consumption and hence rising standards of living everywhere.

The difficulties which we now experience in securing some of our essential imports provide an added unanswerable refutation to those who indulge in reckless assertions that our country can isolate itself from the rest of the world and prosper. The commodities which we bring in from abroad consist overwhelmingly of raw materials and foodstuffs which we either do not produce at all or else produce in insufficient quantities, and of various products and

specialties which differ markedly from our own production in quality, price, season of marketing, etc., and without which our people cannot maintain their accustomed standards of comfort and enjoyment. There is no occasion for rejoicing when our imports of these essential commodities decline. That is a sure sign that some of our factories stand idle and therefore need smaller amounts of raw materials. That is a sure sign that the purchasing power of our people has been curtailed by unemployment, lower wages, or lower prices. That is a sure sign that our exports, too, must decline.

Loss of foreign markets for our exportable surpluses disorganizes and reduces our domestic market as well, causing disastrous unemployment of human and material resources. Reduced to its simplest terms, the importance of foreign trade to our national economic well-being may be stated as follows:

If we were to shut out by means of embargo policies every dollar's worth of agricultural imports and every dollar's worth of imports of manufactured goods—and thereby shut in our own agricultural exports and our own exports of factory products—we would put into cultivation about 10,000,000 acres and take out of cultivation over 40,000,000 acres; and we would take out of employment at least two or three times as many men as might conceivably be employed to make the goods now imported.

These results would inexorably follow if our country were to enter upon an embargo policy as regards tariffs, quotas, controlled exchanges, or other trade-destroying devices. For the embargo game can be played by foreign countries, as well as by us. And there is nothing more certain in international trade relations than a vicious cycle of retaliation and counterretaliation once any country is short-sighted enough to start the process. The bitter experience of the period following the World War bears witness to this, and—much nearer home—our own disastrous experience under the embargo policy of the Hawley-Smoot tariff.

Six years ago, our country resolutely turned its back upon this type of economic suicide. By enacting the Trade Agreements Act, the Congress created an instrument with which it became possible to meet and overcome some of the pressing and extraordinary difficulties in the field of foreign trade with which our Nation was faced. During the period of its operation to date, the trade-agreement program has amply demonstrated its effectiveness for this purpose. As was proved conclusively in recent hearings before appropriate congressional committees, it has brought marked benefits to all groups of our population and to all sections of the country, without inflicting injury on any one.

The renewal of the Trade Agreements Act for another period of 3 years was an immensely important step from the viewpoint of both the immediate and the long-range interests of our country. As things are today and as they are likely to be for some time to come we need to have this and every other appropriate means of safeguarding our trade and of our whole economic life and of maintaining and improving the economic health and strength of our country. At the same time we must be everlastingly concerned with the broad and basic problems of the future.

The principles underlying the trade-agreements program offer the only possible basis on which the economic life of the world can be successfully rebuilt when the present wars are over. Only if these principles prevail in economic relations among nations will it be possible to create a firm foundation for stable peace and for satisfactory economic progress. If the opposite tendencies—those of totalitarian autarchy and all that it means—so ominously spreading today, should come to be widely dominant, mankind will be plunged into a period of chaos and impoverishment, and, inevitably, into moral and spiritual decay.

Our Nation has an obvious and essential stake in the establishment and preservation of conditions of stable peace and of orderly international relations. It is our duty to ourselves to make every appropriate contribution toward that end. Our paramount task today is twofold, and I cannot emphasize too strongly the vital importance of both of its phases. We must increase our national strength, redouble our national vigor and courage, create for ourselves adequate means of defending this country's safety and security against any armed challenge. And we must hold ever in readiness—for use when circumstances permit—the proven and tested instrument of constructive action for economic welfare, free enterprise, and stable peace provided by the trade-agreements program.

War and World Advancement

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

LETTER FROM HON. COMPTON I. WHITE OF IDAHO

Mr. WHITE of Idaho. Mr. Speaker, what will be the outcome of the war now raging in Europe, and what can we as a nation do to serve the best interest of our country and to assist humanity in restoring civilization and insure the stability of governments and safeguard the rights of people everywhere to maintain their liberty and security?

My views expressed on the subject in a recent letter are submitted for inclusion in the RECORD.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON IRRIGATION AND RECLAMATION,
Washington, D. C., May 20, 1940.

Mr. FRANK E. MEEK,
Post Office Box 774, St. Louis, Mo.

DEAR FRANK: Your courtesy and assistance in supplying me with a copy of your letter addressed to Senator CLARK, stating your views on the international situation, is very much appreciated.

I am particularly interested in the national defense and feel that the country should be made impregnable to invasion from any quarter. I know that we are in accord in opposing war in any country, and I have never lost faith in the ideals of President Woodrow Wilson. I believe that our country should do its part in setting up a supreme authority with policing power to prevent any war anywhere in the future.

This is a big subject, and much can be said of past mistakes and measures that might have been taken to prevent the destruction and devastation that is now sweeping over Europe; but in the light of experience, let us hope that order and reason will come out of the present travail, and the family of nations will devise and put into operation an organization with supreme authority that will safeguard mankind in the future from such terrible havoc.

I deeply appreciate your assistance in making known your views on this great issue, and wish that more of the people whom I have the honor to represent would give me the benefit of their good advice on national questions.

Sincerely yours,

COMPTON I. WHITE, M. C.

Counsel of Disaster

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

EDITORIAL FROM THE WASHINGTON EVENING STAR

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial, which appeared in Monday's edition of the Washington Evening Star. It is aptly entitled "Counsel of Disaster," and is one of the best editorial comments which I have yet seen on the recent radio address delivered by a young man to whom it correctly refers as "a good airplane pilot":

[From the Washington Evening Star of May 20, 1940]

COUNSEL OF DISASTER

In an address which can only be described as remarkable for the inconsistency and confusion of its thought, Col. Charles A. Lindbergh has told the people of America that we are in no danger of war, and that we will not become involved in war unless we seek it out ourselves.

With an assurance implying a factual knowledge which he cannot have, Colonel Lindbergh says categoricaly and without any qualification that "no one wishes to attack us." In the same breath he says that we "need a greater air force, a greater Army, and a greater Navy." The self-contradiction presented here is interesting. Since it is not to be supposed that Colonel Lindbergh has access to information concerning the plans of possible aggressors, he is giving dogmatic expression merely to a personal opinion when he says that no one wishes to attack us and that no one is in a position to do so. But if that is the case, or if he really believes it to be the case, why, then, should he urge the building up of our armed forces? For what reason would he spend money on additional arms if he does not believe there is any danger of an attack upon us?

The colonel also advances as a novel proposal the thought that we ought to decide what we are going to defend before we think about building a defensive air force. If our defense is to be confined to the United States, he says, we shall have to build one type of air force; if we are to defend the Western Hemisphere, planes of different types will be needed. That, coming from one who does not shrink from advising the Nation as to the course it should follow in this critical time, is an amazing proposition.

President Roosevelt and other high officials have stated time and again that it is our intention to defend the Western Hemisphere. Fleet and land maneuvers have been carried out with that objective in mind. From no responsible quarter has there come the

slightest suggestion that we should confine our planning to a defense of the United States alone. To do so would be the sheerest folly, and no one knows that better than Colonel Lindbergh, for he acknowledged that any attempt to defend only the United States "eventually would leave us as vulnerable to air attack as the nations of Europe are today."

Colonel Lindbergh stands alone in his uncertainty as to what our defense policy is. It is a doubt which exists in his mind and nowhere else. But that does not soften the harsh fact that in advancing the suggestion that we do not have a definite policy in this respect he is doing a disservice to the country. If accepted by the people at their face value, his remarks could only serve to shake public confidence in the administration at a time when unity is a paramount necessity.

Any and all suggestions that it is to our interest to aid the Allies in their struggle against Germany are rejected outright by Colonel Lindbergh as being the machinations of unidentified "powerful elements" in America seeking to serve their own selfish purposes. Once again he holds forth personal opinion disguised as fact, without any supporting evidence.

The President, with ready access to sources of information that are denied to Colonel Lindbergh, has stated in effect that France and Britain are fighting our battle and that they must be kept fighting at least until we can prepare ourselves. That will require precious time, a year or more at best, but the colonel counsels delay.

His advice invites disaster, as is evidenced by the fate which has befallen half a dozen stricken nations in Europe, and the American people should have little difficulty in choosing between the course advocated by the President and that which Colonel Lindbergh, a good airplane pilot, would follow.

"Spring to Arms"—What Arms?

EXTENSION OF REMARKS
OF
HON. STEPHEN BOLLES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1940

EDITORIAL FROM THE BELOIT (WIS.) DAILY NEWS

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Beloit (Wis.) Daily News on a subject at this time most acute in these United States.

[From the Beloit (Wis.) Daily News]

"SPRING TO ARMS"—WHAT ARMS?

Write it in large letters—courage is not enough.

The days are past when the United States could afford to listen to a Bryan, with his confidence that, when they were needed, "a million men would leap to arms overnight."

"What arms?" asks the American of 1940, his eyes apprehensively on Europe, and especially on the countries which trusted in nonaggression pacts, in meticulous neutrality, in patriotic spirit.

In the days when the United States rebelled against the British Crown, "embattled farmers" could crouch behind the stone fences of Concord with muskets hastily snatched from above the fireplace, secure in confidence that they were not conspicuously worse armed than the British regulars.

That is over. All men skilled in military affairs have known it for years. Now it is written across the face of Norway and Holland and Poland for all to read: "Courage is not enough."

The British should have had their lesson in 1915, when the great Kitchener felt sure that two machine guns to a battalion were "more than sufficient," and that the tank was "a pretty mechanical toy." Yet they have allowed Germany to outbuild them in planes and mechanized equipment.

We also had some object lessons in 1917–18, when our Army in France, more than a year after our declaration of war, was still using European-built artillery, machine guns, and airplanes because we were not even then able to build our own and deliver them to the fighting front.

At last the Garand rifle is being delivered in slow driblets, replacing the 1903 Springfield. The air forces have not been neglected, yet were it not for European orders, the rate of production would still be very slow. Pilot-training, almost more important than plane-building, lags. There is no antiaircraft artillery worth the name, and virtually no munitions industry.

All this is no cause for hysteria, but for sober thought, careful planning, and wise foresight.

We need to calculate carefully just what our military needs are to defend this country from any likely attack, and then supply them promptly and effectively.

For whatever heroic deeds may have been performed in the past by ill-armed and underequipped patriots, it is perfectly plain that today courage is not enough.

A Scientific Tariff Policy

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1940

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. MURRAY. Mr. Speaker, the following article from the May 4 issue of the Christian Science Monitor gives the viewpoint of the National League of Women Voters:

[From the Christian Science Monitor of May 4, 1940]

STRONG TARIFF PLANKS AIM OF WOMEN'S GROUP

(By Mary Hornaday)

NEW YORK, May 4.—Both Democratic and Republican Parties will be urged by the nonpartisan National League of Women Voters to include planks on scientific tariff making and qualified Government personnel in their 1940 platforms.

Final arrangements for sending a league delegation to the platform-making sessions of both conventions were laid here at a general council meeting, following conclusion of the league's biennial convention here yesterday.

Instead of backing the Hull reciprocal trade program by name, the league wrote its tariff plank in terms it hopes will be broad enough for acceptance by Republicans as well as Democrats.

"Any party should be for a tariff that is not the result of a tug-of-war between special interests but is planned for the good of the country as a whole," declared Miss Marguerite M. Wells, of Minneapolis, Minn., newly reelected president of the league.

"Women got the vote at a time when tariff logrolling had become such a public scandal that they hated it from the beginning," added Miss Wells. "The only difference between league members and party people now on this issue is that we keep on being against logrolling all the time while they sometimes change their minds when they are in office. We believe that the promotion of scientific tariff making and the maintenance of a tariff policy that will tend to free instead of to clog the channels of international trade are very much in the public interest."

AGAINST SPOILS SYSTEM

Of the league's insistent demand for better qualified public services, Miss Wells said, "our stand on qualified personnel in Government will be that of asking the parties to pledge themselves to abolish the spoils system of patronage as destructive to democratic principles. We shall ask them to substitute principles and methods of employment that will attract the best trained citizens to the Government service."

At its final business session yesterday the league adopted a score of policies on which its board and branches in 31 States will be empowered to undertake specific campaigns during the next 2 years. Most important among these projects will be:

Promotion of more efficiency and responsibility on the part of State legislatures, opposition to interstate trade barriers, support of the principle of old-age insurance; extension of the county manager form of government as well as the city manager; development of scientific research into the field of taxation with increased regard for ability to pay; improvement in selection and procedure of juries; and attention to bettering substandard conditions of work violating the wage-hour law.

This article shows a keen interest in the wage and hour problems of our people.

I am sure, Mr. Speaker, that anyone who gives thought to the tariff question must admit that a protective tariff is necessary in order to give the farmer a floor under his wages and a ceiling over his hours. The farmer cannot have a desirable wage or acceptable hours if he is compelled to compete with cheap foreign labor in the production of agricultural crops. The farmer cannot be subjected to the free-trade approach of the reciprocal-trade treaties and hope to obtain the fair wages and the fair hours to which he is entitled in this country.

I expect to see more and more groups discontinue support of the reciprocal-trade treaties that have caused such losses to the dairy interests of our country. It was morally wrong for a "rubber stamp" Congress to delegate its powers to any one man to control the milk check of every dairy farmer in America and also control the grocery bill of every family in our country.

It is high time that the wages and hours of the farmers of this country had consideration, and I am happy to note that the National League of Women Voters join in this movement. As a part of their program for the next 2 years, I hope they will include a study of the wages and hours of the farmers of this country. I am sure they will not give their stamp of approval to the 20-percent reduction in the tariff on cheese in 1938, when cheese averaged only 12.6 cents per pound for the year. Their study of the wages of farmers producing 12.6-cent cheese, 5-cent hogs, and 12-cent eggs will demonstrate to the people of this country the fallacies and injustices of the free-trade approach of the reciprocal trade treaties as executed by the New Deal.

United States Far Behind in Air Defense

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1940

EDITORIAL FROM THE WICHITA (KANS.) BEACON

Mr. HOUSTON. Mr. Speaker, under leave granted me, I am pleased to present herewith, for the special benefit and consideration of Members of Congress, a timely editorial on air defense which appeared in the Wichita (Kans.) Beacon of May 14, 1940:

UNITED STATES FAR BEHIND IN AIR DEFENSE

The United States leads the world in many things—in telephones, automobiles, radios, electric refrigerators, homes with modern plumbing, in railroad mileage, in the efficiency of its industrial production, but it lags far behind one nation—Germany—in one of the most important things of this modern world.

THAT IS MILITARY STRENGTH IN THE AIR

German air forces, by the most conservative figures, are now at least three times the size of the United States, the Nazi pilot force is nearly four times greater, and the airplane-production capacity of Germany is about six times greater than that of the United States.

The United States has now 4,165 first-line fighting planes as compared with more than 12,000 in Germany. The United States has a roster of 7,942 pilots as compared with more than 30,000 in Germany. Ground forces in this country total 53,361 compared with more than 300,000 in Germany. The production capacity of this country is now about 500 planes a month as compared with at least 3,000 a month.

Of that 500 most of them are now going to England and France. Under the expanded defense program in 1 year from next month the Navy will have 3,125 planes, the Army 5,500, a total of 8,625. There is no telling how big the German air armada will be by that time.

It is now 20 months since the Munich Pact, more than a year since the violation of Czechoslovakia, nearly a year since the end of Poland—each one an unmistakable guidepost along the road to war. In that time this Nation could have geared its aviation production to meet that of Germany. Instead we lag far behind every major power in the world.

There are bright spots behind the black picture of comparative air strength. American planes are among the best in the world. American pilots are more thoroughly trained than in any other country. American industry has the capacity to turn out more planes if given the proper incentive. No industry will produce goods unless there is a market for them. That market has increased considerably in the past few months, but still has not answered this Nation's great need for a larger air force of both planes and men.

Wichita went after a new Federal aviation laboratory some months ago. At that time it was the opinion of aviation and congressional leaders that still another laboratory besides that one that Wichita sought, but failed to gain, should be constructed. One is now on the east coast. One is to be constructed on the west coast. Surely the third should be located inland, safe from any sudden foreign attack, and nowhere is there a better location than Wichita.

Wichita failed to sell itself then, but now it has a still more powerful claim. Military leaders are giving serious attention to the dangers of a European invasion by air from a Greenland base. The serious situation in Mexico has caused considerable worry in Washington. Where, in the whole United States, is a more ideal location for an air-research center and the concentration of military-defense power than at that one point in the United States equally distant from the Atlantic and Pacific coasts, the Canadian and Mexican borders?

That place is Wichita, and this city should redouble its efforts to gain the location of the next air laboratory here and to help speed the Nation's plane production until adequate defense in the air is gained.

The Armament Program

EXTENSION OF REMARKS
OF
HON. CHARLES HAWKS, JR.
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1940

ARTICLE FROM THE BUFFALO COURIER-EXPRESS

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Buffalo Courier-Express of May 20:

[From the Buffalo Courier-Express of May 20, 1940]

BISHOP DUFFY HITS ROOSEVELT SPEECH—ASSAILS ARMAMENT PROGRAM, FEARS TOTALITARIAN STATE, WARS TO RESULT FROM IT

Denouncing the armament speech of President Roosevelt as "the most fateful and perhaps the most tragic utterance ever made in the United States of America," the Most Reverend John A. Duffy, D. D., bishop of the Catholic diocese of Buffalo, yesterday morning pleaded with 500 members of the Buffalo post-office staff on the occasion of their annual communion breakfast to aid in "bringing back God." The breakfast was held in Hotel Lafayette.

The Catholic bishop declared that preparedness such as President Roosevelt outlined means the delivery of this Nation to the totalitarian system and alinement with the brute force that is endeavoring to destroy the civilization of the world. Speaking directly after addresses by a Congressman from Pennsylvania and an assistant postmaster, who had evoked rounds of applause with ringing pleas for militant upholding of the Monroe Doctrine, the bishop reduced his audience to silence as he presented an impassioned plea for the use of coercive force without arms.

FEARS TOTALITARIAN STATE

"Just as soon as a million men are under arms in the United States then at that moment does America become a totalitarian state and no power of democracy can change it," the bishop warned. "With this Nation and the whole of industry geared to war we can never come back and disentangle force from our civilization and return once more to the ideals of democracy and a free people.

"Because of the hysteria in Europe, because of the aims of imperialistic governments we are told that we must change our basic ideals and aline ourselves with brute force for the protection of our country—and, as far as our need goes—with the ambitions that seek the control of the world. Two hundred thousand men under arms—50,000 planes—that means militarism for ourselves and for our children and all the fine purposes, all the great democratic and pacific ideals for which we have worked for 160 years—the idea of liberty, of equality, and that this Nation, under God, shall endure—are scattered to the four winds, and we have begotten tyranny and a totalitarian government.

"If we do this, mothers, train our boys to become soldiers. And fathers, steel your hearts and souls to watch them as they become the victims of guns and planes and bayonets. Oh, I know that this is an unpopular speech. I know the sentiment. You have been worked up into a fury of fear because distances have been obliterated and the protection of 3,000 miles has been taken away. But this is a Nation under God, with German and Frenchmen and Englishmen alike, with Catholic and Jew and Protestant, white man and black, all colors, all races, all creeds, living side by side in peace. Copy the brutality of Europe today and you join them in a blood struggle that has been going on for 2,000 years.

MUST REMAIN FREE PEOPLE

"I feel that I would be remiss in my duty as a priest if I did not urge you today to use instead the coercive force without arms that we as a nation possess. Let us bring back God—not imitate the foreign program of blood. One hundred and twenty-five million people in this country can, I believe, unite the 21 republics of the Western Hemisphere into the real world power—a coercive force without arms, the ideal and envy of the world. It is the function of America to remain a nation of free people."

This unheralded and unprecedented outburst of the bishop was received first with awed silence, then with an ovation. He then proceeded in moving simplicity to express his appreciation of the splendid demonstration of the faith of the assemblage.

"The true interests of the country are the interests of the soul," he said. "These are the ideals that tend to mold us—to meld us—into a great democratic nation."

Colonel Lindbergh's Broadcast

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

EDITORIAL FROM THE NEW YORK TIMES

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial, which appeared in Monday's edition of the New York Times. It is short, but very much to the point, and merits the most careful consideration of the Congress:

[From the New York Times of May 20, 1940]

COLONEL LINDBERGH'S BROADCAST

In his radio broadcast last night Colonel Lindbergh advised the American people to "stop this silly chatter of calamity and invasion that has been running rife these last few days." Let us put to one side the question of "invasion"—since Colonel Lindbergh himself believes that the country needs "a greater air force, a greater army, and a greater navy," which is all the advocates of more adequate national defense have themselves been saying. Let us consider instead "this silly chatter of calamity" that also annoys him. The "silly chatter" is the talk now heard on every side that the democracies of France and Great Britain stand in imminent danger of defeat by Germany.

Colonel Lindbergh is a peculiar young man if he can contemplate this possibility in any other light than as a calamity for the American people. He is an ignorant young man if he trusts his own premise that it makes no difference to us whether we are deprived of the historic defense of British sea power in the Atlantic Ocean. He is a blind young man if he really believes that we can live on terms of equal peace and happiness "regardless of which side wins this war" in Europe.

Colonel Lindbergh remains a great flyer.

Shackles on the Liberties of the People

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

AN EDITORIAL

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

SHACKLES ON THE LIBERTIES OF THE PEOPLE

In an earlier period of the New Deal, President Roosevelt said something about "setting up instruments of government" which, if misused, might put "shackles on the liberties of the people," or words to that effect. This pronouncement is coming in for a lively review, according to Washington observers who see the abuse of public power looming as a paramount issue in the impending Presidential campaign. A fair deal for American citizens will be the byword, they believe.

The Walter-Logan bill, revision of the Wagner Act, and amendments governing the National Labor Relations Board will be made centers of attack against the misuse of governmental power by boards and bureaus, it is said, and in the formation of battle lines observers see the Democratic leaders in Congress playing into the hands of the Republicans to give the latter a formidable weapon.

The Walter-Logan bill in particular is demanded as a guarantee of a fair deal to American citizens. It provides for court review of the arbitrary rulings of boards and bureaus and is opposed by President Roosevelt and his department heads on the ground that court opinion would interfere with liberal reforms which should be given a free hand in restrictions necessary to gain the ends sought and give Government a certain control over the economic life of the Nation.

New Deal supporters of the administration set up the ridiculous claim that enactment of the Walter-Logan law would open up a field for the lawyers, forgetting that the New Deal and the arbitrary rulings of its bureaus has increased the necessity of lawyers, accountants, and technical experts and thus advanced the cost of doing business in America—all to the detriment of consumers and employment pay rolls.

Americans will hear much about the abuse of public power to "put shackles on the liberties of the people" although administration forces no doubt will point to all this as a smoke screen to shield reactionary attempts to frustrate liberal economic reforms of the New Deal. However, those who fear bureaucratic power have recent European history to corroborate their fears. It is a matter of known fact that in Italy, Germany, and Russia the first move toward dictatorship was made in the interest of liberal reform with an assault upon the economic system and a popular appeal to labor—just as has been done under the New Deal. The result of this is well known—industry, business, agriculture, labor, and every activity of the citizen has been regimented under the hand of one-man power and orders from a small group of advisers. There is no appeal to the courts over there where the firing squad dispenses justice.

In the United States, however, it is apparent that the rank and file of the people have not yet lost faith in the integrity of the courts, despite the many assaults made upon tribunals of justice by official Washington. The Nation reacted definitely against the attempt to pack the Supreme Court and it is reacting favorably to the Walter-Logan bill, as is evidenced by the fact that the Lower House of Congress passed it by a vote of three to one over White House objection.

Now is a good time to defend the authority of the courts over the misuse of arbitrary power by the administrative branch of government. In a time of agitated hysteria over armament and national defense against an imaginary invasion, when military men are directing public opinion, it might not be a far step from bureaucratic dictation to beating drums and rattling sabers. You know the military department has the plans all worked out for use in an emergency—and an emergency might be made to work for defense as well as in time of actual war. Then would shackles be forged on the liberties of the people.

Bidding for a Dictator

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 20, 1940

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. HOFFMAN. Mr. Speaker, if the new dealers think, by yelling "partisan" and "politics," to induce all American citizens tamely to accept their choice of a dictator, they do not rightly gage American public opinion. Hugh Johnson puts their thought quite clearly into words in his release of May 20, which reads in this wise:

ONE MAN'S OPINION

Secretary Ickes, the original triple termite, made a speech before the Amalgamated Garment Workers. It didn't get much publicity, but it was on the air. I have to paraphrase it from memory, for its purpose was a masterpiece.

It first assumed that garment workers are "the underprivileged," then it painted a picture of Mr. Roosevelt as the original and greatest champion of that class. He has only begun to take away from the "have-nots." He saved the country from revolution by this method. To prevent revolution is No. 1 item of defense. Self-preservation is the mightiest law. Therefore Mr. Roosevelt must be reelected or such followers of his may destroy the Republic.

The next point was the necessity for national unity in the face of danger. After a few punches at the economic royalists, it gloated that they are flocking to the Roosevelt standard under the stress of threatened war. The music was not that of welcome. It was haunted by the old Rooseveltian "match and master" motif: "Love me—you, I'll beat you to death." This part was a plug for class war plus a plea for unity, but that inconsistency will pass without notice.

In the third movement of this symphony Mr. Roosevelt appears the great dealer, reformer, and savior of our economic and industrial system, which is now our first reliance for defense. In the fourth he is the inspired diplomatic, naval, and military genius upon whom the whole democratic world relies for championship and who foresaw the necessity for complete rearmament and in a single recent speech united the country for it.

On this skillfully prepared foundation came the pay-off.

Washington was trotted out as the original triple termite in these circumstances, because he once said that in a crisis we should conscript services of the leader universally approved as our best.

Therefore, Mr. Roosevelt—and incidentally, Mr. Ickes—must now be drafted because "democracy universally demands it."

Thus, in a single sound-off, Mr. Ickes said it all for his side. He wrote its platform, uttered its keynote speech, mapped its whole strategy, and prepared an outline for every fourth New Deal speech in the coming campaign.

Pretty soon Mr. Roosevelt will set up either a "coalition cabinet" or a "coalition emergency government" to argue that there just isn't any use bothering seriously about an election. Anybody who criticizes that will be called a war enemy to "national unity" and hence a traitor.

Well, it's all a ton of tripe. Mr. Roosevelt hasn't strengthened our economic system for defense. He has almost ruined it with debt and taxes. He hasn't contributed to unity. His political stock-in-trade has been disunity and class hatred. If there is an incipient revolution here, which is absurd, it should be dealt with otherwise than by tribute, which is very low politics and patriotism.

His diplomacy hasn't prevented the awful results of aggression abroad. It has invited it by raising false hopes of wholly impossible American intervention to push into action nations which, because of their unreadiness, should have stalled for time to prepare. He hasn't shown any military leadership. In spite of many warnings over years in a world aflame, he has permitted our defenses to lapse into disgraceful impotence. He failed to restore our economy after 7 years of unprecedented power.

This is the reverse of a record on which to choose a leader on Washington's formula. A "slicker" who could sell the country that mess could sell heaters in hell. It begins to appear that Mr. Ickes' crowd could do even that.

National defense can't and won't be made a football of politics. But what are we to call this kind of stuff?

Who Is Hitler? The Man Who Made Him Reveals Him as One of the Most Unscrupulous Tyrants in Centuries

---

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

Mr. SABATH. Mr. Speaker, who is this man Hitler? The entire world, fully aroused at last by his barbarous rape of Europe, is now asking this question.

There is an answer, Mr. Speaker, by a man who financed him with millions, and in whose palatial home when he was a poor and struggling young politico, he held his meetings, and was encouraged to seek leadership.

That man is Fritz Thyssen, who was once one of the richest, if not the richest, industrialist in all Germany. Herr Thyssen now regrets that he ever trusted Adolph Hitler, as, it is unnecessary to add, does Poland, Czechoslovakia, Denmark, Holland, Norway, Luxemburg, and other nations that once believed in his protestations of friendship and his treaties, understandings, and agreements guaranteeing them peace and good will.

Fritz Thyssen is today an exile. His huge fortune has been confiscated. There is a price upon his head. Murderous and bloody hands seek to encircle his throat. And all this by the man of all men that he trusted, financed, believed in.

LETTERS A KEY TO HITLER'S METHODS WITHIN GERMANY

Because I believe they should be preserved in the official records of Congress as references to one of the most important state papers that has evolved out of the European war thus far, I desire to place before the House of Representatives quotations from a series of letters and telegrams written by Fritz Thyssen in a hopeless appeal to Adolf Hitler, that barbarian who, having ravished most of Europe, may be expected now to seek to control, make no mistake, even Mexico and South and Central America. And in whose mad brain may dwell even designs upon our own United States of America as well.

The average American citizen by this time is, of course, more or less familiar with many of the damnable acts of this crazed Hitler, who seeks evidently to emulate Napoleon, and to outdo him in ruthless conquest if that be possible. But he may not be aware of the new German war lord's policy of confiscating the fortunes and ordering the arrest of every wealthy and outstanding German citizen or businessman who has the temerity to disagree with his mad course in even the slightest degree. But such is, Mr. Speaker, and has been his policy from the very first.

Fritz Thyssen is a member of the German Reichstag. In the beginning he was one of Hitler's biggest financial backers. He believed in him then, foolishly, as he realizes now, because he had been made to believe by Hitler himself that the latter's desire for high place in German affairs was principally to protect the fatherland from Russia and communism, which Thyssen feared and hated above all things, but with which Hitler is now, traitorously, hand in glove. Once Hitler's dominance became absolute, he began gradually to reveal to the astounded Thyssen his hidden fangs now so completely exposed to all the world. The old iron master was amazed at Hitler's cold-blooded, unscrupulous, and theretofore secret plans to plunge Europe once more into a caldron of bloodshed and disaster. Thyssen, as revealed by the publication of these letters to Hitler, Goering, and other of the Fuehrer's raving mad satellites, protested, and kept on protesting, proving himself a strong and courageous character.

The result was that finally he was obliged to flee for his life. Every dollar's worth of his property, and its value runs into the hundreds of millions of gold marks, has been confiscated by a proclamation which proclaims that any appeal is unlawful. His arrest and that of his wife is being sought. But he has not quit fighting. His letters, telegrams, and so forth, made public in Paris on April 10, 1940, to "undeceive the German people, to remove nazi-ism, and to end the war," show up Adolf Hitler for the bloodthirsty, unprincipled tyrant that he really is. The press dispatches have told of Hitler's unrivaled acts of barbarism outside Germany, but these papers reveal his tyrannical acts within Germany. They will convince the world that Hitler is the type of despot that is dangerous to society in any land, anywhere on earth; the most dangerous demagogue that has appeared in world affairs in centuries.

WHO COULD HAVE FORESEEN HITLER'S BARBARITIES EVEN A FEW WEEKS BACK?

As recently as 2 weeks ago the atrocities that he has since perpetrated would never have been believed, but now cannot be denied. The fortunes that he has confiscated within Germany from such wealthy citizens as Thyssen he has used to bribe high officials in other lands for the purpose of making them traitors to their own nations, even to the extent of permitting the invasion and capture by German troops. That he is attempting to practice bribery, and has resorted to it, within the confines of the United States, no longer can be successfully denied. It is almost a matter of public knowledge. The extent to which he has succeeded, however, no one yet knows. But it is a German method of carrying on warfare. Millions upon millions of dollars were expended in the United States during the World War to promote bribery, sabotage, and so forth. And Hitler has proven a more bloodthirsty, irresponsible, and satanic tyrant than the Kaiser ever was.

One feature of the Thyssen case that deserves more than passing notice is the disclosure that after Thyssen's fortune had been confiscated and he had been driven from Germany, he was publicized and condemned as having been a Communist, the one thing in the world that he was not. The significant point about this is that it is an exact duplicate of the methods practiced by Nazi workers and agents in the United States. They seek to evade censure and deserved condemnation for their subversive pro-Nazi activities here by crying that their critics are all Communists, when just the opposite is true, and has been so proven time and time again.

THYSSEN'S TELEGRAM OPPOSING THE WAR

On August 31, 1939, Thyssen sent a telegram to Field Marshal Goering in which he said:

> I am against the war. A war will make Germany dependent on Russia also in the matter of raw materials and thereby she will lose her position as a world power.

As this telegram went unanswered, Herr Thyssen, a few days after the outbreak of the war, knowing that his life was

in peril, crossed the German frontier into Switzerland. He took his family with him as a precaution. When Hitler cannot "get his man," it is his custom to seize members of the families of those who disagree with him, confiscate their fortunes, hold them as hostages, and subject them to the grossest of indignities.

On September 22 Herr Thyssen sent Field Marshal Goering a long telegram of protest against the war, saying, in part:

5. Now, as before, I am against the war. As the war has started already, Germany ought to try to put an end to it as soon as possible, for the longer it lasts the worse will be the peace terms for Germany.

6. It is not Poland that broke the pact with Germany—that pact to which Mr. Hitler himself repeatedly referred to as a guaranty of peace.

7. In order to achieve peace, it will be necessary that Germany return to conditions which conform in every respect to the constitution. Where the constitution is not respected, there will be anarchy in the end.

On October 1 Thyssen sent Goering another message, in which he said:

I protested to you when, on November 9, 1938, the Jews were robbed and tortured in the most cowardly and brutal manner, and when the government chief of Dusseldorf, whom you had installed yourself, was almost killed and driven away. Again there was no response. As a sign of my protest, I resigned at that time my position as state councilor. I asked the Prussian Minister of Finance to stop my state-councilor salary. There was no answer from you. The payments, however, which were made in disregard of my request, are deposited in a blocked account with the Thyssen bank, awaiting your pleasure.

GERMAN SECRET STATE POLICE ENTER THE CASE

Goering did not answer Herr Thyssen, except in this way: A circular was sent to every bank in Germany but not allowed to be mentioned in the press, which, in part, stated:

In compliance with an order given by Field Marshal General Goering * * * the total property of Fritz Thyssen is confiscated by the state police according to section 1 of the law concerning the secret state police.

* * * * * * *

No appeal against this decree is legally admissible.

On December 11 Herr Thyssen sent another letter to the German Government, stating:

My conscience is clear. I feel free of any guilt. My sole error was that I believed in you, Adolf Hitler, the Fuehrer.

* * * * * * *

At an early stage already I felt it necessary to voice my protest against the persecution of Christianity, against the brutalization of its priests, against the desecration of its churches.

When on November 9, 1938, the Jews were robbed and tortured in the most cowardly and brutal manner, and their synagogs destroyed all over Germany, I protested once more.

* * * * * * *

Now you have concluded a pact with communism. Your propaganda ministry even dares to state that the good Germans who voted for you, the professed opponent of communism, are, in essence, identical with those beastly anarchists who have plunged Russia into tragedy, and who were described by you yourself as "blood-stained common criminals." (Mein Kampf, p. 750.)

* * * * * * *

I refuse to cover your crimes with my name, even though you declared in the Reichstag session of September 1, 1939, "He who is not with me is a traitor and will be treated as such."

I refuse to condone this war into which the German nation has been plunged so frivolously, and for the horrors of which you and your advisers will be held responsible.

* * * * * * *

In my own house you pronounced the ultimate goal of the movement. * * * Social justice, social appeasement was to lead to a totalitarian guild state.

* * * * * * *

Your present policy amounts to suicide.

* * * * * * *

Your new policy, Mr. Hitler, is driving Germany into an abyss, and the German people into perdition. Turn back as long as it is still possible. Your policy will terminate in a finis germaniae. Think of the oath you swore in Potsdam. Give back to the Reich a free parliament; give back to the German nation freedom of conscience, freedom of thought, freedom of speech.

* * * * * * *

Listen to me and you will hear the voice of the tormented German nation that is crying out to you: "Turn back; let freedom, right, and humaneness rise again in the German Reich."

FRITZ THYSSEN'S FINAL CHALLENGE TO ADOLF HITLER

And then this brave old man, not a poor, unknown, obscure man, but one of the richest and most powerful in all Germany, had the God-given courage to close his letter with this final challenge:

I demand that this letter shall not be kept from the German people. I am waiting. Should the German Nation, however, be prevented from hearing my words, which are the words of a free and upright German, then I shall call upon the conscience of the world and shall let the world pass judgment. I am waiting.

Fritz Thyssen waited, waited while the madman, Hitler, unleashed one new outrage after another upon the world, until he could stand it no longer. The above letter had been written on December 11, 1939. On May 10 of this year, in Paris, he kept his word and gave out the complete series of letters that indict Adolf Hitler and his accomplice Goering as two of the greatest villians of all history. I am sorry that because of the limitation of space in the CONGRESSIONAL RECORD, as required by the rules of the House, I have been able to quote but very briefly from the various letters of Fritz Thyssen. The complete series, however, was given publicity in America for the first time on April 29, 1940, by that remarkable pictorial weekly magazine Life, which deserves the gratitude of posterity for the rendering of a great public service.

In presenting the Thyssen letters, Life printed the following enlightening introduction:

FRITZ THYSSEN'S LETTERS

On this and ensuing pages, Life presents a series of heretofore unpublished letters from Fritz Thyssen, No. 1 financial backer of the Nazi Party and currently No. 1 German exile, addressed to Hitler, Goering, and other Nazi leaders. Life's editors believe that these letters have a significance for United States readers far beyond their obvious value as pure news.

When August Thyssen died after the war, he left in the August Thyssen Hütte a huge holding company comprising coal, steel, iron, oil, and foreign investments valued at somewhere between 600,000,000 and 800,000,000 gold marks. This self-made ironmaster had been the industrial giant of the Wilhelminian period, the creator of the modern steel and iron industry of Germany. (Curiously, he was the first German industrialist to realize the vital importance of Scandinavian iron ores and to secure their supply for Germany.) His death, at the most critical moment in the existence of Germany and German industry, seemed to be the final blow to his own enterprises. In the following two decades his son and heir, Fritz Thyssen, proved himself to be a chip off the old block. He not only secured the survival of the August Thyssen Hütte, but also fortified and enlarged the concern. He not only saved his own inheritance but also rescued the remaining independent steel and iron industries of defeated Germany from utter decomposition. At the outbreak of the present war, he was recognized as the outstanding industrial leader of the Third Reich. His power and his influence in Germany, as the principal holder of the August Thyssen Hütte and the Vereinigte Stahlwerke, seemed unlimited.

In the same year, 1923, Ludendorff induced him to join the National Socialist Party. He declared his adherence to Adolf Hitler openly and at once. He did not wait for the Machtübernahme in 1933 to display his Nazi badge. Winning him over was the greatest single triumph the party ever achieved before coming into power. It is more than doubtful if Hitler could ever have succeeded without the moral, political, and financial support which he received from the steel king in the ensuing 10 years. This constitutes a tremendous responsibility, which weighs heavily today on the conscience of the self-exiled patriot.

Like so many conservatives and capitalists in Germany, Italy, and elsewhere, Fritz Thyssen saw in fascism the only salvation from communism. As a deeply religious Christian, he realizes today that trying to save Germany from the frying pan of communism, he only helped push her into the fire of nihilism.

It was a fateful error. If it deserves any punishment, the ironical fact that Fritz Thyssen is being branded now as a Communist by the Nazi authorities, and that his huge property has been confiscated—several months after Hitler's joining hands with Stalin—by force of the anti-Communist laws of the Third Reich, is ample penalty in itself. A further enhancement of it is provided by the appointment of the banker, Baron Kurt von Schröder in Cologne, as a trustee of the Thyssen's confiscated property. It was in the office of this very Baron von Schröder that he, Fritz Thyssen, Adolf Hitler, Franz von Papen, and others assembled in the last days of 1932 to provide a fund of 45,000,000 marks for the tottering Nazi Party, which was then faced with the imminent danger of complete dissolution in consequence of discouragement, demoralization, and impecunity.

Fritz Thyssen did not and does not believe that Germany can win this war. No one knows the economic potentialities and shortcomings of his country better than he does. He is trying his utmost to undeceive the German people, to remove nazi-ism, to end the war.—Editor, Life.

Work-Relief Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 21, 1940

Mr. PITTENGER. Mr. Speaker, the most important legislation that has come before Congress at this session is House Joint Resolution 544, known as the W. P. A. appropriation or work-relief bill, which the House of Representatives is considering today. No domestic problem confronting our Government is more important than that of unemployment, which after 7 years of experiments is more prevalent in America than ever. A permanent solution must be found if our form of government is to survive. I do not here discuss those changes in Government policy which will have to be made to permit industry to function and offer jobs to the unemployed. I want to point out that House Joint Resolution 544 is a temporary relief measure only, and in my opinion inadequate at that.

Not only do we have men with families who are on relief, unable to obtain work, but we have single men who travel about the country looking for work, and there is none to be had. In addition, for several years last past, each year the high schools and colleges have been turning out a class of graduates to take their place in the ranks of the unemployed, adding to the army of the unemployed. One of my constituents, in a letter to me a few days ago, expressed the thought that these young people out of school and idle should be given consideration. With alert minds, ambitious, and energetic, they are the foundation of our Nation tomorrow. Unless something is done to give them work and provide employment, it is only a question of time until they may turn to the alluring and pleasant promise of new theories of government. The youth of today are the citizens of tomorrow. Let us not give them the wrong outlook on life. For 7 years money has been squandered with no results to show. Let us spend some for the relief of our unemployed.

The amount of funds provided in the present bill is inadequate and should be substantially increased. With an increase in the amount of funds additional worth-while projects can be made possible, and this means that more people will be furnished employment. The bill should be amended to bring about this result.

I also believe that the requirement that the sponsor of a project shall furnish 25 percent of the cost of the project should be abolished. In many localities where W. P. A. funds are needed the most the local authorities do not have funds with which to pay any part of the cost of the project. In my opinion, the amount of the sponsor's contribution should be left to the Administrator. I also believe that he should be given more discretion in the matter of the 18-month lay-off provision and will support an amendment to this effect.

Amendments along the lines here indicated, as well as other changes in the bill that will improve it, should be adopted by the House.

World-war developments may or may not lead to increased employment in this country. Let us hope that employment does increase. If such proves to be the case, the expenditure of funds provided for unemployment relief can be decreased. But in the meantime proper funds should be voted to furnish work for those who cannot obtain employment in private industry.

Pioneers of Light

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. ALEXANDER WILEY, OF WISCONSIN, AT GIDEON CONVENTION, JANESVILLE, WIS.

Mr. WILEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a speech which I delivered recently at the convention of the Gideons held in Janesville, Wis.

The subject matter of this speech is somewhat unusual for inclusion in the RECORD, but I feel that in these trying times it is desirable for us to devote more attention to spiritual values. The Gideon Society is concerned with the preservation of such values. Its sole purpose is to distribute the Book of Books.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster and ladies and gentlemen, I am very happy to be your guest this evening. Why? Well, I always like to be with folks who do constructive things. I like to associate with builders. I like to "comrade" with doers. I think the Gideons qualify for membership in all of these categories. They are doers, builders, and constructive thinkers.

You remember the story of the man walking down the street of a big city when he heard an auctioneer's voice saying, "How much, how much, how much," and, being interested, he entered the store. There the auctioneer was holding up a violin. "One dollar is the bid, $2, $3; going, going!" The old gentleman walked up and said, "May I see the violin?" and he examined it and dusted it off, rosined the bow, then started to play. And out of the heart of the violin came the Moonlight Sonata. But something else came also. The violin spoke with authority; its voice commanded respect. A lost Stradivarius had been rediscovered. One thousand, two thousand, five thousand—$10,000 the violin finally sold for. It was the same instrument, but now its worth had been discovered.

Well, the men in this city who in 1898 founded the Gideons and the men who have been carrying on have apparently rediscovered the value of the Bible—the value to themselves and to others. Therefore, they decided that they would place the book where others might discover its value, so they put the Bible in the bedrooms of hotels and hospitals.

Now, why was this done? The wise man before he retires generally takes a bath and then "rolls in"; that is, he bathes his physical body. But the wiser man does more than that. He bathes his soul. And how does he do that? Well, that is where you Gideons showed a great appreciation of one of man's greatest needs. You knew that the Book of Books provides the greatest opportunity for that very experience—cleansing one's soul. You knew also that men come to their chamber—discouraged, lonely, melancholy, dissatisfied, dissipated, heartbroken. Such men are looking for reinvigoration, looking for something that will revitalize their minds, something that will give them courage to carry on, that will fill them with hope and the desire to do right. Knowing this, you Gideons placed the Bible where it could be easily reached.

"I gave a beggar of my little store
Of well-earned gold. He spent the shining ore
And came again, and yet again, still cold
And hungry as before.
I gave a thought, and through that thought of mine
He found himself the man, supreme, divine,
Fed, clothed, and crowned with blessings manifold,
And now he begs no more."

—*Ella Wheeler Wilcox.*

Many years ago my mother—who has "gone on" in the journey—gave me a Bible. I did not know why then, but I know now. I have

written out that reason in simple blank verse. Here it is—let my Bible speak:

"I am the Bible your mother gave you. I am the Book in which she found consolation and courage, hope and joy.
"From my pages she also got guidance and direction, light and truth.
"She knew there was much I could tell you that she could not.
"She knew that when she was gone, I would give you the message she would have for you.
"I am not only to prick your conscience, but to lighten your load. I have a message for every occasion. I can meet every need.
"For my truths come out of the hard struggles that human beings before you have had.
"I am no fetish. I speak to you of the bread of life—the bread that refreshes and rebuilds.
"I will lift you from the levels of discouragement, fear, and sin.
"Aye from the low levels of the senses to the mountain peaks of the spirit.
"I speak of a Presence that will go with you—a Presence that is ever with you.
"I will confer upon you power to overcome obstacles, power that will make you free from your mistakes and shortcomings.
"I will awaken you from the dream of the temporal.
"And will put into your being—purpose: purpose to venture forth to find the answers to life's unanswered questions.
"All this is yours, if you will but read, assimilate, and utilize.
"The treasure is within.
"I am the Bible your mother gave you."

This last summer I stood in St. Paul's Cathedral, London, by the side of the grave of Sir Christopher Wren, and read the Latin inscription which translated means "If you desire to see his monument, look about you."

That brought to mind this thought: We are all "monument makers." Christopher Wren built this great cathedral. As for myself, I would rather have a monument in the living hearts of men so that if I'm remembered, it will be as one who helped "build men."

You know, I think you Gideons are daily erecting monuments in men's hearts—monuments of high adventure in spiritual living. Many a man and woman has found the light because there was a Gideon Bible conveniently located which set in motion, through reading thereof, the unseen (but not unfelt) forces of reconstruction. The noblest experience is that of growing toward the light—unfolding real life.

In this fast-moving world it is important that we stop, look, and listen. The Nation needs to do that now, just as much as the individual does.

Someone has said that it's a wise man who can take time off to walk by the side of the brook—walk leisurely and enjoy the voice of Nature. Yes; wise indeed is the man who has learned to appreciate the beautiful in this life, the beautiful in nature, in music, in art, in his fellow man. But wiser still is the man who has learned to evaluate and explore into spiritual truths.

"Tune me for life again, O quiet musician,
Strive to adjust my loosened thoughts until,
Made taut, they shall be yielding to thy fingers
Gladly as trees to winds that touch this hill.

"Rhyme me with life once more, O silent poet,
Out of my weary, fluttering heartbeats make
Cool rhythms, hushed and certain as the circling
Water against the edges of this lake.

"Fit me for life again, O patient artist.
Paint on my tired soul glad, vivid things.
Splash now upon its dullness beauty's pigments,
Lovely as pansies and a bluebird's wing."

—*Violet A. Storey.*

"But how can I become competent in that direction?" I hear someone ask. The answer must be—by understanding more about your real self.

Bobby Burns asked the bishop, "Who am I? Where have I come from, and where am I going?" and all of us are asking ourselves unconsciously the same questions many times, and the most satisfactory place to go for those answers is to this same reservoir of spiritual wisdom—the Bible.

Of course, it is one of the oldest pieces of literature, describing ancient days, scenes, and old ways. Despite its antiquity, it is still a best seller. It is interesting to note that in all the mass of literature—in all the torrents of words and phrases which have been written since the invention of the printing press by Gutenberg—there is still only one great permanent best seller. It has been translated into every language. It is not a book of form or creed. It is a place where great treasure is to be found—but one must go on a treasure hunt to find the treasure. No one else can find it for you. You can't just mumble the words of the Bible and expect to find the treasure.

The Persian proverb, "I was common clay until roses were planted in me," could well be applied to millions of people who have glimpsed the rosebuds in the Scripture.

We are told in Proverbs that, by understanding, a house is established. Men are made over when an awakening within occurs. When men regard themselves as so much clay, they are clay men, but when they, like Paul, realize they "now are we the sons of the Most High," then they are clay men no longer.

I remember the story of the young high-school student who woke up one day to a realization that her parents were no good. According to every human standard, she was foredoomed. The law of heredity started to operate and she naturally said, "They are no good, so I'm no good." But a Bible student who was a teacher—the principal of the school—saw what was going on. She saw that the girl was being crushed between the upper and lower millstone. The teacher talked to her, "You are the daughter of a king," and she quoted the words from Job, "The spirit of God hath made you. The breath of the Almighty hath given you life." The girl caught the import of those significant words. She broke the claim of heredity, and she became one of America's great women.

The sentence, "I have come that you might have life and have it more abundantly," is so full of promise and power and significance that it is just waiting to be picked up by tired, doubting humanity. These, and many more, words of promise are to be found within this Book of Books.

I heard a great bishop of a great church say not so long ago that when the Master spoke these words He meant that the abundant life of the spirit was for men to experience here and now if they are wise enough to reach out for it.

In the days of Lincoln, when books were scarce, the Bible was the great reservoir. From its pages Lincoln continually got inspiration and guidance. He found it a workable manual for everyday life.

I remember on one occasion, when I was speaking to someone, this thought of the Bible's providing a way of life, this thought was questioned. But after discussion this person received a new angle on the subject. He had always regarded the Book as one to be read on Sunday or to be perused as one would peruse a novel.

He has, however, changed his mind in relation to the Book. It no longer is something to be read and then forgotten, but to him it is now a quarry out of which he must carve the great fundamental truths. It must have been in such a way that Sir Walter Scott regarded the Book. It is said of him that a few days before he died he called to his son-in-law, Lockhart, "Read to me from the Book." "What book?" he was asked, because Scott had a large library. Scott replied, "Need you ask? There is but one."

We can read in the Book the story of Moses—Moses the great sinner (even a murderer)—how he went down to Egypt and brought his people out of their bondage. From such a bit of history we can gain courage, but if we dig deeper we will realize that this Moses, when he was directed to go on this mission, stuttered and hesitated (even as you and I), and then something happened to him. He was told, "My presence shall go with thee." And he hesitated no longer. A great experience was his; and it may be for you and me also if we but realize that "His presence shall go with us."

We can read the story of David and his fight with Goliath, which is but an incident; or we can drink deep of his Psalms:

"The Lord is my Shepherd, I shall not want."

"Round about me are the everlasting arms."

"Though I walk through the valley of the shadow of death, I will fear no evil, for Thou art with me."

And glean out of these great spiritual truths vitality and fearlessness to front our problems.

The great need of the present is spiritual leadership. America needs that more than anything else, and by spiritual leadership, I mean the insight that comes from spiritual contact with the Infinite One. Just before Goethe died, he called to his listeners, "More light." He knew what his generation needed. And well can we say to this generation, "More light," in politics, in economics—that is the great need.

I have often stated that men have found that it was wisdom to go apart and get away, as it were, from their normal activity awhile. Lincoln, in the midst of his worries, found relief in humor and in reading the Scripture. Woodrow Wilson in the midst of the World War used to recite great poems. The Great Teacher in His life went apart time and time again, and He told mankind to go into the closet and shut the door and pray to the Father. One way to accomplish this is to become so engrossed in the great spiritual values found in the Book that you are apart from your normal activity. That is the reason why so many people start the day with reading out of the Bible. In this manner they get a spiritual food which stays with them throughout the

day, so that they are then equipped to handle calmly, judiciously, and understandingly the problems with which they are confronted.

In the days that are up ahead, America needs men and women everywhere who will maintain their mental balance, who will not become creatures of hysteria or subjects of emotional fever. Such men and women will be real leaders. And if there are enough of them, no amount of propaganda, illogical thinking, or misinformation will sweep them off their feet.

I have a very strong conviction that if America is going to keep clear of the storm which is enveloping other nations it will be only because we will have a sufficient number of men and women who look to the God of Spirit for guidance and direction. More and more men are realizing that they cannot live by bread alone, that man must be fed brain food—great ideas—and only with this food can the individual and the Nation grow in health. Man continually needs an expanding horizon, the vitalizing influence of dynamic ideas, and a constant impact upon his consciousness that he is one with the Eternal—not one with the earth.

Yes; man needs new intellectual and spiritual avenues of adventure. Men strive to become wealthy in material things which rust and decay, but more men are now realizing the need of acquiring a spiritual wealth which depressions and wars cannot obliterate, and so some of us are trying to gather up a few of the ideas which belonged to Moses and Isaiah and Jesus, Paul, and David—ideas which add zest, melody, and enchantment to living.

You Gideons in your work have lighted a candle which will not go out. You are "pioneers of light."

Criminal Procedure

EXTENSION OF REMARKS

OF

HON. HENRY F. ASHURST

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

LETTER FROM THE PRESIDENT OF THE UNITED STATES

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the RECORD a letter from the President of the United States, addressed to Hon. William Draper Lewis, director of the American Law Institute. The letter deals with the necessity for regulation and simplification of Federal criminal procedure.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,
Washington, May 9, 1940.

Hon. WILLIAM DRAPER LEWIS,
Director, the American Law Institute, Philadelphia, Pa.

MY DEAR MR. LEWIS: I take great pleasure in greeting the members of the profession who are attending the Eighteenth Annual Meeting of the American Law Institute, and extending to the institute my best wishes for success in its many commendable endeavors.

The institute has made many constructive contributions of outstanding character to the advancement and improvement of the law. I am gratified to observe that it is not restricting its activities by the traditional framework of juridical science, but has extended its studies to such matters as treatment of juvenile delinquents.

Much has been accomplished in recent years in the direction of simplification of civil procedure and coordination of the operations of the courts, especially in the Federal field. Much still remains to be attained in the realm of criminal law and penology. I am hopeful that the Congress will make provision for the regulation and simplification of Federal criminal procedure by means of judicial rule making, similar to that made by it several years ago in respect to Federal civil procedure.

The institute is in a position to render signal service to the advancement of penology. Not only the treatment of juvenile delinquents, to which it is already devoting attention, but also such matters as indeterminate sentences, probation, and parole form fruitful subjects for studies of the type that the institute has so effectively undertaken and successfully pursued in the past.

These phases of the administration of justice touch practical life in a true sense. As members of the legal profession we must always bear in mind that the law is not a detached science, but is the handmaiden of society. It must be adjusted, as nearly as possible, to the requirements of shifting social and economic conditions. As has been truly said, "the final cause of law is the welfare of society."

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

Fiftieth Anniversary of the Admission of Idaho to Statehood

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

HISTORICAL STATEMENT BY C. E. ARNEY

Mr. CLARK of Idaho. Mr. President, on July 3 of this year Idaho will celebrate her fiftieth anniversary of statehood. One of our distinguished citizens, Mr. C. E. Arney, a pioneer journalist, businessman, and historian, has prepared a brief statement covering some of the early history of the State of Idaho as well as since its admission into the Union. I ask unanimous consent to have the statement inserted in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EARLY IDAHO

July 3 of this current year marks the half century milestone of Idaho statehood. The bill creating the new State passed the Senate July 1, 1890, having previously passed the House. The father of the bill was the then Delegate from the Territory, Fred T. Dubois. On the morning of July 3, as he was approaching the gate to the White House, he met with the then Secretary of State of President Benjamin Harrison's Cabinet, James G. Blaine. After the morning salutations Blaine congratulated him on the admission of his Territory to the Union and was especially pleased with it, for, as he put it, "Fred, it will give us two more Republican Senators and a Republican Congressman."

Then Dubois said to Blaine that he was on his way to see the President and ask him to sign the bill on the morrow, that Idaho might be known as an independence State. Blaine said to him in substance: "Fred, why don't you have it admitted today? If so, another star, the forty-fourth, will be added to the flag and it will be a great day for your young State." The Delegate told him that he was much obliged for the suggestion and asked Blaine to accompany him to see President Harrison, which he did. Dubois made the presentation of his wish that the bill might be signed "today." The President replied: "Your determination in the matter, Delegate Dubois, will be my pleasure." Dubois asked him for an hour's time and returned at the end of that time with a gold pen, which President Harrison used in signing the bill.

It was my pleasure in the summer of 1907 to go with Dubois to the Idaho Historical Society's room in the Capitol and see him present this gold pen to the curator.

What is now Idaho was originally a part of the Pacific Northwest Territory. Later it became a part of the Oregon country. Later, in 1853, when Washington divorced herself from the Oregon parent, Idaho was a part of Washington. Thus, the Northwest Territory was Idaho's great granddad, the Oregon country its granddad, and the Territory of Washington, its dad. Washington was created a Territory in 1853, divorcing herself from Oregon, and taking with her all the territory east of the Puget Sound country, including what is now Idaho, Montana, Wyoming, and over a hundred miles of what is now the two Dakotas, and Nebraska, and having for its northern boundary, approximately 48 degrees north, and extending south of the northern boundaries of Oregon, Nevada, Utah, and Colorado.

Early in 1861, gold was discovered in large quantities in the mountains of north and central Idaho and soon, that small mining area around Pierce City and in the Boise Basin, had thrice the population of both the Willamette Valley in Oregon and the Puget Sound section in Washington. The rich diggings of gold, silver, lead, and copper created an urge for more stable forms of government, for courts of justice, and for the establishment of a legal political regime. An appeal to Congress bore results. On March 3, 1863, Congress cut Idaho loose from Washington and endowed it with all the eastern area which previously was included within the Territory of Washington. Such a large area was cumbersome, and in 1864, Montana Territory was created, and in 1868, Wyoming. This reduced Idaho to its present boundaries, approximately 487 miles from north to south, 48 miles along the Canadian boundary line, and 309 miles along the southern line from Wyoming to Oregon.

Its first Territorial capital was at Lewiston, at the confluence of the Snake and Clearwater Rivers. Two sessions of the legislature were held in Lewiston, and the delegates to the lawmaking branch of the Territory came on foot and horseback, from its far eastern counties which had been established from a part of Washington.

William Wallace became Idaho Territory's first Governor, but was soon elected a Delegate to Congress, to be succeeded by Governor Lyon, of Lyondale, N. Y.

Congress passed an act authorizing the removal of the seat of government from Lewiston to Boise in 1864. One Alonzo Leland, early editor of a Lewiston weekly paper, undertook to enjoin the government from removing the records. During the pendency of this action, Governor Lyon took a "fishing trip" in a boat on the Snake River. His craft soon struck the center of the mighty Snake which carried him rapidly to a point some 16 miles downstream, where his pilot veered the boat to the southerly banks of the stream where, most conveniently for His Excellency, was a horse, which he mounted and, with the records and seal of the Territory, rode to Walla Walla, where he stayed overnight, taking the stage for Boise the next day, where he set up Idaho's Territorial government.

Illustrative of the opinion of the public on racial questions where two acts passed by the second Territorial legislative session, which assembled November 14, 1864, at Lewiston, one: "No person not being a citizen of the United States or who shall not have declared his intention to become such, shall be allowed to take gold from the mines of this Territory or hold a mining claim, unless he shall have a lease therefor, as hereinafter provided." And again, "That all Mongolians, whether male or female, and of whatsoever occupation, shall be considered foreigners, and shall pay a license tax of $4 for each and every month they reside in this Territory."

From Lincoln (1861) to Cleveland (1884), all Presidents, clothed with authority from Congress, appointed officers for all Territories. All previous Presidents were Republicans—save Andrew Johnson, who was elected on the Union ticket from Virginia as Vice President—and succeeded Lincoln after his assassination. These Governors were chosen from various States, as New York, Oregon, Indiana, Iowa, Pennsylvania, and each one for some service he had rendered his party in the State from whence he came. It is not within the history of Territorial Idaho that during that almost quarter of a century, anyone appointed Governor had ever seen Idaho, or knew anything about Idaho or her people. In all this time, quite a third of the appointees undertook to run for Delegate to Congress from Idaho Territory, but without success, and at the end of the term, all of them during this period, went hence as soon as their terms ended.

Idaho, like all other Territories, was accorded the privilege of choosing a Delegate to Congress at each recurring biennial election. Such a one had the privileges of the floor but could not vote.

During the existence of Idaho Territory, the following men served Idaho in the above capacity, namely:

1863–65. William Wallace, of Lewiston.
1865–69. Edward Holbrook, of Idaho City.
1869–71. Jacob K. Shafer, of Idaho City.
1871–73. Samuel A. Merritt, of Idaho City.
1873–75. John Hailey, of Boise.
1875–79. Stephen S. Fenn, of Mount Idaho.
1879–83. George Ainslie, of Idaho City.
1883–85. Theo. F. Singheiser, of Boise.
1885–87. John Hailey, of Boise.
1887–90. Fred T. Dubois, of Blackfoot.

Governors of Idaho, after Lyon, were Ballard, of Oregon; Marston and Connor, residence unknown; Thomas M. Bowen, remained 1 week, residence unknown; D. P. Thompson, drew his salary but never came; Brayman, spent a little time in Idaho; Hoyt, never came; Bennett, from Indiana, and a splendid Governor; Thompson, of Oregon; Neil, of Iowa; Irwin, of Iowa, faded away in 30 days; Bunn, of Pennsylvania, a member of the Philadelphia Clover Club.

Then came Stevenson, of Idaho Territory, appointed by President Cleveland; and later Shoup, of Idaho Territory, appointed by President Benjamin Harrison, both of whom royally loaned the weight of their great influence, both as Governors and as statesmen of the very highest type, to the admission of Idaho to statehood. The latter, in fact, took a display at his own expense of Idaho products to the New Orleans Exposition in the middle eighties, and afterward ran a car of exhibits to prominent cities in the East, displaying especially the mineral, timber, and agricultural products of his adopted Territory.

The organic act creating Idaho Territory stipulated that the secretary of the Territory should, during the period of a vacancy in the office of Governor, be the acting executive.

Thus, while the gubernatorial "carpetbaggers" were playing hide-and-go-seek, irrespective of the honor conferred on them, Hon. Edward J. Curtis, first appointed secretary in 1869, served in that ex officio capacity longer than any Governor.

Curtis pioneered in politics and the law in both California and Oregon prior to coming to Idaho. He was capable, an orator of exceptional ability, and most affectionately greeted by his many friends as "Uncle Ned." He served as Territorial secretary from 1869 to 1878, from 1883 to 1884, and from 1885 to 1889.

He lived but a short time to enjoy, with his friends, Idaho as a State.

In March of 1889 and just before his retirement, Governor Stevenson had called a constitutional convention to meet in Boise City on July 4 of that year. Early in April and immediately after taking the oath as Governor of the Territory, Governor Shoup renewed and vitalized the call. While the Republican was the prevailing party in Idaho Territory at the time, there was slight difference in the cumulative vote of the two parties. Governor Stevenson was the acknowledged head of the Democratic Party and Delegate Dubois of the Republican Party. Immediately following the call these two leaders met and made friendly suggestions to the various committeemen from all the counties of Idaho Territory, suggesting the most capable men whom they thought would do the highest honor and render the greatest service in the effort to transform Idaho Territory into a State.

On July 4 the convention met without any authority from Congress. They had precedent for this in half a dozen other States, who in Territorial days had moved toward statehood by voluntary action of constitutional conventions. Nearby Dakota was one, Iowa was another, and in each case there were some misgivings on the part of Members of the two branches of Congress as to the regularity of such proceedings. Many of those old-style statesmen reasoned in terms of orderly procedure, and styled the movement in Idaho as a fresh innovation, and did not see in the movement that degree of dignity of which they were so fond; and, again, there were other things besides the small population which arose to plague the sponsors of the bill in Congress to accept the constitution which these very capable men had drafted in their session beginning July 4, 1889, and lasting 34 days, and passed out to the people to vote upon as the labor of 72 men.

The principal struggle came over the moot Mormon question. With the beginning of Territorial reign, each Governor who made an annual report to the President emphasized the existence of polygamy in the southeastern countries of the new Territory. In the fore part of the eighties, led by Dubois, Henry W. (Kentucky) Smith, Harry Bennett, William H. Crawford, and many others, the Republican Party in the counties where these Mormons were most numerous disbanded locally the Republican Party and formed what was called an anti-Mormon Party. Their aims matured in the legislative session of 1885 when Kentucky Smith, as a member of the Territorial council, elected from Oneida County, put through and caused to be signed, the famous Idaho test oath. The purpose of this enactment, which was later carried to the Supreme Court of the United States in the case of *Beeson* v. *Oneida County*, was to disfranchise anyone who belonged to an organization, order, or sect which taught or practiced bigamy or polygamy in the Territory, and, furthermore, prevented them from holding office or serving on juries. Thus, of the 84,000 population in Idaho when it knocked at the door for admission to the Union, 25,000 were disfranchised. However, on November 15, 1889, 12,398 votes favored while 1,773 opposed the adoption of the Constitution which had been framed by the July and August convention.

Confronted with the argument in Congress, where Dubois as a delegate had the right of the floor, with the fact that he sought to admit the Territory of Idaho whose Territorial delegates had made a constitution interfering with religious freedom, Dubois retorted in the House as follows: "We want a State for those whose highest allegiance is to the United States, or else we want no State at all."

While on the subject of the Mormon question, the operation of the test oath—which, by the way, is still in Idaho's Constitution—lasted less than 10 years, for the legislative session of 1893 took cognizance of the manifesto previously issued by the authorities of the church renouncing their allegiance to the objectionable practice, and thus loosened the strings for the admission of Utah, and gradually since, harmonious, neighborly, and friendly relations have existed between Mormon and non-Mormon in Idaho, which we now pause to suggest has a greater population of Mormons than has Utah.

As arguments for the admission of Idaho as a State its sponsors showed 55,000,000 acres of land, classified as follows: 12,000,000 acres agricultural; 12,000,000 acres dry sage; 10,000,000 acres timber; 8,000,000 acres timberland, meaning land on which there was timber of lesser value.

Dubois, in addition to being a very keen Republican politician at the time, was lucky. He had formed the acquaintance of an Iowa Congressman by the name of Isaac S. Struble, a Virginian by birth (1843), who had settled in Iowa with his parents, attended common schools, entered the Civil War at 17, serving in Company F, Twenty-second Regiment Iowa Volunteer Infantry. At the close of the war he attended the Iowa State University and was admitted to the bar in 1870, and in 1872 he located at Lemars, Plymouth County, where he was elected successively to the Forty-eighth, Forty-ninth, Fiftieth, and Fifty-first Congresses (March 4, 1883, to March 3, 1891). He was defeated for renomination in the campaign of 1890, losing the nomination on the forty-third ballot to George D. Perkins, of Woodbury County.

Early in the session of 1889 he came to Dubois and asked him if he would use his influence with Speaker Reed that he, Struble, might be made chairman of the Committee on Territories. Struble explained that he had a sincere wish to preside over that committee and admit Oklahoma, Idaho, and Wyoming as States of the Union. Dubois told him he had no personal call on the Speaker, but that he would see if he could not originate some outside pressure, and to this end the young Delegate, then in his early thirties, went to Dan Voorhees, the United States Senator from Indiana, known as the "tall Sycamore of the Wabash." Voorhees was a distant relative of Dubois' mother, and he knew the family well. The Senator responded most cheerfully and a day or two later called Dubois to his committee room and told him that Reed would name Struble chairman of the Territorial Committee of the House. Struble was overjoyed when Dubois brought him the news and favorable action by

his committee later resulted in the passage of the Idaho Admission Act by the House on April 3, 1890. It went to the Senate, where it was passed July 1, 1890, and as above stated, signed by President Harrison July 3 of the same year.

In the enabling act generous donations were given the new Idaho by the Federal Government, known as grant lands, namely:

	Acres
Scientific schools	100,000
State normals	90,000
Asylums for the insane	50,000
State university	50,000
Penitentiary	50,000
Other State, educational, penal, and reformatory institutions	150,000

As a safeguard for the residue of this land, a minimum sale price of $10 per acre was fixed by the Congress.

We might pause here to remark that it was cold-blooded politics that induced the House and Senate to admit Idaho to statehood. The Cleveland administration of 1885–89 had admitted many Democrats into the two legislative branches, and the Republicans cast about for help to maintain control. They figured that Idaho with Dubois' leadership was safely Republican and recalling Blaine's suggestion, above referred to, proceeded on that basis. And now comes an evidence of ingratitude in politics. Admitted by a Republican House and Senate and signed by a Republican President, the young State of Idaho at its first opportunity to choose Presidential electors chose three Populists. Its third legislative session (1895) had in it but one Democrat, William H. Watt, of Blaine County, and 2 years later (1897) the two branches had but one Republican, T. A. Davis, of Oneida County.

Of the 72 members composing the Constitutional Convention held 51 years ago, but 2 are now living, namely, Drew W. Standrod, who served from Oneida County, now living at Pocatello, and Frank Harris, who served from Washington County, still living in that county, at Weiser, the county seat.

Reminiscent: On the afternoon of July 3, 1890, I was riding in a one-horse-drawn buckboard from Rexburg, where I was running a newspaper, to Idaho Falls, a distance of 45 miles, the first 15 of which was through a sagebrush desert, to the Caldwell ferry, on the north fork of the Snake River, thence down to Menan Island to the dry bed which we forded. I was riding with one of my printers. As we climbed the bank from the stream at pitch dark, I observed occasionally flickers of light in the sky to the south. I observed them closely for a few minutes, for some appeared to be closer to us than others.

Presently I slapped my friend on the shoulder and said to him: "Grant, we are riding in the State of Idaho and those lights we see are fireworks from Eagle Rock (now Idaho Falls), Blackfoot, and Pocatello." Arriving at our home in Eagle Rock near midnight, we found it to be true. The bill had been signed, and not only in that Snake River desert area but throughout the entire State, through its mountains, its hills and valleys and wooded areas, and the mines of the south and north of the new State, people were wild with joyous enthusiasm, such as it has never been my privilege to witness before or since.

The man Dubois, who was in Congress and piloted the bill with other assistance through both branches of the Congress, was born in Crawford County, Ill., May 29, 1851. He was graduated from Yale—a Scroll and Key man—in 1872. He served as United States marshal of Idaho Territory from 1882 to 1886, when he resigned on his nomination as Delegate in Congress. He was elected Delegate in November 1886 and took his seat in the Fiftieth Congress on the 4th of March 1887. He was elected a Delegate in the Fifty-first Congress in November 1888, and on the admission of the State to the Union on the 3d of July 1890 he was legislated out of office.

At the first legislative session Idaho did something that no other State in the Union has ever done—i. e., elected four men to the United States Senate, three of whom were accepted, as follows: On the legislative balloting there were four candidates—Dubois, Shoup, McConnell, and Clagett, none of whom had enough votes to elect.

Dubois wired Congressman Sweet who had taken his seat as Idaho's first Congressman, to confer with Senator Edmunds, chairman of the Judiciary Committee, Senator Hoar who was a member of the committee, and Senator Platt, chairman of the Committee on Territories, and ascertain if the legislature could elect one person for the term ending March 4, 1891, one for the 4-year term ending 4 years and 3 months hence, March 4, 1895, and one for the 6-year term beginning March 4, 1891, and ending March 4, 1897. This was done by the election on December 18, 1890, of McConnell and Shoup, who forthwith proceeded to Washington and at the bar of the Senate, drew cuts for the long and short term, McConnell drawing the 3-month term and Shoup the 4-year-and-3-month term. The Idaho Legislature proceeded on the same day to elect Dubois to the long term above referred to. Dispute arose among the members, for Clagett was not only a very able, but a very magnetic man and his friends were legion. By a system of log rolling and trading, they got enough of Dubois' voters, after he had been elected and given his certificate for the 6-year term, to forsake him, and on February 11, 1891, in joint assembly voted for Clagett, giving him a majority and authorizing him to contest Dubois' 6-year seat, which he did on the basis that the two houses voting at the time of his election, had not voted in their separate capacities, but as a united legislative body.

Clagett came to Washington and without a certificate from the Secretary of State, but with a copy of the Legislative Journal, and without objection occupied the floor of the Senate and made a speech in his own behalf, but he only succeeded in getting six or seven votes.

At the end of Dubois' first term, he was defeated by Senator Henry Heitfeld, a Populist of Nez Perce County. Four years later, in 1901, Dubois was elected by a fusion of the Democrats, Populists, and silver Republicans, to a 6-year term beginning March 4, 1901, and ending March 4, 1907, and on his entrance to the Senate, he proclaimed himself a Democrat. At the close of this, Dubois' second term, he was succeeded by Senator William E. Borah, a Republican.

The Science of Peace

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

ADDRESS BY DR. PHILIP M. BROWN

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Dr. Philip Marshall Brown, May 20, 1940, in Washington, D. C., on the occasion of the one hundred and twelfth annual meeting of the board of directors of the American Peace Society on the subject of The Science of Peace.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Nietzsche says that "man is something that must be surpassed." It would seem that man has now been surpassed by modern science. He is not only grateful for the comforts and enjoyments which science has given him, he is its docile creature. He is even beginning to believe that social redemption will be achieved solely through science.

The tragedy of science is that its main trend has been toward the perfection of power and force. The intrusion into the private life of the atom has been animated largely by the desire to measure its energy and exploit its power of destruction.

The supreme expression of modern science is the war machine. But once this machine is set in motion it soon gets out of control. The god of the machine takes command. It runs wild, destroying men, nations, and vast material resources. It also destroys cherished institutions and standards of values. Confusion of thought, and worst of all, destruction of moral character follow in the wake of this Frankenstein monster which science has created. Men lose their mental equilibrium. They cannot anticipate and discount the course of events. The war machine rolls ruthlessly on. Civilization reels and chaos threatens.

The war machine has no respect for democracies. They can defend themselves against dictatorships only by being less democratic. The organization of democracy for war demands great concentration of power and serious limitations on freedom. All the resources of the state, human as well as material, must be surrendered to the government. State capitalism results, and, in turn, produces social revolution. The masses of the people become restless and readily susceptible to subversive influences. A war between nations breeds social revolutionaries.

Under such disintegrating conditions created by the war machine, it is obviously impossible to plan intelligently for peace. We do not know on what kind of foundations we may restore the temple of peace. We cannot be sure that the present war may not prove to be only one of a long series. Definite plans for international organization at the present time are futile. They are as derisive as small fountains playing in a deluge.

What then can the advocates of peace hope to accomplish in this hour of world tragedy? We cannot acknowledge defeat and remain silent. The lighthouse is most needed in darkness and storm. We must hold the faith and fight on. But not blindly. Not with empty phrases and slogans. Our immediate duty is to dedicate ourselves anew to the apparently insoluble problem of international peace. We must do so in a scientific spirit. The science of power expressed by the war machine must be opposed by the science of peace.

Now, science in its essence is nothing else than knowledge. And knowledge is gained by realistic, logical processes of thought. We are warranted in believing that through honest research comparable to the investigations of modern science we may discern the principles that control this science of peace.

The reasonable approach to this problem would seem first to recognize the errors and failures of previous experiments in the laboratory of peace. The lamentable experience of the League of Nations in particular should have most important lessons for us. There must be no emotional, wishful thinking. Too much of fateful import to humanity is at stake. We are engaged in a scientific research infinitely more significant than the study of the atom.

The basic error in the peace experiments would seem to have been in a false analysis of the causes of war and in the methods proposed to end war. And this error, strangely enough, has been due to the very same error that created the war machine. Both have been produced by a materialistic, mechanistic age. Both have been dominated by a blind belief in force. Both have believed that men can be coerced to behave as desired by gangsters, statesmen, and reforming idealists alike.

The peace advocates have placed their faith too much in institutions, in organizations, and in systems of government. They have persisted in the ancient error that men can be compelled to cooperate and live at peace with one another. The logical goal of this school of thought has been the creation of a gigantic international peace force to impose peace on single nations and on blocs of nations.

The peace movement has been obsessed by this faith in force, in the inexorable power of the machine. It found feeble expression in the attempt to apply economic sanctions against Italy at the time of the invasion of Ethiopia. The League of Nations when used as a means of coercion collapsed miserably in dealing successively with Japan, Germany, Italy, and Russia.

No lesson in recent times could be more impressive and poignant than that the way to peace does not lie along the road of force. The god of the war machine can never ensure peace. Whether in personal, domestic, or international relations, mankind will always abhor coercion of any kind, be it physical or moral. You may win a temporary and a precarious peace by force but you cannot reason with men by force.

A most serious mistake of the peace movement has been to urge peace because of the increasing horrors of modern warfare. This argument has been as unrealistic as it has been ignoble. Heroic men never shrink from any call of duty because of the fear of suffering and death. It is an inspiring tribute to the character of the men facing the horrors of hell in Europe and China that they have not faltered in the defense of what they believe to be sacred rights and obligations. The appeal to fear has sadly discredited the peace movement. It has paralyzed normal thinking and obscured the distinctions between right and wrong. It would be difficult for a Finnish, Dutch, or Belgian soldier to understand the reasoning of the professional pacifist. Men who are defending their hearth and home value duty and honor above life itself. The span of life is all too brief, but men still believe in eternal values. They will not be deterred from laying down their lives for others by fear of the horrors of war. This argument has done the peace movement great harm.

Another error of the peace advocates has been to stress unduly the idea that wars are caused by a state of mind. It is true that wars result from a state of mind and emotion. Men do have profound convictions, be they right or wrong, concerning the justice of their cause. They think in terms of national interests, of pride of race, of religious freedom, and material needs. They plan wars deliberately for the sake of their convictions, whether high or low, reasonable or fantastic.

Calling this a state of mind does not serve to clarify the problem. It requires much more than denunciation, derision, or argument. The fervid belief of the German people in a pure race which shall dominate Europe cannot be eradicated by either war or ridicule. The British interest in Gibraltar and Singapore; the demand of Italy for greater economic freedom; the claim by Japan for predominance in the Far East; these all must be considered realistically. Such debatable issues disclose something much deeper than an emotional state of mind. They reveal the motives that inspire and control the actions of men and nations. We must know the philosophy of life that determines conduct. We must know the compelling motives that make men selfish or generous, cruel or kind. What most matters in the science of peace is the basic philosophy that actuates the conduct of men and nations.

It is painfully apparent that our present civilization too long has been dominated by a materialistic, mechanistic attitude of mind. The hard and dangerous work of society has been done not because men and women wanted to, but because they had to. Society has been strangely indifferent to many social and economic injustices. The economic law of necessity has prevailed over the law of love. It is easy to understand why the economic determinists have so profoundly affected the thinking of all ranks of society, including many social-welfare workers and members of the clergy. They rightly believe that modern scientific discoveries should make human existence more comfortable and enjoyable. They believe that men will cease to be miserable and rebellious if economic injustices are corrected. This, they hold, is the right way to find peace.

The leading exponents of this philosophy of life are the Marxian Socialists. Their idealism may not be questioned though their class hatred and their methods lay them open to serious criticism. The inherent vice of this philosophy is that it restricts man within the narrow limits of economic determinism. They believe that man is merely the product of his economic environment. It is essentially a materialistic attitude toward life. In common with less radical reformers they would solve social and economic problems by legislation, institutions, and systems. They are substituting one mechanism for another. They would submit man to external controls of a different nature. The freedom they seek is economic. They have slight regard for his intellectual freedom and none for his religious freedom. Such a philosophy of life is too restricted to satisfy his whole nature.

This philosophy of life is also vitiated by its failure to take into account the conflicting desires of men. It ignores the greed, the lusts, the hatreds, as well as the ideals, that animate and control human conduct. It is based on the false assumption that these desires and motives can be regimented by clever regulations and mechanistic systems devised by the state. In his instinctive search for complete freedom man has never been willing to submit to a social control over his desires and ideals.

The ultimate problem in the science of peace is to discover how the desires that control human conduct, whether in the family, in industry, politics, or international affairs, may be reconciled and guided into right channels. If these desires are irreconcilable, if men and nations are resolved to take by any means, fair or foul, what they feel entitled to, there is no use in attempting to seek peace by the arbitrary use of force. You may secure a temporary semblance of peace by force, but you fail ignominiously to eradicate the basic cause of war.

The advocates of peace through justice are now facing the stark, ugly reality that civilization is rapidly reverting to the law of the jungle. Our materialistic philosophy has been tending more and more to the idea of the survival of the strongest. Disguise it as you will, it is present everywhere—in business, industry, politics, and, saddest of all, even in the church, wherever men find it possible by a sufficient show of strength to gain their ends by means other than reason and moral suasion. There is evident a general cynicism that makes light of ethical standards. We are aware of a prevalent social attitude that demands privileges but denies obligations. The freedom men seek is in the main individualistic and irresponsible.

The plight of the liberal in these times is most tragic. A sense of defeatism and the inadequacy of his convictions make him inclined too often to compromise, to accept restraints and restrictions imposed by both doctrinaires and dictators. He is in desperate need of a fresh renewal of faith in what Walter Lippmann has termed "freedom of personality and inviolability of the soul of man." He cannot be content with any human institutions and devices which in aiming at social betterment actually fetter mankind with restrictions on his desire for the freest development of his highest nature. He knows very well that the legitimate desires and ideals of men can never with safety be restrained by any schemes of social reform.

What then is the complete solution of this problem of peace? Are we to confess ourselves to be hopelessly defeated? Must we accept fatalistically the prospect of unceasing contentions and wars? If that be our answer, we might as well eat, drink, and be insanely merry before the resounding crash of civilization. But if we are committed in our personal lives to a philosophy that can give contentment, alter profoundly the desires of men, and reconcile them, then we have an adequate answer which we must proclaim resolutely with undaunted faith.

But this will exact much more from us than intellectual conviction or moral dedication. We must first demonstrate in our own lives, in every relationship both within and without the family, those standards of behavior which we believe should control the actions of other men and nations. We should acknowledge the simple painful truth so fully expressed many years ago: "Whence come quarrels and conflicts among you? Come they not from your uncontrolled desires that contend within you?" It is axiomatic that if we cannot have peace at home or in our other relationships we cannot expect it between nations. This demands immense discipline and sacrifice. We would much rather seek external controls on human conduct than inner compulsions. We would resort to resolutions, petitions, denunciations, legislation, and punishments to constrain men to keep the peace. But this is to continue the old discredited fight between conflicting philosophies of life, whether Marxism, capitalism, collectivism, or any other form of social reform. The fight is most clearly drawn between materialism and idealism, between those who deny and those who affirm the right of man to freedom of personality and the inviolability of his soul. All other warfare has but little meaning beside this unending battle. Either we must thoroughly alter and reconcile the conflicting desires of men or abandon the fight for world peace.

How can these desires be altered and reconciled? How can they be harmonized into one sole objective, one supreme goal, one great faith to animate and satisfy mankind? If we have the courage of our convictions and the willingness to sacrifice something the answer may not be as difficult as we imagine. The only adequate,

rational, unifying philosophy must be our faith in the actual brotherhood of man and ultimate spiritual purpose in social evolution. Paul, the first of the great internationalists, proclaimed this truth to the skeptics on Mars Hill. "For God hath made of one blood all nations of man to dwell upon the face of the earth, and hath determined the periods and the bounds of their habitation." Rejecting the paltry philosophy of the materialists, we must hold to the faith that there is a divine plan of evolution that promises the utmost freedom of personality and the complete inviolability of the soul. We cannot be content with lesser and baser objectives.

I am not pleading for any sectarian creed. Each must be loyal to his own convictions. I am challenging those millions of Protestants, Catholics, Jews, Mohammedans, and all others who accept the authority of God in human affairs to present a militant, united front to promote the only kind of righteousness that can insure peace throughout the world. Thus a united front would be irresistible. As President Roosevelt has so eloquently said: "There is no problem, social, political, or economic, which would not melt before the fire of a great spiritual awakening." This is the true science of peace which can triumph over the science of war. This has been the great aim of the American Peace Society since its founding 112 years ago by William Ladd, himself a great spiritual leader.

We are definitely challenged to dedicate ourselves to this crusade to check the rising tide of war and to lay the foundations for a sound and enduring peace. After all the yearnings, the strivings, and searchings after peace, we must take up the task in a venturesome pioneering spirit.

"All the past we leave behind:
We take up the task eternal, and the burden, and the lesson!
Conquering, holding, daring, venturing, as we go the unknown ways—
Pioneers! O pioneers!"

District of Columbia Primary Election

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

RESOLUTION OF DEMOCRATIC CENTRAL COMMITTEE OF THE DISTRICT OF COLUMBIA

Mr. LEE. Mr. President, on May 13 the Democratic Central Committee of the District of Columbia adopted a very fine resolution, which I ask to have printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Democratic Central Committee of the District of Columbia believes that in the District, among Democrats and other persons of independent and progressive inclinations, there exists a sentiment for the reelection of Franklin D. Roosevelt as President so preponderant that it amounts virtually to unanimity; and

Whereas knowledge that this sentiment exists is based on information gathered from every section of the community, from persons in all walks of life, but mainly from those identified with the residential class, in contradistinction to Federal employees of the more or less transitory groups; and

Whereas it is manifestly a sentiment resting, in general analysis, on three apparent and easily definable propositions, as follows:

1. Mr. Roosevelt took over the reins of government in a time of unprecedented national demoralization. The country was at its lowest ebb—economically, morally, and spiritually. Our fundamental institutions were under threat of danger more frightful than foreign foe and more sinister than civil war. The horrors of revolution lurked in the background. Roosevelt brought courage and action into a situation where before there had been but timidity and ineptitude. He saved the Nation.

2. Mr. Roosevelt, when he had effected this rescue, did not call it a day's work. He proceeded to safeguard the people against recurrence of the acts of maladministration and the misadventures of which they were the victims in the 1920's. With his administration there came in rapid succession a greater list of reforms than was ever before undertaken by any previous President. By his clear vision the course of recovery was charted; and by his stout heart and strong hand, through drought and flood, wars, man-made economic upheavals, and partisan abuse and misrepresentation such as was never before heaped upon the responsible head of the Nation, he consistently and doggedly held to his policy of using the power of his office under the Constitution for the benefit of humanity. History has already acclaimed him the greatest friend of the common people since Andrew Jackson.

3. Mr. Roosevelt, during the past 7 years, has steered a straight course toward peace. In a turbulent universe, with democracies of the Old World torn asunder and disintegrated at the whim of a single individual, with peoples everywhere harassed by the uncertainties of war, and the outlawry of dictators striving for the world knows not what, the President's foreign policy remains irrevocably fixed to its solid basis of justice—justice as vouchsafed in the teachings of Christianity. Particularly is he the champion of peace at home. He is not merely the most potent force for peace in America, but he is the foremost leader for peace upon whom the people of the world can rely today; and

Whereas, in consideration of these things, and because of the acuteness and unpromising condition of affairs in the world, it is the sense and desire of the Democratic Central Committee of the District of Columbia that the people of the District shall have a voice in the nomination soon to be made of a Democratic candidate for President of the United States: Therefore, be it

Resolved, That all Democrats and other persons of independent and progressive inclinations, who are residents in the District of Columbia, and who are not under 21 years of age, be and hereby are invited and urged to participate in a Democratic primary election, to be held on Wednesday, June 5, next, by attending at District polling places, set up for their convenience, and there, by ballot, express their preference for delegates to represent them at the Democratic National Convention to be convened in Chicago July 15, 1940.

Onward, Christian Soldiers!

EXTENSION OF REMARKS

OF

HON. GERALD P. NYE

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM BALTIMORE SUN BY H. L. MENCKEN

Mr. NYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Baltimore Sun of Sunday, May 19, entitled "Onward, Christian Soldiers."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of May 19, 1940]

ONWARD, CHRISTIAN SOLDIERS!

(By H. L. Mencken)

The Honorable Mr. Roosevelt's heroic attempt to rescue England from the law of natural selection has got off to a good start, and may be expected to develop with undiminishing radiancy. As everyone knows, it has been long in preparation, and it would have been launched months ago if the hazards of the third-term campaign had not counseled caution. But with the Honorable JOHN N. GARNER lying dead upon the field and nearly all the other erstwhile fifth-column men leaping for cover, the way is now open to panic the booboisie in the grand manner, and this, no doubt, will be promptly undertaken and achieved. In a few weeks it will be a primary article of American dogma that it is an act of lunacy, and not only an act of lunacy but also immoral and against God, to change barrels going over Niagara.

The impediment lying in the proletarian disinclination to be butchered must be considered, of course, but it is not likely to last long. The plain people, having abandoned the barber shop, the village grocery, and the dream book for the radio, are now wholly dependent upon it for information and ideology, and in very short order they will be getting a horse doctor's dose of both. Six successive nights of White House crooning will make them pant for Hitler's poisonous blood; indeed, it would take only seven or eight to make them pant for Churchill's. That crooning will be on us anon, beginning for the same at middle C and running up gloriously to A above the clef.

To be sure, there may be some adverse caterwauling in Congress, but it will hardly be heard, and its effects are already discounted. The Democratic opposition to the New Deal has been acting of late like the opposition of the poor Dutch to Hitler's blitzkrieg, and the Republicans have been divided and demoralized by a Trojan horse operated by the Honorable Wendell L. Willkie, LL. D. He will be joined at once by many another agent of the economic royalists, and the end may well be a coalition ticket, with Roose-

velt heading it and Willkie taking the place of the liquidated Garner. If the harder-dying Republicans, refusing this chance to get aboard the band wagon of religion and morality, insist on nominating a ticket of their own, it will be as surely doomed as the ticket headed by the Honorable Roger W. Babson, LL. D., author of New Ways to Make Money, and What About God?

Thus the New Deal prepares for fresh and greater triumphs, and we seem to be in for a third and worse dose of salvation. In a few weeks it will become a kind of treason to mention the Budget. Money will begin to pour out like water from a bombed reservoir, and the national debt will leap agilely to new highs. The taxpayer will not only have to shoulder another half-million jobholders, and enrich a whole new generation of war profiteers; he will also have to take over the sustenance and supply of the English and French, both of whom now teeter on the rim of bankruptcy. I have little gift for prophecy and none at all for figures, but if the deficit for the calendar year 1940 does not smash all records I'll certainly be surprised, and if the national debt isn't above $75,000,000,000 by the time civilization is saved again I'll be glad to put on a dunce cap.

All this colossal looting will go on, of course, not in the name of saving England but in the name of national defense. To the fictitious German submarines which the Honorable Mr. Roosevelt announced last September are already added a huge fleet of imaginary German airships operating from Greenland, the West Indies, and Alaska. And to bring Japan into it, and thus further the Honorable Cordell Hull's pious endeavor to open the channels of trade, there is additional inflammatory talk about an attack from the islands of the southern Pacific, though every schoolboy is presumed to know that virtually all those islands are controlled by England, France, and Holland.

It is hard to discuss such rubbish seriously, but let us assume for a moment that it is true. If it is, who is responsible for the fact that the United States is not prepared to meet the onslaught? Obviously, the baby is squawking on the doorstep of the New Deal. It came into office more than a month after Hitler began his sinister career as Reichskanzler, and before the end of its first year all Europe was aware that a new struggle for power was in the making. By 1937 even Roosevelt himself was sounding loud alarms. But instead of looking to the national defenses while there was yet time, he and his associated frauds devoted themselves to buying votes at home, and in that enterprise they were still engaged at the time the storm broke.

No more gross perversion of governmental function was ever heard of on this earth. It was actually not until last year that the annual expenditure upon defense reached $1,000,000,000, though every year saw four or five times that amount wasted upon schemes to take money away from those who had earned it and give it to those who had not. In 1938 England spent 5.37 percent of its total national income on its army and navy, and France spent 6.36 percent, but the United States spent only 1.47 percent, and most of that small amount seems to have gone for naught. Nearly 2,500,000 boys have been put through the C. C. C. mill since 1933—all of them trained, at huge expense to the taxpayer, in the arts of the Boy Scout, but not one trained in those of the soldier.

The immense sums that the New Deal charlatans have got rid of otherwise have been equally unproductive. There is nothing to show for them now save a national debt of $45,000,000,000 and a horde of 10,000,000 career mendicants, all trained to believe that they are entitled to something for nothing. If half the billions that went into so training them had been spent in preparing them to fight for their country, no dictator would dream of flouting us today. And if half the billions that were frittered away upon costly garden cities for jobholders, imbecile guide books, and obscene communistic art had been laid out in equipping an army, it would now be as formidable as Hitler's.

Were the New Deal wizards the victims of their own Christian innocence? Was it impossible for them, as consecrated lovers of peace, to believe that the bosses of other countries could be so wicked as to make war? The answer is surely not aye. From the time of the first faint alarms they have been bitterly and raucously partisan and provocative. Beginning with Roosevelt himself and running down to such dubs as Cromwell and Bullitt, they have howled for one side and against the other. American neutrality has been constantly dishonest and nefarious, and there is every reason to argue that England would not have entered the combat at all if it had not had clear assurances of American support. At this moment every rational person knows that providing such support is the main business before the House and that all the gabble about attacks on the United States is only cover for it.

Such is the net effect of New Dealism in the field of foreign relations. As in the domestic field, it has let the taxpayer in for a wholesale looting, and in addition it has greatly endangered the national safety. After 6 months of doldrums, the war has suddenly taken on such a tempo that it may very well end before the rescue of England can be achieved or even attempted. Indeed, it is not inconceivable that the English, facing appalling and almost certain punishment, may make peace before any help beyond that which a prison chaplain offers to a condemned man can reach them.

Whether this happens or not, it must be plain that we have been let in for a long series of extremely unpleasant consequences. Our only hope, in fact, lies in an overwhelming English victory, which now begins to look excessively improbable. If it fails, we'll find ourselves face to face with a bloc of mighty and far-from-tender powers, each and every one of them smarting under a sense not only of injury but also of insult. The pecksniffian blather of Roosevelt, Hull, and company has offered them intolerable affronts—maybe deserved in moral theology, but certainly not by their reckoning. History shows that nations remember and resent such insolence long after they have forgotten the wounds of actual war. They nurse and cuddle them as an elephant nurses and cuddles the memory of a Mickey Finn concealed in a peanut shell.

Thus we seem doomed to pay another stupendous bill for the honor and glory of being governed by mountebanks. I suggest that we had better look sharply to our arms. It is an irony worthy of noting that the job of assembling, cleaning, and oiling those arms will probably be entrusted to the same mountebanks.

The American Defense Problem

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

ARTICLE BY ERNEST LINDLEY

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by Mr. Ernest Lindley on the American defense problem, and appearing in the Washington Post of this date.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 22, 1940]

THE AMERICAN DEFENSE PROBLEM

(By Ernest Lindley)

In the supreme interest of our national security, diplomatic and naval steps of the most delicate and critical character may have to be taken within a few weeks. This sharp possibility arises from two facts:

(1) That within a matter of weeks the Germans, with or without Italian help, may win a victory over the Allies. Not a partial victory, followed by a negotiated peace, but a total victory, involving the destruction or surrender of the French Army and the destruction or successful invasion of Great Britain.

(2) That we are unprepared to do what we should do to guarantee our national security in the event of an Allied debacle, especially if Hitler should fall heir to the Allied fleets.

The stark realities are that the German war machine is even more formidable—very much more formidable—than it was generaly thought to be, and that the Allies are very much less well prepared to resist it than was generally thought—or than they thought. Various of our experts saw parts of the picture clearly long ago. A few voices were warning of the supremacy of Germany in the air and of its effect on the operations of armies and fleets. Our Army experts knew some time ago of this superiority of the German Army in mechanized equipment, both in numbers and quality. But the total picture was probably not clear to many, if any, people.

In appraising the picture almost everybody has been wrong. The pacifist isolationists and the pacifist internationalists were more thoroughly wrong. Those who advocated defense of the Western Hemisphere—or even the Western Hemisphere plus Oceania—saw the trend, but in most instances underestimated the time we would have to prepare for the moment of action. The President sensed the danger but befogged the situation with a political melange of meddling in Europe, futile expressions of indignation, and insufficient economic, military, and aerial preparation. If he had not misjudged the situation, he would not have supported the will-o'-the-wisp trade policies of Hull, and would not have indulged in the luxury of moral condemnation and halfway economic sanctions, unsupported by armed force. He would have talked, instead, in terms of defense of our national security.

But that is all water over the dam. The question now is not one of meddling in Europe but of our national security. Within a few weeks the Nazis may be able to line up in Norway, Holland, and Belgium, and on the French channel coast 6,000 or 7,000 bombing planes and fighter escort planes. (Meanwhile they may or may not have occupied Paris or knocked out the French Army.) If that happens, we may expect the most gigantic blackmail in the history

of the world: "Surrender the British Fleet intact, or Britain will be devastated." Whether the British would give up at the first threat is extremely doubtful, especially with a man of Churchill's fighting spirit at the head of the Government.

But suppose the Nazis convert London, the nerve center of Britain, into a shambles and then say: "Are you ready now to give up and surrender the fleet?"

Churchill has warned that the battle for the British Isles impends. The British have very considerable defenses against aerial attack but perhaps nothing like what may be necessary if Hitler is willing to gamble all on victory. Even if the British are able to withstand such punishment as no urban people have ever endured, the possibility cannot be eliminated that Great Britain will be successfully invaded and beaten to its knees.

In British shipyards a navy larger than the present Italian and German Navies combined is under construction. If Hitler gets these ships, he will have in short order, with the German and Italian Navies, a formidable force. If he gets in addition the Allied fleets afloat, or even part of them, he will have at his command by far the greatest navy afloat, in addition to by far the greatest air force and the most powerful army.

The power of the German land forces is not our imminent concern. The power of Germany in the air is more important to us. German naval power may be a life-and-death matter to us.

German air power may be indicated by the fact—or belief of our best-informed people—that the German production of military planes now exceeds 3,000 planes per month and will reach 6,000 per month by fall. The German production at present is believed to exceed the total world production outside Germany. Ours this month is about 600 planes and we won't reach 1,200 until about December. The Germans have a vast reserve of fully or partly trained pilots.

German superiority in the air need not worry us unless, or until, it is accompanied by sea power.

With Japan to watch in the Pacific, we cannot defend the naval and aerial approaches to the Western Hemisphere if the Allied fleets, in whole or in considerable part, shortly should fall into the hands of Germany or any firm ally of Germany.

This may prove to be an unduly dark picture. But any national policy which does not take account of the darkest possibilities is foolhardy.

A preeminent concern of American policy at the moment must be to assure that the Allied fleets are never surrendered. If they are scuttled, our situation will be bad enough in view of our inadequate preparations for defense, especially in the air.

We are powerless to influence the result of the great battle now being waged in France and Belgium. But we may be able to do a little to preserve the morale of the Allies if that battle goes adversely to them. To prolong their resistance it might help to guarantee to them unlimited economic assistance. If promptly given, such a pledge might influence the attitude of Russia and even of Italy. Both Stalin and Mussolini must be quaking in their boots. For if the French Army cannot withstand the German onslaught, the infinitely inferior Russian Army would stand no chance whatsoever. And Mussolini must sense that any spoils he might grab as a momentary ally of Germany could be taken from him about as quickly as the Nazis drove through Poland.

In return for whatever we can do to bolster the morale of the Allies and to accelerate economic assistance to them, we should seek to obtain the most solemn assurance that the Allied fleets will never be surrendered, and that if by air power they are forced off their present bases they will fall back on the Western Hemisphere and Singapore.

Endorsement of Third Term for President Roosevelt

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM THE WASHINGTON POST

Mr. GUFFEY. Mr. President, the suggestion by Miss Dorothy Thompson in the New York Herald Tribune several days ago, which I had placed in the RECORD, that President Roosevelt be drafted by both parties to serve another term has been endorsed by a member of the Republican National Committee's speaker's bureau staff. These statements, coming voluntarily from Republican sources, are very gratifying, and it is very pleasing to me that my book Roosevelt Again is receiving popular attention. Evidently there is a trend toward adjournment of partisan politics.

I ask that the article to which I have reference, a news dispatch from the Washington Post, be placed in the CONGRESSIONAL RECORD.

There being no objection, the dispatch was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 19, 1940]

REPUBLICAN LEADER URGES ROOSEVELT AS G. O. P. CHOICE

SEATTLE, May 18.—Melvin G. Winstock, member of the Republican National Committee's speakers' bureau staff, recommended today that the G. O. P. nominate President Roosevelt to succeed himself.

In letters to chairmen of the Republican and Democratic National Committees, he asked that the Democratic National Convention nominate as Vice President a Republican chosen by the Republican National Convention; that the President give assurance he would form a coalition Cabinet; and that Congress agree to the immediate passage of legislation to secure the maximum productivity of the Nation and conscript wealth, industry, agriculture, and labor.

"Americans all," he wrote, "should set aside partisan politics and present a united front to the peoples of the world."

Petition for a Considerate Understanding Between the American Government and the Navajo People

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

PETITION FROM THE NAVAJO TRIBE OF INDIANS OF NEW MEXICO

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a petition from members of the Navajo Tribe of the State of New Mexico.

There being no objection, the petition was ordered to be printed in the RECORD, as follows:

TO THE PRESIDENT OF THE UNITED STATES OF AMERICA

A PETITION FROM THE NAVAJO TRIBE FOR A CONSIDERATE UNDERSTANDING BETWEEN THE AMERICAN GOVERNMENT AND THE NAVAJO PEOPLE

(To be presented by Hon. DENNIS CHAVEZ, United States Senator, by request of the Navajos)

We, representatives of the Navajo Tribe, residing in the Navajo territory and Navajo Reservation within the State of New Mexico, do hereby protest the rules and regulations being imposed upon us by the administration of John Collier. We protest the following action and ask the careful analysis of our protests:

1. (a) We protest the system of having and maintaining 18 districts or subdivisions administering the affairs of the Navajo.

(b) We ask the return to the system of maintaining the judicial districts comprising six in number and thus situated to be of convenience to our people.

2. (a) We protest the reduction of our livestock under the present system that is destroying our right to free initiative and the right to make a lawful living from occupations that have been ours for centuries, and thus guarantees us life, liberty, and pursuit of happiness as is guaranteed by the Constitution of the United States.

(b) We ask that you analyze the constitutional rights of John Collier, the Commissioner of Indian Affairs, to confiscate our property by force.

3. (a) We protest the coercion of our people by representatives of the United States Government. The system of force being used upon our people is making them disrespectful of a democratic form of government, to say nothing of the hardships that are being imposed upon our people by this unjust action.

(b) The attached report from the different districts of our reservation is but evidence of the injustice and the malfeasance of the present administration of Indian affairs.

4. (a) We approve action that will tend to improve our ranges and our condition, but the present effort to improve our conditions is so sudden and so forceful that it threatens to deprive us of our very existence. It goes without saying that it is an impossibility for a Navajo family to exist on the limited herds under the stock reduction plan, and we protest the action that tends to make prisoners of our people. We want to be a free people with constitutional rights to make our own living. We believe that the administration of the Commissioner of Indian Affairs is unpractical for the future progress of our race.

4. (b) We do not believe that it is practical to administer the Taylor Grazing Act on the Navajo Reservation, and will tend, if enforced, to cause trouble with our people.

5. We define the action of creating a central agency at Window Rock as an act of extravagance at the expense of the Navajo people; that such agency has not been placed in the hands of men familiar with the lives and habits of the Navajo people. We believe the administration of the Commissioner of Indian Affairs to be far from the purpose of democracy as is guaranteed by the Constitution of the United States.

6. (a) This discussion brings out the question as to who is owner of the Indian lands. We contend that the treaties of our people with the United States Government present the Navajo people with the ownership of Navajo Indian lands. We therefore contend that our people have a right to self-government under the supervision and considerate cooperation of the United States Government, and we should be given the constitutional right to express our individual opinions and to present our individual arguments pro and con on all matters pertaining to Navajo affairs.

6. (b) Under the regulations and rules of the New Mexico Grazing District 7, act of June 28, 1934, the Indian Commissioner, or his duly authorized representative, may represent individual Navajoes, or groups of Navajo Indians in all district matters. This act alone deprives the Navajo of all rights to free speech, and since so many of our people do not speak or understand the English language, much misrepresentation has resulted, and our people have been persecuted as a result of the misrepresentation and many have been jailed as a matter of force to do things they do not understand.

In one treaty with the United States Government, dated June 1, 1868, we submitted to the protectorate of the United States Government and agreed to bring our trouble to our Government, and today we plead of our Government to come to our aid with an understanding that will benefit our people and bring to rest the unrest and wrongdoing that is caused by the action of the Commissioner and his subordinates who administer our affairs.

We, the undersigned, ask for an investigation of Indian affairs on the Navajo Reservation by men unbiased and understanding of the Navajo, and request the removal of John Collier as Indian Commissioner and his duly authorized representatives who are bringing action by force upon us.

Fred Tososie, Chief, Mascalito, Juan Agustin Guerto, Esquy Martin, Clyde Beyale, George Blackie, Pablo Martinez (Kimbeto), Woodie Harrison, and many Navajo of White Horse Chapter.

NAVAJO REPORT OF CONDITIONS AS REFERRED TO IN PARAGRAPH 3–B

REPORT MADE BY TRIBESMEN ON THE RESERVATION

District 1: The Window Rock Agency inform the Navajos about Taylor Grazing Act. The regulation to stock holder were to reduce their sheep, goats, horses, and cows to one family. He should have five sheep, five goats, one horse, one cow; no more, and that will support his family and their older family.

District 2: The old folks will have no stock and they are not to raise no more stock for their families. They will be under Government relief.

District 3: Young folks that were married 2 years ago will have no stock for their family, same as old folks, and they will be under Government relief, too.

District 4: The regulation of the Taylor Grazing Act has to be one section land for winter and one section for summer. We suppose not to build a house or hogan or fence and water. The rules are to pay for water hole and for grass. If we don't accept this regulation on Taylor grazing, there will be $500 fine or you will be put in prison for that length of time if we refuse this regulation.

District 5: We like to get together with our meeting now and make out our plan. We have authority and as much power to talk against these regulations which come out from Window Rock Agency and other different places, because these things are not prove by Congress. We have government and we want the Government to protect our tribe stocks and other things that Window Rock Agency is putting on our tribe. We don't want to have the Government support us. We like to support ourself.

District 6: Please remember and keep in mind and worked for better things, and your delegates and chapter officers must work the rights of our tribe. Your delegate were chosen to stand for the rights of your people and your chapter officers please stand by your tribe and stand up for your chapter meeting and talk for your tribe.

District 7: Indeed, my people, our plan which we meet for here today from different places—and I hope you will like these plans. We want to put our Fryer out of Window Rock Agency and all his guards and his supervise, because they are working against the Navajo Tribe and they are putting the tribe into starvation and destroying Indian stock and other things which we don't believe its prove by United States Congress. We want to get six different agency which was located within the reservation. When we had these six agency the Navajo Tribe were better off, because they had their own agency which located in their own districts. Since the Window Rock Agency was situated on the reservation they have split 18 different districts within the reservation. Therefore, lets get together and fight against these regulations. Lets cut them up in small pieces and throw them out of our way and ask our Government to give us better agency that will work for our Navajo Tribe so our tribe will not get into the starvation with our country.

District 8: It was stated that there was 337,000 different tribe United States within other countries and 227,000 Indian tribes living in United States. Indians living in United States have as much power and rights to ask the Government to protect their stocks and families and other things.

District 9: It was stated to the tribe by a missionary, Mr. Walker, and a lawyer who went to Washington for a visit, that where we find out about these things and it was not prove through Congress and Indian Affairs. And so the lawyer talked to one of our head men. He said get together all of your delegates and chapter officers and all the tribe. Talk against these unlawful regulations which is upon you from Window Rock Agency. Because you have as much rights than I to talk against it. They would not do anything to you if you talk for self-defense. The Government's given you authority and power; talk for the rights of your tribe.

OTHER NEWS FROM DIFFERENT PLACES

District 10: Mount Taylor and Crown Point Districts have accepted the Taylor Grazing Act. That is in some places were Navajo Tribe cannot think for themself. These Navajo will be under starvation as those of the southwestern reservation. They may be under relief record of Window Rock Agency.

District 11: Districts 19 have the same trouble as any other places. Six years ago this regulation was put up among the tribe, and 3 years ago it got worse as ever. It was stated by a Navajo that this regulation was made by rich people from somewhere to get rid of Navajo stocks.

District 12: Navajo stated J. C. Morgan stated that this Taylor grazing was not harmful and will not do no damage to your tribe and your stocks, too. He said it was one of the great things for us and its the benefit to your tribe. He thought that but he was wrong about it. The future is at hand now and we must try our best and keep away and not accept any regulation that come out from Window Rock Agency.

District 13: Districts 4, Black Mountain News. Navajo stated a supervisor came and had meeting 3 day ago. Meeting was about Taylor grazing. One section land was to be use for 6 months and 6 months for the other. For Taylor grazing we have to pay taxes as citizen and go by this regulation. If we refuse these orders we will have to pay $500 fund or they send you to jail for that length of time.

District 14: Navajo stated that Indian trading post grocers were pretty high, and its hard to make a living out here. He stated he wants to take up cheap trading post for his tribe. Again he stated that Fryer stated that there was 254 families that need relief in District 4. You Navajo Indian are better off then where I came from. I drank more coffee than I ever had, and its cheap, too.

District 15: Mount Rose white people stated that the Navajos had as much authority and power to live like white people told us to try our best talk for your rights. Navajo policeman and try to handcuff him and take him to the jail. He told them to handcuff him if they had some authority to do that. But after all they didn't take me.

District 16: Cottonwood Circle Navajo stated that who send these delegates legal. What were they good for. Where have these delegates legal come from. Have they come from the State of Arizona, Utah, Colorado, or New Mexico. It's unknown to our tribe and they never do us any good since the delegate of our tribe got these legal.

District 17: Mexican Spring. Old fellow stated that he was enlisted for scout army and went to the war with some number of Navajos and United States Government promise the Navajos that they will win their country back for their tribe if they would help in the army. So I have given my heart and head and life for my country and tribe. Why shouldn't the Government remember this part.

District 18: Regulations that come out from St. Johns, Ariz., put the Navajo to sleep and they can't hardly talk against it.

Santa Fe, State of New Mexico. Navajos in these counties are wide awake and they took up their trouble in Santa Fe and Albuquerque, N. M., in the courthouse. Number of the courthouse are willing to help our tribe if we do our part and talk against the regulation of Window Rock, because these regulation was

not put out from Santa Fe or Albuquerque courthouse. We will help you people all we can to fight for freedom.

District 19: Notice on Fryer relief for Navajo tribe. A truck load of relief stuff will be issued. Fryer order these relief stuff from Kansas warehouse—150,000 pounds of relief stuff, such as flour, coffee, sugar, beans, cornmeal, B power. These stuff will be issued to those who are under starvation. These relief to be hauled western side of Black Mountain and Mount Taylor districts and other places were it's needed. The relief stuff above hauled before snowfall.

District 20: Fryer stated that radio system was improving on the reservation. Fifty thousand Navajos took interested in radio system.

District 21: Navajo stated not half don't know anything about radio. Some never seen these radio yet.

District 22: 10,000 horses have been destroyed on southwestern of the reservation. Obey the regulation on stock reduction more and horse will not pay Navajo bill.

District 23: Hashtlishmi Nez stated he was clear an acre of land to put some crop for himself. He thought he was doing something to support himself and his family, and so Supervisors came along and told him he done wrong and was against the law of Taylor Grazing Act, and so he stated he is in jail for 12 months.

District 24: Fred Kebeto Districts. States when he made a visit to Washington, D. C., with J. C. Morgan, the Congress made some prove that we had our rights to keep our stocks and we suppose to get our 6 agency back on the reservation, and other things were promise. I am very glad to hear that you all working for our tribe. Thanks.

District 25: Coyote Spring News. A Navajo stated he had his daughter herding his sheep. She has been gone all day, and missed the girl coming home with the sheep. So the Navajo went and look for the sheep and he track the sheep copy mile away and he know who took the sheep. It was the Government stock man that took the sheep and he put the sheep in the corral. The next morning he went to get his sheep and Government men offer him $10 and he can get his sheep out of the corral. His brother had his sheep with him, so his brother get his sheep back. The sheep got into a fence pasture that was the reason why. He was notify before about getting his sheep in that pasture. The Government men gave the Navajo sheep and so they send a sheriff from St. Johns and had him arrest and was put in jail for 35 days.

District 26: A supervisor stated they will be put in court in Santa Fe if they don't accept this branding on Indian horses.

District 27: Two Navajo boys was put in jail for some reason, under 12 years and 13 years of age.

District 28: Navajo pupils that were married 2 years ago were enrolled in relief record.

So the supervisor issue some relief stuff to these fellows and he orders them they will worked 2½ days for their relief stuff and they will pay for them.

The meeting took place January 8, 1940. Number of Navajo attend the meet were 384 Navajos.

Will have a meeting at Pueblo Altro January 18–19–20, 2 days, and 4 other meeting they will have on southwestern reservation.

The Navajo Indians are becoming more and more dissatisfied with the Federal administration of their lives, habits, and reservation. The latest complaint is against having one central agency at Window Rock, Ariz. The Indians want to return to the system that gave them separate agencies in six jurisdictions within the boundary of the reservation. Navajos in the northern half of the reservation have always complained about Window Rock being so far away. To the Indians, Window Rock is a fabled city, inhabited not with fairies but with "Maitso." Few are the Indians in the northern half of the reservation who have visited the Navajo Agency in Window Rock, but they learned of its working when agents came along and reduced their herds and took their ponies. This is done to conserve the range, the theory being that the grass will grow "heap big" if the range is not overstocked, but no provision is made to get water on the range. The Navajo rain dance will take care of that. No doubt much good will come from the soil-conservation work, but this work is limited to soil-erosion control and grazing control, which places the benefits in the future. No immediate relief for the Navajo today is forthcoming, since the action tends to add to the Navajo's troubles of everyday life. He is suffering much for the benefit of future generations. His trade has been stolen by the white commercializers; his herds are reduced to below a make-living standard; his pony, legal tender, has gone through the reduction plant. The jobs that are rightfully his are given to the white men; the money that should be spent to ease his suffering is represented in traveling caravans, large administration buildings, hundreds of bales of mimeograph paper, typewriters, stenographers, and publicity workers.

A common-sense plan to rehabilitate the Navajo would develop the natural resources of Navajo land—timber, oil, mining, water, and irrigation—and thus bring about a self-supporting program. The Navajo set-up, past and present, has made white men rich and the Navajos poor. (George B. Bowra in the Aztec Independent-Review, Aztec, N. Mex., January 19, 1940.)

Responsibilities of Citizenship

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

ADDRESS BY HON. HATTON W. SUMNERS, OF TEXAS

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit for inclusion therein a copy of an address delivered by me on the 19th of this month as a part of the I Am an American program at Hollywood. In this connection I want to congratulate and thank this community and many others in the country for this timely patriotic service to the country. One of the most hope-inspiring things which I have observed in a long time was this group of American citizens not only attending to a local civic duty but giving their time and money to stimulate a Nation-wide interest in really getting on the job as American citizens in doing a most urgently necessary thing.

The address follows:

Citizens of America, newly come to that privilege and to that responsibility, we welcome you and declare with you in the spirit of dedication and high unyielding purpose, "I am an American."

If we are to survive as a democracy, the serious, solemn, sacred obligation and the all but divine privilege of American citizenship must come soon within the conscious realization of our people. You come to governmental responsibility with many inherited domestic difficulties in what may prove to be for the whole world the most tragic epoch of the ages. Things long established are being shaken to their foundations. The din of battle, the cry of the vanquished, the crash of democracies greet you today as you come to the threshold of governmental responsibility. Upon you as Americans, not upon agents of government, depend the mightiest issues of history.

You have a great opportunity. You are called to responsibility, challenged by a responsibility greater than that which in a thousand years has come to test the fiber and make it possible for a generation—your generation—to tower above all its fellows as they pass again in review before the historian, who must now rewrite the history of the world. I use no figures of speech. I declare the solemn, challenging truth that either you will be the greatest generation that has lived on this earth in a thousand years, demonstrating your greatness by the greatest achievement which in that time has adorned the history of the world, or you will by your failure to measure up to the challenge of your difficulties go down in defeat, carrying with you the wreckage of what will probably for a long time be the last of the remaining great popular governments of the earth. Will you do that? The answer is, "I am an American." The battle cry is, "I am an American." But the answer is not in the waving of flags, the saluting of flags, the singing of anthems, the reciting of creeds.

They have their place, but they warn us of the danger of our patriotism becoming ritualistic. Patriotism without works, like faith without works, is dead. It is good to honor those who have served their country well, but we honor them best not by worshiping at their shrines but by emulating their example with a patriotism of flesh and blood, willing to work at governing, willing to sacrifice, to suffer that the things in government for which they sacrificed and suffered may live. It does not matter how often we salute the flag and sing the national anthem. Whenever the governmental capacity of a people operating a system of popular government becomes less and remains less for a considerable period of time than their governmental difficulties, the form of their government must change.

This is a challenging thought, a challenging fact: May I give you my conclusion based on the facts which I have got as near their sources as it has been possible for me to approach? Except by conquest, no people privileged to govern themselves ever lost that privilege until they had first lost their capacity for self-government. No people who failed to use their capacity for self-government were ever able to retain it. No people who had lost their capacity to govern themselves were ever able to remain free. I am using no idle words; I am declaring the solemn warning truths of history, that when any people become so inefficient governmentally in proportion to their governmental difficulties that they cannot do the business of government, government of necessity turns from them and lays its hand on a Mussolini, a Hitler, or a Stalin to do its work.

Governments are no more accidents than worlds and trees and human beings are accidents. The fact that there shall be government is fixed by nature in human necessity. Human beings have a choice, but the only choice they have is which of two great systems of government they will have. It is either some form of totalitarian government functioning from the top downward, or a government by the people which by its nature functions from the people upward. One is directed by men who believe that might is right; the other is guided by principles which are fixed in the economy of nature.

Human wisdom unaided is not wise enough to operate such a system of government. Confused and muddled by the false belief that men, some human beings in conventions, in a creative sense gave to us our system of government, we have been looking to no higher authority than human wisdom to guide us in its operation.

Each of the basic provisions of our constitution originated out of necessity, and was tested by the experience of a people peculiarly gifted with the genius of self-government long before our constitutional conventions undertook the task of our written constitutional constructions. If we are to emerge from the difficulties that now endanger us, we must rid our minds of the silly, historically incorrect, humanly impossible mythological tales about some supermen having created for us our Constitution and system of government; and, instead of such tales, which have crowded out the truth, and which are as impossible of human accomplishment as the tales of the Grecian gods, we must realize the truth about our Constitution.

The Constitution of a popular government comes from the same source that the constitution of your physical body comes from, the same source that a tree comes from. No political philosopher or constitutional convention in a creative sense ever fashioned the constitution of a living government. Constitutions of popular governments are living things; they must be rooted in the governmental concepts of a people whose governmental capacity is able to sustain them, or they wither and die as a plant withers and dies rooted in a soil which does not sustain it.

We live in a universe of natural law governing everything from the smallest atom to the greatest systems of worlds. In this universe of law there is a live God, a great intelligence, a great power. I say in all reverence He is the Big Boss. We may be His copartners, if we will, but we must work in obedience to His law. Only in the field of government do human beings now ignore this fact, and in the field of government is the one outstanding failure of this age.

We have the choice aided by the guidance of great principles which govern governments, of governing ourselves or being driven by the lash of oppression to the discharge of a neglected duty. This is the fundamental law I would impress. People learn to govern by governing. They retain the ability to govern by using it. They lose the ability to govern by not using it. They acquire the greater ability to meet the greater problems of tomorrow only by using the ability today possessed to meet the problems of today.

The difficulties of popular government, like all other difficulties, have been provided for the development of people. Nature has no disposition to avoid difficulties for people. It creates them. The development of people is the central objective of nature. Difficulties are the gymnastic paraphernalia provided for that development. We know by our own experience and observation that no individual was ever greater than his difficulties. No victory was ever greater than the battle fought to win it. The greatest epochs of the world are those in which peoples with a purpose which would not yield, with a courage which sustained, fought their way through the greatest difficulties of time. The history of the world is but a record of difficulties overcome. Being on top of the hill is not important in the scheme of nature. Had it been so, we would have all been created on the top of the hill. Climbing the hill and gaining the strength from the climbing is what is important, instead of sitting down at the foot of the hill because it is steep and rugged and letting the muscles grow flabby. It is a law, a universal law, and therein lies the philosophy of self-government.

Progress is slow. Progress is uphill. Progress is difficult. Progress is the road of struggle and of strength; along that road lies the thrill of victory, the fitness to live. We are getting soft in America. We want the easy way, the fast way. But the easy way, the fast way, is the road downhill. It is the road of retreat. It may be alluring, but it is the lure of death. Study your own life. Examine history.

When some difficulty comes to our communities, to the smaller units of government, to our States, which function largely through smaller units, where the people choose their chief officers and have the opportunity to control, where the individual's voice may be heard and his influence felt,—instead of grappling with that difficulty and adding thereby to our governmental capacity by the use of the capacity which we possess, we cry out for a supergovernment to come in and do the job for us. As a result we not only fail to receive the increased capacity to govern which nature gives as a reward to those who use the capacity already possessed, but we lose capacity. Nature takes from us the capacity which we fail to use. It is the law of life. Let the greatest athlete go to bed and cease to use his muscles; the strength in his muscles will not remain. Let any self-governing people shift their governmental responsibilities away from themselves and, in proportion as they do, the strength to govern departs.

Basically considered, from the disregard of these fundamental facts, great laws of Nature which govern, not only in government but everywhere, which determine sound policy, which limit human discretion, which fix the program for the development and preservation of governmental capacity of the people, from that disregard, basically considered, our major governmental difficulties and dangers have come. That is my judgment. I have examined the facts. I have been trained in the school of practical experience. I have subjected that judgment to every test to which experience has taught me to subject judgment before yielding to its guidance. I give it to you for whatever it may be worth.

"Lord God of Hosts, be with us yet, lest we forget" that we live in a world of universal law, that we talk through the air, fly through the air, and do all the other wonderful things of this complex age because we have discovered and are obedient to natural law, lest we forget that long ago great thinkers, practical people who had searched the mysteries of life declared as a discovered fact that "there is a God who presides over the destiny of nations." Young men and women, and those from other lands, coming to governmental responsibility, let me impress that government is not the one hiatus in Nature where there is no governing natural law. There is no hiatus in all the universe. Only by obedience to that law can human beings now operate and preserve in this complex scientific age a great system of popular government, such as we have.

"Lord God of Hosts, be with us yet, lest we forget, lest we forget."

Cherries and the Tariff

EXTENSION OF REMARKS

OF

HON. FRANK E. HOOK

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

EDITORIAL FROM THE GRAND RAPIDS (MICH.) PRESS

Mr. HOOK. Mr. Speaker, there has been much loose talk going on with regard to the reciprocal-trade agreements, foreign competition, and higher costs under the Wages and Hours Act. I do not know whether it is because of ignorance of the facts or deliberate attempts to mislead the public, and I care not. Such talk should stop.

Recently my good friend and colleague from Michigan [Mr. ENGEL] made a speech with regard to what he claimed was wrong with legislation concerning the cherry industry. He claimed foreign competition occasioned by a lower tariff and higher costs under the Wage and Hour Act was ruining the cherry industry. The facts do not justify such remarks. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Grand Rapids Press of Grand Rapids, Mich., and no one can accuse the Grand Rapids Press of being either New Deal or Democratic, entitled "Cherries and the Tariff."

The editorial is as follows:

[From the Grand Rapids (Mich.) Press]

CHERRIES AND THE TARIFF

Michigan cherry growers, who produce about one-fourth of the total cherry crop in the United States, probably were greatly interested in a recent House speech by Representative ALBERT J. ENGEL, of Muskegon, regarding their industry. ENGEL told his colleagues that Michigan growers are being crushed between foreign competition occasioned by a lower tariff and higher costs under the Wages and Hours Act.

There is undoubted justification for the complaints concerning the Wages and Hours Act as it applies to the processing of cherries, but his charges against the tariff gave rise to suspicion that ENGEL was merely following what seems to be the routine custom of so many Republicans these days of blaming all the ills of the country on the reciprocal-trade policy.

ENGEL declared, it will be recalled, that Michigan cherry growers developed a maraschino cherry with the aid of a protective tariff, reduced imports from 22,000,000 pounds to a few thousand pounds a year. Then, he added, the State Department, "over our repeated protests," made a reciprocal-trade agreement with France reducing the tariff on maraschino cherries 20 percent, with the result that "we are now receiving importations of cherries not from France but from Italy under the most-favored-nation clause."

"Farm prices were forced down as low as 1½ to 2 cents a pound, and the growers have been producing cherries at a loss for some time," ENGEL declared, placing the onus on the current trade policy.

That would be a serious charge, if true. But it doesn't check with the facts, which ENGEL might easily have ascertained. James W. Young, Director of the Bureau of Foreign and Domestic Commerce, Department of Commerce, in response to a query, reveals the following facts about the tariff rate:

"The duty fixed by the Tariff Act of 1930 on cherries—maraschino, candied, crystallized, or glazed, or prepared or preserved in any manner—was 9½ cents per pound and 40 percent ad valorem, the combined duty being equivalent to approximately 105 percent ad valorem in 1931, to 103 percent ad valorem in 1933, and 95 percent ad valorem in 1935. Under the trade agreement with France, the specific duty of 9½ cents per pound was left unchanged, but the ad valorem duty was reduced to 20 percent. On the basis of imports in 1939, the reduced duty was still equivalent to 91 percent ad valorem."

From this it is clear that the difference between the combined duty in 1935, before the trade treaty with France was signed, and the duty in 1939 was less than 5 percent—not the 20 percent which Representative ENGEL charged. His statement apparently was the result of some loose figuring on the reduction of the ad valorem from 40 to 20 percent, in which he completely ignored the fixed duty of 9½ cents per pound. Young also states:

"The Department of Agriculture reports the production of cherries in the United States to have been 278,280,000 pounds in 1938, and an estimate by the United States Tariff Commission places the production of maraschino cherries in that year at about 36,000,000 pounds, compared to 12,000,000 pounds in 1925. * * * Imports (of maraschino cherries), which come almost entirely from France, have not only been negligible but also have shown no material increase since the trade agreement with France became effective on June 15, 1936."

In support of the latter statement, Young cites figures showing that in 1935 maraschino imports totaled 24,863 pounds, valued at $4,275, of which 24,841 pounds came from France. In 1937, after the French agreement was in effect, total imports rose to 57,598 pounds, valued at $10,587, of which 56,019 pounds came from France. Imports dropped below the 1935 figure in 1938, however, and in 1939 total imports were only 35,303 pounds, valued at $4,718, of which 32,798 pounds came from France. The imports from Italy, of which ENGEL makes so much, could not have been more than 2,500 pounds.

It should be noted that total maraschino imports in 1939 were less than one-tenth of 1 percent of domestic production. Of significance, too, are the figures showing that imports in 1931, immediately after the imposition of the Smoot-Hawley rates, were 168,399 pounds, or three times the 1937 imports following the reciprocal trade agreement with France.

In a final word Young comments: "In considering our foreign trade in cherries, account must, of course, be taken of exports as well as imports. In 1939 imports of cherries, including fresh, amounted to 1,609,539 pounds (less than one-half of 1 percent of domestic production), valued at $108,074, while exports of fresh and canned cherries, the only items for which I have statistics readily available, amounted to 5,363,193 pounds (almost 2 percent of domestic production), valued at $481,069, being greatly in excess of imports."

Cherry growers may judge for themselves whether the encouragement of foreign trade hurts or helps their industry. Representative ENGEL probably knows that the troubles of the cherry producers are domestic rather than foreign. It has been frequently suggested that cherry growers and processors might do a great deal more for themselves if they would adopt national advertising and promotion policies to increase their domestic markets. Blaming trade policies for their plight is obviously reduced to absurdity.

National Defense

EXTENSION OF REMARKS
OF
HON. ZEBULON WEAVER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1940

TELEGRAMS FROM CLARK FOWLER AND ERIC R. HALL

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams relating to our national defense legislation:

ASHEVILLE, N. C., *May 17, 1940.*

Hon. ZEBULON WEAVER,
House Office Building, Washington, D. C.:

We wish to urge that you, as well as all of the other Congressmen, support President Roosevelt's program to finance the building up of our defense with the view of protecting our great country. Have just read where Senator GEORGE stated we need 25,000 airplanes, 100,000 pilots, and 1,000,000 trained men. We think we need double the quantity of each, and we need to get busy now. It is better to allot $25,000,000,000 for the protection of our country and be in position to protect it rather than later get in a war that would cost us $50,000,000,000 and then lose on account of not being prepared. For your information, we are a branch of Eli Witt Cigar Co., manufacturers and distributors of cigars, large taxpayers, and we are willing, along with others of our great Nation, to stand our part of whatever the cost may be. Time is essential. When there is an emergency, such as exists today, we should take action. It is to be hoped that we will never have to use arms for defense or otherwise; but with the world in the condition it is today, it is suicide for us to sit still and depend on faith or fate to protect us. We should arrange to protect ourselves.

CLARK FOWLER.
CLARK FOWLER CIGAR CO.

ASHEVILLE, N. C., *May 18, 1940.*

Congressman ZEBULON WEAVER,
House of Representatives, Washington, D. C.:

Kiffin Rockwell Post, No. 2, American Legion, Asheville, urges your support of any bill offered that will increase our national defense.

ERIC R. HALL,
Post Adjutant.
MARSHALL W. ORR,
Post Commander.

The Attitude of the Churches Toward the Present World War—Scripture Lesson: Matthew 5: 38–48

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1940

SERMON BY REV. NEWTON N. MANTLE

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks, I wish to have printed a sermon delivered on Sunday, May 19, at the First Methodist Church at Ironton, Ohio, by Rev. Newton N. Mantle. Reverend Mantle is a very capable and worthy man and a credit to his profession.

The sermon follows:

It is almost certain that there are many here this morning who cannot and will not agree with much that will be said in this sermon. This can be expected when the subject itself is considered, for it is a topic over which there is bound to be a great diversity of opinion. If there should be something said that will help stimulate quiet thinking on the subject of peace as against war, and if what is said will help many of us to be just a little less hasty in our judgments and more fair in our decisions, then the preacher will feel that the sermon has served the purpose for which it has been prepared.

The attitude of the church during the past 20 years should be reviewed. When a boy in England and up to the time of maturity (which brought me to the first World War) I do not remember ever having heard a sermon against war. In all those years of easy impressions I do not remember ever having heard a school teacher saying at any time that war was foolish and wrong. But for the past 20 years and up to the present conflict the world has become conscious of the folly and injustice of war, and the Christian ministry of all denominations, the teachers in our schools and colleges, have been preaching and teaching that war is wrong, foolish, and unnecessary. Men like Harry Emerson Fosdick, the late Parks Cadman, and vast numbers of the greatest ministers in the world have been pleading for settlement of disputes without force of arms, and that, regardless of the consequences, they would never again support another war as they had the first World War. One of the greatest sermons on peace ever written is that of Dr. Fosdick when he preached on the subject of the Unknown Soldier, in which sermon he offers his devout apology for ever having encouraged the boys to go to war at all.

Hundreds of books have been written showing the cost and folly of war, and hundreds more have been printed to instruct the world that war is incompatible with Christian teachings.

The result of all this has been that many people have come to believe that there should no longer be a resort to war. Many of the young men have become conscientious objectors. Those attending the Young People's Institutes for the past 15 years have found always a course of study offered on war and peace. Thousands have been taught, and many convinced, that the only way to permanent happiness is the renunciation of war. It is rather safe to say that no institution in the world has had so much to do

with this change of attitude in the public mind as has the Christian church. And I for one have been proud of the church for its great campaign of education for peace.

The foregoing has been particularly true of the democracies, but probably not so true of the totalitarian states. The reason for this is that the power of one man depends on armed strength, and such men will not tolerate any talk about the evil of war. This will also largely explain why the democracies have not been as well prepared for war as have the dictator states.

Now there is coming a rapid change in the thinking of the public. We find that many who have advocated peace at any price are now silent. Many who have felt war to be wrong, and who still feel so, now accept it as inevitable. Many more have been so dismayed and horrified over the needless aggression of innocent countries in the present war that all thoughts of peace have been wiped out, and there is a cry for revenge.

It is encouraging to the speaker, however, that so many of the men of the pulpit are still soundly and strongly against war, and that comparatively few of them have weakened their stand in this matter. Even in Canada some ministers have held out, against overwhelming public opinion, for the stand they had previously taken. It is time for us as Christians to examine once more the problems that face us as a church. There might be a day come soon when such a sermon as this will be refused a hearing of any kind. It has happened before and it can happen again.

Was the church, then, wrong in its attitude during the past few years? Has it made a mistake? Is it now necessary to retract what has been preached in moments when ideals were high? The answer we would like to give to these questions is "no." The church was right, and the church that now stands for opposition to war is still right. The reason we are so emphatic here is that regardless of whether we are forced to go to war or not, we still feel that it is definitely anti-Christian, and that the church dare not back down from its idealistic stand. War generates hate, bitterness, injustice, cruelty, lies, brutality, crime, disease, and low morals. War is evil from start to finish. There is nothing Christian about war. The church, therefore, cannot support it as Christian.

But what if war is forced upon us? Surely it may be truly said that the democracies have not wanted this war. The very fact of their unpreparedness is proof of this fact. Then, too, it is in the democracies that there has been the agitation for disarmament and for the abolition of war. When a murderer is at large there is only one thing to do and that is to try and arrest him, and make it impossible for him to commit another murder. The war in its final provocation has been brought on by the dictators. Russia going into Finland gave Hitler all the encouragement he needed, and he needed very little, for he had already shown his caliber on other smaller nations.

But are not both sides in the wrong? Even if our indignation and our anger have been very much aroused by the invading forces during the past few years, can we quiet ourselves for a few moments to look back and try to see the cause of this conflict, even the primary causes? This is not easy to do. The speaker is English born and fought in the American Army against the Germans in 1918. He finds his resentment growing so bitter that he has to constantly remind himself of Christ and of Christ's great love for all in order to keep hatred out of his heart, and even then he naturally feels a sense of elation whenever there is a report of Allied successes. These statements are made to show that, after all, the minister is as human as any who listen to him. But are not both sides to blame? Suppose we do agree that nothing can excuse the brutal war-mindedness and grasping ambition of the dictator nations. Supposing we also agree that the war could have been averted permanently had only Hitler been more willing to listen to reason, and have waited a few more years for the fairer attitudes of the Allied nations, which we have reason to believe would have become increasingly apparent. Yes; even if we do rightfully throw all the blame on Hitler for the actual combat, yet is it not still true that the democracies forced upon Germany the Hitler regime? In spite of high, hard, bitter feelings, let us try to stop long enough to be fair.

The first World War left all European nations embittered and in desperate conditions. It was bound to take years of readjustment and rebuilding to bring things back to anything like normal. In fact, this was never done. Now, if this was true of the Allied Nations, it was infinitely more true of the defeated nations. With the national treasuries bankrupted, with industrial plants destroyed or dismembered, with commerce with Germany made nigh impossible, because no nation would extend credit nor trade by the system of barter. With a people facing starvation, poverty, deprivation, a lost national pride, and with an allied army watching over their every move, is it not natural that there grew up a bitter resentment in the heart of a people who, after all, are a great and brave race of people? They cried for justice, and most of the world felt that they had it—perhaps they did—so they cried out for mercy, a chance to live as a nation. But the Allied Nations would give them none until it was too late. Then just a few years before the present conflict broke out the English and the Americans began to change their thinking, and it was admitted that the Versailles Treaty was, if not unjust, at least cruel, revengeful, and absolutely impossible.

The Allied Nations came to agree that if another war was to be averted that some concessions must be made to the German Nation. But none were made, and a Hitler was lifted to power. At first Germany did not want him. At first she refused him hearing and he was jailed. At first they waited for their democracy to work in their beloved country, but there was no chance. The Allied Nations, which could be pardoned for their bitterness and vengeance for the few years just following the war, continued to blind themselves to the consequences of constant oppression. And a dictator nation was born. Then it was too late. Too late. Hitler inaugurated a reign of racial and class hatred. The intelligentsia were persecuted and forced to flee the country. The Jews were robbed, banished, oppressed, and murdered. Hate was the word most heard in the German language, or words kindred to it. It was too late. But it need never have been. If only the Allies had been merciful after victory. If only they could have been reasonable, more generous, and more Christlike, even 10 years after the heat of the conflict had worn off; if only they had tried to help place Germany on her feet while she was yet a republic, this whole war might have been completely averted. There would have been no need for a Hitler. There could have been a League of Nations with force of power, especially if the United States had stood with it. But it was too late.

Now look at the results. No matter which side wins the war, the world will be scores of years making any recovery. If the dictator nations win, capitalism is doomed, and democracy will find itself threatened on every quarter. No one can foretell what will happen in the United States. That it will be profoundly affected goes without saying. The entire international relationship will be changed. Commerce will be disrupted, and who can tell what will happen to industry? What will take place in Japan or in South America? And what will Canada do? Who can tell? Probably Canada will declare its independence.

If the Allied Nations win, what will be the result? It will mean a repetition of the Versailles. Maybe worse. There will likely be an attempt to completely dismember Germany. Reparations will be imposed that will be just as impossible as those of 22 years ago. Distrust, bitterness, revenge, hate, suppression, all these will be displayed. Germany ruined, and the other warring nations bankrupt in wealth and men. Years of depression, rapidly growing crime, likewise will follow. Then slowly but surely the German peoples remaining will draw once more together; a national spirit will be revived and secret armies will be rebuilt. Men, women, and children will be trained to go forward once more for national existence, a war that will turn out to be another war for German world conquest. But this period may never again have a chance to come, for by that time Russia will have by far the most powerful war machine in Europe and resources second to none. The weakened nations can be quickly overcome, and the last state of the world will be worse than anything we can now imagine. Gone will be liberty; gone will be free religious thought; gone will be freedom of speech and press; and gone will be anything resembling the capitalistic system.

Not an attractive picture; but who will deny that some such results are bound to be the consequences of a German or an Allied victory or because of a prospective Russian invasion. Therefore, if the war continues the world faces a future that is very dark, and it will be robbed of most of what we have hitherto regarded as precious and most worth while and sacred.

America should stay out of the war if at all possible. This for several reasons. Because we believe that the United States can best serve the world as a peaceful Nation, both to help the world establish peace whenever such is at all possible, and second that it might be able to help steer the war-torn world to sanity again and assist it commercially and industrially when the period of reconstruction sets in. An America at peace will be of vastly more service to the world after the war than an America that has been a nation at war. Then, too, no country in the world has been preaching and teaching peace as strongly as has the United States. To stay out of the war will help America to continue her messages of peace after the war is over. And, finally, if there is to be another attempt to federate the nations of the world, then America can help build this unity better by remaining at peace than by entering the war now.

The only grounds that the United States has for entering the war is that of self-defense. This statement will not satisfy a large number of people, but if there is anything more important than victory in this present war it is the careful planning for the future of the world. The world must come to see that war is absolutely futile, completely destructive, and ruinous for all who participate. Only in the event of a direct threat to the United States should this country consider joining the combat. Then if the present plans of spending billions to build the largest war machine in the world is only for that of a defensive war, we can state that we are in favor of the present administrative program. But when this is said, it should also be added that the United States must stay completely out of the combat except for an actual invasion of our own home territory. If this sounds selfish, we should again remind ourselves that we hold war to be folly, useless, and wrong, and that no nation ever wins a war in this day. All are losers. And let it be emphasized again that America can best serve the world as a peaceful nation.

Now, what should be the attitude of the church? That America should stay at peace. That war is still wrong even when forced upon us, and that since it is wrong we will never resort to it unless it is absolutely forced upon us. The church should stand unitedly behind the forming and maintaining of a federation of the nations of the world. It should preach and teach that in that federation all nations, large and small, be treated with the same kind of justice.

The church must preach that backward nations such as India, Africa, China, and smaller European nations be given every opportunity for self-expression, independence, and self-improvement, with the encouragement of the other nations. The church must preach that selfishness and greed are the basic forces and motives of all wars and that such greed and selfishness must be condemned whatever and wherever its source, home or abroad. The church must preach that all men are brothers no matter what the color or tongue, and that for brothers to fight is unthinkable, and that since all men are brothers all men have an equal right to live. The church must teach that after the war is over and an armistice declared that the coming peace terms must be with mercy and love as a basis, and without hate and vengeance. (That this will be improbable if Germany is the victor seems too strongly testified to be refuted, but the church must still preach it as a cardinal doctrine of Christian love and faith.)

The church must teach that only by the spirit of forgiveness can a right kind of relationship be established in the world and the church must preach that warring nations are built of individuals, men, women, and children, the most of whom are not devils, nor demons, but are human beings asking only for a chance to live with equal opportunities with other nations and peoples. The church should teach that distinctions between race and color and nationality have no part in the program of God, as far as His children are concerned, and that what He has given to the world He has given for all the world to use. The church must teach, preach, and stand for the high principles of love, kindness, understanding, fairness, and justice for all. The church must preach that human nature is not inherently wrong or low but that it is driven to such standards by injustice, misunderstandings, and greed. It must preach that the Germans as a people are just as fine as the English, and it should remind the people in America that there are some of the finest citizens of the world who have come from Germany and England to be adopted by the United States. Surely all the people of Germany are not like Hitler.

Let it be remembered that there can be no permanent victory in this war for any side. No one will win the war, in the strictest sense of the word. The events following the first World War have proved that. If Germany wins, the day will come when a rebellious people will rise up and throw off their oppressors. If the Allies win, then also there will rise in a few years a people in revolt. There is only one answer. It is the way of Christ.

What has the Methodist general conference to say? At the close of the recently adjourned general conference (less than 3 weeks ago) the following position was taken:

"We stand upon this ground: The Methodist Church, although making no attempt to bind the consciences of its individual members, will not officially endorse, support, or participate in war. We insist that the agencies of the church shall not be used in the preparation for war, but in the promulgation of peace. We insist that the buildings of the church dedicated to the worship of God shall be used for that holy purpose, and not by any agency for the promotion of war."

The conference also pledged its support to its conscientious objectors, and recommended that the Federated Council of Churches form a committee "through which Protestant denominations that desire to do so may officially represent the interests of their conscientious objectors before the Government of the United States."

But what more final word can be given than the words of our Lord Jesus Christ: "Ye have heard that it has been said, an eye for an eye and a tooth for a tooth; but I say unto you that ye resist not evil, but whosoever shall smite thee on thy right cheek, turn to him the other also. And if any man will sue thee at law and take away thy coat, let him have thy cloak also. And whosoever shall compel thee to go a mile, go with him twain. Give to him that asketh of thee, and from him that would borrow of thee turn not thou away. Ye have heard that it hath been said thou shalt love thy neighbor and hate thine enemy; but I say unto you, love your enemies, bless them that curse you, do good to them that hate you, pray for them that despitefully use you, that ye may be the children of your Father which is in heaven; for He maketh His sun to rise on the evil and the good, and sendeth rain upon the just and the unjust. For if ye love them that love you, what reward have ye? Do not even the publicans the same? Be ye therefore perfect, even as your Father in heaven is perfect." (Matthew V: 38–48.)

Had this spirit been shown 20 years ago—yes, even now—it would be the salvation of the world.

It is a time when Christian people should keep calm. It is a time for honest and unbiased thinking. It is time for deep religious meditation. It is a time when we should pray that God will keep us from hatred. We must pray for our enemies. This will take a lot of Christian grace, but there are men, women, and children in Germany who will appreciate our prayers, and surely there are some men, women, and children in Germany who are praying for peace and for us.

If the spirit of Christ is freed in human hearts, men will be free. Let us pray that we may be able to live by His precepts. Some day we shall be glad that we have so done.

Flood Control in Red River Backwater Area, Louisiana

EXTENSION OF REMARKS

OF

HON. NEWT V. MILLS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

RESOLUTIONS FROM CONCORDIA PARISH, LA., CITIZENS AND A LETTER FROM BRIG. GEN. THOMAS M. ROBINS, OF THE WAR DEPARTMENT

Mr. MILLS of Louisiana. Mr. Speaker, considerable interest has been manifested from citizens throughout northeast Louisiana; however, more particularly recently citizens from Concordia Parish are requesting the War Department to take the necessary remedial steps toward granting relief to the Red River backwater area, and rightly so, as a large part of the backwater area is the finest farming land in the world with improved highways, schools, and churches; therefore, I include as a part of my remarks on this subject three resolutions from Concordia Parish and a letter I received from Brig. Gen. Thomas M. Robins, of the War Department.

Whereas a large part of Concordia Parish, State of Louisiana, is within the area flooded by backwaters of the Mississippi River backing up through the mouth of Old River or Red River, this area being known as the Red River backwater area; and

Whereas this Red River backwater area comprises several million acres of fertile alluvial land, all of which is suitable for development and a large part of which is now farming lands with improved highways, schools, roads, churches, etc., many of the farms having been in cultivation for more than 100 years; and

Whereas this Red River backwater area suffers greatly from the annual floods caused by backwaters of the Mississippi River, and this situation is growing worse and the floods more numerous; and

Whereas this area has easy drainage to the Gulf of Mexico by the Atchafalaya River and the Morganza floodway; and

Whereas a bill has been introduced in the Congress of the United States to build levees in the Yazoo backwater area of Mississippi, the effect of which will be to raise the flood heights of backwaters in the Red River backwater area: Now, therefore, it is

Resolved by the police jury of Concordia Parish, La., That while we do not oppose the efforts of any other backwater area to relieve its situation, we consider that this should not be done in such a way as to add to the burden of the Red River backwater area, but that at the same time relief is granted to other areas, and in the same bill, relief should be granted to the Red River backwater area by reducing the intake of the Morganza floodway to a height low enough to take the floods out of the Mississippi River before they back up on the Red River area, or such other relief as the United States engineers may find desirable, and also that the fuse-plug levees above Concordia Parish on the west bank of the Mississippi River and in the south end of Concordia Parish be first raised to the new standard grade.

MONTEREY, LA., *May 6, 1940.*

Hon. NEWT MILLS,

Member of Congress, Washington, D. C.

DEAR MR. MILLS: At a meeting of the Monterey Branch of Concordia Parish Backwater Flood Association, held in Monterey, Concordia Parish, La., on May 5, 1940, the following resolution was unanimously adopted:

"Whereas the backwaters of the Mississippi River, backing up through Red River gap in the levees, almost every year flood the Red River backwater area, which is an area of several million acres of rich alluvial land in the center of the State of Louisiana; and

"Whereas, these floods are growing worse every year that the main channel of the Mississippi River is improved, and now ruin our lands almost every year in the planting season; and

"Whereas this situation should be easily remedied because this area has a direct, straight, independent outlet to the Gulf of Mexico by the Atchafalaya River, as well as by the new Morganza floodway:

"Now, therefore, this association urges that the United States engineers and our Congressmen take cognizance of this situation and the increasing damage being done by these Mississippi River backwater floods and adopt such measures as will cure the evil, especially by putting the intake of the new Morganza floodway at

a low enough level to take Mississippi waters there, before they back up on us, and such other measures as may be found desirable, to the end that this rich area be reclaimed and rendered prosperous."

In accordance with this resolution, I transmit same to you and trust it will have your serious consideration.

Yours very truly,

C. B. BURLEY, *Chairman.*

Attest:

JOSEPH J. GODWIN, *Secretary.*

ACME, CONCORDIA PARISH, LA., *May 6, 1940.*

Hon. NEWT V. MILLS,
Member of Congress, Washington, D. C.

DEAR MR. MILLS: The Acme branch of the Concordia Parish Backwater Association instructs us to write to you regarding the backwater floods from the Mississippi River in this area.

We are located near the mouth of the Black River, at its junction with the Red River, in what is called the Red River backwater area. This section is thickly populated along Black River and Red River, with farms cultivated in small units, with improved highways, schools, churches, etc.

In 1937, 1938, 1939, and many years earlier back to 1927 our fields have been flooded during the planting season by waters backing up from the Mississippi River through the gap in the west line of levees at the mouth of Old River or Red River. These floods are ruining the country. They add so much to the cost and uncertainty of farming and stock raising, as to destroy our prosperity.

We respectfully ask, that in building the new Morganza Floodway that the intake be lowered so low that the Mississippi River flood waters will go down there before they back up on us, and such other relief as you can find for us.

Yours very truly,

FRED DAVID, *Chairman.*
SHERMAN PECANTY, *Secretary.*

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, May 20, 1940.

Hon. NEWT V. MILLS,
House of Representatives, Washington, D. C.

DEAR MR. MILLS: I am in receipt of your letter of May 14, 1940, enclosing letters from the Acme and Monterey branches of the Concordia Parish Backwater Association with respect to the backwater situation in the Red River backwater area and asking that the matter be brought to the attention of the Mississippi River Commission.

Your letter and its enclosures are being referred to the president of the Mississippi River Commission for his information and consideration. A similar resolution by the Concordia Parish police jury has been referred to the president of the Mississippi River Commission and a report has been received from him. The matter of providing increased protection for the Red River backwater area will be given careful consideration in connection with the review of the existing project for the control of floods on the Mississippi River below Cape Girardeau, Mo., requested by resolution of the Flood Control Committee of the House of Representatives, adopted August 2, 1939, and by resolution of Committee on Commerce of the Senate, adopted March 12, 1940. The report will develop the remedial action, if any, that can be undertaken at this time under existing law, as well as any desirable future action that might require changes in the law. The president of the Mississippi River Commission states that the desires of local interests west of the river are known to his office, and will be given full consideration.

Yours very truly,

THOMAS M. ROBINS,
Brigadier General, Assistant to the Chief of Engineers.

I Am An American Day

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

ADDRESS OF HON. JOSHUA L. JOHNS AT HOLLYWOOD, CALIF.

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOSHUA L. JOHNS, delivered in the Hollywood Bowl, Los Angeles, Calif., at I Am An American Day gathering celebrating Citizenship Recognition Day on Sunday, May 19, 1940:

Mr. Chairman, ladies, and gentlemen, it is with a sense of gratitude and deep appreciation, and I can assure you that I consider it a distinct honor and privilege to be invited to address this vast audience, who have assembled here tonight to recognize as citizens of the United States the young men and women of this country, who have become of age during the past year, and also those who have been fortunate enough to become naturalized citizens of the United States during the past year, or previous years; and I want to thank your committee for their generosity in extending to me the invitation that they have.

This gathering tonight, in response to a proclamation issued by the President of the United States on May 3, 1940, carries out the provisions of the resolution introduced by me in Congress and passed by both the House and Senate of the United States, which provides that the President is authorized and requested to issue annually a proclamation setting aside the third Sunday in May of each year as a public occasion for the recognition of all who, by coming of age or naturalization, have attained the status of citizenship, and the day shall be designated as "I Am an American Day."

The resolution further provides that the civil and educational authorities of States, counties, cities, and towns be, and they are hereby, urged to make plans for the proper observance of this day and for the full instruction of future citizens in their responsibilities and opportunities as citizens of the United States and of the States and localities in which they reside.

The resolution does not, and shall not be construed as changing or attempting to change the time or mode of any of the many altogether commendable observances of similar nature now being held from time to time, or periodically, but, to the contrary, such practices are hereby praised and encouraged.

The resolution further provides that at the time of rendering of the decree of naturalization or at such other time as the judge may fix, the judge before whom such naturalization is held, either shall himself or he shall designate some other person to address the newly naturalized citizens upon the form of our Government and the privileges and responsibilities of citizenship. It was the thought of the author of this resolution to enlist the aid of the judiciary, in cooperation with civil and educational authorities and patriotic organizations, in a continuous effort to dignify and emphasize the significance of citizenship.

May I take a moment to congratulate you all upon the vision and the civic leadership in having been willing to undertake this difficult and responsible task of making this great gathering the success it is. Your chairman, your board of education, your superintendent of schools, your teachers and principals, the press and various civic organizations of the community, and the movie industry are all to be commended for their attitude of helpfulness and cooperation.

To you young men and women who have become of age during the past year, and to you new citizens who have become naturalized during the last year, or previous years, and who have volunteered to come together to reinforce your mutual purpose to be good citizens, deserve a special word of appreciation. May the memory of this day abide with you to inspire and guide your citizenship throughout the coming years.

What you are doing here today has more than local significance. It is a response to a need that is Nation-wide. We have taken too lightly in our generation the duties and privileges of citizenship. We have taken it for granted that democracy would run itself. We have failed to impress upon the more than 2,000,000 new citizens who each year reach the age of 21, and those who become naturalized citizens of the United States, the deep significance of their coming into active citizenship. In the past we had no inspiring public occasion to mark that event.

Several years ago I prepared an outline on United States citizenship, which is now in its sixth printing. In that outline, I called attention to the Greek idea of citizenship, which was that a citizen had a right to participate in both legislative and judicial functions of the political community of which he was a member. The right was carefully guarded and was rarely conferred upon foreigners.

In Rome there were two classes of citizens—one consisting of those who had a share in the sovereignty, and who were capable of attaining the highest offices in the State, the other made up of those possessing only the right to private citizenship. The latter class had the right to vote.

In the United States we have a dual citizenship—one to the National Government and the other to the State in which we reside. We owe our highest allegiance to our National Government.

The Supreme Court of the United States has made our duty to our National Government very plain, and for this reason I am going to quote from an early decision of the Court, when it said:

"There is in our political system a government of each of the several States and a Government of the United States. Each is distinct from the other, and has citizens of its own who owe it

allegiance and whose rights within its jurisdiction it must protect. The same person may at the same time be a citizen of the United States and a citizen of a State, but his rights of citizenship under one of these governments will be different from those he has under the other. The Government of the United States, although it is, within the scope of its powers, supreme and beyond the States, can neither grant nor secure to its citizens rights or privileges which are not expressly or by implication placed under its jurisdiction. All that cannot be so granted or secured are left to the exclusive protection of the States. A citizen of the United States owes his first and highest allegiance to the General Government and not to the State of which he may be a citizen."

This day should mark the beginning of a new purpose for not only these young men and women who have become of age during the past year, and those who have become naturalized, but for all citizens, to encourage each year a Citizenship Recognition Day, where every new citizen shall be invited to take part, to the end that our great Republic shall go forward with a new appreciation of its inspiring possibilities.

The spirit of this occaison engendered by your presence here with your friends and neighbors, by this beautiful music, together with the ideals which lie back of this movement, should have a personal meaning for each of you because your future as an individual is bound up with the future of your country.

We have been in the midst of a great depression and we have been very conscious during recent years of our national shortcomings. Perhaps we have all been somewhat discouraged and a little critical of our Republic and of our American system of government. It is well in a Republic that we should be critical and that we should attempt to improve the conditions which surround our lives, but let us never forget our great and noble inheritance, for upon that inheritance we must build our future.

It is difficult to read this history without seeing in it all the hand of Providence, for the struggle which was then taking place in America was in a sense the climax of untold centuries of human struggle upward, a struggle against despotism, a struggle against the destructive forces within the nature of the individual man himself. The birth of our democracy goes back nineteen hundred years to the birth of Christ. It was His teachings, gradually permeating the minds and hearts of the people of the western world, building up their self respect, that led to a demand for larger liberty and justice. Let us never forget that our democratic institutions have their foundation in the principles of life that were set forth by the Great Teacher.

We live in one of the greatest transition ages of all history. We think of the dawn of history, the breaking up of the Roman Empire, and the reorganization of the world's life which followed the discovery of America as marking great turning points in man's existence. In my judgment, the change that is taking place in human life today is even greater than the change which took place in the Middle Ages or during the fall of the Roman Empire; it can be compared only with the dawn of history itself.

With all of the great nations at war, save only America alone, I believe that the world is entering upon a new epoch, that mankind has again come face to face with destiny, that it has reached a point where it can turn backward into the darkness and confusion of bygone ages, or can move forward into a new period of light, self-government, justice, and beauty. Whether it shall do the one or the other may depend—indeed is likely to depend—upon what happens in the United States of America. Here we have the conditions of life, here we have the level of education; and we are the highest civilized people of the world. We, therefore, have the background and, let us hope, the purpose to preserve human freedom and to perfect democracy until every man, woman, and child under the American flag, and all civilized people throughout the world, may enjoy the blessings of security and opportunity.

It is needless for me here now to review the vicissitudes of countries overseas, the break-down of government in one country after another, or the struggle of one nation to conquer the world, or the unsettled conditions that prevail everywhere. We hear it daily over the radio, we read it daily in the headlines of our newspapers, and it all becomes very depressing and disheartening.

It is needless for me to review the difficulties that we face within our own Nation—with over 10,000,000 people unemployed, with a national debt of now over $45,000,000,000, it behooves us, as American citizens, to be calm and collected during a gathering storm which may be fierce and unrelenting as it passes over us. We need not fear so much from without, but our greatest difficulty will be within our own Nation. It, therefore, behooves us to put our own house in order, remain at peace, if we are to make our best contribution toward stability of the world when this holocaust which now envelops most of the world has quieted down again.

We have many new problems for you new citizens to help solve, problems involving relations between capital and labor, problems having to do with our economic condition today, problems involving the housing of our people, problems of education, in the conservation of our national resources, and our greatest problem is to adjust ourselves and our institutions to the new conditions as they occur from day to day.

As I am speaking today to both the native-born and foreign-born, and I want to call your attention to the fact that both those who are native-born and foreign-born alike must experience the process of Americanization. In the case of natives, Americanization involves getting acquainted with the best American traditions and current standards, and practicing and trying to improve the quality of these traditions and standards. In the case of the foreign-born Americanization means giving up one set of well-known and, in part, precious loyalties for another set of loyalties, more or less new and unknown. To renounce one group of loyalties for another group involves a deep-seated and delicate readjustment of mental and social attitudes.

In this process the native-born possess a strong advantage over the foreign-born, because they are surrounded by their homes, schools, and churches and by constant American teachings, while the immigrant or the naturalized citizen is obliged in many instances to learn a new language, and adjust himself to new customs, in most instances in mature years of life, and making such an adjustment at that age is generally quite difficult.

Americanization involves the rebirth of all our fundamental virtues; namely, liberty and initiative, union and cooperation, democracy and justice, internationalism and brotherhood. Average Americans should set the pace for new immigrants coming into this country. Whether the immigrants become social or antisocial Americans depends upon the examples which are set by average Americans, and if we do our part, I am sure these new naturalized citizens will contribute their share to the upholding of American traditions.

You are blessed here in Los Angeles with one of the most powerful instruments for building American citizenship of any other locality in the world—here you have the moving-picture industry, which is the greatest power in building public opinion that we have in the world today. I am grateful to those in the moving-picture industry who have taken such unselfish interest in the program, and my sincere hope is that some writer of movie script may be inspired to write the script for a great moving picture that may involve the thoughts and the purposes of this great gathering.

I have heard much said about there being so few opportunities in the world today. To me there are more opportunities than there ever have been in the history of our Nation. The great trouble is to find time to study and help solve the great problems that constantly confront us. The problems that we face in our country, and throughout the world, cannot be solved overnight. Our present generation will leave plenty of problems to be solved.

Among the two most important problems to face you new citizens today are the menace of dictatorship and the danger of war. Closely tied up with these problems are the many economic difficulties that face people everywhere; and as stated before millions unemployed, the ability to produce far beyond our needs, and inefficient methods of distribution. Although we are appropriating and spending millions of dollars for relief, no permanent basic solution for our economic ills has yet been found. We are living in an age of real challenge. The opportunity and the need for making worth-while civic contributions have never been greater. What the world needs today is men and women who are prepared for meeting these emergencies, and solving these problems as they come up for solution day by day.

It is for you to understand the difference between a dictatorship and a democracy. Under a dictatorship, the individual exists for a state. In a democracy a state exists for the individual, as a means to an end, and the welfare of the individual is of supreme importance. It is the claim of the Nazi, Fascist, and communistic dictatorships that the people will be better fed, better clothed, and have less worries if the dictator does all the thinking and planning. But in a democracy we would all rather share in the worries and responsibilities of state and have something to say about how we are to be governed, fed, and clothed. In the past we have always felt that we had attained life above the mere level of food and shelter.

My sincere hope is that the new citizens will all realize that your education in citizenship is really just beginning and that it will never be completed, no matter how far you go.

If we are to continue as a great Nation, we have a right to expect, and it is going to be necessary, that there be developed among our people a greater interest in public affairs, and a greater appreciation of citizenship. Citizenship is born in the schoolroom, and that is especially true with our native-born citizens; therefore, the ideals of school teachers should be the true ideals of America. The importance of their work cannot be overestimated. First impressions are lasting, and are reflected definitely in all of the future years of our life. The spirit of Americanism can and should have its inception in our schoolrooms, and with this teaching should give lessons with respect to law and order.

Young Americans should be taught to love America, and to support our Constitution and our laws, and at the same time learn that to violate these laws and the Constitution is to trample upon all that is good and distinctive in the high ideals fought for by the forefathers of our Nation.

Our country was founded on certain great principles fundamental in character. It seems to me in times like these through which we are passing it is imperative to consider these principles and see to it that we shape our lives in accord with them. Too frequently these activities of government are left in the hands of a few who have made such matters more or less their life work, when as a matter of civic responsibility we, too, should give them our own consideration. America more than ever before is looking to her younger generation to carry on her great principles and ideals.

This, a peacetime service comparable in urgency to that required in time of war, and this service is the first obligation of citizenship. A good citizen, mindful of his country's traditions and welfare, should uphold a proper respect for constituted authority and assist in preserving and advancing the integrity and prestige of his Government.

In closing, may I say that I have lived over a half century. The shadows for me have begun to fall to the east, while for most of you new citizens they are still stretching to the west. America has been most kind and generous to me. We are now passing through a great emergency, and may I ask of you that you look proudly to our country, revere its traditions, fight for its prosperity and future, and, above all, live that life, whatever be its intrinsic reward, which will cause us to know that we have been honorable citizens, appreciative of the privileges our country affords, jealous of its integrity, and alert in its defense. Be not afraid of patriotism; it is the soul of citizenship. Be not afraid of service; it is the road to contentment, and it is a thing we all can give.

Always realize that the present hour is the only hour that you really possess. It is best illustrated in these few lines:

"Behind me is infinite power;
Before me is endless possibility;
Around me is endless opportunity;
Why should I fear?"

and these words from that beautiful poem "Salutation to the Dawn" should inspire everyone:

"For yesterday is but a dream,
And tomorrow is only a vision;
And today well lived makes
Every yesterday a dream of happiness,
And every tomorrow a vision of hope."

Colonel Lindbergh's Speech

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

ARTICLE BY RAYMOND CLAPPER

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a very informative article by Raymond Clapper which appeared in the Washington Daily News of Tuesday, May 21, 1940. Mr. Clapper has written a splendid commentary on Colonel Lindbergh's recent radio speech and his article merits the most careful attention of the Congress.

[From the Washington Daily News of May 21, 1940]

COLONEL LINDBERGH'S SPEECH

(By Raymond Clapper)

It is taking in a good deal of territory to say so, but no recent public utterance has produced a more unfavorable impression among administration people than the radio address of Col. Charles A. Lindbergh.

Some of the private comment among high officials is extremely critical. Those whose outlook is closest to that of President Roosevelt are severe and blunt in their reproaches. They regard Colonel Lindbergh's remarks as hostile to the President's policies and, in effect, unduly sympathetic toward Germany. Colonel Lindbergh's acceptance of a decoration from the Nazis a few years ago is being recalled.

This private criticism, frank and impatient in tone, speaks more eloquently than anything else in describing the state of mind in Washington today. It reveals a degree of intensity which has increased rapidly within the last few weeks.

Obviously the famous flyer has eliminated himself from any important role in air-defense activity beyond the restricted sphere of technical aid. Such a national figure, with his prestige in aviation, would have been invaluable in promoting the defense program and in guiding public thought concerning it. There is the greatest respect for his technical knowledge and frank regret that he has not confined himself to that field in his public utterances.

Colonel Lindbergh's remark about "this hysterical chatter of calamity and invasion" is being construed as a thrust at recent statements of President Roosevelt, particularly the air timetable into the Middle West, which was outlined in the defense message to Congress. Indeed, the shoe might be considered to fit many important official feet.

At one point Colonel Lindbergh directly challenged the whole fundamental attitude of the administration toward the war. He said that "regardless of which side wins this war, there is no reason, aside from our own actions, to prevent a continuation of peaceful relationships between America and the countries of Europe."

High administration officials, from President Roosevelt down, have argued directly the opposite. Every action of this Government now is guided by the belief that if Hitler wins he will at once turn his pressure against the Western Hemisphere, and that we shall feel the effects in countless ways that will be most uncomfortable. It is not necessarily military invasion of the United States that our officials have in mind in this, but piecemeal penetration of Latin America, not only through trade but through "fifth column" activities and probably efforts to obtain commercial aviation footholds. In fact, such activities were under way before the war began and have not been abandoned.

Therefore administration officials do not agree with Colonel Lindbergh's statement that "if we desire peace, we need only stop asking for war." That is exactly their complaint, that every fact about the Hitler regime and its works indicates that we will not be let alone to go about our own business.

Nevertheless, Colonel Lindbergh put his finger on one soft spot which needs the most skillful handling when he said that adequate air defense of the Western Hemisphere necessitates the cooperation of the other nations.

Thanks to the good-neighbor policy, the solidarity of the American republics has grown. But it is delusion to think that the other nations are ready to sign on the dotted line anything that we may propose.

It would be dangerous for us as well as for Latin American nations if a potentially hostile power established air bases in the Western Hemisphere. It is to the interest of every nation in the Americas to join us in various moves to strengthen hemisphere defense, including perhaps the acquisition of British, French, and Dutch possessions. But the idea has not been completely sold. The situation will not be secure until all countries below the Rio Grande realize that Nazi penetration menaces their independence.

That is as necessary to defense as adequate weapons and manpower.

Our Duty As a Nation in the Present World Crisis

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

ADDRESS BY BISHOP MANNING TO THE ONE HUNDRED AND FIFTY-SEVENTH CONVENTION OF THE DIOCESE OF NEW YORK, DELIVERED IN THE SYNOD HALL, TUESDAY, MAY 14, 1940

Mr. BLOOM. Mr. Speaker, at the one hundred and fifty-seventh convention of the diocese of New York a resolution was adopted by the convention, as follows:

Resolved, That that part of the Bishop's address which deals with the unprovoked conflict in Europe be printed separately and a copy sent to the President of the United States, to all members of his Cabinet, and to all Members of the Senate and House of Representatives.

Under leave to extend my remarks in the RECORD, I am happy to include therein that section of Bishop Manning's address which deals with the unprovoked conflict in Europe. I have read it with the greatest interest and was deeply touched by the bishop's stirring plea that—

God grant that this frightful conflict may speedily be ended, and that it may be so ended that justice, right, and liberty may be upheld * * * for the sake of all that is high and sacred in human life.

No one can fail to read Bishop Manning's address without gaining a fuller realization of the fundamental issues involved in the present struggle, and I hope that each Member of this House will give thoughtful consideration to his address.

OUR DUTY AS A NATION IN THE PRESENT WORLD CRISIS

(By Rt. Rev. William T. Manning, Bishop of New York)

Since its organization in 1785 this diocese has seen many historic moments, and has passed through many experiences and vicissitudes, but never in all its history has any convention of this diocese met under conditions so grave for the whole world as those which we are facing at this time. We are facing the most stupendous crisis in the history of the world in the past 2,000 years. We are in the midst of a world conflict in which every principle of truth and justice, every principle and ideal of the Christian religion, every principle of free and civilized life is assailed and threatened.

In such a situation it is useless to declare, as our ultrapacifists do, that because war is evil we will have nothing to do with any war. Such declarations are in fact worse than useless, they are gravely harmful, they hold up a wrong and mistaken idea of Christian duty, they are morally confusing and misleading, and they play directly into the hands of the aggressors and the war makers, as

some countries are now seeing to their tragic cost. If we are to have a world in which men can live in peace, and without fear, those laws and principles must be upheld upon which alone peace and freedom can exist.

Few of us, I think, can be so blind as to imagine that this world conflict is a struggle in which our Nation is not directly concerned. None of us, as Christians and Americans, can be willing to see this world ruled by the forces and the principles of nazi-ism or of Russian communism. We all know that there has been wrongdoing in the past in which we and all the nations had our part; we all know that there have been, and are, inequitable international conditions which must be righted; but any who say that in this conflict both sides are equally guilty are, indeed, morally blind and are themselves guilty of most grave injustice.

We see the world now threatened by a despotism such as has never before been known. We all know what this despotism stands for, for we have seen this in its deeds. It is a despotism which destroys the very principles of justice and liberty; which ruthlessly attacks and overruns smaller nations and claims to do this for their protection; which crushes all opposition to its rule by the purge and the concentration camp; which drives innocent men and women from home and country to seek asylum wherever they may as refugees; which stands for rule by brutal and naked force not only over the bodies but over the minds and thoughts and souls of men. And it has now added the further infamy of its attack upon the peaceful people of Holland, Belgium, and Luxemburg. No one can read the proclamation of Queen Wilhelmina without feeling its nobility, its pathos, and its justice, nor without feeling the deep iniquity, the unspeakable wickedness, of this invasion bringing death and agony and terror to people who have asked only to live in peace and have given no offense.

In such a situation can any Christian, or any American, be neutral?

In such a situation is our entire moral duty covered by the phrase "Keep America out of war"?

We all abhor the very thought of war. None of us want to see our country engaged in war.

But in this situation I hold that we owe our fullest help at once, both moral and material, to those who are fighting for the right of the democratic nations, large or small, to live. I hold that it is the duty of our great Nation to let the whole world know where we stand and to give immediately our utmost material assistance to those who are struggling, at untold cost, to uphold the principles of human life for which our Nation stands, and upon which Christian civilization and all that we hold most sacred depend.

What further may be required of us no man can now say.

But in this day of world tragedy and world crisis our prayer must be not merely that we may be kept safe, not merely that we may be spared from the horrors of war, but that justice and liberty may be preserved in this world, and that as a nation we may be given vision to see, and strength to do, whatever is right.

I should like to see one of the candidates for the Presidency of our country now come forward and take his stand clearly on this platform.

God grant that this frightful conflict may speedily be ended, and that it may be so ended that justice, right, and liberty may be upheld, for the sake of all the nations, for the sake of our own land, and for the sake of all that is high and sacred in human life.

A Supreme Hour

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

EDITORIAL FROM THE NEW YORK HERALD TRIBUNE

Mr. MARTIN J. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

Each new edition of the newspapers carries headlines more glaring and depressing than those of yesterday. I believe, as a result of these "scares" many radio commentators, newspaper columnists, and editorial writers have gone far afield in the character and tone of their remarks on events connected with the European War.

It is reassuring to have a leading newspaper, the New York Herald Tribune, discuss the critical world situation in the moderate but forceful language contained in the following editorial entitled "A Supreme Hour." I hope many other papers will follow the splendid example of the Herald Tribune.

[From the New York Herald Tribune]

A SUPREME HOUR

With a fearful anxiety the free world has watched the relentless deterioration of the Allied position under the hammer blows of the Hitler "blitzkrieg." With Holland and eastern Belgium overrun it was "serious but not critical." With the great break-through along the Meuse it became "critical but not desperate." Last night, with the terrible armored divisions racing unchecked through Amiens to the sea, leaving a great swath of death and desolation in their wake, "desperate" was not too strong a word. Amiens is the vital center of the whole rail net feeding the northern armies; many remember how the German tide swept up to its very gates in 1918, and how it seemed at that time that, if those last few miles were crossed and Amiens fell, Allied defeat would be irretrievable. Now Amiens has fallen to the "panzer-divisionen"; the Germans believe they have cut off the whole northern Franco-British-Belgian group and trapped a part of it in an "encirclement within an encirclement" in the Cambrai-Valenciennes area. But whether they have done so or not, France and Britain are not yet defeated.

The military position is a desperate one; but there is no hint—not in Premier Reynaud's strong speech, frankly admitting the "disaster" which overwhelmed the French Ninth Army on the Meuse and the "unbelievable faults" which contributed to it, but voicing an inflexible determination to retrieve the position—not in the communiqués and dispatches from the British—that the peoples of the Allied democracies have given way to despair. Under a terrific punishment their morale is firm. They still have great armies in being. The Germans have overrun a vast territory with the surprise of their new tactics; they have not yet demonstrated their ability to hold it. Despite the achievements of the armored columns, it is certain that there is an immense confusion within the areas they have left behind them; in this new kind of warfare the lines on the map have not the definitive significance they have had in the past, and no campaign is ever won until it is over.

France and Britain are in a supreme hour—a supreme hour for their own national existence and for all the values of civilized society—but they are meeting it with a supreme courage and coolness. They are desperate; they are not yet destroyed, and as onlookers we cannot be less cool and firm than they.

Colonel Lindbergh's Ocean

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

EDITORIAL FROM THE CHRISTIAN SCIENCE MONITOR

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the Christian Science Monitor on Monday, May 20, entitled "Colonel Lindbergh's Ocean":

[From the Christian Science Monitor]

COLONEL LINDBERGH'S OCEAN

Col. Charles A. Lindbergh seems to think the Atlantic Ocean is wider than when he flew across it in 1927.

He believes, according to his broadcast Sunday night, that "If we (in America) desire peace, we need only stop asking for war."

Denmark, Norway, Holland, and Belgium did not ask for war.

He says:

"We are in danger of war today not because European people have attempted to interfere with the internal affairs of America but because American people have attempted to interfere with the internal affairs of Europe."

It would require more documentation than Colonel Lindbergh offers to show wherein the American people have tried to interfere with internal affairs of Europe since the World War. In fact, it could be said with more reason that the conflagration in Europe which threatens America today got its start partly because the United States failed to do its part toward consolidating the peace it helped to win.

Colonel Lindbergh does not object to the $1,000,000,000 defense program advanced by President Roosevelt; rather, he approves reasonable defense forces, including aircraft. Possibly he would recognize that this and most of the $6,000,000,000 spent on defense in the last 7 years by the United States are direct costs of the developments in Europe which he thinks offer no threat of invasion to America.

His recipe for security is that the United States take the other nations of the Western Hemisphere under the wings of its air force, presumably whether they like it or not, and make sure that they do not get into wars with European powers. Does not this sound like meddling with the internal affairs and foreign policies of Latin American nations?

The essence of Colonel Lindbergh's plea appears to be in this: "Let us turn again to America's traditional role—that of building and guarding our own destiny." What is that destiny? Is it to attempt a selfish and insecure aloofness in the shambles of a world engulfed by hate and rapine? Is it America's traditional role to remain blind to the implications of foreign wars and aggressions until it costs more to protect herself from chaos on her borders and sea lanes than it would have cost to help preserve a semblance of world order and decency?

"We cannot aid others," the Colonel concludes, "until we have first placed our own country in a position of spiritual and material leadership and strength." Can spiritual leadership result from self-interest that thinks only of its own safety and advantage in the face of an attack on the moral and ethical standards humanity has spent centuries in building?

Why Have $7,000,000,000 Not Prepared Us?

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

The Roosevelt administration, in its all but 8 years in office, has spent $7,000,000,000 for preparedness, and we have no preparedness.

The Roosevelt administration now asks the people of the United States to spend $2,000,000,000 more for preparedness, which of course the people are willing to do if they can only get preparedness.

But if $7,000,000,000 does not buy any preparedness whatever, how can the people imagine that less than one-third that sum will now buy it.

What has the $7,000,000,000 been spent for?

What has it bought?

Who has spent it, and who has got it?

We cannot find defense behind bales piled upon bales of dollar bills, as General Jackson fortified himself behind the cotton bales at New Orleans.

We cannot make armies out of hordes of New Deal politicians and their hangers-on and handy men.

We cannot make forts out of "pork barrels."

We cannot build redoubts by logrolling.

We cannot be content with airplanes that float only in oratorical hot air.

We cannot feel safe if our country is full of "fifth columns" of incompetent politicians, betraying their country to satisfy their own selfish purposes and wasteful extravagances.

What has become of the $7,000,000,000—a thousand million dollars a year—which this country has spent over the last 7 years for the preparedness it has not got?

Who got the money that Senator CLARK truthfully says was poured down a rat hole, and who were the rats at the other end of the hole?

Before we pour any more money down the same rat hole for the benefit of the same rats, would it not be well to have those questions answered? Says Senator Clark:

"On the recommendations of the President in his various Budget messages, we have appropriated $7,000,000,000.

"We have authorized $2,000,000,000 more this year, and if we include the authorizations, the amount is $9,000,000,000, the most tremendous peacetime appropriations in the history of any nation.

"I think the Congress of the United States is entitled to find out where and how this money has been spent, and whether it has been spent advisedly.

"I do not accuse anyone of stealing the money, but I say the American people are entitled to know what has become of this vast sum of money if we are pitiably unprepared, as the brass hats of the Army and the Navy now tell us we are.

"A little more than a year ago," continued Senator CLARK, "we adopted a vast program for the expansion of aviation service of the United States Army. Now we are told a year later that we have only 58 airships which are not obsolete.

"Having appropriated that money a year ago, and finding that we have only 58 airships that are not obsolete, I think we should find out why that is a fact and where the responsibility lies."

But the air force is not all that is "pitiably unprepared."

We are supposed to have a standing Army of 235,000 men—less than half of the Swiss Army, to be sure, but a presumably serviceable Army—but Gen. George C. Marshall, Chief of Staff, declared, when questioned before the Senate subcommittee on military appropriations, that the Army could only put 75,000 men in the field today, and that for them "some equipment is still lacking."

"But in general," continued this Army authority, "I will say that in a state of fair efficiency, with many of the most modern weapons, with modernized field artillery, we could put in the field as a mobile force about 75,000 men of the Regular Establishment."

Questioned as to how such a force would be equipped, General Marshall stated that "it would have Garand rifles.

"It would lack almost entirely the 37-millimeter antiaircraft guns.

"It would have a fair complement of 37-millimeter antitank guns.

"It would have at the moment a little less than half of the modernized 75-millimeter guns.

"It would be lacking modern 155-millimeter guns, and some corps troops.

"It would be lacking some essential engineers and communications units.

"Other than that, it would be all right."

Friends and fellow goats and gudgeons, we have spent 7,000 million dollars in 7 years for preparedness, and we can now put into the field 75,000 men only partially equipped—or one-fifth the fully armed and equipped force of Switzerland.

Fellow easy marks and come-ons, we do not need so much to be defended against hostile armies.

We need to be defended against incompetent politicians.

It is the "fifth columns" of our own demoralized democracy which are going to destroy us.

Maj. Gen. H. H. Arnold, chief of Air Corps, also testified before the Senate Subcommittee on Military Appropriations and declared in regard to obsolete airplanes that:

"If you take the B–18 [which are the Army's twin-engine bombers] and send it out against modern equipment, it would be suicide. However, we will use the B–18's for training purposes."

Asked whether the Army has any ultra-modern planes, with self-sealing tanks and cannon armament, he said:

"None. We are just now going into it."

Asked then how many of the Army's fleet of 2,700 planes could be modernized, he replied:

"Offhand, I should say half a dozen."

In regard to the availability of the National Guard as an auxiliary defense body, General Marshall asserted that:

"At the beginning of the fiscal year 1941 the guard will have on hand or on order 14,000 motor vehicles, out of a normal peacetime requirement of 44,000 vehicles.

"National Guard divisions are now tied to the ground—immobile. They cannot take the field as such."

In regard to a shortage of 85,000 uniforms for the National Guard, General Marshall said:

"We would not have on hand the cloth to commence the manufacture of uniforms for 4 or 5 months."

To epitomize further testimony, the stated facts show that the Army is now equipped with the World War Springfield manual rifle, over 20 years out of date—that there are 38,000 automatic rifles on hand, 131,000 ordered, and 240,000 asked.

That there are 218 antitank guns on hand, 526 ordered, 1,556 asked.

That the British force, when it abandoned Namsos, left 460 antitank guns on a Norway beach—more than twice the number that our Army possesses.

That there is serious shortage of modern 75-mm. artillery, 141 being on hand, 411 ordered, and 1,380 asked.

That there is also serious shortage of 75-mm. antiaircraft guns, but the Army is switching to 90-mm. antiaircraft guns to get longer range, and will need many more in an emergency.

That as to howitzers, we have none at all—48 are ordered and hundreds needed.

That many of our coast defenses are obsolete.

That some of the machinery in our arsenals is over 40 years old.

That even the new funds would create only one mechanized division—and that short of two battalions—while Germany used 30 divisions in Poland alone.

That there is shortage of 30 to 50 percent of tanks in all categories, and that there is critical shortage in ammunition.

In plain words, we have spent $7,000,000,000 for preparedness, only to find out that we are not prepared at all, even to put into the field one-half of the picayune Regular Army we are supposed to have.

We have spent $7,000,000,000 to find that the playboys of the administration have employed the same rat-hole methods of extravagant and resultless expenditure that they have used in every other branch of their ineffective personal government.

Now, Congress is asked to contribute $2,000,000,000 more of the people's money to allow these "Coal Oil Johnnies" of finance, the prodigal sons of politics, to pour down preelection rat holes for what—for the protection of the country, or for the protection and prolongation of the New Deal?

It is a fair question.

Seven billion dollars have been largely wasted in rat-hole politics and we have no preparedness.

Fifty-eight billion dollars have been spent—and largely wasted—in various departments of government in the 7-year itch of New Deal extravagance and incompetence, and little of benefit to the public has been accomplished anywhere.

Sure, as Senator CLARK so moderately asserts, "The Congress of the United States," and the people of the United States are "entitled to find out where and how this money has been spent."

If we cannot have preparedness, we can at least have an accounting.

Security and Defense, the Road to Peace

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. TOM CONNALLY, OF TEXAS

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered over the radio on Monday, May 20, 1940, on the subject Security and Defense, the Road to Peace.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The objective of the foreign policy of the United States is peace. We have come to know, however, that our security and peace can best be assured by adequate armed defense—a defense not alone of men and military equipment but a defense fortified by the spirit and character of our people. In this democracy of ours, both in peace and in war, in times of calmness and quiet, and in periods of danger and peril, every citizen has a lofty duty toward the Republic which guarantees those fundamental rights of citizenship which are the glory of our system.

That is the America our fathers gave us. This is our America. It shall remain our America. If it is to remain our America, we, and we alone, can preserve it and protect it and hand it on to our sons, stronger and nobler for our having lived and served and sacrificed.

Every citizen of the Republic has a task and a duty to preserve it—civilian and soldier alike. Individual right, individual privilege, carries with it individual responsibility.

On November 11, 1921, with a vast concourse I stood in Arlington National Cemetery where sleep thousands of soldiers of the Republic, soldiers of the Revolution, of the War of 1812, of the War with Mexico, the Blue and the Gray, reunited in valor and in death's endless sleep, those who fell in Cuba and the Philippines, and those whose blood reddened the soil of France, and in the splendid marble amphitheater I saw the generals and admirals and diplomats, representing the governments of many foreign nations and the United States, lay upon the sarcophagus of an unknown and unnamed American soldier a multitude of flowers, and pin upon the coffin military decorations expressive of the tribute and gratitude of great nations, and then I heard the President of the Republic lift up his voice and give noble utterance to the emotions that stirred within the hearts of his countrymen in that solemn and sacred moment—here lay only the poor, broken body of an unknown soldier wrapped in his uniform and shrouded in the flag for which he died—unknown, one out of 4,000,000—no one knew his name, no one knew whether there flowed in his veins the blood of some distant noble or that of an ancestral peasant; no one knew from what home he came, whether from a hovel or a mansion; no one knew from where he came—but all the world knows where he went; he went forward filling the file, the individual file, to which his country and civilization called him, and in going forward he leaped to fadeless and undying glory.

He set an imperishable pattern for every American in peace and in war, in times of prosperity and in times of economic disaster, in periods of domestic tranquillity, and in times of stress and strain.

This is our America, our democracy, ours to govern, ours to advance, ours to perfect, and ours to make more glorious. Every American has a solemn duty—a duty commensurate with his ability, his resources, and his intellect. This is our America. If it is to remain our America, we must stamp out and extirpate communism and all the other foreign "isms" and subversive influences which seek to undermine things American. We shall tolerate neither the "fifth column" nor the espionage nor sabotage of foreign agents nor the treachery of any domestic influence or group.

This is our America. It shall remain our America. The United States is devoted to the ideals of peace. We want no war. We have never drawn the sword except with reluctance and to vindicate the violation of sacred rights. We want to attain our national destiny without foreign aggression or involvement. We entertain no imperial ambitions. A liberated Cuba and an enfranchised Philippines testify before all the world that we desire to hold no people in subjection or thralldom. We covet neither the territory nor the riches of any other land. We want no entangling alliance with foreign nations. Neither do we propose to be the victim of foreign aggression or conquest. We do not want a foot of foreign territory, but, by the same token, we shall not give up an inch of America to any aggressor on earth. We do not dictate to any other nation on the globe its form of government. We do propose to maintain our own system and to lead our own way of life.

Today the world is staggered by a terrible picture of blood and horror. The clouds that hang above one of the fairest regions of the earth are charged with the heaviest and most murderous bolts in the armament of Mars. Great nations and mighty armies are grappling in an embrace of death. Neutral nations have been overrun and conquered. Neutral rights have been violated and extinguished by the sword. Frontiers have been destroyed and sovereignty wiped from the map by the bayonet's thrust. In such an hour of world danger, at a time when the processes of peace and the rule of law have been dethroned, and military might and conquest have usurped the seats of power, what is the duty of the Government of the United States? It is our manifest obligation to our people; to our institutions; to our territory, and to our lives; to the heroic traditions of a great and glorious past; to those whose blood and treasure established this Republic; to the martyred dead, who have defended it and protected it—it is our manifest obligation to make America so strong upon the land and upon the sea and in the air that no power on earth shall dare to attack us, or to challenge our safety. We want peace, but there is no other course, if we would remain at peace. We must not, through any sense of false security such as that suggested by Colonel Lindbergh last night, through any idealistic attachment to pacifism, hesitate one moment to make our national defense absolutely invulnerable. In this dark hour the admonition of George Washington comes ringing down to us through more than a century: "To be prepared for war is one of the most effectual means of preserving peace." Those were inspired words. They had their background in Valley Forge and Brandywine and Germantown, and in the Battle of Long Island, when ragged and hungry and unprepared armies and lack of support almost crushed his great heart with despair. They reach back to Yorktown, when, prepared and with an adequate force, he vanquished the armies of a king and achieved peace and independence.

For many years I have been an aggressive advocate of preparedness. In a speech in the United States Senate on February 27, 1939, I urged the expansion of national defense and of the air program. At that time I said, "Ah, Senators, the armies and the navies of powers which are ambitious, of powers which are aggressors, of powers which love conquest, of powers which are dominated by men whose vaulting ambition reaches the stars—those armies and those navies are to fight some nation when they get ready to fight. We may be that one.

"It is said, however, that we are protected by two great oceans, that we are in no danger, that we have the Atlantic on the east and the Pacific on the west.

"Talk about being defended by two oceans; the only way we can defend ourselves with two oceans, Mr. President, is by having a navy good enough and strong enough to dominate two oceans. We ought to have an unbeatable navy. That is the kind of a navy the Senator from Texas favors."

In that address I advocated the building of an incomparable and unconquerable navy. I urged the increase of our fleets of airplanes, both for the Army and the Navy, and the increase of antiaircraft defenses and artillery and the augmentation of the Army to place the Nation in a state of adequate defense.

It must not be assumed that the Government of the United States has not taken steps looking to the national defense. Today the Navy is stronger, better equipped, and more efficient than at any time in its history in time of peace. Today the Army enjoys its greatest peace-time strength. The Air Establishment, both naval and military, is stronger than at any time in the history of the country in time of peace. During the administration of President Roosevelt the Congress has appropriated more than $7,000,000,000 for national defense. The Congress is ready to vote for military and naval defense, which will secure the safety of this Republic.

President Roosevelt, in a masterly address to the Congress, laid before the country a program of national defense which will meet the support of both the Congress and the country. I am standing and you are standing squarely beside the President in plans for the security of the Republic. It is my own view that we must build an incomparable and unconquerable Navy. A vast fleet of military and naval aircraft must be provided. Antiaircraft defenses and heavy artillery must be produced in increasing volume and of the most modern and scientific pattern. The strength of the Army must be augmented and intensified training and modern equipment must be supplied to the National Guard and to the Reserves.

The American people pray that the United States may not be dragged into a war anywhere on the globe. But there can be no assured peace except in armed defense. We shall arm not for war, but for peace. We must be prepared to say to any power on earth who challenges our security or threatens our safety, "We want no war with you, but if you dare assail us, we shall resist

on the sea and under the sea, on the land and above the land, with a navy, with an army, and with an air fleet unconquerable and irresistible."

This is our America. All that we are and all that we hope to be and all that we possess are pledged that it shall remain our America. We look back through the heroic history and treasured traditions of America for more than 160 years, we strike hands with and salute the Continental Congress that gave us the Declaration of Independence, and with them exclaim, "with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor." This is our America and by all the gods of peace and by all the gods of war, it shall remain our America.

Colonel Lindbergh's Speech

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, May 22 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM THE NEW ORLEANS TIMES-PICAYUNE

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the New Orleans (La.) Times-Picayune of May 21, 1940, commenting on Colonel Lindbergh's recent radio speech. I agree with the sentiments expressed in the editorial.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

[From the New Orleans Times-Picayune of May 21, 1940]

AMATEUR ORACLE

From Colonel Lindbergh's oracular counsel of Sunday night we quote the following:

"Regardless of which side wins the war there is no reason, aside from our own actions, to prevent a continuance of peaceful relationships between America and the countries of Europe. If we desire peace, we need only stop asking for war. No one wishes to attack us, and no one is in position to do so."

By a daring airplane flight across the Atlantic in his youth, Colonel Lindbergh won world-wide popularity. He was acclaimed wherever he went; wealth and honors came his way. The hero worship and the material rewards of his exploit blended a draught potent enough to turn most heads. So in early middle age Colonel Lindbergh has blossomed into an oracle who feels confident to instruct the world and his countrymen on such momentous problems as war (of which he has had no experience); statesmanship and diplomacy (in which he has had neither training nor service); foreign philosophies, the character and purposes of war lords abroad and the conduct of our own national affairs.

To believers in human freedom and Christian civilization, Colonel Lindbergh's assumption that so far as our "peaceful relationships" with Europe are concerned, it makes no difference who wins the war, seems not only mistaken but foolish. His observation that "if we desire peace, we need only stop asking for war" is mocked by the current fates of nations which fervently desired peace, never "asked" for war, and held the solemn nonaggression promise of the dictator who without warning bombed their cities, committed indiscriminate slaughter of their civilian populations, and blasted them into submission.

The colonel's assumption that "no one wishes to attack us and no one is in position to do so" may be correct for the moment, when the aggressor has his hands full elsewhere. But the predators themselves define this as a war of the "have nots against the haves," and no intelligent person can doubt that they covet the rich resources of the Americas—including this Republic with its temptingly inadequate defenses.

Does Colonel Lindbergh still share the pathetic faith so long displayed by Mr. Chamberlain in Hitler's moderation, honesty, and "friendliness"? Most of us judge that conquest-mad war lord today by his deeds—and put no trust whatever in his continuously broken promises.

So we hope no American will be deluded by Colonel Lindbergh's theory that American institutions and ideals of human rights and freedom will take no hurt no matter how the overseas war against those ideals is won or lost, nor by his assumption that the self-styled "have nots," armed to the teeth and running amok in Europe, have no thought of striking for the greater riches and loot offered in the Western Hemisphere if and when conditions favor the assault.

New Equipment and Great Waste

EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

Mr. BOLLES. Mr. Speaker, responding to the emphatic demand of the people of the United States that we shall be prepared to defend ourselves in any great emergency which might arise, I have, in common with other Members of Congress, voted for large sums for our war forces and for such equipment as would place the military arm of the United States in a position to defend these shores. I had hoped that there would not be any retelling of the story of 1917 and 1918 in the use of these funds. I may say, Mr. Speaker, that I was shocked at the devastating report of the Budget Bureau on defense expenditures which, to say the least, are amazing. I stated some of these facts in an interview which under the signature of that distinguished journalist, Arthur Hachten, has been printed in many metropolitan papers of this Nation in the last few days. It is as follows:

In 1937 the War Department spent $380,000,000. Of that, 2.8 percent went for new equipment. In 1938 the War Department spent $405,000,000 and a paltry 1.66 percent went into new equipment. In 1939 there was $455,000,000 to spend, and this time, in the face of war in Europe, 5 percent only went into new equipment.

There was a total of $1,237,000,000 in war funds in 3 years, and 9.46 percent was spent for new equipment to get ready for war. That was $117,020,200. That won't go far in war to outfit an army.

Therefore, when it comes to Garand rifles, mobile artillery, machine guns, and soldier outfits, I believe I am justified in my statement that if we got only $117,000,000 for new equipment out of $1,237,000,000, we cannot hope to get a greater percentage of new equipment out of what the President asks unless there are a lot of changes in procedure.

We might as well face the cold facts that to equip a real defensive army with antiaircraft guns, mechanized artillery, coast defense, a real Quartermasters Corps, ordnance, and all other necessities, we shall spend, before we are genuinely prepared, up to $10,000,000,000.

I would prefer to prepare to spend $10,000,000,000 and be ready than to skimp and fail, but we want to make certain that the money is spent wisely and not squandered by new dealers.

Let us hope we do not waste millions as in 1918. We want no "war babies" for 1940. Our industry is equipped to go ahead and do its job for the Government on the basic principle of millions for defense but not one cent for waste and graft.

Let us not forget that since and including 1938 and to this date, including the spending bill for the Army as passed by the House, we have appropriated $2,583,606,105 for the War Department, and for the same period for the Navy $3,084,845,394, or a total of defense money of $5,668,451,499.

We certainly should have gotten somewhere on this enormous pot of gold. Where?

Mr. Speaker, if the same proportionate percentage as revealed by these figures for the last 3 years in the expenditure of money for new equipment is applied to the appropriation of $1,180,000,000 asked by the President of the United States, there would be but $118,000,000 for new equipment. I trust, therefore, that not 10 percent, as has been the experience according to the report of the Budget committee for the past 3 years, but 100 percent will be expended. The necessity of administering this fund need not add a dollar to the expenses of the Government. We already have the personnel perfectly able to do it, without the addition of picturesque boards and commissions to handle it. Of course, I know what has become of the other 90 percent of the appropriations made for the years indicated in the interview, but that does not exonerate the War Department from the responsibility when we have for so long a time faced the prophetic possibility of our being obliged to defend ourselves against the storm and debacle destroying Europe. There must not be, Mr. Speaker, a repetition of the waste in contracts and the piling up of useless equipment as we had in the World War, which

scandalized this Nation following that great conflict and which sent a number of people to our penal institutions. Bureaucratic irresponsibility should no longer obtain in this time of our crisis.

Storm Over the Caribbean

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

LETTER OF PRESCOTT DENNETT, TREASURER OF MAKE EUROPE PAY WAR DEBTS COMMITTEE

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter written by Mr. Prescott Dennett, treasurer of Make Europe Pay War Debts Committee, which was published in the open forum of the May 1940 issue of the American Mercury magazine, under the title "Storm Over the Caribbean."

The letter is as follows:

[From The American Mercury for May 1940]

STORM OVER THE CARIBBEAN

SIR: In his article No More West Indies in your March issue, Mr. Tom S. Hyland levels his guns at the Make Europe Pay War Debts Committee and at our national chairman, Senator ERNEST LUNDEEN. He completely obscures the fundamental national defense issue which serves to make the acquisition of European-owned islands in American waters a simple and an easy method for Europe to square up in some measure on the billions in war debts which have been saddled on the American taxpayers.

In his diatribe concerning West Indies "poorhouses" your author makes no mention of Bermuda. He could hardly consider Bermuda poverty-stricken. Senator LUNDEEN, who visited Puerto Rico a year ago, tells us Mr. Hyland's analysis of conditions there is at variance with current facts. Shortly after your article appeared, Senator ROBERT R. REYNOLDS, on of the many to join our movement, introduced into the CONGRESSIONAL RECORD statistics which give an entirely different picture of the economic situation in many of the West Indies than that presented by Mr. Hyland. In justice to our committee and in the interests of accuracy, I believe it is only right that you direct your readers' attention to the CONGRESSIONAL RECORD of March 4 and 13, pages 2284–2288 and 2784–2787.

Outstanding naval and military authorities have published dramatic reasons for doing substantially what our committee urges. Maj. George Fielding Eliot, for example, has pointed out that our defense in this area rests on Puerto Rico, and contrasted the holes in our Atlantic island-outpost system with the very good island-outpost system we now have in the Pacific, which serves both offensive and defensive purposes. Moreover, I refer interested readers to the leading article in the February issue of the semi-official United States Naval Institute proceedings, wherein Lt. Comdr. Isaiah Olch, U. S. N., devotes 11 pages to a résumé of national interests in the Caribbean area. Will your author attempt to refute such statements as the following?

"The importance of our position in the Caribbean area and along the South and Latin American coasts cannot be overimpressed upon anyone interested in the future safety of the United States. The former naval base at St. Thomas has been abandoned while in that same key area of the northeastern section of the Caribbean we have failed to develop any extensive naval facilities in Puerto Rican waters. * * * Perhaps the time will come for us to withdraw from European and Far Eastern spheres in the face of concerted action by foreign powers before we realize that the heritage left to us in the form of a fundamental and progessive development of interest in the Caribbean and in South America has been lost * * *."

The Mercury will be performing a public service in the interest of accuracy in bringing the above authoritative military and naval defense opinions to the attention of its readers.

PRESCOTT DENNETT,
Treasurer, Make Europe Pay War Debts Committee.
WASHINGTON, D. C.

Development of Red River Valley

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

Mr. BROOKS. Mr. Speaker, a great part of my work in Congress has been devoted to projects for the development of the Red River Valley in Texas, Arkansas, and in Louisiana. A number of projects have been pending for many years and within the last year at least one tremendous project has actually been begun. Within a few short months, it is my hope and expectation some smaller projects in northwest Louisiana will actually see the breaking of ground and the beginning of work on a large scale.

I have assembled numerous facts regarding these several projects and I would like to take each one up in order to give this Congress some of those facts which are so essential and vital to the development of the Red River Valley.

DENISON RESERVOIR

The construction of the Denison Reservoir on the Red River in Texas and Oklahoma for flood control and other purposes was authorized by an item contained in the Flood Control Act approved June 28, 1938. The basic plans for the development of the Denison project are contained in House Document No. 541, Seventy-fifth Congress, third session.

The Denison Reservoir will be formed by an earth dam located in the Red River in Grayson County, Tex., and Bryan County, Okla., at a site about 5 miles northwest of Denison, Tex., and about 15 miles southwest of Durant, Okla. The dam will be about 14,000 feet in length and about 165 feet in maximum height above the stream bed. The storage capacity of the reservoir will be 5,825,000 acre-feet, of which 2,060,000 acre-feet are for generation of hydroelectric power and 2,745,000 acre-feet are for flood control. When filled to the top of the power pool, the Denison Reservoir will extend upstream along the main stem of the Red River about 64 miles and about 61 miles up the Washita River Valley.

The construction of the Denison project is in the charge of Capt. Lucius D. Clay, the district engineer at Denison, Tex., under the general supervision of Col. Eugene Reybold, the division engineer, southwestern division. Allotments totaling $7,888,000 have been made for this project to date. In the statement showing the proposed application of funds included in the Budget estimate of $70,000,000 for the fiscal year 1941, which the Department submitted to the Committee on Appropriations of the House of Representatives in connection with the hearings on the War Department civil appropriation bill for the fiscal year 1941, it is hoped that the sum of $4,800,000 will be set up for continuing work on the Denison project. A further item of $2,000,000 is included on the list which was also submitted to the Appropriations Committee showing the allocation of funds in the amount of $25,000,000 which could have been profitably expended in the fiscal year 1941 in addition to those listed within the Budget limitation of $70,000,000. These two lists are printed on pages 136 and 143 of the hearings for the subcommittee of the Committee on Appropriations of the House of Representatives.

The first contract in the construction of the Denison Dam was for the clearing of land at the dam site. This work was completed during October 1939. Additional clearing of one disposal area in the dam-site area, the construction of a temporary field office building and field concrete laboratory building, and the laying of a water-supply line to the

dam site have been completed by hired labor. Contracts are now under way for the excavation for the outlet works and the construction of a temporary bridge and for the construction of the outlet works. The plans and specifications for the construction of the main embankment of the dam and the excavation for the spillway have been approved by the Department. It is expected that the construction of these items will be initiated about May 15, 1940. The design of the remainder of the project, including the highway railroad and utility relocations is progressing rapidly. The construction of the entire project will be carried on as expeditiously as engineering considerations and the availability of funds will permit.

Flood records of the Red River, especially with regard to the discharges in the upper river, are very incomplete. It is known, however, that floods of considerable magnitude occurred in 1843, 1876, 1892, 1908, 1915, and 1935. The greatest flood of accurate record is that which occurred during late May of 1908, although there is evidence that the flood of 1843 may have been considerably higher. The 1935 flood, which was approximately equal to the 1915 flood, caused a considerable amount of damage in the Red River Basin below Denison. The bottom lands in the Red River Valley are subject to flooding throughout practically the entire length of the river. Between Denison and the mouth of the river the flood plain is wide, and the flood losses are high, due to the size of the flood plain and its relatively large agricultural crop value. Between Denison and the Texas-Arkansas State line 153,000 acres of cleared land were inundated by the 1935 flood. All but 10 percent of this, or 138,000 acres, would have been protected by the Denison Reservoir. If the 1908 flood were to recur under present conditions about 233,000 acres would be flooded in this reach of the river. This flood area will be reduced to about 15,000 acres after the reservoir is in operation. If the estimated maximum probable flood were to occur about 97,000 acres would be protected by the reservoir out of the total of 263,000 acres that would be flooded if the reservoir were not in operation.

Between the Texas-Arkansas State line and Alexandria, La., there are numerous levee districts with levees in various stages of repair and disrepair. The Denison Reservoir will protect in this reach 35,000 acres of cleared land from the 1935 flood, 179,000 acres from the 1908 flood, and 423,000 acres from the estimated maximum probable flood. The crop damages caused by floods are so extensive in the Red River valley that they constitute a major economic problem to the landowners, tenants, and sharecroppers. As a result of a survey of flood damages in the agricultural area between Denison, Tex., and Alexandria, La., it was determined that the average annual flood damages to crops amounts to about $1,007,000. The prevention of these crop losses will be one of the principal flood-control benefits resulting from the operation of the Denison Reservoir.

Many other damages which will be prevented by withholding flood waters or by reducing flood magnitudes include the loss of buildings, bridges, and livestock; business losses due to reduced crops and the disruption of business caused by floods, bank caving, which causes great losses nearly every year; the pollution of fertile fields with weeds, which can be eradicated only with considerable labor and expense; the erosion of rich farm lands; the deposition of silt on agricultural lands; and various others. In addition to the prevention of loss, definite benefits will be obtained through the reduction in the incidence of malaria and the enhancement of property values due to the ability to turn forest or submarginal lands to economic crop production.

Inasmuch as any new navigation system for the Red River would require flow regulation, the Denison Reservoir will be of considerable benefit. It will have beneficial effects in reducing floods, decreasing bank caving, and in substituting moderately high river stages of long duration for high flood stages of short duration. These beneficial effects will be augmented by the increased low-water flow resulting from the regulated power discharge which will furnish more dependable navigable stages. Although at present irrigation is not practiced to any great extent in the Red River Valley below Denison, the reservoir would have beneficial effects on any future irrigation by pumping from the river or from shallow wells due to the improved flow conditions that will result from the operation of the reservoir.

The Red River Valley below the Denison Reservoir has had a serious health problem for many years due to the prevalence of malaria. The principal breeding places of the anopheles mosquito in this area are pools in low places in the bottom lands along the Red River which are frequently filled during floods and in the larger ponds that are often formed by the river cutting a new channel during high stages. The Denison Reservoir will be of considerable benefit for malaria control by reducing the overflowing of bottom lands, caving of banks, and the cutting of new channels.

Bank caving due to high stages and velocities during floods is serious in the Red River Valley, as large amounts of land are lost thereby during every flood. Caving becomes serious as the river approaches bank-full stage and is accelerated during stage recession if banks have been thoroughly saturated by overflow. The operation of the Denison Reservoir would have important benefits in the prevention of bank caving in the river valley below the dam.

At the present time approximately 600,000 acres between Denison, Tex., and Alexandria, La., are completely or partially protected from flood by a system of levees, but there are many additional acres of fertile lands now under cultivation or adapted to cultivation if flood protection is assured. A large portion of these lands will receive further and more definite protection when the system of levees is assisted by reservoir operation upstream.

Floods in the Mississippi River usually occur in the spring, as a result of flood flows out of the Ohio River. The coincidence of flood flows out of the Red River with the Mississippi River spring floods is rare. However, the early summer floods out of the Missouri River occasionally coincide in the Mississippi River with the summer floods out of the Red River. The control provided by the proposed Denison Dam and Reservoir on the Red River summer floods has been estimated to produce a reduction of approximately 0.6 foot at the mouth of Old River on the Mississippi. This reduction, while not substantial with respect to Mississippi flood stages, is important when flood crests seriously tax the Mississippi levee system.

RED RIVER PARISH

The Flood Control Act approved June 22, 1936, authorized the raising, enlarging, and extending of the present levee system on the right bank of the Red River in Red River Parish between 35 and 55 miles below Shreveport, La. This project was completed during the fiscal year 1939.

BAYOU PIERRE

A project for enlarging the channel of Bayou Pierre from Bayou Wincey to Grand Encore, La., was authorized by the Flood Control Act approved June 22, 1936. This project was also completed during the fiscal year 1939.

BLACK BAYOU RESERVOIR

The Black Bayou Reservoir in Caddo Parish, La., about 25 miles northwest of Shreveport, La., was authorized by the Flood Control Act, approved June 22, 1936. Local interests have agreed to provide the lands and damages for this project, but to date have not yet made available to the Department any of the lands. It is understood, however, that a large part of the necessary lands are owned by the levee

district. Preliminary plans for the Black Bayou Reservoir have been completed. When lands are made available for the project, every consideration will be given to providing funds for the preparation of detailed plans and specifications. Because the continuation of projects already initiated will require most of the $70,000,000 included in the Budget estimate for general flood control during the fiscal year 1941, no item for the Black Bayou Reservoir is included in the list which the Department submitted to the Appropriations Committee of the House of Representatives. A proposed allotment of $289,000 is, however, included in the $25,000,000 additional list.

BAYOU BODCAU RESERVOIR

Bayou Bodcau Reservoir was authorized by the Flood Control Act, approved June 22, 1936, and the authorization was amended by the Flood Control Act of June 28, 1938, and the War Department Civil Appropriation Act of June 28, 1939. Work on the plans and designs and on dam site, reservoir, and property surveys is in progress. The Department has recently approved the plan of development proposed by the division and district engineers. Allotments totaling $939,000 have been made available for the Bayou Bodcau Reservoir.

WALLACE LAKE RESERVOIR

The Wallace Lake Reservoir was authorized by the Flood Control Act approved June 22, 1936. The preliminary designs have been completed and the field work and office studies in connection with the preparation of construction plans and specifications is in progress. The Department has approved the plan of development proposed by the division and district engineers. The division engineer has recently advised this office that it is expected that bids for constructing the dam will be advertised about May 15, 1940. To date allotments totaling $512,000 have been made for this project.

RED RIVER SURVEY

Pursuant to a resolution by the Committee on Rivers and Harbors of the House of Representatives dated February 25, 1938, and several other congressional authorizations for investigation of tributary streams, the Department is making a comprehensive review survey of the entire Red River Basin. The field work and detailed studies in connection with this report are being made by the district engineers at Denison, Tex., and Vicksburg, Miss. The preparation of the full review report is being carried on by a special board of officers appointed for this purpose. Brig. Gen. M. C. Tyler, the division engineer, Lower Mississippi Valley Division, is the senior member of the special board. The district engineers' reports are rapidly approaching completion, and the full report of the special board is scheduled for submission to this office on June 1, 1940. The report will then be reviewed by the Board of Engineers for Rivers and Harbors as required by law prior to its submission to Congress with the Department's findings and recommendations.

CONCLUSION

The Denison Dam is just as important to the ultimate development of the local Red River Valley as though it were located in the State of Louisiana. It will have a tremendous effect on future activities along the Red River in Louisiana, and when it functions in cooperation with the Bayou Bodcau and Wallace Lake projects, it will go a long way toward relieving us in the Red River Valley of future floods and river troubles.

At the present time I am not going to enter into a discussion of the probable benefits of navigation that future development of the river may bring. This work is yet ahead of us. But in the not-far-distant future, I can see the bright rays of a new hope to the people who live in this great and alluvial valley. I can see the return of the steamboat and the river barge to northwest Louisiana and the extensive use of this God-given asset for navigation, and for the purpose of aiding mankind in the elimination of some of his burdens and his problems.

The Spirit of Tolerance

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1940

RADIO ADDRESS BY REV. EDWARD J. HICKEY

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Rev. Edward J. Hickey, pastor, St. Aloysius Church, Detroit, chancelor, archdiocese of Detroit:

Religious-minded people of the Columbia Church of the Air, now if I were a Jew, living in the tempest of an anti-Semitic campaign, I am afraid that I should doubt that Christians ever heard Christ's command to love their enemies. The yellow newspapers of Germany vomit forth the most frightful abuse of the Jews. The brutality of storm troopers falls on Jewish women and old men and little children. Doctors are driven out of their hospitals. It becomes a public sport to smash Jewish shops; it is a national contest to see who can steal most from the Jews that can no longer claim the protection of the police. Jewish families cluster together in the protective dark, wondering when the fist that clutches an automatic will beat on their door. Jewish mothers see their daughters attacked, their sons beaten. Old men feel hot, torturing fingers twisting in their beards. It has become an achievement to smash the face of a Jew. It has become a literary triumph to invent new insults to heap upon them.

Anti-Semitism has been the chameleon of history; it is constantly changing its ground; it is always making new appeals to the particular prejudices of the age. It appropriates the most hated labels of any period and attaches them to this unhappy people. Were the Jews ever guilty of even a fraction of the charges raised against them by their enemies, they would be sunk to a level of moral and intellectual depravity unparalleled in the history of mankind. It is the very diversity and extravagance of these accusations which make them incredible. Whatever the Jew might be, certainly he could not be everything his detractors have affirmed.

Today in Europe anti-Semitism stems from the conception of the absolute subordination of the individual to the state. Now, the chief complaint against the Jew is that he holds beliefs and practices that do not permit his coordination in the absolutist state; that he has loyalties that transcend the boundaries of the Nation; that he professes a religion which is universal and hence inimical to the particularist doctrine of a homogeneous people founded on a common blood and soil.

The very cause of this totalitarian condition is unjustly charged to Jewish philosophers, Jewish international bankers, and the Jewish proletariat.

And while Americans in general are supposed to hate Jewish persecution, as they are supposed to hate all persecution, America is seeing the rise of anti-Semitism on an alarming scale. In New York that rise is notable because Jews are most numerous there.

It is in the highest degree depressing, and not a little remarkable, that among a people and under a Government where freedom of worship, freedom of conscience, and freedom of speech are embedded in the rock of fundamental law, there should now exist organizations whose sole aim is persecution and that there should be many thousands of individuals who, singly and in groups, constantly manifest an un-American and un-Christian spirit in their attitude, their language, and their acts toward those who differ from them. The preaching and teaching of Christianity are apparently futile with all such; the spirit of Christ has wholly departed from them. Any comprehension of the underlying principles of American Government and American social order is quite beyond their ken. The persecuting tendency is a distinctive mark of a barbarous people. These persons, though living in the twentieth century, in a free land, and in communities where there are both churches and schools, are, nonetheless, barbarians.

Unhappily the time through which we are passing is one in which, by a few wild words, it is possible to make tens of thousands of the ignorant intolerant of him who is educated and intelligent; tens of thousands of the unthrifty and the poor intolerant of him who is thrifty and has gained possessions; and tens of thousands of those who have failed, through defects of their own character, intolerant of him who has succeeded by brains and untiring devotion in achieving a well-considered purpose.

Many of our contemporaries profess to dislike the Jews because of disagreeable relations with individual members of this people in business or in the professions. But is such an attitude reasonable?

Are these undesirable characteristics of some modern Jews the product of an inherent defect in this people or are they merely the result of historical circumstances?

To deny the actuality of the forces which determined the formation of the Jewish soul is to deny the obvious testimony of history. To pass strict moral judgment on a people who have been bred in the bitter cauldron of hate and oppression is to neglect the basic laws of justice and charity. It is far more reasonable to try to understand the modern Jew in the light of the conditions that have shaped him. Nor is it beside the point to insist that not only is this the rational view but it is the only one consistent with the high principles of our Christian faith.

We have suffered too much at the hand of persecutors, we Catholics, not to have a deep sympathy for the persecuted and a deep hatred for persecution.

Persecution brutalizes the persecutor. It plants the poison hatred in his soul. It leaves upon him indelible scars. It makes him less a man and more a hunting dog. It converts him from a human being into a brutalized wild beast, blood on his fangs, and the lust of murder in his heart.

Persecution never won any man to a faith or to a cause, and it will never win the Jews to the faith of Jesus Christ. The only way in which we can ever win Jews to the Christianity we love is to show them Christian virtue in our lives—notably Christian love and gentleness and forgiveness. Christ cried: "Blessed are the merciful; for they shall obtain mercy." Mercy is not found in the reprisals, pogroms, ghettoes, discriminating laws, beatings, the burning of homes, starvation inflicted upon an entire people.

Here, in America, we must understand and practice tolerance. It does not mean indifference to truth, or weakness in seeking or defending the truth. What it means is that the tolerant person, realizing the dignity and the worth of the individual human spirit, grants to each and every human being, the right which he claims for himself, namely, to shape his own convictions and his own beliefs in his own way. Arguments, not force, persuasion, not punishment, are the instruments of approach to those whom one would bring to his own way of thinking.

Tolerance, rightly understood, is composed of two elements. These elements are first positive conviction, and second, sympathy with men whose convictions differ from our own.

Catholicism frankly states its position regarding toleration to the world, and in practice abides by its protestations. It proclaims that dogmatically Catholicism is not and cannot be tolerant of error; one religion is not as good as another; there can be no compromise in principles that touch faith and morals. At the same time, it most emphatically proclaims that other men are to be permitted to follow out their conscientious beliefs untrammeled, accountable, not to man, but to God, for the faith that is in them, and that they may not be discriminated against precisely because of their religion.

Brotherly love does not, because of this, blind us to sectarianism, heresy, rationalism, or radicalism on the part of those whom we still call our brethren. It does not prompt us to make compromises, however slight, with error. But it commands us, nonetheless, to love with a deep supernatural love for their souls' true welfare, all who may hold or teach the doctrines of which we do not and cannot approve. To have them united with us in the one and only fold of Christ should, therefore, be our constant prayer and endeavor.

True tolerance consists in the love of truth and the love of man, each brought to its perfection and living in perfect harmony with one another; but that these two great affections are perfect and in perfect harmony only when they are orbed and enfolded in the yet greater affection of the love of God. The love of truth, alone, grows cruel; it has no pity for man. The love of man, alone, grows weak. It trims and molds and travesties the truth to suit men's whims. It is only when truth and man are loved within the love of God, loved for His sake, truth loved as His utterance, man loved as His child—only then is it that they meet and blend in tolerance.

For the individuals, for they have their souls to save, the church has all the love and affection of Jesus Christ Himself who died for them. She is interested in their material as in their spiritual welfare.

Even if the Jews were guilty of all the crimes that propaganda has dumped at their doors, we would still have no course open to us as Christians but the Christ-like course of loving them, praying for them, giving them every possibility of finding their way back to what we know is their Father's house, the church founded by the one sent to be their leader, the promised Messiah.

Anti-Semitism is simply anti-Christianity. It is impossible to understand how a man can hate the Jews and pretend to love the Christ who commanded His followers to love their enemies with a special love. The rule of Christ is the rule of charity and love. How dare Christians, much less Catholics, substitute for that charity, hatred for any man or race.

Hatred is a hideous vice. And Christians who have once let their souls be caught up in the bloody, lustful, hot, vengeful arms of hatred are never again the same. I am afraid of what this hatred of Jews will do to us Christians even more than I am afraid of what it will do to the Jews.

True brotherly love is universal as the brotherhood of man and the fatherhood of God. Its light and warmth go forth to all and its blessing is withheld from none; like the sun that shines on the good and bad, like the rain that falls on the saint and sinner. "And this commandment we have from God, that he who loveth God love also his brother."

The man that carries hatred in his heart against a brother is classed by the great apostle of love with the most extreme of criminals: "Whosoever hateth his brother is a murderer. And you know that no murderer hath eternal life abiding in himself." "He that saith that he is in the light and hateth his brother, is in darkness even until now."

Let us take the classical case of Christ himself. The people of Judea knew Him well. They had experienced His goodness, His kindness, His beneficence, His care of the poor, His help to the sick and the weak, and they loved Him for it. They loved Him so tenderly and so devotedly that they followed Him into the wilderness; they forgot to eat.

And yet, and yet, what happened? Propaganda was started against Him by the clever demagogues, who always start propaganda, who know perfectly well how false it is, but who also know, alas, how gullible oftentimes, the people are, and how fickle is their affection, even for their best friends.

So the propaganda started and the spirit of hatred was aroused. Christ, whom they had known to be the befriender of the poor and the weak and the suffering, was now pointed out as consorting with sinners and no friend of Caesar; and in 5 days—mark how brief is the time it requires for vicious propaganda to do its work—after they had welcomed Him royally into the city of Jerusalem, they were screaming before the palace of Pilate, filling the streets with their imprecations and demanding His death. Here is your typical case of propaganda and this is what inevitably follows.

Although He foresaw that He would be the victim of hatred and persecution during His public ministry, Christ had always been the very soul of love and kindness, and there in Him was set clearly and perfectly before the world the pattern of consummate tolerance. The love of truth and the love of man, each complete, and each in perfect harmony with the other, within the embracing love of God—is not that the life of Jesus? Not for a moment does one doubt His absolute hold on the truth; it is so deep that He not merely holds the truth, He is the truth. And yet His patient, willing indulgence of His brethren, His utter refusal to use any power except reason and spiritual persuasion to turn them from their error—all this is just as clear as His belief; and in Him there can be no doubt that the two essentially belong together.

Public expression of this standard of love of neighbor was given to the world by the late Pope Piux XI in his defense of the Jews against their opponents. In the midst of the loud roar of dreadful anti-Semitic hatred, which came from the totalitarian valley of darkness, the voice of His Holiness was heard calling the racists of Germany, Italy, and elsewhere to the divine command to love their neighbor, for in Christ there is no distinction of Jew and Greek. This aged man of God, arising miraculously from his sick bed, with tears such as must have flowed from the eyes of Christ as He mournfully gazed upon sinful Jerusalem, boldly lined himself and his 350,000,000 spiritual children alongside the persecuted sons of Abraham. * * * Through Christ and in Christ we are Abraham's decendants. No, it is not possible for Christians to take part in anti-Semitism. Anti-Semitism is inadmissible. We are all Semites spiritually. This is the true spirit of tolerance.

Reserve Officers' Association

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

ADDRESS BY HON. ALBERT L. VREELAND, OF NEW JERSEY

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include the following address which I delivered at the annual convention of the Department of New Jersey, Reserve Officers' Association of the United States:

I am highly honored and deeply grateful to my fellow officers for the high honor you have bestowed upon me, and the confidence expressed thereby in electing me as your president, but it is with considerable trepidation that I enter into my new duties, first, because of the fine record of my predecessors in carrying forward our organization in the great State of New Jersey, and, secondly, because of the trying times that face our country in the near future.

An organization is only as strong as its members. I am only one person and cannot individually carry on the work of the department without the unselfish cooperation of the chapters. New Jersey, I am sorry to say, cannot boast too well of its membership or of its

membership's standing in relation to other States of the United States. We, as officers, by accepting a commission in the Reserve have indicated our willingness to serve our country, and have expressed thereby that we are not in any way to be considered slackers in case of an emergency. Yet a very small percentage of the Reserve officers in our State belong to this, their association, and have allowed a few to carry on in their interest. Are they not, in a sense, derelict in their obligation? It is through the efforts of the national committee that many benefits have been derived, and which has carried on the objects of the association for an adequate national defense. They need our support and the support of every Reserve officer in the country. I only hope with the unsettled conditions abroad and the closeness to our country the present situation has been brought it will be sufficiently important to those who are nonmembers to influence them to join this year.

These are indeed serious moments to our country, and it is our duty as Reserve officers to prepare ourselves to be in constant readiness should our country need our services. Not only should we do that, but as Reserve officers we should be sufficiently conversant with the military conditions of our present armed forces to realize the utter lack of preparedness that has existed in our country up to this year. Of the 8 years that I have been a Reserve officer, I have constantly publicly urged the necessity of preparing in peace for what might be in the future an emergency. I know that all of you officers have done likewise, and it has been one of the objects of our organization to impress the people of this country with the importance of an adequate national defense, it being the best insurance against becoming involved with some warlike Nation of the earth.

Unfortunately, our people were not receptive and, as a result, our armed forces were allowed to diminsh until we find today in the light of that which is happening abroad our wholly and pitifully unprepared condition. You officers who went through the maneuvers last summer well know that whereof I speak to be the truth. You know as well as I we are in no condition at the present time, nor will we be, regardless of the amount of money spent, even within a year to consider interfering in the conflict abroad.

Unfortunately, the American people are inclined even personally when insulted, instead of first appraising the physical ability of the opponent to determine the ultimate result should an altercation occur, the first reaction is, "What are you going to do about it?" and sometimes get into something a little bit more than they can handle, with the unhappy result of a sound trimming. It is for us, as officers, before being stampeded into a war with nations armed to the teeth and fully prepared, that we first take inventory of our own ability and determine whether we shall be victorious or not.

This, of course, is not considering an invasion of our country. Every day there are letters arriving in my office urging that we take sides abroad, and it is for us, as officers and, after all, we cannot be considered as pacifists or cowards as we have signified our intention to do our jobs and defend our country in case of need, but it is for us to try to keep our feet on the ground and discourage the hysteria of the public adduced by propaganda which might cause us to enter into a conflict from which we might not emerge.

It might be well also in considering the situation to consider just what might occur in our own country should we send our forces abroad. Unfortunately, we Americans in our desire for freedom of speech and with the usual theory of, "It can't happen here," have allowed foreign groups to organize and undermine and even to the extent of using our mails to further their insidious propaganda inciting a dissatisfaction and racial hatred with the intent of destruction of our form of government. As I have said on the floor of the House of Representatives and on many other occasions, if there are any in this fair land of ours receiving the benefits of the freedom of this country who are not satisfied with our form of government and who constantly praise the advantages of some foreign form, let them take the first boat back to the land they admire so much. We got along very well before they arrived and we can get along much better after they leave. Our country might be likened to a building erected by the finest artisans of time to stand against the ravages of the elements and the storms. Yet a small insect such as a termite, by constantly boring from within, can destroy that which it has taken years to erect. It is for us and all who love our country and the principles for which it stands to be constantly on the alert to counteract the poisonous influence gaining a strong foothold toward its destruction. We wear the uniform of the United States. Let us be proud of it and not be afraid to stand up for our country and its flag.

Where in the world could we meet as we are tonight over the festive board and at a convention free and without worry of the spying eyes of secret police to express ourselves as free-born people on subjects we desire to discuss? It is a heritage and a privilege that has been denied practically every country in the world except our own. It is something worth fighting for, something worth keeping. Let us look to our own defenses, clean up our own back yard, and until our own country is in danger stay out of the conflict 3,500 miles away.

I again seek your cooperation and help, and I pledge to you my untiring efforts to make this association, the Department of New Jersey, one of the outstanding departments of the country and to bring to the people of our country the realization that we in the Reserve have for years given of our time and services to learn to become proficient, so should the emergency arise, we may defend our country with the best possible efficiency and that the Reserve officers are not militarists nor saber rattlers but good, true, patriotic American citizens.

Hollywood, Calif., "I Am an American" Day May 19, 1940

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

Mr. JOHNS. Mr. Speaker, the gentleman from Texas, Judge SUMNERS, and myself accepted an invitation and attended one of the first citizenship meetings held since the passage at this session of House Joint Resolution 437, known as I Am an American citizenship day held at Hollywood, Calif., on Sunday afternoon and evening of May 19, 1940. The public interest in this meeting prompts me to make a brief report with reference to it.

It was an elaborate meeting, attended by several hundred participants and some 15,000 people. The principal addresses were delivered by the gentleman from Texas, Judge SUMNERS, and myself. The program during the afternoon was broadcast over the Mutual Broadcasting System, and the evening program by the National Broadcasting Co. This was a most hope-inspiring activity.

The meeting was nonpartisan and all civic organizations of Los Angeles and Los Angeles County cooperated in the program. Great credit should be given to Mr. Edward Arnold, the actor; Mr. Ben Neal, and Mr. Leo Spencer, all of whom came east to support the bill in the Senate after it had passed the House, and who had charge of the arrangements for the fine meeting at the Hollywood Bowl. Mr. John B. Hughes, the commentator, was very active in directing the arrangements. Five bands participated and a message from the President of the United States was part of the ceremonies, and was broadcast from Washington by the Secretary of Labor, Miss Perkins.

Rupert Hughes, the author, had written a special sketch for the occasion, which he called Who Is American? The actors and actresses who gave their services free to act this sketch were headed by Lewis Stone, and included Edward Arnold, Marjorie Rambeau, Hedda Hopper, Mickey Rooney, Marsha Hunt, Rosemary Lane, and William Henry. Rear Admiral Joseph B. DeFrees, of the United States Navy, delivered a brief address at both the afternoon reception and evening program. The moving-picture industry was well represented through M. G. M. and Warner Brothers.

The gentleman from Texas, Judge SUMNERS, and myself feel that these new citizens of America are entitled to the commendation of the country and he joins me in recommending to every community in the United States the observance of "I Am An American" Citizenship Day, which will be held on the third Sunday of May each year, through the issuing of a proclamation by the President of the United States.

Some 3,000 young men and women who became 21 years of age during the past year, and those who became citizens by naturalization, were present to take their pledge as new citizens.

Both the gentleman from Texas, Judge SUMNERS, and myself commend all people in Los Angeles County and throughout the Nation who cooperated so splendidly in the first meetings held under this new law.

Relief

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1940

Mr. WOLVERTON of New Jersey. Mr. Speaker, the bill now before the House to provide funds for the relief of the needy unemployed will have my support. I have consistently supported such measures ever since the depression came upon us. The need for such exists today as surely as at any time in the past. I regret that this is true. I had hoped that long ago employment at normal wages would be procurable. But, unfortunately, employment in industry is not available at this time for the millions of our unemployed. In fact, relief appropriations seem even more necessary in many respects than heretofore. With each succeeding year there are more and more people who find it necessary to avail themselves of public relief. This is due to the fact that as the depression continues there is an ever-increasing number of persons who have used up all their available savings and credit in an endeavor to avoid going on the relief rolls but who are now faced with the necessity of doing so. They are not at fault. They are entitled to help.

It is a serious situation when 10,000,000 are unemployed throughout the Nation. This bill, though large in the total amount, is not sufficient in itself to supply help for more than a small fraction of those who are unemployed. The situation is made all the more serious because of the emergency that now exists to expend large sums to build up our inadequate national defense. In addition to this is the inability of our States and local governments to supply any material assistance in the way of funds. Already the tax burden upon the home owner has become too heavy to bear. As a result we see the necessity of local governing bodies selling properties for what they will bring. In most every case it means a price far below the real value. But most distressing of all is the fact that every time a property is sold it means that some family has lost the home which it has struggled for years to obtain.

The whole picture is dark and forbidding. I have often asked myself the question: "How long can this continue?" Mere granting of relief such as provided for by this bill is not the answer. It solves none of the basic conditions that have created or continued this widespread distress. All that these relief measures do is to provide some temporary relief, and the available amount is so limited that it does not provide adequately for the need that actually exists.

In addition to the inadequacy of the amount available there is also a glaring defect in the administration of these relief funds. I refer to the political use that is made of such funds. It is a disgrace for any political party to use the need for relief, that arises from unemployment, to be utilized for political purposes. Time and again this condition has been revealed. In fact, it has become so deep-rooted that it seems to be part and parcel of the W. P. A. set-up. This is wrong. To use relief to control the votes of the hungry and needy deserves to be condemned in the strongest language possible. We have passed statutes that seek to deal with the situation, but even these seem to fail of their purpose. It is time for the citizens of our country who have knowledge of such conditions to demand that the law-enforcement agencies of the Government utilize the powers that Congress has given to them to end this un-American practice. The welfare of our Nation requires that every citizen, no matter how humble, shall have the right to exercise a free choice in the selection of elective officials. To give bread and demand a vote in return is destructive of real Americanism and nothing can ever justify such a practice.

The support for this bill will come from Republicans as well as Democrats. The desire to relieve distress is not confined to any one party. Likewise the funds in the Federal Treasury that will be used for relief come from Republicans as well as Democrats. Thus, in no sense is the granting of relief for our needy unemployed a partisan matter, and, therefore, should not be utilized for partisan political purposes. Any political party that seeks to do so should be held to the strictest accountability. The right to vote is only worth while so long as it is an unrestricted right. The future security of our Nation and the individual welfare of our citizens demand that the freedom of the ballot be preserved as a fundamental right of free American citizenship.

Exemptions from Civil Service System

EXTENSION OF REMARKS
OF
HON. ROBERT RAMSPECK
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1940

LETTER FROM L. A. MAYER, EXECUTIVE SECRETARY, AND AN EXECUTIVE ORDER

Mr. RAMSPECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and Executive order:

MAY 22, 1940.

Hon. ROBERT RAMSPECK,
Chairman, Committee on the Civil Service,
House of Representatives.

DEAR MR. RAMSPECK: Referring to our conference and to your request, the Commission advises you that as a matter of good public policy it objects to the exemptions from the civil-service system provided for on page 2 of H. R. 9802 and H. R. 9825, relating to the national defense.

Although the exemptions are stated as being for the purpose of expediting the building up of the national defense they would have the opposite effect.

The Civil Service Commission through its 13 district offices and 5,000 local boards of civil-service examiners throughout the country is already equipped without any preliminary training to recruit, competitively or noncompetitively, all kinds of qualified personnel essential in any preparedness or defense program. This work can be done only by the Civil Service Commission without mutually conflicting recruiting activities by each of the agencies of the Government engaged in such program. Furthermore, each of these agencies would have to go through the expensive process and the consequent delay of building up of recruiting offices, and they would necessarily compete with each other.

The President has full and complete authority under existing law to prescribe the methods of recruiting to meet any emergency condition. One step in this direction was taken by the President on recommendation by the Civil Service Commission in the issuance on September 21, 1939, of Executive Order 8257 (copy attached) authorizing the Commission "to permit an immediate appointment, without regard to the competitive requirements of the civil-service rules, in any case in which it appears that a public exigency exists which is directly connected with the neutrality of the United States or the preparedness program of the Federal Government."

A further order was issued on December 12, 1939, authorizing the Commission to sustain objections to eligibles in the case of highly confidential positions in the State, War, and Navy Departments.

General Gasser, the Deputy Chief of Staff, speaking for the War Department, has asked that this exemption be stricken from the military-affairs bill, as the Department is satisfied that the Civil Service Commission is equipped to render the War Department the best possible service in recruiting qualified civilian personnel. If this exemption is continued in the bill and becomes law the Military authorities will be hampered in the work they are established to perform because of the importunities of seekers for employment and because of the fact that they would necessarily be required to

establish and train elaborate staffs of employees for recruiting purposes.

It is further to be noted that there is no such exemption from the civil-service system in the preparedness and defense bill providing for the expansion of the Naval Establishment.

One question that has been raised relates to the elimination of employees of subversive tendencies from the Government, and also the prevention of the appointment of such persons. The Commission is engaged in working out a procedure whereby there will be enlisted all the investigative agencies of the Government to make careful and detailed character investigations of eligibles on the Commission's registers who may be considered for positions connected with the preparedness and defense program of the Government.

Under directions from the President conveyed to the Civil Service Commission through Mr. W. H. McReynolds, administrative assistant to the President, the Commission has been planning for months to meet any emergency need of the War and Navy Departments and other agencies connected with the defense and preparedness program of the Government, and it is clear to the Commission that the President is desirous that these positions be filled through civil-service procedure.

By direction of the Commission.

Very respectfully,

L. A. MOYER,
Executive Director and Chief Examiner.

EXECUTIVE ORDER AUTHORIZING EXCEPTED APPOINTMENTS TO MEET PUBLIC EXIGENCY

By virtue of and pursuant to the authority vested in me by the provisions of paragraph 8 of subdivision 2 of section 2 of the Civil Service Act (22 Stat. 403, 404), it is hereby ordered that, subject to appropriate noncompetitive tests of fitness, the Civil Service Commission is authorized to permit an immediate appointment without regard to the competitive requirements of the civil-service rules in any case in which it appears that a public exigency exists which is directly connected with the neutrality of the United States or the preparedness program of the Federal Government. This authority may be used only under most unusual and compelling circumstances, and the person or persons so appointed will not thereby acquire a classified civil-service status.

FRANKLIN D. ROOSEVELT.

THE WHITE HOUSE, *September 21, 1939.*
(No. 8257.)

Lindbergh Speaks Again

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1940

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. DWORSHAK. Mr. Speaker, in this hour of hysteria which has overwhelmed so many well-intentioned Americans who have been given a set of war nerves by sensational statements of radio broadcasters and extravagant predictions by some Eastern newspaper commentators and editors, it is necessary that we substitute sound reason for panicky conclusions and scrutinize our problems of national defense.

What America needs now is a belt-tightening program to modernize and streamline our national defenses which have been so badly neglected, despite the expenditure of $8,000,000,000 by the present administration under the authority conveyed by Congress to develop our national defense. We need less hysteria, now, and more logic in analyzing why it is that we have gotten so little in modern fighting equipment for the $8,000,000,000 the Roosevelt regime has spent for that purpose. We need less excitement by undue alarmists and more efficiency by a businesslike administration of our defense system.

Mr. Speaker, I ask in all seriousness how it is we expect to greatly improve our defense system at this time with the expenditure of another billion dollars if we follow the same formula and permit the money to be spent by the same personnel as has been true in the past 7 years. If $8,000,000,000 have left us as completely unprepared as the President now insists, another billion, or even two more billions, will not plug up our weaknesses and perfect our defenses unless Congress insists on setting up a commission or board to handle these defense purchases and to get America a dollar's worth of defense for every dollar appropriated for defense purposes. The mere voting of another billion dollars will not solve our problem of defense. We must substitute efficiency for inefficiency in the executive influences on our Military Establishments.

As a part of this statement, I am asking permission to include a statement recently appearing in the Washington Times-Herald which has a direct bearing on these remarks. It points out vividly the logical conclusion that we should not be swept off our feet at this critical period to the point of pyramiding inefficiently upon inefficiency and of multiplying mistake by mistake. We must appropriate funds for national defense. We must do it without delay. And, my colleagues, we must do it wisely with Congressional direction which will lead to its wise use in bringing out defenses up to date along a pattern determined by a clear-cut analysis of our foreign policy.

I now call your attention to the following item as illustrative of the argument I am making for a sensible and scientific approach to our defense problem rather than a jittery and jumbled stampede simply to spend more money without any clear idea of what we hope to secure for it or how we are to proceed in developing defensive armaments to meet today's methods and machinery of modern warfare.

This editorial entitled "Lindbergh Speaks Again" appeared in the Washington Times-Herald May 21 and reads as follows:

[From the Washington Times-Herald of May 21, 1940]

LINDBERGH SPEAKS AGAIN

Col. Charles A. Lindbergh, Sunday evening, made the third radio speech on the war that he has made since the war began. We thought the speech contained a high percentage of common sense—at least, in the passages devoted to the correct aviation-defense policy for the United States.

All of Lindbergh's adventures in connection with this war have been interesting.

In 1936, while still a self-made exile in England, Lindbergh visited Berlin and said at an Aero Club meeting that modern warfare might easily "destroy the very things we wish to protect"—a remark which didn't please Germany's airmen a little bit.

In 1938, after a tour of Russia, Czechoslavakia, Rumania, and France, Lindbergh was accused by the Russian Government press of having advised Neville Chamberlain's appeasement crowd in London that he thought the German air force could lick the British, French, Russian, and Czech air forces put together.

That Lindbergh had some such hunch was indicated when on May 17, 1939, he told the House military appropriations subcommittee that in all types of planes except heavy bombers the German planes had the edge over the American.

When the war finally broke out last September, Lindberg went on the air, September 15, with a bluntly worded plea for absolute United States isolation. A month later, October 13, he repeated that plea, and went further by remarking, "Sooner or later we must demand the freedom of this continent and its surrounding islands from the dictates of European power"—which started Canadians calling Lindbergh names, as Russians, Germans, British, and French had done before.

THIS TALK OF INVASION

Well, the German air force, in Poland and Norway and in the last 11 days on the western front, has borne out Lindbergh's long hunch that it was a most efficient air force. So we surmise that people will listen somewhat more attentively to Lindbergh's ideas from now on than they have done for some time past.

In Sunday night's speech he put forth several ideas:

"The power of aviation has been greatly underrated in the past. Now, we must be careful not to overrate this power in the excitement of reaction. * * *

"Aviation is for us an asset. It adds to our national safety. With a firm and clear-cut policy, we can build an air defense for America that will stand above these shifting sands of war. * * *

"But * * * without a strong policy of defense, we will not even know what types of planes to build. The speed and range of our fighting planes must depend on the bases available for their use. If we are to defend the United States alone, then we must construct numerous air bases along the Mexican and Canadian borders. Such a plan would require large numbers of small bombers and pursuit planes, and eventually it would leave us as vulnerable to air attack as the nations of Europe are today.

"On the other hand, if we are to defend the entire Western Hemisphere, we need long-range bombers capable of attacking a hostile fleet a thousand miles or more at sea. * * *

"Let us not be confused by this talk of invasion by European aircraft. The air defense of America is as simple as the attack is difficult when the true facts are faced."

From this point, Colonel Lindbergh went into a repetition of his previous pleas for absolute United States isolation from the eternal wars of Europe. This part of the speech was obviously pointed at the Roosevelt administration, which Lindbergh seems to suspect of interventionism.

That is a matter of opinion, and of evidence piled up from day to day—and it is a matter which may come to a show-down at the polls next November.

The practical part of Lindbergh's speech struck us as practical, indeed, and very reassuring in these days when some people's imaginations are already seeing the "blitzkrieg" bombers dealing death and destruction here.

We think Lindbergh would be a valuable man on any Government board of air-defense planning and strategy.

The National Defense

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

Mr. THOMAS F. FORD. Mr. Speaker, we are today facing one of the great and tragic days in world history. If, by any chance, the German Army should overwhelm the French and British forces, reach the channel, and invade England, the United States would be face to face with the greatest crisis in its history.

If Hitler should—and he threatens to do so—invade England and take the British fleet, a fleet that has always protected our interests in the Atlantic, the United States would be in, to use a street phrase, a hell of a position. We cannot protect both coasts, because our people have been, and to some extent are yet, opposed to adequate preparedness.

I do not know how this complex came into being. I am, however, just a bit suspicious. For years we have been told by that group of isolationists, Nye, Borah, Johnson, and others, that we as a nation had nothing to fear. They insisted that their information was as good or better than the information of the State Department. We, of course, know that they were tragically, or, I may say, criminally, mistaken.

The most effective fifth column that has operated in the United States is that group in another body that has insisted, in the face of known facts, that all we needed to do was to remain aloof.

That their position is untenable today we all know.

I do hope that these gentlemen, patriots all, I agree, will abandon their utterly silly position and join with President Roosevelt in a program to erect in our own country a barrier of defense that will keep our people safe from the ravages of Hitler and his crew of ruthless raiders.

To plead for peace is, and always will be, a popular plea. The American people are a peace-loving people. No American loves peace more than I do. No American will go farther than I will to insure peace. But, how are we going to insure peace with a madman loose in the world—a madman armed to the teeth—who tells the world in his book Mein Kampf that nazi-ism is a world philosophy and he is its prophet?

It is my hope, as it is the hope of every American citizen, that the Allies will hold this madman in check and that democracy and civilization, as all Americans conceive it, will not perish from the earth.

Let me say in this connection, however, that wishful thinking will not stop mechanized military might.

I fully realize that the mothers of America are, and should be, opposed to war per se. I also realize that the wives of America whose husbands are of military age should be opposed to war per se. I am in complete sympathy with their view, but the problem that presents itself is not, will my son or my husband go abroad to fight for some foreign cause, but will he be called upon to protect his homeland. That is the question that we face.

I know, of course, that no American mother, no American wife, will answer in the negative insofar as the invasion of our homeland is concerned.

Hitler has announced to the world that his philosophy is a world philosophy. It is a philosophy that is diametrically opposed to our philosophy. If we believe in the philosophy of democracy, we must reject the philosophy of Hitler. If democracy is worth fighting for, it is worth dying for.

Thirtieth Anniversary Meeting of the National Commission of Fine Arts

EXTENSION OF REMARKS

OF

HON. KENT E. KELLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

REPORT OF THE MEETING

Mr. KELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following record of the Fine Arts Commission:

A meeting of the Commission of Fine Arts held on May 17, 1940, marked to a day, the thirtieth anniversary of the establishment of the Commission by Congress. During the 3 decades of its existence 43 leading artists of the country have served without compensation as commissioners, representing the professions of architecture, landscape architecture, painting, and sculpture. The existence of this permanent Commission of distinguished artists has enabled the Government to secure continuous expert advice in matters pertaining to the fine arts. Appointment to membership has ever been regarded a patriotic service to the Nation, "well qualified judges of the fine arts" being requisite for appointment made by the President for 4-year overlapping terms.

Prior to the establishment of the Commission of Fine Arts in 1910, it was the practice of Congress to authorize the appointment of a special committee to advise concerning each specific project. When the project was completed the committee was discharged, leaving Congress and heads of governmental departments without a recognized body to which matters pertaining to the fine arts might be referred.

During the fiscal year 1911, the first in the life of the Commission of Fine Arts, there were 41 submissions; now they number several hundred each year. There is hardly any other appropriation made by Congress which brings such a large proportionate return as that for the Commission of Fine Arts, since a statutory limitation of only $10,000 a year has been made during the 30 years of the life of this body.

The first matter which came before the Commission of Fine Arts concerned the design and location of the Lincoln Memorial. During the succeeding years the Commission advised concerning many other buildings, monuments, and memorials, but none have exceeded in importance that of the memorial to Abraham Lincoln.

The act creating the Commission of Fine Arts specifically states that the "provisions of this act shall not apply to the Capitol Building of the United States and the Library of Congress." However, the Committees on the Library of the Senate and of the House of Representatives frequently avail themselves of the services of the Commission of Fine Arts in matters pertaining to the Capitol area.

The Commission of Fine Arts is an advisory body and does not have the power of veto. In spite of this fact, its decisions are seldom overruled. Occasionally Congress confers the veto power upon the Commission by requiring, in specific legislation, that a design shall have the approval of the Commission of Fine Arts.

At the present time the Commission advises concerning all projects within the realm of the fine arts with which the Federal Government is concerned in the District of Columbia. Recently the Commission called attention of the Members of Congress to the importance of giving more attention to the embellishment of our public buildings through the use of sculpture and mural painting. To this suggestion the Members of Congress have given favorable response.

In the early days of the Republic, President Washington called a committee consisting of Messrs. James Hoban and Stephen Hallet, architects, Colin Williamson and Carstairs, builders, and Dr. William Thornton, to meet in Philadelphia for a conference concerning questions relating to the design for the United States Capitol. In the spring of 1825, during the administration of President John Quincy Adams, a Commission consisting of Dr. William Thornton; Charles Bulfinch, Architect of the Capitol; C. B. King, portrait painter; and Col. George Bomford, United States Army; assembled in the "unfurnished" East Room of the White

House to determine upon a design for the tympanum of the central east entrance of the Capitol. In 1836, during the administration of President Jackson, a committee was appointed to advise concerning the four historical paintings (in addition to those by Trumbull) in the Rotunda of the Capitol. In 1859 Congress authorized the President to appoint an Art Commission of distinguished artists to advise on questions of sculpture and painting for the interior of the Capitol Building. President Buchanan appointed Henry Kirke Brown, sculptor, and James R. Lambdin and John F. Kensett, painters. This Commission, clothed with the veto power, was organized June 1, 1859; they submitted their only report February 22, 1860. A conflict between this Commission and the Congress resulted in an act terminating its existence.

The Senate Park Commission of 1901, the appointment of which was authorized by a resolution of the United States Senate, consisted of artists who had taken a leading part in the Chicago World's Fair of 1893. Danial H. Burnham and Charles F. McKim, architects; Frederick Law Olmsted, landscape architect; and Augustus Saint-Gaudens, sculptor. Charles Moore, then secretary to Senator James McMillan, became secretary of the Commission. It was he who served as member of the Commission of Fine Arts for 30 years and as chairman for 22.

The Chicago Fair, better known as the World's Columbian Exposition, caused a renewed interests in the fine arts throughout the country and Washington was the first city to profit by that awakening. The Senate Park Commission succeeded in rescuing the L'Enfant Plan from oblivion and, in a report subsequently published (S. Doc. No. 166, 57th Cong.), outlined plans for public buildings, parks, and other improvements. However, there was no existing official body to urge upon Congress the carrying out of these plans. In 1909 President Theodore Roosevelt appointed a "Council of Fine Arts" consisting of 30 artists, but after holding one meeting Congress expressed disapproval of it and it ceased to exist. Then, on May 17, 1910, during the administration of President Taft, Congress created the Commission of Fine Arts, a body now 30 years old. Its record of accomplishment may be seen in the present state of development of the Nation's Capital, a record which stands eloquently for unselfish service on the part of a large group of distinguished American artists.

MEMBERS OF THE COMMISSION OF FINE ARTS AND THEIR YEARS OF SERVICE

Architects: Daniel H. Burnham (1910–12), chairman, 1910–12; Thomas Hastings (1910–17); Cass Gilbert (1910–16); Peirce Anderson (1912–16); Charles A. Platt (1916–21); William Mitchell Kendall (1916–21); John Russell Pope (1917–22); Louis Ayres (1921–25); Henry Bacon (1921–24); Milton B. Medary, Jr. (1922–27); William Adams Delano (1924–28); Abram Garfield (1925–30); Benjamin W. Morris (1927–31); John W. Cross (1928–33); John L. Mauran (1930–33); Egerton Swartwout (1931–36); John Mead Howells (1933–37); Charles A. Coolidge (1933–36); Charles L. Borie, Jr. (1936–40); Henry R. Shepley (1936–40); William F. Lamb (1937–41); Paul P. Cret (1940–44); John A. Holabird (1940–44).

Sculptors: Daniel Chester French (1910–15), chairman, 1912–15; Herbert Adams (1915–20); James E. Fraser (1920–25); Lorado Taft (1925–29); Adolph A. Weinman (1929–33); Lee Lawrie (1933–37); Paul Manship (1937–41).

Painters: Francis D. Millet (1910–12); Edwin H. Blashfield (1912–16); J. Alden Weir (1916–19); William Sergeant Kendall (1920–21); H. Siddons Mowbray (1921–28); Ezra Winter (1928–33); Eugene F. Savage (1933–41).

Landscape architects: Frederic Law Olmsted (1910–18); James L. Greenleaf (1918–27); Ferruccio Vitale (1927–32); Gilmore D. Clarke (1932–44), chairman, 1937–44.

Lay members: Charles Moore (1910–40), chairman, 1915–37; Edward Bruce (1940–44).

Total number of members, 43.

Total number of official meetings during 30 years, 261.

Maine Potatoes

EXTENSION OF REMARKS

OF

HON. RALPH O. BREWSTER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

Mr. BREWSTER. Mr. Speaker, under leave to extend my remarks I am inserting a brief editorial published at Lubec, Maine.

[From the Lubec Herald of May 16, 1940]

BOUQUETS FOR TWO

Regardless of politics, credit is certainly due to two Maine men whose prompt action and hard work has saved millions for the fishermen of New England.

They are Representatives BREWSTER and OLIVER, who stepped on the project of the General Seafoods Corporation to ship cured, fresh, and processed fish from Newfoundland into this country free of duty. The bill was a steal, pure and simple. It was necessary, however, for somebody to get the matter into the limelight before it became another integer of the trade pact. The bill to kill the proposition to rob the Atlantic coast fishermen and the public was the work of these two men, and their speeches on the floor were at least strong enough to plug a hole in Cordell Hull's plan to hand us over, body and breeches, to Canada.

POTATOES

Representing the congressional district and the State of Maine that produces far more potatoes than any other district or State in the country, I shall not apologize for calling the attention of this House to the problems of the potato grower.

Potatoes are more widely grown than almost any other farm crop. Every State produces potatoes. On the other hand in most States the production is incidental to other farm operations. This explains the average plant of approximately 3 acres among the 3,000,000 farmers who report potato production and also the low yield of around 100 bushels to the acre.

SURPLUS POTATO STATES

In contrast to this there are a few areas where commercial cultivation is carried on extensively. These are the so-called surplus-potato States.

Chief among these is Maine and Aroostook County, where production runs around 300 bushels to the acre and where individual plantings run from 15 to 500 and even 1,000 acres.

Out of the annual production of approximately 350,000,000 bushels, Maine is likely to furnish 50,000,000 bushels, or approximately one-seventh.

This will make clear the tremendous interest of Maine in the welfare of the potato.

POTATOES, THE FORGOTTEN CROP

The potato was left out of the original program of the A. A. A. in 1933. The result was disastrous. When I came to Congress from Maine in 1935 potatoes were selling for 40 cents a barrel, or less than 4 cents a peck, and in the spring of 1935, millions of bushels were dumped upon the ground to rot in northern Maine.

Potato growers everywhere were aroused. Under the leadrship of the gentleman from North Carolina, Representative LINDSAY WARREN, the Warren Potato Act was enacted into law after an extremely bitter and close fight. This put potatoes on a parity with other major crops.

While many of its provisions were repealed when the Supreme Court ended the A. A. A. the Warren Act still remained in force to declare potatoes a basic commodity and this has been the basis of the programs since that time.

POTATOES—1935–40

This spring in Maine potatoes have been selling at over $2 a barrel which is well above parity. This is in marked contrast to the pampered favorites of the South and West which are in the dumps in spite of the parity payments which have been denied potatoes.

AROOSTOOK LEADS

In addition Aroostook County has led every county in the amount of soil-conservation payments under the A. A. A. with a total of $1,465,476.88. Not even the great counties of the West in Texas and California have approached this return. This is a tribute to the cooperation that has been accorded the program by the potato growers of Maine.

RECIPROCAL-TRADE PROGRAM

In spite of this improved position, however, there is nearly unanimous opposition in Maine to the policy of the administration in opening up American markets to potatoes from other countries under the reciprocal-trade program.

The reduction of the duty on potatoes and the almost unlimited increase in the quota that is possible under the latest agreement cannot under any circumstances be helpful to the potato growers of the United States. Nor does the market history of the potato in the last decade lend any warrant to the suggestion that the consumer is in need of protection against any extortion by the producer. Prices

have never been excessive and supplies have always been adequate.

As chairman of the subcommittee on potatoes of the Republican Committee on Agriculture constituted by the gentleman from Massachusetts, Representative JOSEPH W. MARTIN, Jr., I am sure there is ample warrant for a continuing, vigorous fight against continuance of the policy of reducing tariffs on potatoes and other farm products.

While climate or war conditions may minimize the injury at this time there can be no doubt as to the threat this program presents to every potato producer in the United States.

An historical record of the potato in recent years may be of value as preliminary to the consideration of the extent to which the Government may assist in solving the problems of the potato farmer and the ways in which the Government may wisely aid.

POTATO PROGRAMS DURING THE LAST 10 YEARS

In the early 1930's the only Federal potato programs available were those whereby growers could avail themselves of credit facilities for farm mortgages and production purposes through the Federal Land Bank and the Intermediate Credit Bank. Other efforts consisted of voluntary action under the direction of State and agricultural agencies. These included collection and dissemination of outlook information, current market information, and information as to crop and market conditions in competing producing areas. These programs were also supplemented by seed loans. Since 1933 additional legislation has been initiated through which growers can avail themselves of an opportunity to participate in bettering their conditions.

Potatoes are a semiperishable commodity and can be held only for a limited time. Therefore, a large supply cannot be carried over for a long period of time in order to make it available in short-crop years. Per capita consumption of potatoes fluctuates but slightly. In the past, growers have varied their acreage considerably, depending largely upon prices received for the crop produced the preceding year or the preceding 2 years. Yields per acre also vary so widely that surpluses can occur even though the acreage planted is in line with market demands. Since 1933, programs have been drafted with the primary objective of returning an equitable income to potato growers through the development of marketing procedures. Production of a surplus occasions excessively low prices because consumption by individuals is not greatly increased because of low prices. Consequently, consumers have not profited from the low farm price for potatoes because of the constant costs for transportation and merchandising.

Various types of programs have been tried in an effort to aid potato growers, but none have been entirely satisfactory. These programs include:

MARKETING AGREEMENTS AND LICENSES OR ORDERS

Under the Agricultural Adjustment Act of 1933, as amended, such programs were designed to regulate the shipment of potatoes so as to prevent the movement of excessive supplies to market.

Under this legislation the first potato proposal was a marketing agreement and license submitted to producers and handlers in the southeastern area of the United States, including the commercial producing areas in north Florida and the States of Georgia, South Carolina, North Carolina, Virginia, and Maryland. This program was made operative July 12, 1934. It was effective, however, in only three districts, namely, the Norfolk-Elizabeth City district, the Eastern Shore of Virginia district, and the Eastern Shore of Maryland district.

The main features were the proration of the quantity to be shipped. Shipments were controlled through maximum allotments that could be shipped from each area by means of allotments prorated among various producers and handlers, and not directly to growers. The program was only partially successful, partly because the market was demoralized but chiefly because the agreement was not made effective until late in the season. However, many proponents believed that it was helpful in that it served to avoid a complete demoralization of price.

A similar agreement for the Kansas-Missouri area was proposed in June 1934 but did not go into effect because of a crop failure. Similar tentative proposals also were drafted for potato growers in Oklahoma, Arkansas, Texas, Louisiana, Alabama, Mississippi, and Tennessee, but were not made effective.

THE 1937 MARKETING-AGREEMENT PROGRAM

Under the Agricultural Marketing Agreement Act of 1937, programs were prepared for the 9 major late-potato-producing States, and when a referendum was held among the growers in these States, one of the areas, Maine, decided it did not want such a program. The other 8 States, comprising 3 areas, located in the North Central and Western States, however, voted overwhelmingly in its favor. Marketing orders were issued and made effective in the following 3 areas: (1) Michigan, Wisconsin, Minnesota, and the 18 eastern counties in North Dakota; (2) the major potato-producing counties of Colorado, Nebraska, and Wyoming; and (3) the 34 southern counties in the State of Idaho south of Idaho County.

These orders not only prohibited the interstate shipment of cull potatoes but also provided that, upon the recommendation of the area committee and with the approval of the Secretary, further restrictions could be placed on interstate shipments of other low-grade or small-size potatoes. These orders became effective on October 19, 1937, and expired on July 31, 1938.

The Idaho area committee recommended that all potatoes less than 2 inches in diameter be withheld from interstate shipment. The Colorado, Nebraska, and Wyoming committee recommended that potatoes not meeting the requirements of United States commercial grade, and which were less than 1⅞ inches in diameter, be prohibited from shipment out of the States in which they were produced. The Michigan, Wisconsin, Minnesota, and North Dakota committee urged a prohibition on interstate shipment of potatoes grading U. S. No. 2. These various recommendations were approved by the Secretary of Agriculture, and resulted in fewer unneeded potatoes than might otherwise have been the case from entering the market to depress prices during this period. Moreover, the improved and more uniform grades sold met with the approval of consumers generally, and prices for the 1937 crop were somewhat improved. These agreements were generally appraised as being helpful, and many of the quality improvement practices as recommended by the committees have been maintained through voluntary agreement among the members of the industry in the States involved.

THE 1938 MARKETING-AGREEMENT PROGRAM

At a conference held during the week of March 14, 1938, at Washington, D. C., the representative potato growers attending gave essentially unanimous endorsement to the development of continuing marketing-agreement programs for early and intermediate, as well as late, potatoes.

Obviously, the first program needed was one for the early commercial potato producing counties in the States of Florida, Texas, California, Louisiana, Alabama, South Carolina, Georgia, North Carolina, Mississippi, Arkansas, Oklahoma, Virginia, and Maryland, and work was begun immediately on such a program. It was too late to do anything that year for southern Texas and for southern and northern Florida potatoes since the bulk of their potatoes were marketed in March and April. Other important potato producing counties in the States of Louisiana, Mississippi, and Alabama, however, wanted a program that would become effective in time for their heavy movement, which occurs in May and June. An emergency program, not intended to go beyond July 31, 1938, was therefore formulated for this Gulf States area, and was presented to growers at hearings between April 4 and April 9. In view of the favorable grower referendum, a marketing agreement for these States was made effective on May 12, 1938.

The larger 13-State marketing program for early potatoes, which included the Gulf States area, was a continuing proposal. Like the emergency program, it was designed to eliminate culls from interstate shipment, to permit further restrictions on the shipments of other low grade or small size potatoes, and required Federal-State inspection of all out-of-State shipments.

About 75 percent of the growers balloting in the 13 early and intermediate States area were favorable to the issuance of a potato order. In view of the fact that growers in Maryland, California, and South Carolina balloted unfavorably and only about 57 percent of those in Oklahoma were favorable, the Department deemed it inadvisable to make the program effective.

THE LATE STATES 1938 POTATO PROGRAM

At the March 14–16 potato conference at Washington, D. C., the representatives present requested that a marketing program be provided for the 1938 late potato crop grown in the major potato-shipping counties in the States of California, Colorado, Idaho, Maine, Michigan, Minnesota, Nebraska, New Jersey, New York, North Dakota, Ohio, Oregon, Pennsylvania, Utah, Washington, Wisconsin, and Wyoming.

The provisions of this agrement were similar to those included in the marketing agreement for the early potato-producing areas except that its provisions were much more flexible. The late States were divided into areas, each having a committee to administer the agreement in its own area. The marketing agreement was not made operative because only 65 percent of the growers voted favorably, whereas it is necessary to have a majority of 67 percent.

POTATO ACT OF 1935

The Potato Act of 1935 was designed to regulate the marketing of potatoes by the establishment of tax-exempt allotments equal to the quantity of potatoes estimated to be needed for normal consumption requirements, and by levying taxes on all potatoes sold in excess of the individual allotments. The bill originated with the growers as all farm legislation should originate, and was presented in the House of Representatives by the gentleman from North Carolina, Congressman WARREN, in February 1935. After experiencing a rather difficult fight it was passed by Congress and signed by the President in August 1935. This act amended the Agricultural Adjustment Act by designating potatoes as a basic commodity, and then provided for regulation of the marketing of potatoes. The Potato Act was intended to provide a program for potato growers similar to that in effect for tobacco and cotton under the Agricultural Adjustment Act, the Kerr-Smith Tobacco Act, and the Bankhead Cotton Act. While the passage of this act caused an immediate rise in the price of potatoes, it was not in effect very long due to the fact that the Supreme Court rendered a decision invalidating the Agricultural Adjustment Act, thus making it necessary to repeal the Potato Act on February 10, 1936, except that title I designating potatoes as a basic commodity was not repealed. This meant that potatoes have continued since as a basic commodity.

FEDERAL SURPLUS COMMODITIES CORPORATION PURCHASES

Purchase programs under which potatoes were purchased for distribution to those on relief were intended thus to divert surplus potatoes so as to prevent complete collapse of market prices. Funds for the purchase programs are obtained under the Agricultural Adjustment Act, which authorizes the expenditure of moneys equivalent to 30 percent of the gross customs receipts to encourage greater consumption and the export of agricultural commodities by diverting them from the normal channels of trade and commerce. By means of this program, 3,474,507 bushels were purchased from the 1934 crop; 462,423 bushels from the 1935 crop; 5,273,068 bushels from the 1937 crop; and 2,267,051 from the 1938 crop; or a total of 11,478,049 bushels, at an average cost at loading point of about 36 cents per bushel. No purchase program was in effect during the 1936 season because of the short crop, and none was in effect in 1939 due to the moderate crop. The price paid for potatoes by the Corporation was not high enough to be of any great assistance to producers but nevertheless is conceded as giving considerable help in preventing demoralization of market conditions. During this period potatoes were purchased in 26 States.

DIVERSION PROGRAMS

Subsequent provisions were made in the Agricultural Adjustment Act for making financial assistance available to growers and manufacturers who cooperated in the removal of surplus potatoes, and particularly low-grade potatoes, from the normal market channels. These programs supplemented the marketing-agreement programs.

LIVESTOCK FEED DIVERSION PROGRAMS

The first livestock feed-diversion program was proposed in the fall of 1937 as a means of removing a proportion of an extremely large surplus. The program was made available to producers in the States of Michigan, Wisconsin, Minnesota, North Dakota, Nebraska, Wyoming, and Idaho, who operated under the marketing agreement in the 1937–38 season. A total of 7,962,000 bushels were diverted. The requirements were such that payment of 15 cents per bushel for such diversion were made only on potatoes grading at least United States grade No. 2, minimum size 1½-inch diameter. Since 1,608,000 bushels did not meet requirements, payments were made only on 6,372,127 bushels. The payments totaled $955,808.08, and 14,128 growers participated.

STARCH DIVERSION PROGRAM DURING THE 1937–38 SEASON

The starch industry in Maine was offered a program whereby the Department paid the cooperating manufacturers 40 cents per United States standard barrel, equivalent to 14 cents per bushel for all potatoes grading United States grade No. 2, minimum size 1½-inch diameter, used in the manufacture of starch. The manufacturers in turn agreed to pass this payment on to the growers and pay an additional 20 cents per barrel, making a total payment of 60 cents per barrel to the grower for potatoes meeting diversion specifications. The factories paid 10 to 20 cents per barrel for cull potatoes, the average being a fraction over 14 cents per barrel.

Of the 24 potato-starch factories in Maine in operating condition on September 1, 1937, 23 cooperated in the program. The total quantity of potatoes received by these factories was 1,009,791.5 barrels, equivalent to approximately 2,776,927 bushels. Of this quantity, 2,328,643 bushels met diversion requirements.

Growers used the starch-diversion program as a hedge against falling prices. In reality, it acted as an automatic choke. When the price to growers advanced, the rate of diversion decreased, whereas they increased when prices declined.

The several diversion programs placed a bottom price level for potatoes and gave considerable firmness to the tone of the general market. This in turn resulted in an increased price of 5 cents per hundredweight in all late potato producing States over what the growers would have received without such programs.

In Maine very general interest among potato growers has been shown in the development of a starch program and also in industrial uses for potatoes to be developed at the new Government research laboratories in cooperation with existing research at the University of Maine and Maine Experiment Station.

POTATO STARCH-FLOUR PROGRAM

The Federal Surplus Commodities Corporation was authorized to purchase potato starch and flour from manufacturers provided the manufacturer paid growers at least a minimum designated price for specified grades of potatoes. Under this program approximately 2,733,000 pounds of starch and flour were purchased, which was equivalent to 258,000 bushels of potatoes.

ACREAGE ALLOTMENT PROGRAM

Potato acreage allotments were established for commercial potato farms under the agricultural conservation program,

with payments to producers for planting potatoes in line with the allotment. This program was started in 1938. It does not affect the large number of small farms on which potatoes are grown in small quantities for local market, such as are traded at the local stores, roadside stands, or used for home consumption. Payments are made to producers on farms where the acreage of potatoes planted complies with allotments for that particular farm. Because of an amendment to the act, the rate of payment for farms in 1938 in the northern areas was 3.6 cents per bushel and in the South, 5.4 cents per bushel. In 1939, however, payment was 3 cents per bushel in all producing areas of the United States. This program is very popular among potato producers. There is a high degree of participation and compliance in the program. In fact, many growers are willing to plant acreage slightly below their allotment.

Although the allotments are such that about 3,200,000 acres are provided for, growers have cooperated to such an extent that the acreage planted in 1938 was 3,056,000 acres and 3,068,800 acres in 1939. This has tended to stabilize acreage. Yields during this period have been considerably above average; production has been about 372,000,000 and 362,000,000 bushels, respectively. The average farm price of 55.8 and 68.8 cents per bushel is 65 and 81 percent of parity, respectively. Growers generally consider the lower revised payment of 3 cents per bushel too low to maintain participation of growers in this program at a high enough level to make an adjustment in acreage that will return satisfactory prices to growers.

POTATO BREEDING AND RESEARCH

The importance of scientific research which started about 70 years ago in the discovery of certain genetic principles which were then laid aside and only recently reused has now resulted in dollar-and-cents values to potato growers. In the past, potatoes have looked alike to most people unless there happened to be a difference in color or a distinct difference in shape. The Bureau of Plant Industry recently bred varieties like the Katahdin, which is firmly established as a commercial potato and has entered into South American seed trade because of its attractive appearance and resistance to disease. The following additional varieties have been developed: Chippewa, which is highly productive; the Earlaine, which is early-maturing; the Houma, which is attractive; the Sebago, which is highly productive and resistant to late blight; and the Sequoia, which is highly productive and resistant to leafhopper and late blight.

REGIONAL RESEARCH LABORATORIES

Four regional research laboratories have been established. Their major projects are the development of feed, food, and industrial uses of agricultural products. The purposes of this work is to increase the outlets of farm products for such uses. In this connection, considerable work is being done with potato starch.

The Department of Agriculture is greatly concerned with the potato problems, since potatoes are grown in every State and commercially in 46 States under greatly varying climatic conditions. They are produced during all seasons with widely varying marketing and transportation problems. General marketing work is going on continually for the purpose of bettering local conditions, improving the quality marketed, supplying current market and crop information, and with the aim toward improving farm income from potatoes.

POSSIBLE POTATO PROGRAM—RELATIVE IMPORTANCE OF THE POTATO CROP IN AGRICULTURE

Potatoes are produced in every State of the Union. In many states, such as Maine and Idaho, they are the most important single cash crop, and in States such as Pennsylvania, New York, Michigan, Wisconsin, Minnesota, North Dakota, Colorado, California, Oregon, Washington, Nebraska, Virginia, North Carolina, Alabama, and Florida they are one of the major cash crops and in some years potatoes are the leading crop in these States. The 1934 census shows that potatoes were produced on 3,101,640 farms, which planted 3,601,070 acres to potatoes. On 537,064 of these farms potatoes were a leading source of income, and on 296,213 farms they were the major source of income.

Of the individual crops during the period of 1936 to 1939, inclusive, potatoes ranked fifth in farm crop cash income. During each of the past 4 years cash income from potatoes has ranked fifth among the individual crops and was surpassed only by the cash income received by growers from the crops of cotton, wheat, tobacco, and corn. The cash income from potatoes during this period averaged $174,579,000 per year, which is 5 percent of the total farm income from all crops, or slightly more than 2 percent of the total cash income received by farmers from crops, livestock, livestock products, and Government payments. The cash income from potatoes averages about 75 percent of its gross income.

PRODUCERS' SITUATION

Potato growers received relatively low prices in 4 out of the last 7 years—1934, 1935, 1937, and 1938. Very low prices also prevailed in 1931 and 1932. There is little excuse for a system under which a large number of farmers, who make heavy expenditures to produce a crop, find themselves not only unable to sell the crop for a sum sufficient to offset such expenditures but without coverage for labor costs as well.

There exists a belief among potato producers in various areas that each locality has potato problems distinct and separate from those of all other regions, and that the salvation of each lies in defeating all the others. Sectional competition grows keener year by year in desperate local attempts to regain a lost prosperity. However, income from potatoes largely depends on supplies and the purchasing power of consumers. When the national potato crop is small prices are high, when the crop is large prices in all producing areas are distressingly low. During the last 15 years prices in New York have been high when prices in Maine were high, and low when prices in Maine were low. The fundamental problem of growers in Colorado, Idaho, Ohio, Iowa, and other States is identical in that there is no security offered in the profits that producers make from one crop, followed by several crops returning serious losses. Producers cannot exist on a satisfactory standard of living from a major crop producing a profit 1 year out of 3. Our definite aim is to make potato production the profitable enterprise that it once was and ought to be again. I am going to describe some of the things that growers and others have suggested.

DOMESTIC-AVERAGE ALLOTMENT

It is recognized that there are extreme fluctuations in acreage planted and yields harvested. The yields are controlled by nature, but some definite guidance can be given in respect to acreage. In this connection the acreage-allotment program should be continued but a higher degree of participation must be obtained to make it successful. Reimbursements to growers should be reestablished at the rates of payment existing in 1938, and legislation should be amended rectifying this aspect to reestablish rates as originally promised the farmers. In this manner a reasonable acreage would be planted and the success of the domestic-acreage allotment secured.

MARKET COORDINATION AND INFORMATION SERVICE

For a number of years we have had Federal and State news services which have performed a very valuable function in assembling and disseminating information concerning market conditions, crop conditions, prices, and movements of important crops. Recently large buyers, by means of telephone and teletype, receive information very rapidly from their various connections or offices in the United States. When such information would be advantageous to the producer they take advantage of him by buying his potatoes prior to the news advancing the market. If such news is unfavorable, purchases are withheld until the market has dropped considerably. However, from the standpoint of a potato grower who is forced almost daily to decide

whether to sell or not to sell, and at what price, present market news services, efficient and valuable though they are, are not fast and adequate enough. The seller, and especially the grower who does not have the finances to establish his own connections needs accurate, up-to-the-minute spot information. He needs to know the price in the market to which he intends to ship, the rate of movement into that market and other markets, and prices to growers in his immediate vicinity and elsewhere. He needs to know weather conditions at all shipping points from which the proposed market draws supplies and in that market itself in order to have some idea of what supplies, shipments, and demand are likely to be.

This should be supplemented by clearing houses for performing this function, because accuracy of information and speed are paramount when the pattern of the deal shifts and changes as rapidly as it does in the case of potatoes. The information is valuable to producers in establishing prices in line with demand and supply, but they often receive the information after the potatoes have left their hands. The proposed arrangement would make it possible for every grower to have every scrap of available information in time to use it as a basis for sales operations.

DISTRIBUTION AND TRANSPORTATION PROBLEMS

Inefficient, inadequate, and expensive distribution methods are blamed for much loss of income to potato growers. Distribution, it must be emphasized, begins the moment you start digging the potatoes. Many potatoes are bruised in the digging process, and the quality is lowered by that amount. If the potatoes are bruised or cut at the time of picking, grading, packing, or loading in the car, the producers' income is reduced or he may lose money by allowing potatoes to become sun scalded. If grading method permits potatoes to be packed when caked with dirt, or allows them to tumble from one level to another without adequate padding, or generally permits perishable tubers to be handled like coal, then income is cut and cut again.

An adequate potato program must give attention to these things. It must give careful handling and proper storage a position of real importance.

In this same category are grading, washing, and packing. As a general rule, field-run potatoes are just field-run potatoes and nothing more, whether they would grade out 60 percent United States No. 1 or 90 percent. Under ordinary circumstances there is a heavy loss from the sale of ungraded potatoes except in the rare instances when the production of a particular grower or field is so low in quality as to make grading uneconomical. On the whole, however, the grower who fails to grade, and sells his product field run, actually sells his No. 1's and gives away his No. 2's. If grading is done prior to sale, the No. 1 portion can be sold for practically the same total value as the entire lot when ungraded, and it leaves the grower with some No. 2 grade which can be disposed of for what they are at a price which will increase his total income.

Washing is going to be a very important practice in potato distribution. In Florida, in Alabama, in Louisiana, in Nebraska, in Idaho, in California, and in Colorado, an amazing percentage of the cars shipped last year were washed. Washed potatoes consistently bring a premium over unwashed stock because neither storekeepers nor consumers enjoy the unsightly mess created by dirty potatoes. The time may come when unwashed potatoes will sell at a discount in exactly the same manner as low-grade potatoes do now. We must remember that potatoes are not a staple food to quite the extent that they were a few years ago. Potatoes are in competition with every food that a consumer buys and the variety of foods has expanded greatly in the past 20 years. Per capita potato consumption has gone down steadily in recent years, at a rate of eight-tenths of 1 percent per year, and it is only recently that serious efforts have been made to check the downward trend and to improve the competitive position of the potato. Progressive growers have seen the handwriting on the wall and are mending their fences in every way possible by better grading, properly marking the grade contents on each package, washing the potatoes, and even packaging the potatoes in consumer-sized containers.

In this rehabilitation process packaging has come in for its share of attention. The time was when potatoes could be tossed into a barrel in the field and moved directly to the retail store for repackaging and sale over the counter. But, of course, there was also a time when pickles, sauerkraut, crackers, beans, rice, flour, corn meal, and a host of other commodities were lined up in barrels in the retail grocery store. Those also were the days when no careful housewife would use her corn meal without sifting out the maggots, or her dried beans without examining each one for a worm hole. The housewife did not like it and the storekeeper did not like it. Consequently, we have beans, rice, crackers, and the like attractively packaged in 1-, 2-, and 5-pound containers that are clean, sanitary, and convenient to handle and store. But potatoes? You know how it is.

Many growers and shippers, however, have observed the new trend. They see that a pound of macaroni in a sanitary package leaves no dirt in the sink and requires no tedious preparation, and they realize that something must be done to avoid losing out altogether. Hence, the growth of consumer-sized packages, from 50 pounds down to 10 pounds. Whether of paper or cotton, whether solid or open-mesh, a consumer-sized potato package is an attractive one and a practical one. Individual tubers need not be handled until they arrive in the consumer's pantry. Retail distributors save the cost of repackaging and of shrinkage, and, best of all, the consumer-package forces the seller to pack a high-quality, clean potato. There must be some profit in it, else the practice would not have grown so fast. In fact, it must be worth considerable in the way of extra trouble and higher costs or Idaho would not be shipping matched bakers in half dozens and dozens, individually wrapped in tissue paper and packed in paper cartons. There must be a profit or it would not be done.

The industry is trying to give consumers what they want. One very large Nebraska grower guarantees to the consumer that the potatoes contained in his consumer package will be satisfactory in every respect. I know another large grower and shipper who cook-tests each lot of potatoes as it is dug, and refuses to pack under his private brand any lot that does not measure up from the standpoint of mealiness and color. Consumers in the Chicago sales area like a red-skinned potato, and producers are supplying that demand. Alabama, Louisiana, Texas, and Nebraska go in heavily for the Bliss Triumph variety. The San Luis Valley of Colorado for many years has earned a substantial premium on clean, well-graded, well-packed Red McClures. All markets like a bright, clean potato, hence the swing to Katahdins and Chippewas all along the eastern seaboard. In Pennsylvania there is evidence that the rural variety is waning, and everywhere there is interest in new varieties, not necessarily because they yield more heavily, or carry better, but because they are more marketable. A well-rounded potato program should devote considerable time and effort to cultural research in order to learn how to produce what consumers want.

It is therefore recommended that considerable effort be expended to conduct studies in order to determine and recommend sound and approved harvesting, storage, grading, and transportation practices to the potato industry, with the view of eliminating the losses sustained through waste and reducing the spread and cost of marketing between producer and consumer in order to return to the producer a larger proportion of the consumer's dollar expenditure for potatoes.

CONSUMER EDUCATION THROUGH THE EXTENSION SERVICE

Speaking of consumers, it is necessary now to have a program of consumer education. That program ought to go along two lines—first, education concerning potato quality and grade standards. This also applies to all farm food products. It is frequently stated that consumers in a given

market will not pay a premium for high-quality products, or that consumption cannot be increased, but in practically every case where that statement was investigated it has been found that there are so few good-quality potatoes offered for sale that consumers have not had an opportunity to develop a preference for good potatoes. After all, nobody would offer to pay a fancy price for something they had never heard of. A well-rounded program should include a public-relations project to put this story over to consumers, because by so doing the per capita consumption could be increased enough to absorb all of the surpluses we have had in recent years.

Such a consumer-education program should be included in the programs of the Extension Service, which, through their home-demonstration agents, could conduct such a program. Therefore, adequate appropriations should be made to obtain the necessary informational material and to increase their staff so that our metropolitan areas will receive this necessary information and avail itself of the opportunity of using such farm products.

INDUSTRIAL-USE PROGRAM

Industrial outlets for potatoes have barely been scratched. Modernization of methods of producing and marketing potato starch and of deliveries to potato-starch factories would increase extraction rates and lower costs sufficiently to make material expansion possible. Starch factory waste is an excellent livestock feed and would be a profitable byproduct if there were some inexpensive means of dehydrating it, thus reducing its weight so that it could be transported economically. Some day there will be developed a practical dehydration process for raw potatoes which would open up a whole new field, both for humans and animals, by making extended storage possible. Within the realm of possibility is the manufacture of potato power alcohol for industrial uses. Our reserves of petroleum will not last forever, and it has been demonstrated adequately, here as well as in Europe, that a blend of alcohol with gasoline is about as efficient a fuel for internal combustion motors as gasoline alone. The use of alcohol as fuel probably could be the greatest single outlet, but there are literally hundreds of industrial processes which require the use of alcohol. Further in the future are such possibilities as rubber, paper, plastics, and other products which thus far have merely been demonstrated in laboratories as remotely possible.

A complete program ought to include wide use of potatoes as livestock feed. In Colorado, Idaho, Wyoming, and other States producing both potatoes and range cattle, potatoes have long been used as a supplementary winter feed. It is excellent for such cattle as well as for dairy cattle, sheep, and hogs. Potatoes are grown in every one of our 48 States, and livestock is produced in many of them. These animals represent a vast consuming power for a commodity of which even the culls are worth 25 percent of corn, and the same as corn ensilage.

A permanent program to increase the consumption of potatoes for food, livestock feed, and for industrial uses is recommended not only as a surplus-removal program but more especially as a means of finding a greater permanent use for potatoes.

FINANCING, AND ELIMINATION OF USURIOUS PRACTICES

Growers in many areas have suffered losses so frequently that they are no longer able to finance their own production and have turned to all sorts of money-lending agencies for assistance. As a result of this situation there has grown up a condition under which costs of production are much higher than they should be, and some means should be provided whereby producers and producer organizations can secure adequate loans for production, storage, and marketing facilities, whereby they may be able to regain their bargaining power and increase their net income by lowering production and distribution costs. Under many of the present arrangements growers have absolutely no control over marketings, and consequently have lost all incentive to do a job of smart marketing. They have had to stand by helplessly and watch the growth of unsound marketing practices which have further reduced their income. There should be established some means to assist growers in carrying out these projected programs, and especially in performing the necessary services of financing production, marketing, and distribution themselves so as to enable them to obtain independent action in these services, thus increasing their bargaining power and establishing a free market for their product.

INDUSTRY ORGANIZATION

Finally, the potato industry probably has less organization than any other industry of anywhere near its size. Problems of packaging, grading, transportation, and business practices do not recognize State boundaries. One of the most important moves the industry can make, and the one which it should accomplish first, is organization along national lines with existing State and local organizations and societies forming the backbone of the new organization. By such means it would be possible to obtain concerted action when concerted action is necessary, and to provide a free flow of information and ideas, and eventually to put the potato industry on a sound, orderly, and profitable basis. To effectuate this a National Potato Council should be established.

Some matters for inclusion in a fully rounded potato program might possibly require State or Federal legislation.

America Should Not Become Involved in the War in Europe

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

LETTER FROM E. E. BRINDLEY

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a constituent of mine.

RICHLAND CENTER, WIS.,
May 17, 1940.

Hon. JOSHUA L. JOHNS,
Member of the House of Representatives, Washington, D. C.

DEAR JOSHUA: I am writing you as one of the congressional leaders for the reason that I very much fear the war hysteria that is sweeping the country at this time.

I have been informed by persons who have been at Washington recently that there seems to be a growing sentiment at Washington, and the East generally, for the participation of this country in the European war. I also hear this talk around here where I live. I do not know how it is in the East, but around here this talk emanates chiefly from those who have given the situation little or no thought. The invasion of Norway, Holland, and Belgium by the Germans has aroused the anger of nearly all people, and the more excitable ones think we should do something about it at once.

However, I believe that the older, more sober people, and especially those who are old enough to have participated in the last World War, either as civilians or soldiers, are not persuaded that we have any reason or any business in the present conflict. In my opinion, the present conflict grows right out of the fact that after the last World War the peace terms were so onerous upon the Germans, and the restrictions placed in the way of the German Republic were so impossible of performance that the German Republic failed, and Hitler and his band of thugs are the direct result of unwise and selfish policies pursued by England and France at that time. If that analysis is correct, and I believe it will stand the test, it is perfect folly for us to think of sending our young men over to be killed and murdered to correct the selfish mistakes of men who are still in power. Almost everyone seems to have forgotten that after the excitement of the first World War had settled down certain eminent historians got together and tried in an impartial manner to fix the blame for the first World War. You will recall, as I do, that their conclusions were that all the countries involved were practically equally to blame for the start of that holocaust.

Personally, I do not want to send my sons to war to correct such mistakes, and I do not want to spend any money helping to correct such mistakes by making war.

Furthermore, it is becoming apparent that if the Germans fail in this tremendous drive they are now putting on, the present war will become a stalemate, and that is an additional reason why we should stay on the sidelines. It is, in my opinion, perfect folly to think of sending soldiers and money over to Europe to try to correct their rotten power politics for them. The problems arising out of Europe's politics will have to be settled by the Europeans themselves if they are settled at all.

From a military standpoint, it is becoming apparent, even to a layman like myself, that the problem of invading this country or the American Continent from Europe is insurmountable and impossible for any conceivable combination of powers on that continent, if we but take reasonable and sensible precautions to render ourselves immune to attack. It seems to me that if we had properly spent the money already appropriated we would now be immune to attack from Europe or any other continent, and if we are not, it certainly is a reflection upon the Government that has been in control of our destinies for the last few years.

I know that Dorothy Thompson, in her last syndicated article, is all excited about the situation in Europe and thinks we should postpone our national election and give Roosevelt a third term by consent. That is all poppycock and the sheerest kind of foolishness. It is but the opening wedge for a dictatorship in this country.

I am writing you my feelings in the matter because I wanted you to know that not all the citizens of the country were being carried away by this war hysteria, and I think it is high time that the citizens who are not being carried away by war hysteria remain calm and cool and collected and keep their heads, for Heaven only knows what percentage of the people is subject to be carried away by excitement in times like these.

I do not know whether or not this letter will have any value, but you may show it to any friends or acquaintances that you see fit. I do not pretend to speak for anybody but myself, and I do not hold any high official position, but I happen to be chairman of the county board for Richland County, and have held that position for quite a number of years, and as one of the common, ordinary citizens of the country I think my opinions are entitled to some weight.

I am sending a similar letter to Senators LA FOLLETTE and WILEY.

Will be glad to have your reaction.

Very sincerely yours,

E. E. BRINDLEY.

Stream Pollution

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

EDITORIAL FROM THE PHILADELPHIA EVENING BULLETIN AND LETTER FROM P. G. PLATT

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Evening Bulletin and also a letter from a prominent citizen of Philadelphia:

[From the Philadelphia Evening Bulletin of May 14, 1940]

STATE POWER ABDICATED

Announcement by the State sanitary water board that it intends to approach the problem of stream pollution by "reasonable, practicable, progressive steps, rather than by action harmfully affecting employment and increasing taxation," is mere confirmation of a do-nothing policy that has been in evidence for more than a year.

Nobody wants to bankrupt individuals or corporations that defile Pennsylvania streams. But nobody wants to be forced to drink water befouled and made dangerous by avoidable pollution.

The board long complained that it was powerless under the laws. Those laws have now been changed, and provide a method of reduction of pollution without undue hardship on Government or industry. So long as the board chooses to close its eyes to its duty, just so long will industries and municipalities raise the cry of poverty.

As long as the board holds the view it has just expressed, hope for improvement of the streams from which Philadelphia gets its water supply is virtually nil.

WALLINGFORD, PA., *May 20, 1940.*

Hon. FRANCIS J. MYERS,

1021 House Office Building, Washington, D. C.

DEAR CONGRESSMAN MYERS: I felt that the enclosed editorial from the somewhat conservative, thoroughly independent, and widely read Philadelphia Evening Bulletin would be of considerable interest to you, inasmuch as it forges another link in the chain of evidence against those who preach the adequacy of State enforcement of antipollution laws.

It has been my pleasure to play an active part in the State campaign for clean streams through four administrations. During that period, all aspirants for the governorship pledged themselves to adequate laws governing the problem, yet it was not until the last administration that such laws were enacted. During that administration, as you are aware, it was my privilege to serve as a member of the State sanitary water board. To the credit of the board on which I served for 4 years, you are familiar with the fact that it served warning to the effect that offenders were expected to meet their public obligation, yet there was no bureaucratic terrorism and in the case of extenuating circumstances, ample time was extended in which to carry out the orders of the board. At last, we conservationists hailed the dawning of a new era in which we were taking the first steps in a plan designed to correct one of the worst crimes ever perpetrated upon the State. We had, at long last, the law, we had a sympathetic administration, we had adequate technical personnel.

But it seems that we who believe that the public is entitled to clean streams were too hasty in our appraisal. In spite of the fact that the present administration pledged itself to enforcement of antipollution laws, the "pollutocrats" are back in the saddle. To all practical purposes, the law for which conservationists had labored so long, so patiently, and so earnestly, is now a dead letter. The ghost of Joe Grundy, who thought, not so many years ago, that he had bought a seat in the United States Senate, now sits as chairman of the board which passes judgment upon the nefarious polluting practices of Grundy and his cohorts. Please note that the present policy is opposed to "action harmfully affecting employment and taxation." During a period of great industrial activity, the Grundy philosophy would no doubt dictate that such activity must not be interrupted for the sake of such silly sentimentality.

At a public hearing before a committee of the Pennsylvania Assembly in 1935, a native son and follower of Grundyism testified in favor of the worthy objectives of the proposed legislation, but stated that its enactment would inflict an unfair competitive burden upon Pennsylvania industry, and that to overcome this inequality, the matter should come under Federal jurisdiction, with uniform regulation. The ink was hardly dry on the report of these hearings when this same lobbyist appeared before a committee of the United States Senate to testify in favor of the worthy objectives of proposed Federal control, but insisted that the control feature was none of the Federal Government's business, and must be left in the hands of the various States.

The Barkley bill (S. 685), providing for Federal study and investigation, but no control over the situation, not only has had wide endorsement by the various associations of exploiters of natural resources, but the hearings actually show this bill to have been sponsored by the "pollutocrats." Now that the House of Representatives has amended the bill by means of the so-called Mundt amendment, designed to curb the spread of a great national scandal, the parents of the bill are disowning their own brain child. There can be only one answer to this situation. The sponsors of S. 685 without the Mundt amendment know that the proposal offers no control but would act as a pollution-protection rather than a pollution-control measure, meanwhile leading the uninformed public to believe that Congress had acted in its interest rather than that of the gluttons who despoil public resources for private gain. As the bill now rests in conference it represents a compromise between the study and the action schools of thought. Conservationists, representing the vast majority of unselfish public opinion, have agreed to support the bill as amended by the House on March 1.

During the next few weeks Congress will no doubt focus its attention upon the emergency-defense program now before it. Let me suggest that preliminary to or at least complementary to any agreement on the national defense we should put our house in order by guaranteeing that we have something worth while to defend. Continued squandering and exploitation of our natural resources at past and present rates can eventually lead only to a condition when we will have a land unworthy of defense.

I urge that your influence be brought upon the conferees to report favorably S. 685 as amended by the House, and in case of any deletion or sabotage of the control feature written in by the House you vote to reject the report as representing the very antithesis of the title of the bill.

Sincerely yours,

P. G. PLATT.

PRESS RELEASE FROM THE NATIONAL EMERGENCY CONFERENCE FOR DEMOCRATIC RIGHTS

Mr. COFFEE of Washington. Mr. Speaker, a number of liberals have requested me to secure permission to have inserted in the Appendix of the CONGRESSIONAL RECORD a press release of the National Emergency Conference for Democratic Rights. This release deals with the Detroit raids, the Dies committee's activities, and the protection of the Bill of Rights. Appended to it is an open letter to which is attached some very prominent names of America's leading thinkers, educators, and intellectuals. It will be noted that among the list of names may be found prominent writers, essayists, poets, engineers, college presidents, editors, and actors.

The press release and open letter speak for themselves, and are as follows:

[From Press Service of the National Emergency Conference for Democratic Rights, New York]

One hundred and forty-eight prominent American educators, churchmen, scientists, and civic leaders have called upon Attorney General Robert H. Jackson to investigate violations of the Constitution by agents of the Dies committee, it was announced yesterday (Sunday) by Alfred K. Stern, chairman of the National Emergency Conference for Democratic Rights, and Rosalie Manning, chairman of its New York affiliate, the Greater New York Conference for Inalienable Rights.

The demand was made in an open letter to the Attorney General in which Mr. Jackson was reminded that in 1920 similar constitutional violations by Attorney General Palmer had been condemned by 12 prominent jurists, including the present Supreme Court Justice Felix Frankfurter; Dean Roscoe Pound, of Harvard Law School; and Ernest Freund.

Among the signers of the recent condemnation of the activities of the Dies committee are Dr. William A. Neilson, president emeritus of Smith College; Dr. Mary A. Woolley, president emeritus of Mount Holyoke College; Prof. E. A. Ross, national chairman of the American Civil Liberties Union; Prof. Harold C. Urey, of Columbia, Nobel prize winner in chemistry; Prof. Irving Fisher, of Yale; Dr. Franz Boas, professor emeritus of anthropology, Columbia; Dr. Henry Smith Leiper, foreign secretary of the Federal Council of Churches of Christ in America; Dr. Guy Emery Shipler, editor of The Churchman; Carey McWilliams, commissioner of housing and immigration, California; Borough President Stanley M. Isaacs, of Manhattan, New York City; Deputy Commissioner of Welfare Clifford T. McAvoy; Prof. Harlow Shapley, of Harvard; Prof. Josephine Truslow Adams, of Swarthmore; Prof. Henry Pratt Fairchild, of New York University; and Freda Kirchwey, editor and publisher of The Nation.

The signers of the open letter expressed the fear that "violations of minority rights, sanctioned and participated in by so responsible a body, should inevitably and insidiously lead, as in certain European countries, to suppression of the rights of all the people."

"The undersigned view with growing apprehension report after report of violations of the United States Constitution and its Bill of Rights by the Dies committee and its agents in Philadelphia, Baltimore, Los Angeles, El Paso, Birmingham, and even at its hearings in Washington," the letter began.

After citing recent decisions by Federal Judges F. Dickinson Letts and George A. Welsh, in which activities of the Dies committee agents were characterized as violations of the Bill of Rights and the civil-liberties statutes, the signatories stated: "Not to take a stand now against this conspiracy to violate the Bill of Rights by the Dies committee would indeed be to put the seal of approval on contempt and defiance of the basic laws of the country by a body sworn to uphold them."

They then called to mind a statement issued in 1920 in which Justice Felix Frankfurter, Roscoe Pound, Ernest Freund, and nine other jurists, condemning similar constitutional violations by Attorney General Palmer and his staff, said, "Here is no question of a vague and threatening menace, but a present assault upon the most sacred principles of our constitutional liberties."

"We are not here in any way expressing an opinion on the philosophy or program of the victims of these illegal acts. We speak as American citizens profoundly disturbed to find a congressional committee violating the Constitution of the United States," the open letter continued.

The letter closed with a request that Attorney General Jackson investigate the activities of Dies committee agents and that "our Representatives and Senators move in each House of Congress for the formation of an adequately financed committee to investigate the Dies committee agents and propaganda and urge the dissolution of this committee, should investigation prove its actions detrimental and dangerous to American democratic institutions."

The complete text of the open letter is attached.

The signers of the open letter follow: Dr. Harold Aaron, Dr. E. Stanley Abbot, Comfort A. Adams, Prof. Josephine Truslow Adams, Wayne Adamson, Edward S. Allen, Rabbi Michael Alper, Newton Arvin, F. J. Bagocius, Archey D. Ball, Lee H. Ball, Frank C. Bancroft, Samuel L. M. Barlow, Dr. Henry Lambert Bibby, Katherine Devereux Blake, Rev. Myles D. Blanchard, Rev. W. Russell Bowie, Rev. Clarence E. Boyer, Dorothy Brewster, Rev. Howard L. Brooks, Dr. Esther Lucille Brown, Robert L. Calhoun, W. J. Carney, Morris Carnovsky, T. R. Caskardon, Dr. Emanuel Chapman, Leslie Clarke, Howard Costigan, Malcolm Cowley, Prof. Philip W. L. Cox, Prof. Richard T. Cox, Dr. Henry Hitt Crane, Prof. Ephraim Cross, W. J. Crozier, Joseph Curran, Edgar Dale, J. F. Dashiell, Jerome Davis, Rev. E. A. DeBordenave, Martha Dodd, Robert Ekins, Prof. Henry Pratt Fairchild, Elmer O. Felhaber, Prof. Irving Fisher, Bertha Josselyn Foss, Osmond K. Fraenkel, Horace L. Friess, Ben Golden, Dr. Willystine Goodsell, Abel J. Gregg, Alice Hamilton, Dashiell Hammett, Ruth Gillette Hardy, Prof. Benjamin Harrow, Pearl M. Hart, Marion Hathaway, Aline Davis Hays, Prof. Selig Hecht, Charles J. Hendley, Alexander Hoffman, Austin Hogan, Langston Hughes, Mary E. Hurlbutt, Rev. William Lloyd Imes, Hon. Stanley M. Isaacs, Gardner Jackson, Fleming James, Elsie Voorhees Jones, Matthew Josephson, Robert Josephy, Harry M. Justiz, Rockwell Kent, Ross Kenyon, Carol W. King, Prof. Harold Kirby, Freda Kirchwey, Erwin Klaus, Dr. Philip Klein, Prof. Otto Klineberg, Oliver LaFarge, David Lasser, Dr. Henry Smith Leiper, Max Lerner, William Levner, Charles Liebman, Dr. Eduard C. Lindeman, Prof. Alain Locke, Philip Loeb, Prof. Robert S. Lynd, Clifford T. McAvoy, Louis F. McCabe, Rev. J. A. MacCallum, Robert M. MacGregor, Carey McWilliams, Dr. Gerald Machacek, Rosalie Manning, Herbert E. Marks, Sidney Maslen, Dr. Robert E. Mathews, Prof. Jerome Michael, T. R. Molloy, Dr. William A. Neilson, Prof. Mabel Newcomer, John P. Peters, Rev. A. Clayton Powell, Patrick L. Quinlan, Dr. Walter Rautenstrauch, Prof. Bernard F. Riess, Mary W. Rittenhouse, Prof. Edward A. Ross, Prof. Eugene A. Rostow, Prof. Arthur M. Schlesinger, Prof. Lawrence Sears, George Seldes, Prof. Harlow Shapley, Dr. Guy Emery Shipler, H. Norman Sibley, Daniel Cranford Smith, Isobel Walker Soule, L. Elizabeth Spofford, Rev. W. B. Spofford, Alfred K. Stern, Donald Ogden Stewart, I. F. Stone, Rev. Paul H. Striech, Prof. Dirk J. Struik, Sigmund C. Taft, Prof. C. Fayette Taylor, Katherine Terrill, Rev. Paul M. Tillich, Edward C. Tolman, Rev. Robert Leonard Tucker, Harcourt Tynes, Jean Starr Untermeyer, Dr. Willard Uphaus, Prof. Harold C. Urey, Harry Van Arsdale, Jr., Prof. Oswald Veblen, Rachael Vixman, Mary Heaton Vorse, Dr. J. Raymond Walsh, Goodwin Watson, Prof. Louis Weisner, Henry Wenning, Dr. George B. Wislocki, Dr. Mary E. Woolley, Loyd F. Worley, Dr. Max Yergan.

Additional signatures to the open letter are being received daily at the office of the National Emergency Conference for Democratic Rights, 305 Broadway, New York City, and will be released to the press shortly.

OPEN LETTER

To Attorney General Jackson.
To our Representatives and Senators in Congress.

The undersigned view with growing apprehension report after report of violations of the United States Constitution and its Bill of Rights by the Dies committee and its agents in Philadelphia, Baltimore, Los Angeles, El Paso, Birmingham, and even at its hearings in Washington.

On April 9, 1940, Federal Judge F. Dickinson Letts ordered the release of Philip Frankfeld and F. F. O'Dea, arrested on warrants procured by the Dies committee on charges of contempt of that committee. Judge Letts held that the constitutional rights of these two men had been violated and rebuked the Dies committee for the arrest in the following statement:

"Congress by these enactments (Civil Liberties Statutes) * * * had in mind the necessity of protecting citizens who might be summoned as witnesses from unfair treatment by reason of the fact that differences of political opinion might prevail."

On April 4, 1940, Federal Judge George A. Welsh ordered the arrest of two agents of the Dies committee on warrants charging them with "conspiracy to violate the Bill of Rights and the Civil Liberties Statutes." He said:

"These civil and constitutional rights of ours were given us as the result of the battle of humanity through the ages and must be preserved. Only by the observance of these rights by all our people can our democracy stand. * * * Not to issue the warrants in this case would be to put the seal of approval on what has been done."

Not to take a stand now against this conspiracy to violate the Bill of Rights by the Dies committee would, indeed, be to put the seal of approval on contempt and defiance of the basic laws of the country by a body sworn to uphold them. In the two acts

condemned by Judges Letts and Welsh, amendments 4 and 5 of the Constitution, and article 18, section 47, of the Civil Rights Statutes, were violated.

With Justice Felix Frankfurter, Roscoe Pound, Ernest Freund, and nine other jurists who in 1920 condemned similar constitutional violations by Attorney General Palmer and his staff, committed in singularly like circumstances, we must point out that:

"Here is no question of a vague and threatening menace, but a present assault upon the most sacred principles of our constitutional liberty."

To that indictment we may add Attorney General Jackson's recent warning:

"Particularly do we need to be dispassionate and courageous in those cases which deal with so-called subversive activities. * * * Those who are in office are apt to regard as 'subversive' the activities of any of those who would bring about a change of administration. Some of our soundest constitutional doctrines were once punished as 'subversive.'"

We are not here in any way expressing an opinion on the philosophy or program of the victims of these illegal acts. We speak as American citizens profoundly disturbed to find a congressional committee violating the Constitution of the United States. We are apprehensive lest these violations of minority rights, sanctioned and participated in by so responsible a body, should inevitably and insidiously lead, as in certain European countries, to suppression of the rights of all the people.

We therefore call upon Attorney General Jackson to investigate the activities of the Dies committee agents and ask our Representatives and Senators to move in each House of Congress for the formation of an adequately financed committee to investigate the Dies committee's activities and propaganda and to urge the dissolution of this committee should investigation prove its actions detrimental and dangerous to American democratic institutions.

Harsh and Unnecessary Sponsor Requirements

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

RESOLUTION OF THE POLICE JURY OF BOSSIER PARISH, LA.

Mr. BROOKS. Mr. Speaker, as you know, the police juries in Louisiana are the governing bodies of the respective parishes. They are the governmental agencies upon whom the burden of local government falls and as such are in close contact with the people of the State.

I have received a resolution from the police jury of Bossier Parish, La., dealing with sponsor requirements of W. P. A. The heavy contributions required under existing law places an onerous financial burden upon the local sponsors. In many cases where parishes are not rich in natural resources, the burden of these requirements often renders it impossible for local sponsors to undertake the work of projects. In some cases the police juries and other local agencies have found it impossible to meet these requirements, and many communities are therefore denied the beneficent effect of these appropriations. Too often the real test of relief is not the local need for it but is rather the ability of the sponsor to meet the requirements.

The police jury of Bossier Parish, La., has placed in its resolution certain matters which are important to a proper solution of this matter. Some of these matters mentioned in the resolution may be corrected by a change in the rules and regulations of the Work Projects Administration. In such cases, I commend to the administration the early and careful study of this important subject with the hope that those regulations which are unnecessary and prove to be harassing upon the local sponsors may be withdrawn. In other cases, proper amendments should be placed in this act in order that those communities which really need work relief may be permitted under the law and regulations to meet the requirements imposed upon the local sponsor.

Rules and regulations of W. P. A. should be simple. They should be simple enough to permit all communities to meet reasonable requirements and yet rigid enough to insure proper distribution of these funds provided in such large amounts by Congress to those in dire need and distress. There is no place in the Work Projects Administration for useless and harassing rules and regulations. Where such exist, they should be abolished.

I have already voted to reduce the monetary requirements of the sponsor. I will continue to work and vote to eliminate the red tape and useless and vexatious rules and regulations which stand between Congress which provides the money and the poor unemployed citizen who stands in a position of real and urgent need.

I quote in full the resolution of the police jury of Bossier Parish, La., for the information of this Congress:

Whereas this police jury has made repeated attempts to secure the cooperation of W. P. A. administrators and officials in the setting up of projects in Bossier Parish for the purpose of giving employment to persons unemployed in Bossier Parish, and have failed in their attempts because of not being able to comply with rulings made by W. P. A. officials; and

Whereas it is our understanding that appropriations have been made by Congress to the W. P. A. for the purpose of setting up projects for the employment of persons throughout the country who are in need of work; and

Whereas this police jury does not believe that Congress intended that this money should only be spent in such localities as might be fortunate enough to have surplus funds on hand with which to bear a large part of the cost of projects set up for the providing of employment; and

Whereas most police juries of the State are hard-pressed to meet the statutory and other absolute necessary expenses of local government and cannot find means of raising funds for the appropriation of any substantial sums for the operation of professional and service W. P. A. projects; and

Whereas the W. P. A. administrators and officials have made rulings and regulations, which are evidently arbitrary, whereby any parish desiring to sponsor a professional or service project must comply with these rigid regulations or else not get the projects set up, thereby causing the citizens of the localities which are unable to meet said requirements to be deprived of employment to which they are justly entitled; and

Whereas it is believed that Congress did not intend for the administrators and W. P. A. officials to make rigid rules and regulations which in some cases effect to defeat the very evident purpose of the law, and it is further believed that some of the said rules and regulations are contrary to the Constitution of the United States: Therefore be it

Resolved by the police jury of Bossier Parish, That this police jury does hereby request the Congress of the United States to take such steps as may be necessary to correct the conditions as now exist in the W. P. A. whereby poorer communities are deprived of W. P. A. benefits; and be it further

Resolved, etc., That Congress be requested to so amend the W. P. A. laws or take such other steps as are necessary so that W. P. A. administrators and officials may not have the power and authority to make arbitrary rules and regulations which will cause the very communities and localities which are most in need to be deprived of W. P. A. benefits; be it further

Resolved, etc., That the secretary of this police jury be instructed to have this resolution printed and to send a copy to the Representative in Congress, to the Louisiana Senators, and to the President.

W. P. A. Control and Abuse

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

EDITORIAL FROM WISCONSIN RAPIDS DAILY TRIBUNE

Mr. MURRAY. Mr. Speaker, there is a growing demand that the appropriations for W. P. A. be placed to a greater extent in the hands of municipalities. This plan is splendidly supported by the following editorial from the Wisconsin Rapids Daily Tribune of May 16, 1940, which is an independ-

ent paper that always follows a policy of the greatest good for the greatest number. It is as follows:

W. P. A. CONTROL AND ABUSE

We believe that the W. P. A. abuses bared at Washington in the report of the special House of Representatives committee that investigated the work program are most highly significant, because they point to the difficulty of running such a far-flung activity from the Federal Capital. It's just too far to Washington.

We think that, though dollar-for-dollar value back to the public in any such activity is impossible to attain, more of that value would have gone back to the public had Wisconsin's relief work program been administered directly from Madison and every other State's program from its capital. And still more of the dollar's value would have been returned had the direction been passed still further down to the county seat.

And it is not alone the saving of administration costs that we are thinking of. In addition to that saving, there would have been greater efficiency in the projects themselves, for the local citizens would have constituted the same watchful body in that event over expenditures and work accomplished that the body exercises over its own municipal tax expenditures.

That is a theme often harped upon—closer local control of the relief expenditures. There would still have been abuses, perhaps, but they would have been far less, we contend.

How many of us today pay much attention to W. P. A. projects? They just exist and go along because we have come to accept them placidly as a part of the times. We don't seem to care how much they cost or how much they accomplish. This, we are sure, would be different if we could go to our county-controlling administrators, or even to Madison, and get in that event immediately to the top of the controlling power. But it's just too far to Washington.

It is easy thus to criticize—lock the stable after the horses are stolen. But these columns have many times before urged that some kind of experimenting be done with the problem of federally provided relief funds. And we say again that the W. P. A. has been most remiss because it hasn't done that experimenting.

Why, at some stage of the game in the last 8 years, were not different control methods tried? Why were not selected States given blank checks and told to run their own programs? Why were not some of those States told to pass the funds directly down to the counties and that method tried? And even the counties told to pass the funds on to the local governments?

Had that been done, we would today have the answers to the questions of closer control, and we would have a program ready, of which we could say, honestly, that this is the best method we have discovered.

We defy anybody to read the story of W. P. A. abuses uncovered by the House investigation and say that the best control method has been used.

The Grand Coulee Project

EXTENSION OF REMARKS

OF

HON. CHARLES H. LEAVY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

ARTICLE FROM THE NEW YORK TIMES

Mr. LEAVY. Mr. Speaker, under leave to extend my remarks, I include herewith an article that recently appeared in the New York Times concerning the Grand Coulee Project in my State.

This article is well written and the factual information therein contained is dependable, and I am glad to give it further publicity through the pages of the CONGRESSIONAL RECORD, because as time goes on our citizens will develop a greater interest in this giant undertaking and come to a fuller appreciation of its significance in our national growth and development. The present greatly expanded national-defense program will have in this construction an asset of major importance. The article follows:

GRAND COULEE OPENS VAST AREA—AS MAN'S MIGHTIEST DAM NEARS COMPLETION TOURISTS FLOCK TO THE NORTHWEST IN GROWING NUMBERS TO MARVEL AND PLAY

(By Richard L. Neuberger)

GRAND COULEE, WASH.—Where the Columbia River bends sharply on its swift rush through the Inland Empire, the most massive structure ever built by man is nearly completed. This is Grand Coulee Dam, and President Roosevelt recently told newspaper correspondents that he expected it to irrigate enough land to provide new farm homes for 500,000 migrants from the Dust Bowl.

This "mightiest work of man" is located in northeast Washington, on United States Highway No. 10, between Spokane and Seattle. A plane from New York will take you to the "Evergreen State" in 18 hours, a train in 65 hours, a bus in 101 hours, and the auto trip is about 8 days.

DIMENSIONS STAGGERING

The Grand Coulee undertaking has become one of the principal tourist attractions in the far West. Last year 297,015 people visited it. Travelers arrived from every State to glimpse a dam three times as vast as the Great Pyramid of Egypt. The dimensions of the structure are staggering. When the dam is completed by the end of this year, a waterfall twice as high as Niagara will crash over its parapet. The lake behind the dam will contain sufficient water to supply all the needs of New York City for more than a decade.

One of the most Herculean phases of the Grand Coulee job has been preparing the countryside for this huge lake, which has started to be a playground for fishermen, swimmers, boating enthusiasts, and hunters. The largest W. P. A. crew in the United States is clearing the land which the rapidly rising water will cover. Ten towns and villages have been moved to new locations. Thousands of acres have been stripped of trees and underbrush.

PROGRESS UPSTREAM

As the Columbia has surged higher and higher behind the dam an ark-like craft called the *Paul Bunyan* has moved slowly upstream. At each settlement workers have left the *Paul Bunyan* and shifted the buildings to ground beyond the level of the lake. They have dragged and rolled schools, stores, post offices, houses, and barns out of the water's reach. Even cemeteries have been moved. In addition, 25 miles of the Great Northern Railway have been relocated, as well as 145 miles of Washington State roads and highways.

New facilities for tourists and visitors have been installed at the site of the dam. Grandstands are on both sides of the river and onlookers watch construction progress while loudspeakers describe the work. In an observation building hourly lectures explain the project. These are illustrated with a detailed model of the dam. Last July and August more than 100,000 people attended the talks.

In June the President plans to visit the Pacific Northwest, and he may take another look at this structure which has eclipsed all previous construction records. If he does, he will see not only the biggest power and reclamation project of all time but also the beginning of a vast recreation area that already has been visited by thousands of his countrymen.

Back of Grand Coulee Dam a mighty lake is forming. Eventually it will be 151 miles in length, extending all the way to the Canadian border. This is only 40 miles shorter than Lake Ontario. Foot by foot, the lake rises above the banks of the Columbia. Rapids and white water far upstream will be inundated. Like a great inland fjord, the expanding river will lap against rugged mountains and lofty hills. It will be one of the picturesque lakes of America.

Wharves and boathouses are under construction at the base of granite cliffs. Hellgate Rapids have already been buried beneath countless gallons of smooth water. Cruisers now ply where once it was unsafe for Indian canoes. At high water, when the glaciers are melting in the Canadian Rockies, the Grand Coulee lake will connect with the Arrow Lakes in British Columbia. This will make a 300-mile route through scenery studded with imposing peaks and deep canyons.

There is a vast assortment of marvels at Grand Coulee. One of these in the Grand Coulee itself. This is a gaunt, dry chasm which the Columbia River carved in the Pleistocene age. From it the dam takes its name. In fact, the purpose of the dam is to pump part of the water in the river back into the Grand Coulee. The water then will be coasted onto 1,200,000 acres of land which requires only moisture to be fertile and productive.

APPROACHES BY MOTOR

One of the two automobile approaches to Grand Coulee Dam winds up the bottom of the Grand Coulee. The motorist gets the impression of driving through an immense ditch dug by some steam shovel of unbelievable proportions. The floor of the Coulee is gently rolling, like a counterpane. The walls are as sharp-cornered as shoebox edges. Two miles in width, the immense trough is carved a thousand feet into the lava plateau. The pumps that throw water into it will be powerful enough to empty any river in the country. Grand Coulee Dam will raise the level of the Columbia 355 feet. The pumps will heave the water another 280 feet into the Grand Coulee, which yawns cavernously above the gorge in which the river flows.

This is a region rich in historic drama. Near the turn of the century settlers colonized the land below the Coulee. For a few years they harvested rich crops. Then the water accumulated in the soil began to taper off. The farms gradually caked and dried. The wheat became increasingly thin and scraggly. Most of the pioneers migrated elsewhere, leaving their ranches and homesteads to the elements. Barns decayed and houses crumbled.

NETWORK OF DITCHES

The Grand Coulee project will irrigate and reclaim this area. It will provide a network of ditches and canals for an expanse of land as large as the State of Delaware. Already visitors can see the contrast of steel-latticed transmission towers spanning the

abandoned farms. Ruined dwellings stare out of vacant doors and windows at the poles which will carry the 220,000-volt line connecting the Grand Coulee Dam with Bonneville Dam, 345 miles down the river. Soon the dry land will be criss-crossed with ditches in which the icy water of the Columbia foams and bubbles.

The Columbia River is the second largest waterway in America. It rushes out of the Canadian Rockies, originating in the vast Columbia ice fields. In summer, when the most water is needed for irrigation, the sun beats down on the alpine glaciers and the river booms with its full flow. The Columbia surges to the Pacific in rocky canyons. It is constantly flecked with whitecaps and rapids. It is a river that exceeds the size of the Hudson and the speed of the Kennebec. Forty-one percent of all the latent hydroelectricity in the United States is in the Columbia Basin.

The entire Grand Coulee region is a new spot on the tourist map. Before the dam was started in 1934 the area was desolate. Sam Seaton ran an old ferryboat across the Columbia. His friend, Charlie Osborne, cultivated a sparse peach orchard. That was all the civilization in the vicinity of the present site of the dam.

RECREATION PLANNED

On the lake behind Grand Coulee Dam boats are already churning and sailing, and skiffs and motorboats and launches dot the widening river. The Government has bought 2,400 parcels of land at a cost of $1,600,000 to recompense people for ground inundated as the slack water rises. The lake will be 36 miles longer than Lake Mead back of Boulder Dam on the Colorado River, where a variety of recreational activities has been carried on for several years. Men and women in the Inland Empire are planning boating clubs, swimming resorts, and other vacation spots along its wooded shores.

A boat trip up the Columbia now, impossible before the dam was built because of rapids and rough water, is a scenic experience. In some places rugged cliffs frown down on the river. At others the land slopes up gently to low, forested hills. Thousands of Americans have visited this area in the past few years. Many more will come in the future, especially after Grand Coulee Dam is finished by December.

Make America Safe—in America Only

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

EDITORIAL FROM BERGEN (N. J.) EVENING RECORD

Mr. SPRINGER. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include therein a very interesting and illuminating editorial which appeared in the Bergen Evening Record, of Hackensack, N. J., on Saturday, May 18, 1940.

Every American is urging an adequate national defense. Yet, in the face of the hysteria which comes when a bitter warfare is waged in the world, we must keep our poise and dignity and stand four-square upon the ground and not permit ourselves to be rushed into any untenable position. This is Europe's war. We had no part in the making of it, and we want no part in fighting that war. We must be prepared for any emergency, and one of these is to aid the world in readjusting and rehabilitating itself after this vicious and cruel war is over. And, too, we must not forget in these hours of great anxiety that we have that continuous problem of rehabilitating our own Nation and of solving our own problems in the interest of the American people.

The editorial follows:

[From the Bergen (N. J.) Evening Record of May 18, 1940]

MAKE AMERICA SAFE—IN AMERICA ONLY

In the light of Nazi Germany's current disregard for every law of God and man, her wholesale slaughter of peaceful, neighboring peoples, and her threat to all civilized mankind, practically every American agrees with President Roosevelt's stirring armament speech in principle.

But there is nothing sufficiently new in his speech to now stampede the American people into ventures that may cost them and their posterity all the constitutional liberties and opportunities purchased by the blood of past generations of their fighting and farseeing ancestors. Hitler's future course and the necessity of American preparedness to meet it were outlined in these columns almost 2 years ago in an editorial which said, in part:

"But what of America and its future safety in the light of the land hunger of the three international bullies (Japan, Hitler, and Mussolini), that grow hungrier with each new conquest; what of the Monroe Doctrine? * * * Uncle Sam has his Panama Canal to protect, that vital sea artery which enables a Nation's navy to be concentrated rapidly on either coast instead of being divided between both. It must therefore be apparent to the Nation, all well-meaning pacifists to the contrary notwithstanding, that the United States must now make vast preparations—not to wage a war but to avoid one. Totalitarians know only one language, and its name is force. They fear only one potential opponent, and that is a stronger one. The trend has long been self-evident, despite international peace treaties and Kellogg Pacts."

Columbia is still the gem of the ocean, and it is a priceless one. Other nations not so fortunately situated geographically or so lavishly endowed by nature with almost limitless natural resources are too prone to look covetously and enviously upon such a valuable acquisition. In this era of space annihilation by speed and its future potentialities, our geographical barriers, comprising two oceans, are no longer adequate for America's international treasure vault. And recent history proves that while the meek may inherit the earth, the strong take it away from them. Altruistic Uncle Sam is deluding himself about this inescapable fact, while the totalitarians are once more preparing to prove its sordid soundness.

Either its future national-defense requirements or its present unemployment problem therefore indicates the wisdom of a comprehensive heavy armament program that would immediately provide the United States with a navy and an air force second to none anywhere. To provide the momentum for these desirable ends, a 10-year program should be authorized now. * * * It should include annually four fast battleships of the heaviest type and guns, with all the necessary cruisers, destroyers, and submarines to round out such a future fleet. It should build thousands instead of hundreds of planes annually and train the men necessary to fly them. * * *

Armed might and its threat of frightfulness forced European unpreparedness and fear of wholesale civilian murder to bow submissively to the Nazi bullies. * * * England and France retreated before the prospect of Germany's new air armada, said to number 8,000, all built in the past 3 years. So be it. Germany has set the pace, and now threatens the safety of the world.

America has thousands of partly idle factories and millions of unemployed workmen to man them. If nations that want to dominate the world by terrorism can build 3,000 planes a year for that purpose, the supremely industrial United States can and should build five times that number to checkmate them, at least on this continent. And it should start at once, unless it is content to relegate itself in the not distant future to the unenviable subordinate position that now confronts hitherto potent Britain and France in Europe.

And on Sepember 22, 1938, these columns stated:

"But of one thing Europe should be convincingly assured. America, having no conquered territory to surrender, is going to keep out of the European diplomatic shell game. This Nation needs no foreign territory, and it will not squander its human and material resources to protect that of others. But it can and will defend itself against the world.

"Its slogan should be, 130,000,000 citizens and $300,000,000,000 for national defense at home, but not one man or one dime for foreign conquests, by whatever new euphemisms they may be camouflaged. The people of a nation so dedicated are not mollycoddles, nor do they lack intestinal fortitude. They merely resolve that their primary national obligation is to make America safe for Americans, in America."

The Danger of Civil Service Exemptions in National Defense Bill

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

LETTER FROM ARTHUR S. FLEMMING

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following

letter from Hon. Arthur S. Flemming, Civil Service Commissioner:

UNITED STATES CIVIL SERVICE COMMISSION,
Washington, D. C., May 22, 1940.

Hon. EDITH NOURSE ROGERS,
House of Representatives.

DEAR MRS. ROGERS: In response to your request, I am very glad to provide you with the following information relative to the proposed exemption from civil service as incorporated in the bill reported by the Military Affairs Committee relating to the preparedness program.

Our position in connection with this exemption is that, first of all, it is absolutely unnecessary. If, because of the demands of the national-defense program, it is necessary to exempt positions from the competitive provisions of the Civil Service Act, the President has the power to make such exemptions. In fact, the President has already delegated such power to the Civil Service Commission in Executive Order No. 8257, dated September 21, 1939, which reads as follows:

"By virtue of and pursuant to the authority vested in me by the provisions of paragraph 8 of subdivision 2 of section 2 of the Civil Service Act (22 Stat. 403, 404), it is hereby ordered that, subject to appropriate noncompetitive tests of fitness, the Civil Service Commission is authorized to permit an immediate appointment without regard to the competitive requirements of the civil-service rules in any case in which it appears that a public exigency exists which is directly connected with the neutrality of the United States or the preparedness program of the Federal Government. This authority may be used only under most unusual and compelling circumstances, and the person or persons so appointed will not thereby acquire a classified civil-service status."

Through the Deputy Chief of Staff, Gen. Lorenzo D. Gasser, the War Department has indicated to the Civil Service Commission that it does not desire to have this exemption a part of the bill. Consequently, if the Congress insists on including the exemption, it means that it will be placing a recruiting burden on the War Department which it does not want and which will have the effect of diverting time, energy, and money from the national-defense program.

The Civil Service Commission, in the judgment of the War Department, is equipped to render the service which it needs at this critical point.

Certainly at no time in our history should the country be more careful about obtaining persons who are qualified than in a critical period such as this. Furthermore, working in cooperation with other investigating agencies of the Federal Government, the Civil Service Commission is in a better position than any single department to make the kind of character investigations which will insure keeping out of national-defense positions persons who might utilize their positions for the purpose of injuring the country's defense program.

If the exemption stays in, the War Department will be immediately subjected to political pressures to make appointments, and in responding to these pressures this country knows from past experience that in a large majority of the cases the appointments will be on the basis of political background and not on the basis of merit.

If politics is to be adjourned at a time such as this, it is no time to mix political appointments with the defense program.

Very sincerely yours,

ARTHUR S. FLEMMING,
Commissioner.

National Defense

EXTENSION OF REMARKS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1940

EDITORIAL FROM THE IROQUOIS CHIEF

Mr. LEONARD W. HALL. Mr. Speaker, Congress this week enters upon consideration of ways and means for strengthening our national defense with a unity of purpose and a seriousness of intent which transcends all party lines. For many weeks, prominent citizens in both major parties have been calling for a reexamination of our national defense system and a scientific and intelligent approach to the problem of plugging up its weaknesses and modernizing its methods and machinery. Conspicuous among those urging America to protect itself and its way of life with up-to-date preparedness equipment was Thomas E. Dewey from my home State.

As reported in the attached editorial from the Iroquois Chief, one of the leading papers in South Dakota, Mr. Dewey, speaking in Louisville, Ky., almost a week before the President addressed Congress on the subject of national defense, put his finger on this defect in the administration's program and called upon America to bring its defenses up to date. It is my hope that Congress will now take this job in hand and complete it satisfactorily.

In a speech at Louisville, Ky., Saturday night, Dewey, the fighting candidate for the Republican nomination for the Presidency, not only went on record as favoring adequate national-defense measures but called attention to the fact that the New Deal spending program has impoverished the country at a time when ample resources are badly needed. Dewey put it this way: "With ruthless military aggression unleashed in the world, America must lose no time in strengthening her defenses. The New Deal has wasted billions of dollars of our money, but it has failed to make adequate provision for the needs of our armed forces. More than that, its destructive policies have seriously threatened our national economic strength—the strength which is our greatest safeguard in a warring world. Two things we must do to secure our future: We must restore our whole economy to health and vigor after the ravages of the 7 lean years, and we must build up the power and efficiency of our Army, Navy, and air forces to levels which will make this country impregnable to attack."

"Fifth Columns"

EXTENSION OF REMARKS
OF
HON. ALBERT L. VREELAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 22, 1940

EDITORIAL FROM THE NEWARK STAR-LEDGER

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Newark Star-Ledger on May 20, 1940:

[From the Newark Star-Ledger of May 20, 1940]

THE "FIFTH COLUMN" HITS PREPAREDNESS

The "fifth column" is just as busily engaged in undermining American morale and unity as it was in preparing the way for the "blitzkrieg" in Denmark, Norway, Holland, and Belgium.

The "fifth column" has many duties assigned to it in this country. The German-American Bund, openly organizing storm-troop formations and preaching racial and religious hatred, is only one of many forms of "fifth column" operation in the United States, and by no means the most dangerous form.

The most effective and therefore the most dangerous campaign of the "fifth column" has been the concerted effort to prevent the United States from strengthening itself to face new war dangers. This "fifth column" detail has taken the form of a counterfeit "peace" drive designed to manipulate the emotions and sentiments of millions of Americans who would not, knowingly, give aid or comfort to subversive elements.

The "fifth column" in this propaganda campaign is able to operate through a diversity of "fronts," full advantage being taken of the existence of sincere groups of pacifists, advocates of nonresistance, isolationists, and optimists, who, in spite of all the evidence in Europe, still refuse to believe that our defenses are inadequate. The "fifth column" is able to take on the masks of all these innocent, sincere groups. Communists, who argue that the present preparedness drive is merely a campaign of hysteria by manufacturers and munition makers for business, thus make their contribution to the campaign of the "fifth column" to keep the United States impotent in the face of danger.

A so-called mothers' peace rally staged at the Newark City Hall Friday night furnished a vivid illustration of the technique employed by the "fifth column" in striking at belated patriotic efforts to unify and strengthen our country. A "capacity audience," we are informed by our reporters, cheered a statement by Dr. Annette Rubenstein, principal of a New York high school, that President Roosevelt, because he is advocating American preparedness, "is not on our side and is not trying to keep us out of war." Other speakers are quoted as having urged that instead of spending more money for armaments, we divert the money to build more schools, hospitals, and create more jobs.

Here we have so-called radicals and liberals who profess to be combating Hitlerism, seeking to destroy the opportunity to make the United States a bulwark against the further spread of Hitlerism. Here we have an instance of self-proclaimed defenders of

democracy, striving to bare democracy's heart to the dagger of the enemy.

It but emphasizes the insidious nature of this "fifth column" effort to observe that the majority of the people who participated in the city hall demonstration were probably innocent of all thought of giving aid and comfort to Hitler. It is part of the "fifth column" approach to keep the intended victim in a rarefied atmosphere of pacifistic idealism, while the Nazis and the Communists make ready to attack.

However innocent members of the audience may have been, and perhaps some of the speakers, the Communist influences behind the demonstration are visible except to those who would be blind. It would be recalled that a participating organization, the American Youth Congress, which appears to be so outspoken in condemnation of President Roosevelt's preparedness program, found nothing to criticize in the Communist invasion of Finland or in the Russo-German rape of Poland.

Never in all the history of our country have we been as free from militarism, jingoism, or a romantic conception of war as we are today. Our attitude on war is grimly sober. Since the Japanese invasion of China our newspapers, our broadcasters, and our movie news reels have given the American people years of education in the horrors and futility of war. Now, the Nazis, the Communists, and the "fifth column" seek to turn our detestation of war into a weapon against us. They make a bold bid to stamp peace sentiment as their property and to require all lovers of peace to accept, blindly, their leadership.

American mothers will not be taken in by "fifth column" propaganda for they know that if the Allies should, by some happy turn, stop the Nazi hordes in their tracks in Belgium and France they will be spared concern for the future of their sons. American mothers know, too, that regardless of the outcome in Europe, if America makes itself defensively the most powerful nation in the world their sons will never be called upon to give their lives for their country. And American mothers know, too, that if by our weakness we tempt aggression American blood will be spent just as freely as the blood of Europe is now being spent on the battlefields of Belgium and France.

If the Communists and the near-Communists in America wish to prove their sincerity in the latest wave of pacifist antipreparedness propaganda, they can do so by taking their campaign to Soviet Russia and Nazi Germany, where a little self-restraint would do the world a maximum of good. As long as the communistic allies of Nazi Germany have nothing to say against Soviet militarism, as the ally of Nazi militarism, the criminal attempt to mislead peace-loving Americans is transparent.

Wister Dam on the Poteau River

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

STATEMENT OF HON. WILBURN CARTWRIGHT BEFORE THE HOUSE COMMITTEE ON FLOOD CONTROL

Mr. CARTWRIGHT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement I made recently before the House Committee on Flood Control:

Mr. CARTWRIGHT. Mr. Chairman, and gentlemen of the committee, also General Schley and staff. I am appearing before you again in behalf of a project in my district in which I am very deeply interested—the Wister Dam on the Poteau River in Oklahoma.

As you no doubt know, the Flood Control Act of June 30, 1938, approved the Wister Reservoir in connection with the general plan for flood control on the Arkansas River Basin, but limited the amount to be spent on this plan to $21,000,000.

Of the reservoirs to be selected and approved by the Chief of the Engineers I had hoped and expected that the Wister project would be given priority in the recommendation of the engineers, but I am now informed that the entire amount of this initial authorization will be required for the construction of other reservoirs which are further advanced and that it will be necessary to either get the ceiling raised for the Arkansas River Basin or a specific authorization for the Wister project.

For this reason I have introduced H. R. 8421 to amend the authorization to provide sufficient authorization for an additional appropriation in such amount as may be necessary to construct the Wister Reservoir.

This dam is urgently needed and its early construction has been strongly recommended by the Oklahoma Planning and Resources Board, an able member of which, Hon Frank Raab, is with us today.

I am informed that a dam at this point would not only benefit residents of the Poteau River bottoms but would reduce flood crests on the Arkansas River by at least 5 percent. Thousands of dollars' worth of damage occurs every year to both mining property and farm lands through floodwaters of the Poteau River. Each year the citizens and farmers in this territory have hoped for final assurance that relief would be given them by the construction of this dam, and have seen their hopes fade as War Department engineers have given priority to other projects which do not appear, at least in our estimation, to be any more worthy.

The speech of President Roosevelt from the rear platform of his train in 1938, in which he said he hoped to return again some day to dedicate the Wister Dam, renewed the hopes of many people in this county who were almost in despair, and ever since then the prospect that the dam would be built has sustained them in their effort to hold and save their properties. This part of the State has no large industries other than coal mining, which operates only a few months of each year; therefore they must depend largely upon agriculture to support it. The farmers each year gamble against the floodwaters and there are many with whom the rise and fall of the river is the difference between comfort and poverty.

I have been working on this project for many years and believe I have done everything that is reasonably possible to advance it. I have kept in constant touch with Army engineers, appeared before both this committee and the Appropriations Committee, and have conferred with the President. I have talked and begged for this project until I have almost gotten black in the face. Yet, in spite of this, some of my opponents have charged that I have not pushed it as much as I should. Therefore, I wish to give here a little history of my activities in behalf of the Wister Dam and quote excerpts from letters I have received from War Department officials in reply to my many letters and personal calls urging the early construction of this dam.

I believe the first report in which the Wister Reservoir was mentioned by Army engineers was made in 1931, but no definite recommendation was made. Early in this administration, when the present flood-control program started, I advocated the building of the Wister Dam and have kept it to the front ever since. In 1935 I was instrumental in having it included in the flood-control bill, H. R. 8455, when it passed the House. However, this item and many other similar projects were stricken out in the Senate and in conference before the bill was finally approved.

On January 24, 1935, Lt. Col. F. B. Wilby, Acting Chief of Engineers, wrote me in part as follows [reading]:

"This Department has completed a survey of the Arkansas River and its tributaries, including the Poteau River, under the provisions of House Document No. 308, Sixty-ninth Congress, first session. The field work in connection with this survey has been completed, and the report is now in this office for the preparation of the report of the Chief of Engineers. The report has been delayed at the request of local interests who desire to submit additional data on the improvement of the Arkansas River in the interests of navigation.

"The survey developed that approximately 44,600 acres in the Poteau River Valley are subject to floods, with an average annual flood loss less than $73,000. The best plan for the provision of flood control would be the construction of two reservoirs, one near Wister, Okla., and the other near the mouth of the Brazil Creek, one of the important lower tributaries of the Poteau River."

On April 22, 1937, Maj. Gen. E. M. Markham, Chief of Engineers, wrote in part:

"This Department is giving consideration to a flood-control plan for the Ohio and lower Mississippi River Basins, to be submitted to the chairman of the Committee on Flood Control of the House of Representatives at an early date. The plan has considered a dam on the Poteau River having an estimated cost of $4,750,000. The justification for this dam depends not only on the local benefits which it will afford, but also on its effect in reducing flood stages in the lower Mississippi River. The Poteau River Dam appears of considerable value for this purpose."

On March 14, 1938, Maj. Gen. J. L. Schley, Chief of Engineers, advised me as follows:

"As you doubtlessly know, the Wister Dam was one of many reservoirs recommended by this Department in its comprehensive flood-control plan for the Ohio and lower Mississippi Rivers and published in Committee Document No. 1, Seventy-fifth Congress, first session. As the plan was not adopted, the Department is without authority to undertake the construction of the dam.

"Section 6 of the Flood Control Act approved June 22, 1936, authorized the examination and survey of the Wister Reservoir site. The report of the examination was received in this office on February 3, 1938, and is now before the Board of Engineers for Rivers and Harbors for consideration."

In the Flood Control Act of June 28, 1938, the Wister Dam was included in the general comprehensive plan for flood control in the Arkansas River Basin, which authorized for the initiation and partial accomplishment the sum of $21,000,000, the reservoirs to be selected and approved by the Chief of Engineers.

On August 30, 1938, in reply to my request for funds for the project, Maj. Gen. M. C. Tyler, Acting Chief of Engineers, wrote me as follows:

"In connection with the Wister Reservoir, the Department has presently no available funds which may be applied to this project.

However, an application by local interests for a Public Works Administration allotment for $200,000 has been transmitted to that Administration on August 6, 1938. The sum requested in the application would cover all preliminary work on the Wister project, including foundation explorations, soil investigations, and other preliminary studies."

I then strongly urged the P. W. A. to take favorable action on the application, but was advised by H. A. Gray, Assistant Administrator, on September 13, 1938, that—

"In view of the large appropriations made by the recent Congress for river and harbor and flood-control work, it is not the policy of this Administration to allocate any of the funds made available for Federal projects under the Public Works Administration Appropriation Act of 1938 for work of this type."

I continued my fight before the engineers and on January 26, 1939, Brig. Gen. M. C. Tyler, Acting Chief of Engineers, advised me:

"As you are doubtless aware, the Flood Control Act approved June 28, 1938, is solely one of authorization and makes available no funds with which any project authorized therein can be undertaken. The studies on which the selection of the various reservoir projects will be made by the Chief of Engineers are now under way, but to date no definite selection has yet been determined.

"I regret to inform you that the existing data regarding the Wister Dam are only of a preliminary nature. In the preliminary report the maximum elevation of the spillway crest was set at 512 feet above mean sea level and the maximum pool elevation at 525 feet above mean sea level. The above figures are tentative only and are subject to change when final plans are prepared. A more detailed study of this dam is now under way."

On April 20, 1939, in reply to a personal call, Brig. Gen. John L. Kingman, Acting Chief of Engineers, wrote me, in part, as follows:

"Funds available to the Department for flood-control investigations during the fiscal year 1939 have been limited and are not sufficient to complete all of the investigations that Congress has directed the Department to make. For this reason it will not be possible to complete this survey report until further allotments can be made. It is expected, however, that the War Department Civil Appropriation Act for the fiscal year 1940 will make available funds for flood-control investigations, and that an allotment will then be made to Colonel Scott which will permit him to complete this survey as rapidly as is consistent with full study and sound engineering practice. After the survey report is received in this office it will be reviewed by the Board of Engineers for Rivers and Harbors as required by law and by the Chief of Engineers and will then be transmitted to Congress with the Department's recommendations as to development of the Wister Reservoir."

"On the assumption that the studies of the Department indicate that the Wister Reservoir should be recommended for early construction, there are two lines of procedure by which that reservoir might be placed under way. The first of these would be authorization by Congress of the construction of the Wister Reservoir in either a special act or some future general flood-control act. The Department would then be authorized to initiate this project as soon as funds were available for its construction.

"The other method would be to select the Wister Reservoir as one of the projects to be constructed pursuant to the basin authorization contained in the Flood Control Act approved June 28, 1938, for reservoir construction in the Arkansas River Valley, since that reservoir is one of the projects recommended in the comprehensive plan of the Chief of Engineers for flood control in the Ohio and lower Mississippi River Basins. Congress in the Flood Control Act approved June 28, 1938, approved the general comprehensive plan as set forth in Committee Document No. 1, House of Representatives, Seventy-fifth Congress, first session, for flood control and other purposes in the Arkansas River Basin, and authorized the expenditure of $21,000,000 for the initiation and partial accomplishment of this plan. As the authorized amount of $21,000,000 is not sufficient to construct all of the reservoirs recommended in the comprehensive plan, the Department is now making a study to determine those projects to which funds to be made available by the War Department Civil Appropriation Act for the fiscal year 1940 should be applied in initiating the construction of the comprehensive plan. * * * At the present time it appears that other reservoirs in the Arkansas River Basin, the plans for which are in a more advanced state of completion, will exhaust the existing authorization, and that it will therefore not be possible to undertake the Wister Reservoir pursuant to this authorization.

"Allotments totaling $12,200 have been made to Colonel Scott in order that he might initiate site investigations and other studies pertaining to the Wister Reservoir, but completion of these investigations and preparation of detailed construction plans will require at least 1 year's time. The present studies will, however, develop a great deal of the important basic data needed in making the detailed designs and will facilitate the preparation of the construction plans and specifications in a much shorter time than would be required if the project were to be undertaken before the survey is completed."

After passage of the War department civil-functions appropriation bill referred to above, an allotment of approximately $78,000 was made for continuing field investigations and studies on the Wister project. On October 23, 1939, I again called on the Chief of Engineers, Maj. Gen. J. L. Schley, and he wrote me, as follows:

"The Wister Reservoir on the Poteau River, Okla., has been considered by the Department for construction pursuant to the authorization contained in the Flood Control Act approved June 28, 1938, for $21,000,000 for reservoirs in the Arkansas River Basin. It appears at this time, however, that other reservoirs in the Arkansas River Basin, the plans for which are more nearly complete than are those for the Wister Reservoir, will require the full amount of the presently authorized expenditures, and that consequently the construction of the Wister Reservoir cannot be initiated until Congress provides additional authority applicable thereto.

"I am pleased to inform you, however, that funds have been allotted to Capt. H. A. Montgomery, the district engineer at Tulsa, Okla., with which to carry on the necessary detailed field investigations and office studies and to prepare a detailed report presenting the definite plan for development of the Wister project. It is expected that this report will be received in this office early next spring. With the basic data that is acquired in connection with this report on hand, it will be possible to undertake the preparation of construction plans and specifications without delay when the necessary authorization for this project becomes available to the Department."

Again on January 31, 1940, I urged favorable action on the Wister project, to which General Schley replied:

"As you know, the Department is now making the necessary field investigations and office studies required to obtain the basic engineering data for the design of the Wister project. Allotments for this work have been made to Capt. H. A. Montgomery, the district engineer at Tulsa, Okla., from the funds made available in the War Department Civil Appropriation Act approved June 28, 1939. I am informed that multiplex mapping and field surveys have been completed, that the necessary studies of geology, hydrology, and hydraulics are about 50 percent complete, and that the preliminary subsurface explorations and land appraisals have been initiated. It is expected that a report from Captain Montgomery, together with the comments and recommendations of Col. Eugene Reybold, the division engineer, southwestern division, will be received in this office about March 1, 1940. That report will contain detailed information on the results of these investigations and will present the basic engineering plan for developing the Wister project. With this engineering data in hand upon the completion of these investigations, the Department will be in a position to initiate the construction of this project without delay when the necessary additional authorization and funds applicable thereto become available.

"In addition to the above-mentioned investigations and the report thereon, the Department is now preparing a survey report on the Poteau River and the Wister Reservoir for submission to Congress in accordance with the authorization contained in the Flood Control Act approved June 22, 1936. I am advised that the field investigations required for the preparation of the report on this survey are progressing rapidly and that the district engineer's report, together with the comments and recommendations of the division engineer, is scheduled to be submitted to this office on or about October 15, 1940.

"To call again to the attention of the division and district engineers your great interest in the Wister Reservoir, I am taking the liberty of forwarding your letter to them. You may be assured that the Department recognizes the importance of this project and that within the limits of available authorization and funds every effort will be made to undertake its construction at the earliest practicable date."

On February 23, 1940, in reply to another call, the Chief of Engineers wrote me as follows:

""The Wister Reservoir is one of the projects that was recommended by the Chief of Engineers in his report of April 6, 1937, on a comprehensive flood-control plan for the Ohio and lower Mississippi Rivers. This report is printed in Committee Document No. 1, House Committee on Flood Control, Seventy-fifth Congress, first session, a copy of which is enclosed. The Wister Reservoir is the project numbered 11 on the third map following page 12 of the document.

"Congress, in the Flood Control Act of June 28, 1938, approved the general comprehensive plan for flood control in the Arkansas River Basin as proposed in Committee Document No. 1 and authorized $21,000,000 for reservoirs for the initiation and partial accomplishment of this plan. In accordance with this authorization the Department has given careful consideration to the selection of the Wister Reservoir for construction. It appears, however, that the full amount of the initial authorization provided in the 1938 act will be exhausted by the construction of other reservoirs in the Arkansas River Basin, the plans for which are more nearly complete than are those for the Wister Reservoir. Consequently, this project cannot be undertaken until further authorization is provided by Congress.

"In connection with this need for additional authority, I am informed that on February 2, 1940, you introduced a bill in the House of Representatives (H. R. 8421) to amend the authorization for the Arkansas River Basin to provide authority for an additional appropriation in such amount as may be necessary to construct the Wister Reservoir.

"I am pleased to inform you that under the authority of existing legislation the Department is now conducting the detailed field investigation and office studies required to secure the engineering data needed for the detailed design of the Wister project. Allotments totaling $92,500 have been made to Capt. H. A. Montgomery, the district engineer at Tulsa, Okla., for carrying on this work. Captain Montgomery's latest report indicates that at the end of January preliminary core boring, land appraisals, multiplex mapping, and field surveys had been completed, and that the studies of geology,

hydrology, and hydraulics were more than 50 percent complete. A detailed report from Captain Montgomery on the development of the Wister Reservoir is scheduled to be received in this office about March 1, 1940, together with the comments and recommendations of Col. Eugene Reybold, the division engineer, southwestern division. This report will be carefully reviewed by this office and upon its approval the district engineer will be ready to undertake the detailed design of the project and the preparation of construction plans and specifications. The basic engineering data that will be presented in this report and the other information acquired by Captain Montgomery in connection with its preparation will enable the Department to initiate the construction of the Wister Reservoir without delay when the necessary additional authorization is provided and funds applicable to the construction of that project are made available.

"You may be assured that the Department is fully aware of the importance of the Wister Reservoir project and the desirability of continuing the Department's activities pertaining to it. Within the limit of the funds available every effort will be made to pursue the design of the structures and all other field and office work that will be required prior to the initiation of actual construction."

The CHAIRMAN. We are glad to have your statement, and I may say you have sized up the situation correctly. Your project has been authorized, but it is necessary to have an additional appropriation or additional authorizations for appropriations before it can be considered for construction.

Mr. Speaker, since the above statement was made two things have happened which affect the Wister project. First, on April 17, when the War Department civil functions appropriation bill was before the Senate, Senator THOMAS, who is chairman of the Subcommittee on Appropriations which has charge of such funds, was able to secure an amendment to the bill to raise the ceiling for the Arkansas River Basin. As the House has already passed the bill, it will now go to conference, and it is largely up to the conferees as to whether or not the amendment stays in the bill. Second, on May 7 the House Committee on Flood Control reported H. R. 9640, an omnibus flood-control bill, which also contains a provision raising the ceiling for the Arkansas River Basin. This would have practically the same effect as the Senate amendment and gives the Wister project another chance in the event the Thomas amendment is stricken out.

Work Relief or Direct Relief?

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 22, 1940

Mr. LYNCH. Mr. Speaker, it is with extreme reluctance because of my recent advent as a Member of this distinguished body that I inject myself into this discussion, but I indulge in the hope—faint though it be—that I might be able to make some little contribution that will be of weight in the ultimate consideration of this very important House Joint Resolution 544. During my brief association here I have been impressed by the oft-repeated question of the gentleman from Pennsylvania [Mr. RICH], Where are we going to get the money?

It is a question that insofar as this resolution is concerned holds dire possibilities. It seems to me that unless we pass this resolution the question "Where are we going to get the money?" will echo and reecho throughout the country. Unless we pass this resolution that question will be asked by our State, city, and county governments, which will then be confronted by heavier local relief rolls to take care of dismissed W. P. A. workers. If our local communities are unable to carry a heavier relief roll, and it is undeniable that they are unable to do so, the same question will be asked by hundreds of thousands dismissed W. P. A. workers, when they hear their children crying for food and they see their families evicted from their homes.

That momentous question can be answered by this Congress—it must be answered by this Congress and I am confident it will be answered by the affirmative action of this House upon this resolution.

I am not dealing with the causes of the unemployment of some nine millions of people in this country—I am concerned at this time with the fact of their unemployment. I am concerned with the vital necessity of presently providing our people with the necessities of life to keep their families together until the breadwinners are restored to employment in private industry.

I have heard criticism of the W. P. A. It would be strange if there was none. I have heard isolated instances of abuses of the W. P. A. In an undertaking as vast as the W. P. A. and as unprecedented, it would be beyond reason not to have some instances of abuse, but to state that because of some abuses this appropriation should be defeated, borders on the absurd.

I listened to the incident of the person who, on several occasions, went to the Kentucky Derby apparently on W. P. A. funds and it seemed incredible to me that so great concern was shown with respect to the shortcomings of one man, and not a word said on behalf of the hundreds of thousands of W. P. A. workers, who trudged daily to their work, endeavoring to keep their families together and maintain their self respect by honest toil. An editorial recently published in one of our New York newspapers, noted for its antagonism to President Roosevelt, said in part, I quote:

> Many of these charges are so serious, their implication so strongly unfavorable to Federal management of work-relief funds, that not a penny should be appropriated by Congress until the accusations of fraud and incompetence are thoroughly examined.

To my mind that is the most cruel and ruthless declaration that I have heard. I would like to ask the writer of that editorial if not one penny should be appropriated by Congress until the accusations—accusations mind you—of fraud and incompetence are examined, what is to become of those families whose breadwinners are now on the W. P. A.? Are they, during the pendency of the examination to be dispossessed from their homes? It means either that, or back to the local relief rolls. And where are our cities, counties, and States going to get the money to take care of these additional relief cases?

There may be an honest difference of opinion as to whether the Democrats or the Republicans can best administer the W. P. A., but it seems to me that there can be no difference of opinion as to the necessity for the W. P. A. I am in favor of this appropriation of $975,650,000 as recommended by the committee. I voted in favor of the larger amount of $2,232,000,000 as provided in the Casey amendment which would have provided jobs for 1,250,000 additional persons already certified for relief, for the reason that I feel that the Government has a solemn obligation to provide for the people who are ready, able, and willing to work but who cannot find employment in private industry.

I am thoroughly in accord with the provision of this bill which would exempt those heads of families over 45 years of age from separation from the W. P. A. because of 18 months' continuous service. They are the ones who most need W. P. A. work funds, heads of families who are now looked upon as too old for private industry. Many of them will probably never get back into private industry. They are, nonetheless, ready, able, and willing to work and they have a God-given right to work. It is our solemn duty to see that they get the opportunity to work and in my opinion W. P. A. offers that opportunity.

As a Representative of a district in New York City, which is largely composed of the laboring class and lower-paid white-collar worker, I am deeply concerned with the passage of this bill. Let me show you the results of the curtailment of the W. P. A. activities in our city at various times.

In July and August 1937, 40,000 persons were separated from the W. P. A. in New York City and over 50 percent of them were immediately forced upon the local relief rolls.

Between July 1 and December 31, 1939, 100,000 persons in New York State were separated from the W. P. A. by

reason of the 18-month limitation of service and 34,000 were separated for other causes, or a total of 134,000 persons in all. During these same months 70,000, or 52 percent, of these workers were forced back upon the general relief roll.

Of all the workers dismissed from W. P. A. in New York City in July and August 1939, 54.7 percent were back on relief by the following November and in Buffalo the percent was 63.8. Only 13.37 percent were able to get back into private industry within that time in New York City and only 16.2 percent in Buffalo.

In New York State W. P. A. employment during July–December 1939 averaged 153,700 workers. If there is a reduction of the W. P. A. in our State 50 percent of that reduction will shortly be back upon the local relief rolls and our local communities simply cannot carry the load.

I am in favor of the humane and progressive program undertaken by this administration to give work to the needy, and despite some shortcomings of administration which I have no doubt will be corrected in time, I intend to vote for this resolution.

Sam D. McReynolds

MEMORIAL ADDRESS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 24, 1940

On the life, character, and public service of Hon. SAM D. MCREYNOLDS, late a Representative from the State of Tennessee

Mr. KEFAUVER. Mr. Speaker, I should certainly be derelict in a sacred duty if I completed my first session in the Halls of Congress without paying tribute to my distinguished predecessor, the late lamented Judge SAM D. MCREYNOLDS. The post I occupy is hallowed with the memory of the services he rendered to his State and his Nation. I bring to this assembly, not only my personal lament, but the voice of the entire Third District of Tennessee, united in its sorrow for the passing of the man whom they loved and honored.

Judge MCREYNOLDS for 20 years graced and distinguished the bench as judge of the sixth judicial circuit in the Volunteer State. His personality softened the accuracy and correctness of his decisions, his mien dignified the court, and his brilliant mind left deep its impress on the jurisprudence of the State.

When elected to the National Congress in 1922, he brought to his seat the mellowness and maturity of a life most men would then have been willing to acclaim as a fulfilled and successful career. A larger and more useful public service was in its incipiency. Seventeen consecutive years the citizens of the Third District were privileged to be represented in Washington by this man who so consecrated his personal life to a sacred public trust.

In 1932 his elevation to the chairmanship of the Committee on Foreign Affairs marked the beginning of the final glorious chapter of a man whose life had been dedicated to the public weal. As chairman of this important committee during a period of international unrest, his service transcended the local bounds of a congressional district and his stature assumed national importance. His leadership stamped him forever with the imprint of statesmanship. When Judge SAM D. MCREYNOLDS was called home to his well-earned rest and reward, this earnest east Tennessee patriot's passing was mourned by a sorrowing nation. The United States had truly suffered a loss. Yet, for all of his glorious public service, the most compelling memories of Judge MCREYNOLDS are associated with his private life, which, as so many of his colleagues have said, was most exemplary. He was truly a kind husband, an indulgent father, and a warm and consistent friend. Add to this his ability as a lawyer, his service as a judge, and his accomplishment as a statesman, and the dimensions are those of a man who has been truly destined to receive the blessings of history.

Deny W. P. A. Favors

EXTENSION OF REMARKS

OF

HON. J. HARDIN PETERSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 21, 1940

TELEGRAM FROM SCOTTISH RITE BODIES OF TAMPA, FLA.

Mr. PETERSON of Florida. Mr. Speaker, pursuant to consent to extend my own remarks in the RECORD, I include the following telegram from the Honorable Frank O'Berry, secretary of the Tampa Scottish Rite bodies of Tampa, Fla.:

TAMPA, FLA., *May 15, 1940.*

Hon. J. HARDIN PETERSON,
Member of Congress, Washington, D. C.:

Associated Press story in Tampa Times today that the W. P. A. in Tampa made 400 aprons for the Scottish Rite is false. We have never requested nor received any favors from the W. P. A. Our executive committee requests you to deny this false story and retell to the Associated Press.

FRANK O'BERRY,
Secretary, Tampa Scottish Rite Bodies.

The telegram speaks for itself. Mr. O'Berry is a fine, outstanding citizen, and any statement he makes is correct.

An Answer to Lindbergh

EXTENSION OF REMARKS

OF

HON. KEY PITTMAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Thursday, May 23 (legislative day of Wednesday, April 24), 1940

RADIO ADDRESS BY HON. JAMES F. BYRNES, OF SOUTH CAROLINA

Mr. PITTMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from South Carolina [Mr. BYRNES] on May 22, 1940, over the Columbia Broadcasting System, entitled "An Answer to Lindbergh."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Perhaps the greatest clause in our Bill of Rights is that guaranteeing free speech. In the exercise of that freedom, which totalitarian government is fast wiping out in Europe today, Mr. Charles A. Lindbergh went on the air last Sunday night to urge the American people to continue to bury their heads in the sands and give no thought toward the shocking conflict now raging across the waters, which threatens the very fabric of Christian and democratic civilization.

Mr. Lindbergh's speech was announced as a discussion of our air defense. Like many other Americans, I listened in anticipation of hearing a technical and practical discussion of our aviation problem by the man who thrilled all of us by his spectacular flight across the ocean. But instead of giving us advice on a subject about which he should be qualified to speak, Mr. Lindbergh gave another discourse on American foreign policy, about which he is no more qualified to speak than "Wrong Way" Corrigan or any other aviator who may fly the Atlantic Ocean.

A few years ago Mr. Lindbergh went to Great Britain to live. It seemed natural to us that his interest in aviation should cause him to inspect the air forces of other countries in Europe—France, Germany, and Russia. We thought nothing of it at first.

Later we were somewhat surprised by the news that he had accepted a decoration from Hitler. We were further surprised by the reports, about the time of the Munich settlement, that he was volunteering his advice in important circles in England and France thought to be favorable to a policy of appeasing Germany by offering no resistance to her aggression upon small countries to her east. He had always been regarded as a shy, retiring young man, and the reports of his intermeddling in Europe did not seem in keeping with his character.

Since last September he has taken it upon himself to speak thrice to the American people upon what their attitude should be toward the conflict now raging in Europe.

When his first speech was delivered the question of the arms embargo was uppermost in the minds of Americans. Mr. Lindbergh failed to state in so many words where he stood. But few who heard his speech could doubt that its net effect was to give great comfort to those opposing the shipment of planes even under the cash-and-carry clause to the Allies fighting in defense of their national existence.

The following month Mr. Lindbergh addressed the American public a second time. He pleaded that "for the benefit of western civilization we should continue our embargo on offensive weapons." He wanted to forbid the sale for cash and delivery in this country of bombing planes to Britain and France while their people would lie unpitied beneath the bombs of German planes.

In that speech Mr. Lindbergh even went so far as to attack our neighbor Canada for joining in the defense of the Commonwealth of Nations of which she is by her free choice a member.

He stated in effect that we must demand that Canada separate itself from the British Empire.

The United States cannot start something it does not intend to finish. Had we followed his advice and made such a demand, and Canada refused to comply, we could enforce that demand only with force. He was in effect pleading that we make war upon Canada.

Last Sunday the once shy and reticent Mr. Lindbergh again thought that the American people were in need of his advice. This time about what he professed to call "the air defense of the United States."

This third speech of Mr. Lindbergh was a singular performance. President Roosevelt had recommended appropriations for national defense which were extremely conservative in light of the recommendations of his military experts and in light of the shocking and ominous developments abroad which have threatened with destruction the most inoffensive neutral nations. Even Mr. Lindbergh, at the end of his hysterical protest against other people becoming hysterical about our national-defense program, admitted that "we need a greater air force, a greater army, and a greater navy," and nowhere indicated in what respects the President's program is defective.

Yet Mr. Lindbergh spoke as if the United States was somehow being rushed into an air-defense program before a definite policy of defense had been formulated. He pointed out that an air-defense program based on the defense of the United States alone would be quite different from a defense program based on the defense of the entire Western Hemisphere, and he proceeded to argue what no responsible person has ever denied—that America cannot effectively defend herself without defending the whole Western Hemisphere.

But the President has stated that policy of hemisphere defense time and again during the past 2 years; it is a definite policy of defense already formulated.

Why then does Mr. Lindbergh try to create the impression that the American people are being rushed hastily and impulsively into a national-defense program?

Why does he scorn as hysteria this belated rising of the American giant from sleep?

Mr. Lindbergh said "If we desire peace, we need only stop asking for war." What official of the United States Government is asking for war? Does he think the President is asking for war because he asks the Congress to provide additional appropriations for the defense of this Nation? The people of America know that a nation does not have to ask for war in order to have it visited upon them. Did China ask for war? Did Czechoslovakia, Poland, Denmark, Norway, Holland, and Belgium ask for war? No; not one of them did. Yet today these nations have been wiped out and their men, women, and children slaughtered.

When Mr. Lindbergh says, "No one wishes to attack us," is he authorized to speak for Hitler or Goering? Even if he is, can the American people, in the light of recent history, rely upon that assurance?

Mr. Lindbergh states that while it is true that bombing planes can be built with sufficient range to cross the ocean and return, no such planes exist today in any air force. Would Mr. Lindbergh have us wait until they are built by a nation capable of producing thousands every month?

You and I know it is no feat at all for planes now in existence, in fleets to make the jumps the President described in his message—from Iceland to Greenland to Canada to New England.

When Mr. Lindbergh states that "regardless of which side wins this war, there is no reason, aside from our own actions, to prevent a continuation of peaceful relationships between America and the countries of Europe," I shudder to think of the kind of America Mr. Lindbergh is willing to accept.

Mr Lindbergh seems not concerned with the flagrant violations of the rights of peaceful little nations; the cruel and bitter persecution of God-fearing men, women, and children because of their religion, race, or political opinions; the burning of books; the bombing of helpless women and children fleeing in terror from their homes; the parachute spies and the torch troops. To Mr. Lindbergh all these seem to be only little, trifling, insignificant incidents to an age-old struggle for power. Read his speeches. He has no word of criticism for the aggressors; no word of pity for the victims. The world should know his voice is the voice of Lindbergh and not the voice of America.

To me the vile, barbaric deeds now being inflicted on democratic peoples in Europe represent an attack against everything that we hold dear; an attack against international good faith, against religion, against learning, against political freedom, against civilization itself.

Apart from all moral values, does Mr. Lindbergh really believe that our problem of national defense would not seriously be affected by the destruction of the British Fleet or its surrender to Germany?

Is there among us a thoughtful person who believes that should England be brought to her knees within the next few weeks or few months, that Hitler would permit her to scuttle her fleet? Must we not realize that Hitler would warn that if Britain destroyed her fleet, he would destroy England? Could we expect the British Government under such circumstances to sink its fleet or send it to help the United States? If Britain did what you would do under the same circumstances, and surrendered its fleet to save its people, we would be confronted by Hitler possessing a Navy superior in strength to our own, and with more warships in the course of construction in England than in any other country.

Even if we do not know the terms, we know there is an understanding between Germany and Japan. With the combined sea power of Japan and Germany, vastly superior to ours, could we rely upon the assurance of Mr. Lindbergh that war would not come to us unless we ask for it?

England and France were lulled into a false sense of security by those who pleaded as Mr. Lindbergh has pleaded that they could continue to live in peace with nations which trample ruthlessly over the rights of other nations, and that those who dared to warn them of their dangers were actuated by "personal profit and foreign interests."

England and France were also told as Mr. Lindbergh has told us that appeasement was of primary importance, and "the production of airplanes, cannon, and battleships is of secondary importance."

England and France discovered too late that refusing to aid the victims of aggression and trying instead to appease the aggressor did not keep them out of war but only served to bring the war flaming out of the heavens upon them.

"Fifth columns" are already active in America. And those who consciously or unconsciously retard the efforts of this Government to provide for the defense of the American people are the "fifth column's" most effective fellow travelers.

Mr. Lindbergh may tell us to "stop this hysterical chatter of calamity and invasion," but I thank God that America has at last been aroused to the dangers that beset her in a world menaced by brute force and strident ambition, and is grimly determined to arm in self-defense.

We have witnessed the effect of lack of unity in Britain and in France. We should profit by their experience. Forgetting all personal grievances and all political ambitions, the American people should unite under the leadership of their President, and work to preserve our lives and our liberties.

War Planes Versus Battleships

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 23 (legislative day of Wednesday, April 24), 1940

ADDRESSES BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, AND HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. REYNOLDS. Mr. President, today we authorized an appropriation of $1,301,000,000 for the Navy. At this time I ask that there be published in the Appendix of the RECORD an article from the Washington Daily News of Saturday, May 11, 1940, entitled "The American Forum: Are War Planes Stronger Than Battleships?", which forum was participated in by my distinguished colleague from Massachusetts [Mr. WALSH], the chairman of the Naval Affairs Committee of the Senate, and myself.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

THE AMERICAN FORUM: ARE WAR PLANES STRONGER THAN BATTLESHIPS?

THE QUESTION

(By Theodore Granik, director, the American Forum)

Cataclysmic events in the European war, including the speedy occupation of Norway by Nazi forces; the reported sinking of British battleships by Nazi planes; and the transportation of troops by airplane into Norway, Holland, and Belgium, have again centered attention on the relative strength of the airplane versus the battleship as a weapon in war.

Many believe that the traditional strategy of ruling the seas with a large surface navy will have to be revised, or even abandoned, as a result of new aerial techniques in waging war. Proponents of the airplane contend that a comparatively low-priced plane can disable a high-priced battleship. Supporters of the battleship maintain that methods of defense will be perfected against any airplane threats.

Two United States Senators, each an authority and a student of this question, here present their views, written exclusively for the American Forum.

THE DEBATERS

Any legislation bearing upon new methods of warfare must pass through one or both of two committees of the Senate. Senator ROBERT R. REYNOLDS, of North Carolina, is the ranking Democratic member of the Military Affairs Committee, while Senator DAVID I. WALSH, of Massachusetts, also a Democrat, is chairman of the Naval Affairs Committee. Senator REYNOLDS is a lawyer, an automobile enthusiast, author of travel books. Senator WALSH is a former Governor of his State, a lawyer who has held public office since 1900.

YES! SAYS REYNOLDS

(By ROBERT R. REYNOLDS, United States Senator from North Carolina; ranking Democratic member of Military Affairs Committee)

On the floor of the Senate and in public and private utterances I have repeatedly declared that "the airplane is our first line of defense." That this statement is borne out by recent events in the cataclysm of war now involving Europe is apparent to any newspaper reader.

It is a known fact that the Germans did successfully shuttle whole regiments over the defending allied fleet and out of range of that fleet's guns to bring about occupation of Norway with a speed that has never been equaled. It is history that the airplane was the principal factor in the subjugation of Poland. It is also history that but for her superiority in the air great Russia might still be battling little Finland. And while German planes transported troops into Norway other planes of the pursuit and attack type stood by to machine-gun the slow-moving landing parties that moved from capital ships to smaller vessels for landing.

As this is written, German planes form the vanguard of an attack on Holland, Belgium, and Luxemburg that may be the beginning of the great offensive of the present war.

Secretary of the Navy Edison says it will be necessary to make a number of changes in battleship design to afford better protection from bombing planes. This statement is significant in view of the one word, "changes." If any word can describe the effect of aviation on military and naval tactics, it is this word "changes."

NEW FORM OF WAR

Aviation has changed the whole concept of military and naval operations. It has turned vast theaters of war into tiny spaces. It has brought to the science of war a new and terrible striking power which can sweep over military objectives (and unfortunately over civilian targets as well) with unheard-of speed; which can strike and be gone almost before its bombs have struck the earth.

Here, then, is a new tool of war. Even to the uninitiated it must be apparent that it requires a new approach, a new conception of defense, if a defense is to be made. It is unfortunate that some men in high office still cling to the outmoded belief that basically war is still war, and that nothing has been changed.

One of our aviation leaders recently stated that "the only defense against air attack is a superior air force." Note that word "superior." Newspaper correspondents and military observers in Europe write continually about air superiority. All agree that the nation having superiority in the clouds will have a tremendous advantage. As a ranking officer in the Army recently said: "A second-best air force is like a second-best hand at poker—you simply can't win with it."

Recognizing this, what are we going to do about it? Are we going to listen to a group of "has beens," living in the past and schooled only in outmoded theories of warfare, and so fixed in their ideas that they are unwilling to recognize that there has been a great change in the military order of things? Or are we going ahead to build an air force second to none—an air force that will provide us with such strength that no country will dare attack us, knowing the striking power we hold in our military air fields?

PLEA FOR FINEST AIR FORCE

It is my recommendation—yes, my earnest plea—that we throw overboard our old conceptions, face reality, and recognize the fact that we must have the finest air force in the world. No other single measure can so well insure the fulfillment of the Nation's desire to keep war from coming to America.

In his recent statement, Secretary Edison said that the airplane has made inadvisable certain types of naval activity, particularly some types of action close to shore. What a blow this must have been to members of the old school—the Secretary admitting, and correctly, that planes can prevent successful maneuvers close to shore. This means landing operations, of course. The answer was written in Norway.

The first principle of all warfare is the advantage of the element of surprise. This means speed. Here the airplane comes into its own. Many of our planes today are approaching the 425-miles-per-hour mark and we must assume that other countries have made similar advances.

Can an airship sink a battleship? I don't care to discuss this old question because it isn't necessary to sink a battleship. All that is necessary is to disable it, a feat easily accomplished by damaging its sensitive controls.

If there is anyone who doubts that 10 or 15 bombers, carrying 2,000-pound bombs, could damage a battleship, I refer them to Secretary Edison's recent remarks in which he pointed out clearly the vulnerability of the complicated control system of a big ship to air attack. I would add just this question: What good is a battleship if you can't control it?

ECONOMY OF AIR POWER

I have pointed out, on the floor of the Senate and on the radio, the easily understood economy of air power. Simply stated, it means that you can build a large air force for the price of a single battleship. And when the air force has been built its very numbers provide protection against complete destruction.

To make this clear let me state that a single hit on the deck of a battleship might put this huge implement completely out of action, while a single hit on a group of 100 planes would leave the air force still 99 percent effective.

Let us not fail to realize that changes have come to modern warfare. Let us realize the need of meeting those changes with advanced methods of our own. This naturally does not mean that we should neglect the Navy. This gallant arm of the service still has its place in any calculations for defense of our country.

We simply must build a great and powerful air force to supplement our naval strength. It means, in the final analysis, that we must place emphasis where emphasis is due, and today that means in the air.

If any man doubt this, let him look for a moment at the progress of military operations in Europe.

I repeat, our need is for superiority in the air.

NO! SAYS WALSH

(By DAVID I. WALSH, United States Senator from Massachusetts; chairman of the Naval Affairs Committee)

Among the many questions that have arisen in current discussions of our national defense needs, and of our national defense program, in general, and our naval building program in particular, is one question of wide public interest with respect to which there appears to be considerable public misunderstanding.

This question is as to the comparative value, the importance, and the military effectiveness of battleships and aircraft. One form of this question is: "How vulnerable is the modern battleship to attack from the air?" Sometimes the question is put: "Does the offensive power of aircraft, of the latest and most powerful types, make the battleship obsolete?"

These questions have been accentuated by reason of reports from Europe of the damage inflicted upon the British naval vessels by German aircraft.

Let me say at the outset that the importance of aircraft in present-day warfare is universally recognized. No one will minimize the offense capabilities of combat planes and bombers. Everyone perceives the vital part that aircraft play as a defense mechanism in repelling attack.

Our program for expanding and strengthening our national defenses at every point and by every means gives full recognition to the prime importance of aircraft and its large place in military and naval establishments. No force ashore or afloat can afford, under any circumstances, to be without ample aircraft support. We are proceeding on that basis.

But there is not a particle of evidence to support the theory that aircraft alone can supply the primary defense needs of our country. Indeed, we can be very positive that such it not the case.

BATTLESHIPS NOT OBSOLETE

To the question whether, as an abstract proposition, aircraft, as matters now stand, have rendered battleships obsolete, the short answer is "No."

To the other form of the question, namely, as to the comparative value from our national defense standpoint of battleships and aircraft, the answer is that each complements the other and both are indispensable.

All new weapons of importance have had their effect on naval strategy, tactics, and on naval construction. In the case of aircraft, as in the case of weapons such as the torpedo, submarine, and high-powered gun, the threat of attack has been anticipated by the inclusion in naval vessels, from destroyer to battleship, of appropriate counterweapons and powers of resistance. Increased power and effectiveness of antiaircraft batteries, increased speed and maneuvering ability, increased thickness of deck armor, and greater compartmentation are all characteristics included to resist air attack.

In addition, naval air forces are employed, both offensively and defensively, to reduce the effectiveness of enemy aircraft. By these means, and by appropriate consideration of enemy air strength in the carrying out of strategic and tactical operations, aircraft attack is effective only to a degree compatible with the introduction of any additional and important weapon.

The latent effect of preponderant battleship strength is frequently overlooked by the lay mind, due to the absence of the drama of the frequent naval and air battles of lesser naval war craft. Whether actively engaged or not, battleship strength, around which are shaped the activities of lesser craft, is of preponderant effect in the control of sea lanes and areas.

CONTROLLING THE SEA

Aircraft alone, or battleships, or cruisers, or destroyers alone, are unable to control the sea. Together, in properly constituted forces, supported by suitable and properly located bases, they can. So long as other nations possess armed surface ships, a navy of adequate surface, subsurface, and air strength in suitable proportion is necessary.

Developments in the art of war and in the international situation will undoubtedly change the acceptable composition of the fleet and will cause modification in the characteristics of ships and aircraft, but there are no developments apparent which will render obsolete surface ships of existing types or the basic principles under which they are employed in the national defense.

In considering at this time the question of air power versus sea power, the following must be kept in mind:

(a) Our situation is entirely different from that of the British.

(b) Germany's air power from the very beginning of the war has been greatly superior to British air power.

(c) For a period of about 9 months British sea power has held a greatly superior air force in check, and without this sea power Britain today would probably be another Poland.

It is probably true that the British Navy has suffered severe losses in protecting shipping in and around the British Isles and in supporting the landing of troops in Norway. It must be realized that the British Navy is forced to operate under the worst possible conditions, as it is under the necessity of operating in restricted areas and is subjected at all times to the hazards of shore-based aircraft and small submarines.

OUR SITUATION DIFFERENT

Due to the limited range of aircraft, our self-sufficiency in food, and our geographical location, the United States is not confronted with a similar situation.

If we prevent the establishment of enemy air and submarine bases in this hemisphere, our Navy will not be subjected to the hazards of shore-based aircraft and small submarines. It will be subjected only to the hazards of surface ships, long-range submarines, and ship-based aircraft, an entirely different set of conditions.

Manifestly all naval powers have given serious consideration to the effectiveness and relative security (ability to remain effective) of naval ships against all threats contemplated under the conditions of their employment in war. It is significant that all are continuing their naval-building programs. The heavily gunned and heavily armored battleship, built to withstand the plunging fire of the heaviest armor-piercing projectiles, is least affected by air developments.

We live in a dynamic, not a static, world. Undoubtedly the facts will change. More powerful explosives may be developed, more efficient fuels may become available which will increase many times the effective radius of action of aircraft, submarines, and surface craft, or other more effective weapons of war may be invented.

If the basic facts change we must reorient ourselves to new situations, re-evaluate the facts, and readjust our military establishments to meet these new conditions.

National Maritime Day

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, May 23 (legislative day of Wednesday, April 24), 1940

ADDRESS BY SENATOR MEAD AT NEW YORK WORLD'S FAIR

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me at the New York World's Fair on May 22, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure for me to participate in this annual celebration of National Maritime Day, particularly under the circumstances which make possible the conduct of these exercises here at the New York World's Fair. No one can be here today without sensing the beauty and the splendor of these surroundings. This is a notable occasion in a notable location.

I feel privileged to join in the distinguished company of those who are speaking to you today—men better equipped than I to discuss the progress and achievements of our vast maritime industry.

However, as a Member of Congress for over 20 years, and as a Member today of the Committee on Commerce of the United States Senate, I feel that I have absorbed some of the real spirit that motivates the leaders of American maritime affairs.

I am, of course, more familiar with the advances made by the labor elements in this vast national enterprise. Sometimes, in the more recent years, criticism has been leveled at some segments of the maritime unions. Some of this criticism may have been justified, but I believe, on the whole, the cause of labor has advanced with moderation, with effectiveness, and with intelligence in this industry, just as it has in other stable enterprises of the Nation.

As we observe this famed annual celebration, and as we gather here today under the most pleasant of domestic conditions, there is not one of us here present who does not carry in his mind and in his heart a heaviness caused by the unfortunate events abroad.

The flames of Europe's most devastating war have spread within the last few weeks like the rapacious rush of a destructive forest fire.

Morality and decency and neighborliness have been ground under the heel of despotic, militaristic, aggressive demands. We shudder to contemplate that which the future may hold in store. But we know that our supreme desire is to hold fast to our system of government and to the blessings which we have inherited from a century and a half of struggle to make this Nation what it is today.

Therefore, only a Pollyanna would say that we are completely happy today. We are living under conditions of safety and sanity, but the instability of free government and of free people throughout the world will not permit us to ignore the apprehension that always accompanies the threat of the unknown and the unpredictable.

We want peace and security under our formula of self-government. To the American mind there can be no lasting peace or security under any antidemocratic system. In order to preserve for the generations to come the prerogatives which we enjoy, we know that we must be equipped to defend our liberty, our independence, and our way of life.

The great American merchant marine, the most vital adjunct to our national defense as well as the great bulwark of our trading power, becomes increasingly a major concern.

What I say today, therefore, is predicated on the importance and essentiality of a strong merchant marine for the United States.

We are indeed fortunate, during these perilous and emergency days to have functioning in Washington an ably staffed and intelligently administered United States Maritime Commission.

Under the very able and distinguished chairmanship of Rear Admiral Emory S. Land, the United States Maritime Commission is discharging with singular success, and with expeditious administration, its responsibility of providing the United States with an adequate and well-balanced merchant fleet.

The provision of an adequate and well-balanced merchant fleet demands that full and complete treatment be given to the matters of foreign and domestic trade, and to the national defense. I would like to draw to your attention some of the activities of the Maritime Commission in carrying out its responsibilities which are so vitally important to the Nation.

Let me draw as clear and simple a picture as possible of the progress that is being made under the guidance of the Maritime Commission, so that we can all understand just what is being accomplished through Washington.

I shall endeavor to clarify these activities by breaking them down into 10 major items:

(1) The Maritime Commission, since its creation, has completed a very thorough survey of the entire American maritime industry. That survey was studied by Congress, and every detail was carefully investigated.

(2) As a result of the extensive and thorough survey made by the Maritime Commission, a minimum program was undertaken, which calls for the construction of 500 new ships within 10 years. This means that approximately 50 new ships will be added to the American merchant marine each year. This is a forward-looking program, and one which carries the support of all our people.

(3) At present the Maritime Commission is building its new ships in 15 yards located in 12 States of the Union. These yards are located on our east coast, on our west coast, and on the Gulf—they are not clustered in any one particular geographical location. The advisability of that, from a national-defense viewpoint, is quite obvious. Since the Commission began its program, it has let contracts for 152 ships, or more than 1,000,000 gross tons.

(4) This vast shipbuilding program is providing jobs for thousands of skilled and unskilled workmen; it is improving the merchant marine service by leaps and bounds; it is contributing to the national defense in unmistakable fashion; and it is adding to the prosperity of our farms, our mines, our factories, and our transportation systems. Shipbuilding spreads employment over a great many services, and is therefore a particularly helpful industry to the Nation's economy.

(5) Last year the Maritime Commission submitted a comprehensive report to Congress on coastwise and intercoastal shipping. As a result, legislation was developed and is now pending which is

designed to make available ships now in the Commission's laid-up fleet. The Maritime Commission, some 10 years ago, voluntarily surrendered control over these laid-up vessels at the request of the domestic operators. Today there is every indication that these ships, even though they are older vessels, should be made available. They ought to be put into good shape and they ought to be made available. The Commission is supporting legislation which would make this possible.

(6) When Congress approved the Neutrality Act last year, it was widely feared that the withdrawal of our ships from European commerce would endanger our merchant marine industry. It was even said that additional subsidies would have to be granted, otherwise this great and vital industry would not be able to withstand the economic shock. It is, therefore, a happy fact that the fears which many persons entertained last autumn have not materialized. Our neutrality policy withdrew over 100 ships from regular runs to Europe. As the war zone of Europe broadens, almost day by day, there is strong likelihood that even more American vessels may be withdrawn from trade in foreign waters. Nevertheless, the elimination, or at least the reduction, of our merchant-marine service to Europe has not crippled our maritime industry. Our merchant fleet has not been rendered idle. As a matter of fact, it is now busier than ever with new trade with Asia and, particularly, with South America. There have been no serious nor substantial lay-ups because of the Neutrality Act. In fact, our maritime industry is on the upward trend, and I am reliably informed that this upward trend is not all chargeable to the war. Much of it is new activity—new trade—that will, in all likelihood, remain ours.

(7) Splendid progress has been made over the past year in adding to passenger traffic on our merchant marine. More Americans are traveling on American ships. That is a wholesome trend, likewise.

(8) The Maritime Commission, in 1938, established a training program designed to afford to American merchant seamen an opportunity to improve their abilities. Nearly 5,000 licensed and unlicensed men are now enrolled in this course of training.

The program, as it is developing, is removing to a large extent some of the initial fears of the maritime unions. The wholesome intent of the Maritime Commission has evidenced itself and there is every reason to believe that these training programs will be broadened for we need more and more men efficiently trained in the merchant-marine service.

9. The activity of the Maritime Commission is stimulating patriotic interest in our merchant marine. There is now an ever-widening desire to make our merchant marine the best in the world. Our position is steadily improving, but we still have a substantially long road to travel. It is heartening, however, to realize that we are now definitely headed in the right direction.

10. The Maritime Commission is soliciting the cooperation of all elements essential to the development of an adequate national defense. Therefore, the present program of the Maritime Commission ought to be carried out with utmost speed and with a minimum of obstructive criticism. This is a time for unity, for nonpartisanship, and for coordination throughout the Nation.

In the 10 points which I have brought out I have covered in a very cursory manner the outstanding contributions which your Government, through the United States Maritime Commission, is making toward the development of a bigger and better American merchant marine.

The history of the merchant marine is a dramatic and interesting story. Like the occasion which inspired the establishment of National Maritime Day, there is adventure and romance and drama in the success story of the merchant marine.

There will be new legislation as developments at home and abroad demand it. We received some of those recommendations from the President last week, and they all had to do with providing for our security and our future happiness through adequate defense. If we must quarrel and bicker and criticize, let us by all means confine our protests so that they will not impede the present drive toward national defense. Our homes, our families, and our welfare are at stake.

I salute the merchant marine as a great American enterprise—one that is growing and improving day by day. Its strength, its prestige, and its effectiveness must be augmented and encouraged by our patriotic interest and support.

Peace and Preparedness

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 23 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. ROBERT A. TAFT OF OHIO AT ST. LOUIS, MO.

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech on Peace and Preparedness, delivered by the Senator from Ohio [Mr. TAFT] at St. Louis, Mo., on May 20, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There is not a citizen of the United States who is not sick at heart when he reads the news from Europe. There is no one who is not deeply resentful at the attack made on courageous but helpless people by the German war machine. We see before our eyes a scene of death and destruction threatening to wipe out, in a few short months, the civilization which has been builded in Europe for thousands of years. We are stunned at the implications of modern war as it may affect ourselves.

The very seriousness of the crisis, however, should be an argument for a calm consideration of the situation as it now exists without preconceived prejudice or excitement or emotion. All of us are deeply concerned with one thing above all—the lasting welfare of our people and of the America we love so well. On May 12 the President said, "Surely it is time for our American Republics to spread the problem before us in the cold light of day, to analyze it, to ask questions, to demand answers, to use every knowledge, every science we possess, to apply common sense, and especially to act with unanimity and a singleness of purpose." In that spirit I wish to discuss the position of this country in the world today.

There are those who believe that there must be no criticism of the President in his conduct of foreign affairs; that we must achieve an outward appearance of unity at all costs. I am quite willing to agree that leadership in foreign affairs and their practical working out must rest with the President. But with regard to fundamental questions of foreign policy there is no reasonable argument against public debate. Of course, no man's position should be guided by selfish partisanship; but after all, selfish partisanship should not enter into the discussion, even of domestic policies. Certainly so long as we are not actually engaged in war, no question of foreign or domestic policy concerns the people of this country so much as the possibility of becoming involved in war. The Democratic process demands that the people have a voice in determining that policy. It is the duty, as well as the right, of every man in public life to state clearly his position on such a question, even if he differs with the President. On the other hand, it is equally his duty to state his agreement with the President, even if he differs with the other members of his party. In November, I voted for the repeal of the arms embargo, because I felt that that repeal would tend to keep us out of European war. It has accomplished that purpose. No American ships have been sunk—no American lives have been lost. For the same reason, namely, my desire that we remain at peace, I am somewhat doubtful today of the President's position.

We are not engaged in the present world war. But there are a number of vociferous writers who think we should be. Have they the support of the President of the United States? He has made no definite move toward war but he has made a number of disturbing statements which indicate that he might favor that position if the people would permit it. It is all the more advisable that the people consider soberly the reasons for and against our becoming involved in the war. The President has talked of quarantining the aggressor nations. He has talked of methods short of war which might easily lead to war. He implies that we cannot permit Europe to go totalitarian.

On May 14, the President approved a statement made regarding his position by his secretary, Stephen Early, in which Mr. Early said, "The feeling here is that if there is a four-alarm fire up the street and the wind is sweeping it in the direction of your home, the issue at once becomes the protection of your home. What you want to do is to put out the fire immediately and keep it from reaching your home." If this means anything, it means that we should undertake our defense in Europe. Why should the President dwell upon the possibility of a German attack on the United States by air, picturing German airplanes approaching by way of Africa and South America to drop bombs in St. Louis or Kansas City? Apparently it is to enforce the argument that we must not permit Germany to win the war, because we would be immediately subjected to an attack by air for which we are not prepared. Why otherwise stir up the emotions of the people when their feet ought to be firmly planted on the ground? It is certainly unnecessary as an argument for preparedness, for Congress is only too anxious to appropriate whatever is necessary for an adequate defense.

We have had presented to us repeatedly the reasons why our participation in the war is necessary in the cause of democracy or for defense. I believe we should first consider the reasons why we should not become involved in war.

Those reasons are obvious. Modern war has none of the glamour which we were taught to associate with war in our childhood. It is nothing but horror and suffering and mechanical destruction. It leaves the victor as exhausted as the vanquished, and a train of economic distress in its wake. It is said that we might participate in the war through the loan of money or the action of our Navy, without sending troops to Europe, and thus escape the worst features of the war. I do not believe it. If we abandon our position as a neutral which we have always maintained with respect to wars between nations, if we admit that our safety and defense are at stake in European war, then we cannot go halfway. If we are justified in spending billions for the Allies and supporting their navies, then it would be cowardice not to support them also with men.

There is plenty of death and permanent disability and suffering resulting from the World War, but it would be nothing compared to the loss of millions of Americans if we become involved in this war. No American parent desires to see his or her children sent to the trenches of Europe. It is said that we must participate in this war in order to defend democracy in the world. No one can sympathize more than I do with the success of democratic governments against dictatorships. No one desires more strongly than I the end of communism and nazi-ism. But I question whether war is the effective method of destroying them. Our experience in the World War did not indicate that we can interfere in European quarrels and work out any permanent or satisfactory solution. The World War did not save democracy. It resulted in the creation of the very dictatorships whose military forces threaten the world today. Nothing is so destructive of forms of government, particularly forms of democratic governments, as war.

Our going to war would be more likely to destroy American democracy than to destroy German dictatorship. The President already has wide powers in case of war—to take over the railroads and manufacturing plants, radios, and public utilities. Mr. Edison, Secretary of the Navy, demanded recently that additional arbitrary powers be granted at once. There are pending in Congress measures designed to have the Government take over all business and property, fix prices and wages, draft every workman and every clerk and every executive for civil duty as the Government may assign, and regulate every detail of private employment and commercial life. I have little doubt that the present Government will ask for and exercise these powers. In the World War the Government had exclusive powers, but actually accomplished results largely through the cooperation of industry. The so-called mobilization of wealth, however, carried out in a New Deal spirit, is likely to destroy forever the operation of private enterprise and local self-government in the United States. There is an indication even today that the cooperation of industry is not to be wholeheartedly sought in carrying out the preparedness program.

I believe we will do the cause of democracy much more good if we stay out of the war. There is only one way to spread democracy throughout the world; not by the sword, but by showing the peoples of the world that under democratic government they are more likely to have peace and happiness than under any other form. Efforts to change the governments of other people by force have not often succeeded. Democracy spread through the world in the nineteenth century from our example, and it will do so again.

The third argument for entering the war is that of Steve Early's conflagration, the argument that if Germany wins the war they will immediately attack the United States. Therefore, it is said, we should participate in this war purely as a defensive measure. The argument cannot be lightly dismissed, but I do not think it is sound today. I see no reason why the Germans, if we remain neutral, should attack the United States even if victorious. Their hands would be fully occupied with the problems of Europe. No dictator has ever dominated all of Europe for long. The markets of Europe and Asia would be open to them, and there seems no reason why they should pick out the strongest nation in the world, when we have nothing that they could not secure elsewhere.

Nor have they any reason to suppose that an attack would be successful. Our Navy is three times the size of the German and Italian Navies combined. The ocean barrier is still tremendously effective. The Germans have felt the necessity of violating Holland and Belgium to get within 100 miles of England because apparently even 500 miles is too far for an effective attack by air. The fact that airplanes can fly the Atlantic in a few hours does not indicate for a moment that armies can be moved across an ocean commanded by a predominant navy. I doubt if any competent expert would consider even the possibility of a successful German attack on the United States at the present time.

It is said that our foreign trade would be destroyed. I don't understand why, if peace is once restored, we could not trade as well with Germany as with England. A supposed hostility to Japan, a totalitarian nation, does not prevent Japan being one of our best customers.

Then we hear of our being conquered by a wave of totalitarian ideas which we will be too lacking in intellect to resist. We are to be a kind of Caspar Milquetoast among nations, ashamed to hold the banner of democracy aloft because it is not fashionable to do so. There is a good deal more danger of the infiltration of totalitarian ideas from the New Deal circle in Washington, than there will ever be from any activities of the Communists or the Nazi Bund.

I cannot see that a German victory, regrettable as it may be, would leave the United States defenseless against aggression.

If we are considering the proper means of defending the United States there seems to be little doubt that our line of defense is the Atlantic Ocean, and not the battlefields of France.

Furthermore, the argument that we should defend ourselves by participating in the European war overlooks the difficulty of conducting any such defense. We have no army to send to Europe, we have no airplanes of our own in any material quantity, and those that we have we need at home. Two-thirds of our production is already going to Europe. The Allies have sufficient gold and credits to pay for their purchases for many months to come. The weakening of their control of the seas does not seem to be the result of any lack of warships, but rather of German superiority in the air. We cannot defend ourselves in Europe today.

On the other hand, we cannot minimize the seriousness of the situation produced by a German victory. While I do not think that there would be a German attack on the United States, nevertheless it is a possibility in the future which we cannot ignore, particularly in the case of a German, Italian, and Japanese alliance. We must not be taken unprepared as were the British. If Germany should win, we would have to consider defense in the light of defending the entire continent of North America, the Caribbean Sea, and, at the very least, the northern part of South America. This would require a substantial change of our entire foreign policy, particularly in that section of the world. It would require the expenditure annually of a much greater sum for armament than we have heretofore spent and a much heavier burden of taxation. We would find ourselves in a world where ruthless force had been triumphant over every principle of justice and where the possibility of its continued triumph would be always before the peoples of the world.

Yet even that alternative seems to be preferable to present participation in the European war. The possibility of having to spend two billions a year more than we have been spending is better than spending thirty billions a year for armament while we engage in the present war. We are in a very vulnerable financial situation. We began the last war owing nothing and with a balanced budget. If we entered the war today we would start owing $45,000,000,000 and with an annual deficit of $4,000,000,000 merely for peacetime expenditures.

How foolish and dangerous does the New Deal spending policy look at the present moment! Sound finances are an essential part of national defense. We cannot risk an economic break-down in the midst of war. We have spent billions for boondoggling, public works, and subsidies which now we need for defense. It was the Roman Emperor Augustus, who, when he was beset by enemies, cried aloud, "Varus, Varus, give me back my legions." We may well cry now, when our need is so great, "Franklin, Franklin, give us back our billions."

A world in which force rules is not one we look forward to with equanimity. But I believe that a wise foreign policy with adequate defense would enable us to avoid war even under those conditions. While it is not a pleasant alternative I believe it is better than to plunge blindly into the war today, with death and suffering for our young men, with suspension of our domestic liberties, with financial bankruptcy and with complete futility. I don't believe we can lay down any unchangeable principles for our foreign policy. Conditions change too rapidly in the world today and foreign policy is a practical question which must be adjusted to meet new conditions as they arise, but I do not believe there will be any such change in conditions, at any rate before November. Let's stop playing with the idea that we may enter the war and devote ourselves to a genuine program of defense.

For there can be no argument against a sound program of adequate preparedness.

We have been appropriating tremendous sums for the Army and Navy—more than we have ever appropriated before in time of peace—and yet there are ugly rumors of complete inadequacy. Our Navy is efficient but apparently our naval-construction program has gone forward very slowly, indeed, compared to that of the Japanese. A year ago we authorized 6,000 additional airplanes for the Army. The actual deliveries on this program have not exceeded 350. The largest number of military and naval planes delivered in any 1 month including those for our Army and Navy and foreign exports has not exceeded 337, and deliveries in February and March 1940 were less than those in December 1939 and January 1940.

The Secretary of War states that if additional large-scale orders for types of airplanes now in production are placed immediately it is estimated that the major companies would attain a potential capacity of 1,200 military airplanes per month by the end of 1940. This would still be very much less than the German capacity. Our supply of antiairplane guns appears negligible; the mechanization of our Army units extremely limited. It is certainly fair to ask the administration where the money has gone which has been so liberally appropriated during the past several years. Why has it not been devoted to those things which all the expert opinion considers to be necessary? Was our Government as ignorant of what the Germans were developing as the British were?

It seems to me absolutely essential that a joint committee of Congress make an immediate and thorough study of the entire problem. After consultation with Army leaders, Navy leaders, and business executives, they should submit a plan of defense which will command the support of every party and class of the population.

We face a political campaign in November. I hope there will be no great issue between the parties on the subject of foreign policy, but neither do I see the slightest reason why the present situation in Europe and our own inadequacy in defense should be used as an argument for the reelection of President Roosevelt or the continuation of the New Deal in domestic affairs. The Republicans are accused of partisanship when they criticize the foreign policy of the President. If there could be any course more selfishly partisan than that which seeks to use a great world crisis to boost a third term, I don't know what it could be.

There is certainly nothing to indicate, from our experience in recent years, that the present administration has any peculiar ability to provide an effective Army or Navy for defense or to keep up with modern developments in aviation. Even the program presented recently by the President seems to have been hastily

thrown together, and includes requests for blank-check appropriations, the purpose of which is still uncertain.

Secondly, in the important field of finances, the President has shown his complete incompetence and lack of interest. He said recently that it was minor detail how Congress financed the new national-defense program, that he was not much interested in how the money was raised, but only in the power to spend it. If we become involved in war, there is no more important question to determine than whether we should finance by additional taxation, by increasing the public debt, or by a combination of both. On the proper determination of that question may depend the whole success of a possible war. The present administration has shown its complete incapacity in that field.

Thirdly, the administration still permits its prejudice against business to hamper the development of defense. Only this week the leader of the Senate called up the La Follette civil-liberties bill and insisted on presenting it to the Senate, over the adverse reports of the Army and Navy. These reports assert that its drastic provisions will hamper the production of Army and Navy equipment, which is already slowed up by the regulations of various New Deal bureaus. The La Follette bill incidentally prohibits any employer from making any inquiry whatsoever, or employing others to make inquiries, regarding the union or party affiliation of those who apply for work. An employer cannot protect himself against the infiltration of Communists into his plant. It is a Trojan horse under which Communist and Nazi "fifth columns" may establish themselves in our most essential industrial plants. How secret would our military and naval secrets be in wartime under such a law?

The rights of workmen can be adequately protected without binding the manufacturers hand and foot with red tape. Even today, with all the additional war work, the administration is increasing its demands for relief and proposes to spend a billion dollars on W. P. A. in 8 months of an election year instead of in 12 as originally contemplated. No administration which subordinates preparedness to domestic politics is entitled to ask for a third term under present conditions.

And, finally, the forcing of the third-term issue will destroy that very unity in whose name the third term is proposed. The people will deeply resent any effort in peacetime to set aside the constitutional safeguards which are necessary if we wish to retain a democracy in this country. The tradition against a third term has become as much a part of our Constitution as it could be without being written into that Constitution. It is based on the same reasons as the other limitations of the Constitution, the belief that concentrated power threatens the very existence of democracy. The reason for the tradition is even stronger in time of war for the powers which may be concentrated then in the hands of one man are infinitely greater. Nothing would contribute more to an effective and unified defense policy than a declaration by the President that he does not propose to accept a third term or permit his friends to use the present crisis as an argument for a third term.

If a joint committee of Congress is selected and makes a report to which all agree, it will do much to remove the whole preparedness issue from the national election. Then the campaign can be fought out on the domestic policies of the two parties and their competency to handle the administration of foreign affairs.

We can achieve unity in foreign affairs without abandoning our determination to retain in this country that form of American democracy and American enterprise which in 150 years has made this country the greatest and the most powerful and, yes, even today, the most peaceful and prosperous country in the world.

Spawn of the Trojan Horse

EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 23 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM PORTLAND OREGONIAN

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD an impressive editorial entitled "Spawn of the Trojan Horse," written by Ben Hur Lampman, and published in the Oregonian, Portland, Oreg.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian of May 18, 1940]

SPAWN OF THE TROJAN HORSE

We do not need the warnings of MARTIN DIES and others to remind us that the Trojan horse already has emptied its capacious interior in free America; that the "fifth column" is here, and has been here for some while. Or do we? The besetting weakness of Americans is a sort of self-sufficiency that amounts to complacency. Let the crackpots rave and rant from their soapboxes—nothing untoward can happen to the land of the free and the home of the brave. "When Freedom from her mountain-height"—and all that sort of thing. Enduring. Imperishable. Tolerant and even contemptuous of the envious and malevolent forces. Serene. So was Norway serene.

The "fifth column," the termites, the cargo of the Trojan horse, the apparently innocuous individuals who withhold dispraise of totalitarian methods, the adroit apologists with an accent, or with no accent whatsoever—for some of them are graduates of our universities—these are here. But it were folly to suppose that they are soapboxers, obvious firebrands, definite and open inciters of treason and revolt. These have craftiness and have counsel; they have direction and foreign command. You won't catch one of them on a soapbox. These people profess an admiration for and loyalty to the United States of America. There are few of them who wear semimilitary shirts. The calling they follow has for its first instruction the injunction, above all, not to be obvious.

We need not wait for their arrival, for their infiltration, for they already are here. Not only are they here, but when they have been suspected some of us have invoked the guaranties of the Constitution, as well as the conscience of our own traditional liberalism, to give them aid if not comfort; to shelter them in the folds of that flag they have designed to pull down. This is true. There is at least one conspicuous instance. Its title character, said to be strongly persuaded that American institutions must fall, and be succeeded by an alien and hateful ideology, passed through the form of a trial to a species of vindication. In yet another instance we have placed a foreign-born enemy of the Republic in prison only on the subterfuge, though warranted by the circumstance, of misappropriation of funds. We have condoned and dissembled. The ostrich of fable with its fatuous head in the sands of delusion.

Perhaps the F. B. I. knows how many of them are among us, working and waiting, eager for the word that will permit them to cast aside their flimsy disguises; eager to tell the invader where to land his troops and deposit his bombs; eager to strike down by betrayal the country that gave them the generous shelter of its liberties. Are they so base as this? The answer is that they are without scruple, and that the subversive calling to which they are committed, and to which they were congenitally inclined, practices treachery as a paramount virtue. They are the "fifth column." The dry-rot. The termites. They are the masked enemy within.

As for their baseness, it should be remembered—the betrayal is so recent—how the young Nazis whose boyhoods were passed in Norway, as the otherwise homeless and friendless children of German defeat in the earlier World War, were first to reenter the land of their affectionate foster parents, and by an intimate and presumably beloved knowledge of the land and the language enable the stratagem of assault which left their benefactors stretched in death or dazed in strange and sudden slavery. In the Scandinavian countries the status of foster father is immemorially and peculiarly intimate and well-nigh sacred. The returning foundlings of the Nazi "fifth column" did not scruple to profane it. Would the leopard change its spots out of exceptional consideration for America, the land that has ever been sanctuary to the friendless and oppressed? We may judge the smuggled cohorts of the Trojan horse, the "fifth column," only by their performance elsewhere. They have a purpose in America. And the "fifth column" is here.

It has been reasonably suggested, and here the tentative explanation is offered for no more than appears, that the mysterious paralysis of the Belgian garrison of Eben Emael, stormed and taken by Hitler's troops with a minimum of resistance, was in simple fact attributable not to some secret mechanical or chemical device, but to the corruptive presence of the "fifth column" within the fortress. Whether this is true, or is not, the indisputable evidence remains that the comparatively easy conquest elsewhere of enemy territories and citadels by Nazi troops can be and is explained in part by the existence of traitorous elements, schooled to their function, previously established within the lines of defense.

There is much talk of arming against the possibility of an Allied defeat—which scarcely would be less than ominous to us—on the ancient battlefields of Europe, where the dead men of the last great war have not yet returned to the elements. A formidable and impregnable democracy of the western world, as a torch that burns strongly and will not be quenched. A beacon for the reassembling of the scattered and consecrate forces of mankind's will to be decent and free. And this talk must be solidified into action, it must be productive of effective attainment—but not through neglect of immediate obligations essential to national security, essential to victory if need arises, essential to life as we Americans know it.

The Oregonian is not an alarmist; it suggests no national furor of spy plots, no panic of eleventh-hour trepidation. But it has heard from foreign parts, as you have; it has conveyed testimony. And it has but this counsel to offer, nor need it cite the example of failure: This is the time when the Trojan horse must be captured and curbed; this is the time that never will come for the purpose again. Smash the "fifth column" now.

Blue Ridge Parkway

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 23 (legislative day of Wednesday, April 24), 1940

ARTICLE BY LOUIS AZRAEL

Mr. REYNOLDS. Mr. President, I have here an article which was clipped from one of the Baltimore newspapers in reference to the Blue Ridge Parkway, which, incidentally, leads into my State of North Carolina through Virginia to the Great Smoky Mountains National Park, in which the senior Senator from Tennessee [Mr. McKELLAR] and I have been interested for a number of years. This article is a very vivid description of the beauty of the parkway leading southward to one of the loveliest sections in all the world. I ask that it be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A BALTIMOREAN'S PART IN A GREAT PROJECT

(By Louis Azrael)

To those who are interested in America, in touring to see this Nation's scenic beauties, one of the greatest improvements of recent years, undoubtedly, is the Blue Ridge Parkway, which already stretches more than 300 miles through Virginia, North Carolina, and Tennessee, between the Shenandoah National Park and the Smoky Mountain National Park.

Part of these 300 miles are not yet finished, though they are useable. And almost 200 more miles are yet to be constructed.

Already $15,000,000 have been spent on the project; an equal amount is still to be spent.

Although important parts of the road were not opened until last summer, 300,000 people have already used it.

This summer, it is believed, more than half a million will take the lovely drive along the Blue Ridge mountaintops, through masses of azalea and laurel and rhododendron, past scattered farms with their early, picturesque buildings of hewn timber with hand-split "shake" roofs, through valleys where streams run clear and cool in the shade of the pine and the hemlock.

Accustomed as we are to driving along roads lined with billboards, "hot dog" stands, ugly gasoline stands, the Blue Ridge Parkway drive will be a new, refreshing experience.

They will find the roads edged with wide expanses of grass and trees. They will find no signs or stands to mar the placid beauty of the scenery.

They will find, at intervals, semicircular aprons at high places where they can park their cars and observe the view without obstructing traffic.

They will find places set aside for picknickers, trails for hikers, places for camping.

I write about this magnificent roadway not only to let you know about it—if you don't already know.

It is well worth knowing about. Last year I traveled on part of this highway—the less beautiful part, I am told.

And I have seen no roads in the western part of the Nation; nothing in the Rockies or the Sierras to surpass it.

Nor did I find more beauty when I traveled on the mountainous roads in Norway—roads which then told a story of peace and contentment and placidity and which now creak beneath the weight of German tanks.

I write this only to tell you that there is a place, only a short distance from your home, where you can tour in surroundings as beautiful as those which are found abroad.

I write it also to give public credit to a Baltimorean.

I have just received from the Public Works Administration—which has charge of the entire project—a brief history of the work.

It gives the following story of the parkway's origin:

"During September 1933 a meeting of the League of Virginia Municipalities was held in Richmond, in the Assembly Chamber of the Capitol Building.

"After the meeting, at a luncheon in the Executive Mansion attended by George L. Radcliffe, regional advisor of the P. W. A. District, Executive Officer Maj. Philip B. Fleming, Mr. Theodore E. Straus of the Public Works Administration, Gov. John Garland Pollard, United States Senator Harry Flood Byrd, State Engineer J. A. Anderson, and others, the possibility of such a parkway was proposed by Mr. Straus, and received the approval of Governor Pollard, who immediately appointed a committee, requesting Senator Byrd to act as its chairman."

Mr. Straus, a Baltimorean, was formerly a member of the city school board.

When GEORGE L. RADCLIFFE, who had not yet been elected to the Senate, was named regional director of the P. W. A. activities, he appointed Mr. Straus as his assistant.

In this capacity, Straus not only made the suggestion which started the Blue Ridge Parkway movement he also participated—and is still participating—in carrying the project to fulfillment.

Executive Department Cable-Desk Diplomacy

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ARTICLE BY BOAKE CARTER

Mr. HARTER of New York. Mr. Speaker, there was a time when Boake Carter was best known as a radio commentator with definite ideas which he expressed most forcefully. Months have elapsed since you have heard him regularly over the air, and his admirers are now forced to content themselves in reading his comments. These comments are widely read, and especially do citizens digest his words concerning Europe. They ponder his words because of his intimate knowledge of Europe, including the British Isles, the land of his birth.

Mr. Speaker, by leave of the House, I insert at this point Boake Carter's article, Cable-Desk Diplomacy, which was specifically called to my attention by a mother of my district intent on seeing to it that policies are changed at our Nation's Capital. She insists that we stay out of war, and that we keep war out of this country. I hope you will read Cable-Desk Diplomacy.

[From the Daily Mirror]

CABLE DESK DIPLOMACY

(By Boake Carter)

WHITE PAPER

I have just finished reading American White Paper, by those two alert youngsters, Alsop and Kintner.

It is short. It is easy to read. It should be read by every American citizen.

There have been other newspaper spokesmen from time to time, but nearly all have had their knuckles rapped by the White House.

Not so in this case. Hence it must be assumed that the American White Paper is, as far as it goes, an authentic document on existing American policy.

The chief aim of Mr. Roosevelt, Alsop and Kintner make clear, is neither neutrality nor keeping America out of war.

The Roosevelt policy, instead, is to help the Allies win the war with every means short of dispatching American troops abroad.

Anybody with a grain of common sense can understand the absurdity—and recklessness—of playing at partial participation in war. It is just as absurd to assume that if the Allies found all our other forms of assistance not enough, that we wouldn't send our own doughboys abroad again.

PEOPLE'S FAULT

Thus American White Paper reveals most clearly that there may, indeed, be no limits to Mr. Roosevelt's determination to see an allied victory—even to send a United States army abroad.

If most Americans don't realize this, 96 percent of whom are opposed to going to war with Germany (Gallup polls), it is because Mr. Roosevelt has avoided telling the people.

The authors declare Mr. Roosevelt to have been evasive. But they blame the people for that condition, ironically enough.

The President's special message calling for the lifting of the arms embargo they dismiss as "the least meaningful of all documents of the time what everyone knew to be the real reason for repeal * * * was not directly mentioned."

Whom do the authors mean by "everyone"? Presumably the President's immediate circle of intimates, and no more. If all the Nation knew—meaning everyone—then there would have been no need for deception.

CABLE COUNCIL

Back of this deception there is a new, unique theory of government. The authors say there are those who read the cables coming to the State Department and those who don't.

Those who read the cables, apparently, are the President, the Secretary of State, and half a dozen other men. These are the individuals who really know what's going on. No one else in the country fully does know.

Therefore, assume the authors, no one else in the Nation is qualified to lay down America's foreign policy—except this little handful of "cable readers." The balance of the Nation is too ignorant.

With dope supplied by cable and telephone by Messrs. Bullitt, Kennedy, Biddle, Cudahy, et al., advised by Hull, Welles, and Berle, it is Roosevelt who is making American foreign policy, not the people of the United States, though they suffer and pay the bill.

That is the grim danger to American neutrality. The menace lies not abroad, but, as clearly shown in American White Paper, lies within the White House.

"Fifth Columns"

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ARTICLE BY FRANK C. WALDROP

Mr. ANDERSON of California. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I include the following thought-provoking article by Frank C. Waldrop. A new system of industrial sabotage is apparent and merits immediate investigation by responsible Federal authorities:

[From the Washington Times-Herald of Monday, May 20, 1940]

A HIDING PLACE FOR THE "FIFTH COLUMN"—NAZIS USE OUR PATENT SYSTEM TO SABOTAGE US

(By Frank C. Waldrop)

Where is the Nazi "fifth column" hiding in America? It must be here, for Hitler has improved on all the Kaiser's devices for trouble, and the Kaiser had a very effective "fifth column" here as everybody knows who can recall Franz von Papen, Captain Boy-ed, and the Black Tom explosions.

Undoubtedly, the G-men, handicapped as they are by the recent orders not to tap telephones regardless of circumstances, are having a hard time keeping track of foreign agents who do not have to worry about scruples of the law. And, undoubtedly, something will have to be done very soon to correct that handicap if our Government has any hope at all of defending itself against sabotage and spying.

But in the meantime there is one place where the G-men and all the rest of the Government can be looking with full legal authority and with absolute certainty that it will find important evidence of Nazi assaults upon our defense.

The place where Hitler's "fifth column" is committing sabotage upon the United States every day is in the Patent Office of the Department of Commerce. The Nazis are using American patents as effectively in the United States of America as they have been using bombs in France. And legally.

They actually use American law to block off and harass American rearmament, and the Congress which has the power to prevent such things by a simple patent-law amendment forbidding anybody to withhold patents from license applicants sits idly by. If the Germans were using bombs here the governmental action would be terrific to behold.

But because there is no noise and no blood visible in a patent restraint—that is not until the consequences are registered on the field of battle—Congress looks elsewhere for its laurels as a protector of the people.

Here is how the "fifth columnists" work in our patent system:

They take out patents for industrial processes in the name of captive American firms and then refuse to let American manufacturers use those patents to make American goods. This is a form of industrial sabotage permitted in no other country in the world. In Germany if an American attempted to block off a method of making steel by taking out a patent and then refusing to allow the patent to be used by Germans, he would simply be laughed at. In England and France there is positive law against such things.

But, in contrast, the Germans, the Japanese, and the Russians have for years been stealing American patent processes and using them as their own at home without paying royalties or otherwise acknowledging the source of the idea which made their machines go. At the same time they have all used our wide-open patent law to prevent us from parallelling any of their ideas.

The operations of the Nazi "fifth column" in our Patent Office are of long standing.

On May 20, 1921, the Army Intelligence Service, G–2, reported to the Secretary of War that the Germans were rearming in violation of the peace treaty. This was discovered by a check-over of patents taken out here in the one year of 1920.

German citizens were found to have assigned some 228 patents registered in 1920.

It was found that 228 American patents held by German citizens in 1920 had been assigned to the Frederick Krupp Co., which had armed the Kaiser's army and has since armed Hitler's. These related to artillery-fire-control devices, naval gun controls, fuses, projectiles, and "a considerable number relate to airplanes and their accessories, chemicals, dyes, radio apparatus, and naval equipment."

The Krupp Co. was followed up by Siemens-Halske, the huge chemical and general industrial cartel, which took out patents on countless industrial devices and methods which have since been proved as useful in war as in peace.

How many of these German-owned patents are working in the interests of the United States, by comparison with the number which are working against us because we are forbidden to exercise the knowledge they encompass? Nobody really knows.

Only recently has anyone begun to care. Preliminary surveys have disclosed some startling facts. It is time we got busy.

Mr. Speaker, H. R. 9232, a bill authorizing the Secretary of War and the Secretary of the Navy to deal with patented and secret inventions affecting our national defenses, would go a long way toward removing the objectionable features of our present patent system. This proposed legislation was introduced by me on April 4, 1940, and I trust that it will receive the proper consideration before Congress adjourns.

Points to Failures of Our Democracy

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

LETTER FROM J. H. BILBREY

Mr. KNUTSON. Mr. Speaker, amid the hysteria of war and our own preparedness program, there are persons who shout loudly that ours is the duty to make democracy work at home and preserve democracy in Europe.

It has been said that a purely democratic form of government is subject to the passions and emotions of the multitude and frequently resorts to mob rule. Communists boast of being democratic and favoring a democracy instead of a republic for the United States. Thank God we are a republic and that there are men in this Republic who will not be stampeded into mob rule by any of the dramatic incidents of the last few weeks.

Mr. Speaker, it is refreshing and encouraging that amid all this excitement and passion, a voice has spoken to warn our people of the impending dangers, first of pressure groups and secondly from the indifference of our own people. I commend, sir, the reading of a letter published yesterday in the Washington Star from the pen of J. H. Bilbrey, a member of the bar and a distinguished American.

The letter follows:

[From the Washington Star of May 21, 1940]

POINTS TO FAILURES OF OUR DEMOCRACY—ACTIVITY OF PRESSURE GROUPS HELD MENACE TO ANY REPUBLIC

TO THE EDITOR OF THE STAR:

During nearly a decade the public ear has been assailed with the phrase "make democracy work." Under the guise of these inoffensive words many things have been done. An encyclopedia of new statutes has been enacted. Our revamped judiciary has given new construction to our old laws. A whole alphabet of boards, commissions, and bureaus has been created. Treasure almost beyond imagination, upward of $60,000,000,000 has been spent for relief, subsidies, salaries, pensions, and hand-outs. All

of these things, so it was said, were done to make democracy work.

At this critical time is it not fitting that we seriously and honestly search our souls and inquire whether any of these things or all of them together, have made any substantial contribution toward making democracy work! If they have, the price, although high, is not prohibitive.

Unless history and reason lie, the primary purpose of government is to provide, as a minimum, security in person and property. Security of worship, of thought, and of expression are but refinements and extensions of the primary security. Always important, these latter rights, recently spoken of as civil liberties, have received a plethora of attention and publicity. It might be truly said that the public is civil liberty conscious. This is not an unhappy circumstance, unless our attention has been distracted from the foundation of all of our rights, security of person and property; for what shall it profit us to attain a full measure of civil liberty at the expense of national unity and national security?

The Frenchman could give us some excellent advice on this subject. It was he who invented the sit-down strike, and, of all places, in the aviation industry. It was the Frenchman who invented the week with two Sundays and the vacation with pay. The Norwegian could also give us some advice on national unity and security. Liberality and collective effort were their shibboleths. In fact, their liberality was so genuine that its legislative body until 1935 was a member of the Third International. Its liberality filled its country with spies and saboteurs, destroyed the unity of its people. and invited national calamity and disgrace from which it will never recover.

But what of our national unity and security? Is democracy working in this respect? Although threatened on both the Atlantic and the Pacific, little of the $60,000,000,000 has been spent to strengthen our Navy, our first line of defense. Our Army, with one mechanized division, is literally contemptible when compared with the world of today. We have not enough antiaircraft guns adequately to defend the city of Washington. Although charged with the defense of the Panama Canal our air force in planes and personnel is not sufficient for this one mission, not to mention our unprotected Atlantic and Pacific Coasts and other strategic points. Plants for production of fighting planes are gradually being built up, thanks to foreign purchases and not our own foresight. The Government has taxed and taxed, and spent and spent to make democracy work, but we have no Army or air force and but an inadequate Navy.

Among the numerous new enactments to make democracy work, one was designed to provide "social security." Under this enactment vast sums have been collected, but only a small moiety remains in the Treasury for the purpose for which it was collected. If our economy is adversely affected by our national weakness, our social security cannot be very secure.

While under the sway of foreign agents the Frenchman invented the sit-down strike, the week with two Sundays, and vacation with pay to make democracy work; we provided pay for work not done and a bounty to farmers for not producing, all for the purpose of creating prosperity through scarcity. Notwithstanding the use of public funds to organize and protect the workingman, an army of racketeers, padrones, and others of such ilk gained lucre and high place. With all of our statutes, all of our good will, and all of our liberalism, the crackpot, the inept, the visionary, the left winger, and the agents of foreign governments clog and distract the functioning of the Government service and of the many laws passed to make democracy work.

In spite of all our liberal laws and liberal interpretations by a truculent judiciary, and the never-ending stream of treasure poured out by a liberal hand, there came into being a class of organized mendicants and class unrest, with constant warfare between capital and labor, resulting often in the destruction of private property. To make democracy work only those able to pay were taxed. Unhappily, these taxes were regarded by those paying them as confiscatory, rendering insecure all manner of property, from the widow's mite to the millionaire's yacht, and driving capital from industry. To make democracy work sharp distinctions were drawn between human rights and property rights, between corporate property and individual property. All too many persons refused to acquiesce in these subtle distinctions and have bitterly maintained that human rights and property rights are inseparable, and that the widow's mite is oft invested in corporate enterprise; that laws come with property and leave with it.

Besides the "fifth column" of foreign and domestic origin, whose entry into strategic positions has been so rapid, we have with us an organized host whose primary idea is to get something for nothing; to live on the fruits of the labor and thrift of others; and the iron in whose blood has been distilled away, leaving a softer but much less useful substance.

Considering our potentiality as a going concern, the new laws and the staggering sums laid out in that behalf, it cannot be said that democracy has not had a chance to work. The plain evidence is that if it has worked, it has worked poorly or in reverse.

That democracy will not work is a fact as old and as large as civilization itself. It should be the common knowledge of every grade pupil that an attempt to make democracy work is an attempt to change our republican form of government and revert to a form of government which is bound to destroy itself.

Much of our confusion of thought and lack of national unity arises from the belief, all too general, that our Constitution set up a democracy providing for direct action through organized pressure group, impulse, and emotion. Actually our form of government was carefully designed to prevent this sort of thing.

J. H. BILBREY.

MAY 15.

Lessons From Europe

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ADDRESS BY HON. LOUIS JOHNSON, THE ASSISTANT SECRETARY OF WAR

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Louis Johnson, The Assistant Secretary of War, at the annual meeting of the National Board of Fire Underwriters, at New York City on May 23, 1940:

Members of the National Board of Fire Underwriters: Fires always must have had a real fascination for you. As small boys, the clanging bells and the rumbling wheels probably brought most of you in mad pursuit. Many a time, every one of you must have stood spellbound on the curbstone watching nimble-footed firemen running up and down the ladders. Often the more romantic or imaginative among you must have seen yourselves climbing to the third-story window of your home town's most magnificent residence, there to rescue your best girl or her pet cat or even a poor stray pup. The more realistic among you, however, knew that you had neither the temperament nor the training to be firemen and merely stood by enchanted by the destruction itself.

As you grew older and became interested in underwriting, the fire alarm undoubtedly continued to beckon you, but when you responded, it must have been with a feeling that the needless waste and destruction must be checked. You learned that fires can be stopped, or, even better, can be prevented, but you also realized that rushing headlong into the flames is not necessarily the best way to save your home, or your property, or even to put out your neighbor's fire.

Tonight, I want to talk to you about a great fire, the worst conflagration of modern times. Europe and Asia are ablaze. Some of us, like helpless children, feel that we can do nothing but stand idly by, spellbound by the awful destruction. We seem to be fascinated by the interplay of forces in the Baltic and in the Balkans, in the Near East, and in the Far East, and on the Maginot lines of various depths and proportions. Perhaps, in the nature of grandstand quarterbacks, we try to figure out where the next surprise play in the deadly game of war will be pulled, but appear to have nothing constructive to offer.

Others of us, romanticists at heart, think that we should jump in and fight the flames that have entrapped civilization. To such people it does little good to explain that our efforts may leave us with burned hands and nothing more.

Realists among us recognize grave dangers, both in standing idly by and in rushing madly in. Neither method will save us or our property or our civilization. There is a third way and a more certain way to save ourselves and the Western Hemisphere from war. It is in a strong and united America—so strong on land, on sea, and in the air that no marauding nation will dare risk battle with us and so united in spirit and in good will that no international buccaneers will undermine our institutions or loot our possessions.

Nations that have tried in other ways to save themselves from the holocaust utterly have failed. We should profit by their experience. We can learn from their misfortunes. Let us see, therefore, what lessons we can derive for our guidance from the recent campaigns in Europe.

First comes the lesson that the will to peace, unsupported by adequate national defense, is a certain way to invite war. Holland wanted peace. Belgium wanted peace. Denmark wanted peace. Every one of the small states that now writhes under the crushing heel of a ruthless invader wanted peace. So bent were they on peace that one of them deliberately disarmed. They put their faith in professed friendships only to become vassals of the very state that had promised to protect their sovereignty and their independence. Yesterday, these peaceful, so-called little, nations of Europe slept secure in their isolation. Today, many of them, too many of them, have awakened to find themselves in bondage.

No; the will to peace alone is not sufficient to protect a nation in the world of today; and it makes no difference whether that nation

is little Denmark or big America. The Four Horsemen of the Apocalypse are on a rampage. Those in the saddle are determined to gobble up what others have, and, to gain their ends, they will be governed by no accepted or well-established code of international morality. They bide their time. They attack when the prospect for victory is brightest, without regard to any principle that may be involved.

What has happened in Manchukuo, Ethiopia, Austria, Czechoslovakia, Poland, Finland, Denmark, Norway, Luxembourg, Holland, and Belgium can happen to others. It may happen to us; not today, no; and maybe not tomorrow, but when nations live by the sword their moments of peace with other peoples may prove to be but armistices of convenience or interludes between aggressive acts. Given reasonable prospects of success, they will rip off all masks of pretense and show themselves in their true light.

That is the kind of a world we live in today in 1940. It is not the world of yesterday in which reason had its innings, and we hope it will not be the world of tomorrow; but today force is dominant and we dare not ignore the realities of the situation. We must not be apathetic to what is going on across the seas. An apathetic America is a doomed America. It finds its chief expression in the extreme isolationist who calls out, "Who would dare attack us? We still have the oceans as great barriers. Whom do we fear? The warring nations have all they can do in the present theaters of operation without taking us on in addition."

These arguments are specious. In the first place, the Atlantic Ocean never has been an insurmountable barrier. It has been jumped before. In 1812 the British landed troops along the Chesapeake and marched on to Washington because our Navy was too small. In 1864 the French dropped anchor in Mexican waters and set up a puppet state in the capital because we were too busy fighting elsewhere.

What has been done before can be done again. If our Navy is not big enough and strong enough, hostile troops again may land on the shores of the Western Hemisphere. If our fleet becomes involved in one ocean, we may find ourselves without the ships and the men to thwart attack in the other.

Besides, we have a new weapon with the sky as its limit. With what has taken place in the Low Countries, and in Scandinavia, and in their adjacent waters, who would be so bold as to say that our ships at sea and in our territorial waters are immune to air attack? The bomber is in its infancy. Who knows its full potentialities?

To be sure, the ocean has not yet shrunk to the width of a river. Its crossing is still a military hazard. It is still a barrier, but it never was completely formidable, and is even less so, now that the modern bomber has entered upon the military scene.

In the second place, we must realize that the present war already has jumped the Atlantic Ocean. Greenland is America. Denmark, its erstwhile owner, has lost her sovereignty. The Dutch West Indies are in the Western Hemisphere. Holland, their owner, is fighting for her life. In the past, we have been very careful to preserve the tone of our zoned district. We forbade intruders. We kept out those who did not live by our American standards. Who will rule over Greenland, therefore, is the business of America. Who may try to take over the Dutch West Indies is the concern of the free republics of the western world. In the hands of an un-American power, these parcels of American territory may prove not only distasteful to our American way of life but dangerous to the security of our whole Western Hemisphere. The repercussions of the war in Europe, therefore, already are felt on this side of the Atlantic Ocean. It is folly to blind ourselves to facts.

Finally, we must recognize a new technique in war which does not necessarily depend on the crossing of oceans by hostile ships, planes, or transports. I refer to the Trojan-horse strategy of the so-called "fifth column."

The Communists may have been the first to adopt this technique but their methods are crude and archaic when compared with those of the efficient Nazis. Both cater to the instincts of greed, jealousy, force, and ill will. The Communist aims to set up the solidarity of the masses against the so-called classes to cut across all national boundaries. He preaches a reign of the proletariat by the proletariat for the proletariat. He plots revolution against capitalist society everywhere. He bores from within to attain his diabolic purposes. In the end, he serves none but an oligarchic clique in thirst of world power.

The Nazi tries to set up a solidarity of the so-called Nordic race. He appeals to all who suffer from an inferiority complex. He, too, cuts across national borders and beckons to his banner malcontents of all countries. He, too, plots revolution. He, too, bores from within. First, he pits Aryans against non-Aryans, and then one religious group against another. He threatens and frightens. He distorts and confuses. He, too, plans for the overthrow of capitalism. In the end, he serves not a race, for who are more Nordic than the Norwegians, and who are more Germanic than the Dutch, but a self-anointed group who crave world domination.

Both the Communists and the Nazis plant cells in foreign countries to overthrow existing governments and to drag other peoples into their own orbit. Both make the "fifth column" part of their military strategy. Yes; there have been significant victories, on land, on sea, and in the air, but before we are ready to hail the military achievements of the Germans in the low countries and in Scandinavia as superior feats of arms, weapons, and leadership, we would do well to recognize the contributions of the "fifth column" which in many cases paralyzed resistance.

Here we have a most important lesson to learn from the war. America must be immunized against the Trojan-horse technique. We must be on the alert for any manifestations of un-Americanism in any form, not only in the United States but in every one of our American republics. They mark the beginnings of the despicable infiltration of revolutionary ideas whose ultimate aim is a weak and pusillanimous America.

In our American stables, there should be no stalls reserved for Trojan horses. On our American picket line, there should be no room for these instruments of revolution. The color of the horse is unimportant. Communist or Nazi, the motive is the same—confusion and distrust in the ranks of America as a means of destroying the capitalist system, of overthrowing the American Constitution, and of weakening our national defense. There is no halfway house between despotism and democracy.

The best defense against this Trojan horse, however, is not in our arms, but in our hearts. Intelligent loyalty must be built out of hearts and brains of whole people. If we, every one of us, adhere to the code of America as laid down in the Bill of Rights, neither nazi-ism nor communism, nor any other cult of chaos will find fertile soil here. If we uphold and protect our American institutions, we will keep down the elements of sabotage in any form.

So far, I have discussed some of the political implications of the present campaign. Now, let us look at the purely military lessons.

First, I would place the vindication of air power. At Munich, the bomber was but a threat. In Poland, against decidedly inferior planes and fliers, it was a fact but met little or no opposition. In Norway, it came face to face with more formidable weapons and won a clear-cut smashing victory. Today in Belgium and in France, Germany's mighty air armada is reducing fortifications to shambles and smashing columns to bits. He who is ready so soon to count out the navy, as the German high command tries to do, is hasty to the point of foolhardiness. Certainly I do not. Brittannia still rules the waves. Germany is still relatively landlocked. British ships still ply the seven seas. The German merchant marine has disappeared. Even if we granted that in narrow straits, such as the Kattegat and the Skaggerrak, the plane is more deadly than the battleship, the fact still remains that the navy is supreme on the high seas. Nor am I ready to cede supremacy to the air over ground troops. The bombers may lead in the blitzkrieg but it is the mechanized columns that have broken through the lines.

The lesson to us is not to put our eggs in one basket, not to overestimate the importance of any one service, arm, or weapon. Adequate national defense dares not ignore any service, arm, or weapon. We must have a Navy second to none; yes, and a well-balanced air force second to none. Each has become an M-day force whose power may be tested on the immediate outbreak of hostilities. Each must be ready to get into action at a moment's notice.

The next important military lesson is to recognize the part that bases—sea and air bases—play in modern war. As soon as Berlin gave the green light for the campaign in Scandinavia, Germany seized the principal sea and air ports. As soon as London recovered from the paralysis of the first shock of surprise, Great Britain moved out, but too late to get more than one or two bases for herself. When the Nazi troops captured the key bases, the outcome of the campaign became settled.

On the heels of raiding parties, Germany invariably has marched in with mechanized columns and infantry divisions, and, as always in warfare, the ground troops exploited and solidified the initial gains. Had the invaded possessed strong land forces, they could have driven out the enemy from the air and sea bases as soon as they sized up the situation. Again, as since time immemorial, it was the presence or the absence of well-organized, properly equipped, and fully trained ground troops that ultimately accounted for victory or defeat. In Holland and in Belgium Germany repeated the same technique of raids, raiding frontiers, establishing bases and exploiting the initial success by the use of mechanized columns and infantry devices.

In America, too, air and sea bases hold keys to national security. We must have a strong Navy, a powerful air force, and a well-balanced Army, capable of establishing and manning forward bases anywhere in the Western Hemisphere. To hold these bases and to protect those we already have, we must depend principally on ground troops, on infantry, artillery, antiaircraft, and other land units. The need for a well-rounded team of land, sea, and air defense is obvious.

Another lesson is the importance of military intelligence. In war, one must know not only the capacity of the enemy but his probable intentions. It is not safe to figure that he will observe the established rules of warfare and of international law. In the world of today, we can well expect deliberate violations of neutrality. We must prepare accordingly. One must be ready, therefore, to meet thrusts of all kinds in any direction. To do so effectively requires efficient intelligence service. We must give it every thought and every consideration in our own national-defense program.

Above all other considerations, the present war emphasizes the need for well-balanced and fully equipped national-defense teams. It did not need a war to prove that fact to any student of military history. Not only Germany, but Great Britain and France realized it. The difference was that Germany has had in all theaters of operation the required engines of war. It took years to build them. Military arms and equipment cannot be bought in the open market

place. They cannot be built in a hurry. Today, we behold a spectacle of Great Britain and France, rich in money but weak in munitions, forced, temporarily at least, to bow to Germany, poorer in wealth but stronger in sinews of battle. On M-day, Germany had the guns, the planes, and the trained men. The Allies did not.

There is the lesson for us. Yes, we have enough money to buy anything that is for sale, but munitions are not available at the counter. We have the capacity to build them, but we cannot do that in a hurry. Weeks, months, and, in most cases, a year or two may elapse before we can get all of the military equipment we need, even if we ordered it today. Every day we delay is a day lost in our quest for supply preparedness. We have begun to build, but let us not be satisfied until we have put aside in our vaults of national defense all of the sinews of battle that present production problems in terms of time.

I have devoted my remarks to a discussion of lessons from Europe to assure you that we in the War Department are following the campaign analytically and dispassionately, ever on the alert for developments in tactics, technique, and weapons that will help us to strengthen our own defenses. We think only in terms of defense. We see a devastating fire across the seas, and we must not let it spread to our shores. We must build our ramparts so high and so strong that the flames will not be able to shoot over them or through them to endanger our lives, our homes, and our institutions.

Relief Bill

EXTENSION OF REMARKS

OF

HON. CLYDE L. GARRETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

Mr. GARRETT. Mr. Speaker, one of the tragedies of the American life today is that vast army of unemployed who wander along hopelessly lost without work for their hands and with desperation in their hearts. We have heard much said about this bill for the relief of these people.

In my section of the State of Texas there is a crying need for every job which has been proposed under this bill and every amendment which has been offered. These people whom I represent are not necessarily just the common laborers who have for years gone from one job to another. There are a few such people in the numbers. Many of them are men who have worked at skilled trades, many of them are farmers forced from their tenant homes by the mechanization of the farms, and many of them skilled office men and men of education. They need work. They can and would do good work but they are stranded in our part of Texas with the passing of an oil boom which offered them much and did so little for them.

I have voted for every appropriation asked for these people. Human welfare and human happiness goes before in my creed that of the money changer and the selfish greed that motivates too many lives in this country. Daily letters come through my office telling the story of still-born babies, due to malnutrition of the mother, crying children who want food, and fathers in desperation asking that something be done to alleviate the condition of their families.

Had I heart of stone, ice water for blood in my veins, and a soul that was dead with greed, I could not resist the pleas that have come to me. Many of them are men whom I have known in better circumstances, many are from men whom I knew as children and with whom I went to school. Their cry is my cry, and their plea is my plea. I will stand by them until some economic change is made whereby they can earn the provender for their children and secure the happiness for themselves which is their innate and inborn right. The condition of many of our west Texas counties and cities is desperate. Their tax resources are fixed by law, and they have to meet their expenses under the schedule laid down for them in the law. They cannot handle the problem by direct relief, and they do not have the money for huge outlays and the sponsor's part of such a program. The requirement of 25-percent average is too high with most of them far in debt, and the funds of their taxpayers already, in some instances, pledged for years ahead. They have borrowed their limit, their tax rate at the maximum, and the valuation of their property far beyond its sale value. It is a gloomy picture which I could present, but we face the problem with courage and continue making an effort by all legitimate means to secure our part of the program.

I have favored the increase which was made last year in the wage scale, for I knew that many hungry families were sacrificing food that the bread winner might have enough to eat. It is at best a mere pittance and I do not believe that men should be required to work for a mere bread-and-meat allowance. They do their best and the wage scale is still too low for those who have homes and responsibilities.

I was opposed to the 18-month rule which required that men or women who had worked for that period of time should be laid off and compelled to go without the necessities of life in a land where there was no work to be had. It was cruel and unjust to a people who were in desperation. I was opposed to it then and I am still opposed to it.

The W. P. A. has meant much, not only to our needy and deserving unemployed but also to our towns, schools, and cities. But in the building of these schoolhouses, courthouses, jails, farm-to-market roads, parks, and other public conveniences the funds of the local people have been exhausted. The sponsors have about gone their limit. Now there is no more except a sum which slowly comes in from taxes in an ever-dwindling stream. The load is heavy and the burden excessive. It is now becoming a struggle to find something to do and something to do it with. What the future offers for these people I cannot say.

Discriminations are alleged against those who have passed what the cold business world calls their days of usefulness. Men of 45 and over have a hard time even getting on the W. P. A. No private employer wants to hire a man of that age. Therefore I favor those men above 45, who have dependents and who are in need of employment, being given preference on W. P. A. projects. They are those who now have the least chance in life. Our veterans who need this work are given preference, but we failed to say one word in the last law about that wife who has a sick husband—a veteran—and must work to support him and his children or that widow of a veteran who has not been given the benefit of a pension. Why not show them and the older people some consideration in this bill and give those who have passed the age at which they can or will be employed in private employment the first chance at the work.

The W. P. A. program and workers have faced sneers, jeers, and criticism from the unthinking and uninformed people. Let us look at a few of the things which have been done under the W. P. A. program. Multiplied miles of good roads are to the credit of W. P. A. Courthouses in several towns in my district, schools in almost every town in the country, parks for the use of the public, auditoriums, libraries and clubhouses, playgrounds dot the landscape. Hundreds of needed garments have been made in every town in the country in our splendidly equipped and well-supervised sewing rooms, and this clothing has been productive of some pride and the development of skills which will be of untold benefit to our people. Some have referred to these W. P. A. projects as "rat holes" down which public money has been poured. Yes; they may be rat holes, but I am still in favor of them when they are used as the means of feeding the hungry, caring for the sick, clothing the needy, bringing hope to the hearts of the young, and easing the burdens of the aged. I am supporting the W. P. A. and the requests of the President, and will continue to do so until something better can be offered, and I have no apology to make for any vote that I have cast for any sum which has been offered. One hungry child fed or one sickbed eased of its pain is all the payment that I ask for having let my heart dictate to my mind and not my mind sour the milk of human kindness in my soul.

General Johnson Ridicules Lippmann-Kaltenborn-Dorothy Thompson Third-Term "Blitzkrieg"

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. MUNDT. Mr. Speaker, Gen. Hugh S. Johnson is a Democrat. He recently addressed one of the big Jefferson Day Democratic dinners. His true allegiance to genuine Jeffersonian democracy is not doubted by friend or foe. But Gen. Hugh S. Johnson is more than a Democrat. He is an American. As a patriotic, soldierly American General Johnson calls his shots as he sees them and resents and resists any attempt to utilize the dislike for dictators abroad to foster one-man government upon Americans at home. So in the following article, reprinted from today's issue of the Washington Daily News, General Johnson exposes the shallow, panicky reasoning of those who argue that to defend America adequately we must continue in office a President who has failed to modernize our defense in the past despite the expenditure of $8,000,000,000 in the past 7 years. If it were not plagiarism, I presume General Johnson would call such reasoning "spinach."

THE PRESIDENT MAY RENOUNCE THIRD-TERM AMBITIONS IN SUNDAY NIGHT'S FIRESIDE CHAT

Alf Landon yesterday asked the President to publicly announce that he would not accept a third-term nomination if offered to him at the Chicago convention. Mr. Landon stated that this would do more to contribute to national unity and to the preservation of democratic traditions in America than any other one thing. Mr. Landon pointed out that such a public disavowal of any intention of using the European war situation for political self-advancement would be heartening news throughout America. The President's secretary stated he was too busy to answer that question immediately. Since the President is to deliver another fireside speech next Sunday night, he may well take the occasion to eliminate himself as a third-term contender and thus contribute mightily to the unity of purpose which all Americans agree is important at the present time. He is taking time out to make the speech. America will be listening curiously to learn whether he will take the occasion to answer Alf Landon's question. If he does, whether Democrats or Republicans win next November, American self-government and traditional concepts of democracy will be preserved and the President will be able to present his programs to America during the remainder of his term devoid of either political significance or suspicions.

ONE-MAN'S OPINION

(By Hugh S. Johnson)

ST. LOUIS, MO.—One principal reason why I came out here to St. Louis, the metropolis of the great valley, was to check up as well as I could on certain statements so frequently repeated in the East recently.

One is that this great hinterland people so short a time ago opposed to our taking any part in the war in Europe have now changed their minds. Another is that the President's message on defense has so "electrified" and "unified" them for his foreign policies that an election this fall would be a mistake—that it is no longer necessary. They want a third term for Mr. Roosevelt as a measure of national preparedness.

Mr. Walter Lippmann, Miss Dorothy Thompson, and radio commentator H. V. Kaltenborn seem to have fallen for this line, or at least have stressed various angles of the move to suppress our two-party system on a belief that what we need is unity. That is also the White House janissariat and third-termite line. It is at the bottom of the President's dramatic but tricky presentation of the preparedness bill and of his coquetry to seduce a healthy opposition party by the so-called coalition Cabinet idea.

Well, it is my observation among this valley people of my own beginnings that it is all a bunch of bunk. This Midwestern country no more approves the President's policy of sticking our necks out into the foreign imbroglios of Europe and Asia than it ever did, and that was not at all.

It does approve the spending of whatever is necessary for American defense. It always did. It needed no "unification" on that either by the President's speech or "coalition Cabinet." It is shocked to learn at so late a date that this administration, while spending so many billions for boondoggling and some useful work, has permitted us to remain so delinquent in defense that we have practically no armament against the dreadful weapons of modern war. It is beginning to realize that it has not heretofore been told the truth about this defenselessness.

It is especially indignant to learn that as early as 1933, when Hitler started the "mechanization and motorization of army tactical units" which is now conquering civilization, and which then erased the unemployment problem in Germany, Mr. Roosevelt was authorized by Congress to spend any part of $3,300,000,000 that he chose for the same purpose—and spent it and many billions more for other and far less necessary purposes.

Mr. Roosevelt made an effective rearmament speech and got a lot of applause. But the facts are leaking out that he was making a virtue out of his own neglect and inaction in defense; that the appropriation he asked for was unplanned and inadequate; that the speech and the subsequent coalition Cabinet stuff was pure third-term politics and had little to do with increased industrial defense production, which is the essence of our problem.

The Lippmann-Thompson-Kaltenborn theory that we must perpetuate Mr. Roosevelt and pipe down any opposition because of the administration's great capacity for major effort and defensive dependability is beginning to look silly in view of the slowly appearing fact that the administration has failed and fumbled in defense. This tragic failure is of a piece with its unbroken record of failure in every major effort—industrial recovery, reemployment, and agricultural "parity." It has had unprecedented powers. It has spent billions. It has tried no less than 20 major plans. It has succeeded with almost nothing.

This is no record upon which to base a demand for reelection, the suppression of opposition, and a coalition to support such invariable and dangerous errors. If anybody believes that burghers of the Middle West swallow this stuff, they must have been born east of the Hudson River.

The National Defense

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

TELEGRAM FROM THE NEW JERSEY CHAMBER OF COMMERCE

Mr. VREELAND. Mr. Speaker, it is with a great deal of pride that I insert herewith a telegram forwarded to the President of the United States offering cooperation of the New Jersey State Chamber of Commerce for national defense, as follows:

The PRESIDENT,

The White House, Washington, D. C.:

The New Jersey State Chamber of Commerce tenders the cooperation of the industry, agriculture, and commerce of this State in support of any adequate and sound defense program which the Congress of the United States may formulate to meet the Nation's needs. We are prepared to aid the National Government by assisting in the coordination of the commercial and productive activities of New Jersey behind such a program.

The New Jersey State Chamber of Commerce believes it can render a useful service in helping to gear New Jersey enterprise to the national requirements. We suggest that this program include cooperation with Federal and New Jersey governing bodies to foster increased business activities. We will aid in reporting to the public and to the National Government the problems of business and the necessity for maintaining confidence in private enterprise during these critical times.

We volunteer our services to assist National and State authorities in aiding New Jersey manufacturers in the production of materials and equipment required for our national defense.

We offer to cooperate with the proper public officials in developing a plan through which employable persons may be placed in new production activities incident to our defense program and thereby help to reduce relief rolls.

ROBERT T. BOWMAN,

President, New Jersey State Chamber of Commerce.

Maladministration of Public Affairs in Puerto Rico

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1940

LETTERS FROM MILES H. FAIRBANK, HARRY S. BARGER, AND E. K. BURLEW

Mr. CRAWFORD. Mr. Speaker, the following correspondence should be carefully studied in connection with the recent testimony of Miles H. Fairbank before the Subcommittee on Deficiencies, Committee on Appropriations, House of Representatives, pages 93 to 162. Further reference is made to certain reports filed with Mr. Burlew by Mr. Barger. Those interested in Puerto Rican affairs can well afford to study carefully all of this data which is made available to Members of Congress.

PUERTO RICO RECONSTRUCTION ADMINISTRATION,
San Juan, P. R., October 8, 1937.

Memorandum to: Mr. Harry S. Barger, Chief of Investigation Unit.
From: Mr. Miles H. Fairbank, Acting Assistant Administrator.

I have just finished reading the report on the Del Rio land purchase. I must confess that I consider this report (like the previous report on the compensation section) practically worthless from the standpoint of advising this office. Both reports, instead of sticking to a bare recital of the facts, as required in any impartial investigation, are so replete with personal opinions and rather vehement statements that one is constrained to believe that the investigator proceeded with predetermined prejudice. Obviously no such report was requested or is required.

If you have under consideration any other matters, please be advised that an impartial statement of facts is what this office desires.

MILES H. FAIRBANK,
Acting Assistant Administrator.

I hereby certify that the above is a true and correct copy of, and made by me from, the original of the memorandum dated October 8, 1937.

ALFONSO GRAU.

OCTOBER 9, 1937.

Memorandum to: Mr. Miles H. Fairbank, Acting Assistant Administrator.
From: Harry S. Barger, Chief, Office of Investigations.
Subject: Your memorandum of the 8th instant, concerning the investigative reports submitted in the Del Rio land purchase and compensation section cases.

In all the work I have done along investigative lines, for and with other governmental agencies, it has been requisite that the reports should not only show and recite the facts disclosed by the investigation, but conclusions, findings of fact, and recommendations as well.

When I came to Puerto Rico Reconstruction Administration, I was instructed to submit like reports; and the numerous reports submitted by me to date have been meant and intended to conform to those instructions.

Your memorandum is taken as instructions for the future reporting of investigations, and I shall omit therefrom conclusions of facts drawn from other proven facts, conclusions of ultimate facts, and findings of facts.

Recommendations will be continued unless you indicate a contrary wish in that regard.

HARRY S. BARGER,
Chief, Office of Investigations.

WASHINGTON, D. C., *July 12, 1938.*

Hon. E. K. BURLEW,
First Assistant Secretary, Department of the Interior, Washington, D. C.

MY DEAR MR. BURLEW: As you doubtless know, the writer served the Puerto Rico Reconstruction Administration in the capacity of chief, office of investigations, for approximately 19 months; and that my appointment to that position has just been terminated.

Numerous facts, circumstances, and conditions came to my notice during that employment which have impelled me to the conclusion that very many things have happened, and are happening, in the Puerto Rico Reconstruction Administration which, due to its organization and set-up, are unknown to the Administrator and you; and my sincere belief is that, if those things were known, they, or most of them, would not receive ultimate official sanction and approval.

Recently I endeavored to see you with a view to discussing these matters in person. Your secretary, Mrs. Rowe, quite naturally inquired the nature of my business, and when I stated in a very general way that I desire to discuss with you certain aspects of the P. R. R. A., she suggested that I present the matters in the form of a memorandum. Accordingly, I am sending with this letter, a memorandum stating, as briefly as possible, the matters I have in mind, for whatever they may be worth.

If I did not do this, I should not feel that I had discharged a duty I owe to the Administrator, to you, and to the Government, or that I had kept the faith with my own conscience.

Very truly yours,

HARRY S. BARGER.

UNITED STATES DEPARTMENT OF THE INTERIOR,
OFFICE OF FIRST ASSISTANT SECRETARY,
Washington, January 11, 1939.

Mr. HARRY S. BARGER,
2844 Wisconsin Avenue, Washington, D. C.

MY DEAR MR. BARGER: On July 12 last you presented a memorandum outlining observations concerning the relief and rehabilitation work carried on by the Puerto Rico Reconstruction Administration.

The 21 charges made in your communication have been gone into carefully and, with the exception of two, which had already received administrative consideration and action, we are convinced that they have no foundation in fact.

The Department has every wish to protect the interests of the Government and I believe it has taken all reasonable steps to safeguard them.

Sincerely yours,

E. K. BURLEW,
First Assistant Secretary.

Why a Dictator?

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1940

EDITORIAL FROM THE SOUTH BEND (IND.) TRIBUNE

Mr. GRANT of Indiana. Mr. Speaker, confronted with the mad onrush of totalitarianism abroad and the third-term "blitzkrieg" here at home, it is important that the American people keep their feet on the ground.

I include herewith an interesting and well-written editorial touching on this subject that appeared, under date of May 21, 1940, in the South Bend (Ind.) Tribune.

[From the South Bend (Ind.) Tribune of May 21, 1940]

WHY A DICTATOR?

Alfred M. Landon was not a narrow partisan when, in the role of titular leader of the Republican Party by virtue of his Presidential nomination in 1936, he asserted last Sunday that a vigorous partisan Presidential campaign, as usual, is a national necessity. He and many other thoughtful Americans are deploring the suggestion cabled from Paris by Dorothy Thompson that President Roosevelt be reelected practically by acclamation as a demonstration of American unity to bolster British-French and European neutrals' morale and frighten the Nazis.

The Thompson suggestion, however, is valuable in one sense; it gives the American people tremendous incentive to study their established political system and its vital relationship with the general system that has contributed to national progress. The United States, if it is to survive as "the land of the free and the home of the brave," needs at least two perennially vigorous major parties. What Miss Thompson proposed, in effect, was dictatorship by acclamation. If her plan were adopted, if the Republican Party did not make a Presidential nomination this year, notice would be served on the world that the United States, even without being involved militarily in the European war, was voluntarily swallowing the political poison that has contributed to the current debacle overseas.

Miss Thompson did not suggest that Republicans also refrain from contesting with Democrats for seats in the United States Senate and the House of Representatives, but she might as well have extended it. If the Republican Party, with public approval, permitted Franklin D. Roosevelt to be elected for a third term by

default to "demonstrate American unity" it would amount to service of notice on every person elected to Congress this year that the Presidency was paramount. If it were dangerous, as Miss Thompson says it would be, to oppose Mr. Roosevelt for the Presidency, to which he has already been elected twice, it would be just as dangerous, for the same reasons, for Congress to question his judgment after the election.

An important point that Miss Thompson did not mention when the German invasion of Holland, Belgium, and France set her afluttering in Paris, is that the man elected President this year cannot be removed from office, if the experiment turns out badly, so easily as the parliamentary heads of government in Great Britain and France. The man elected President this year will be President for 4 years—and that is a long time in this period of quick general changes—barring death, voluntary resignation, or formal impeachment. The latter process naturally is complicated. To counsel election of anybody to the Presidency practically by default with that long-term prospect in mind is to reason that the United States is ripe for a rule by a "benevolent" Mussolini or a Hitler.

If the American people, in a great emergency, were to consider seriously bestowal of another term upon a President practically by acclamation the first vital requirement would be a White House incumbent possessing a broad mind. The present incumbent, of course, is not a partisan on the traditional pattern. He is not, however, nonpartisan in a constructive sense. He has made it plain that he regards the label of the party that he has used for election and reelection merely as an instrument for personal government. He has been a vindictive President.

He has used Government power to assault every important individual and every organization, including the Democratic Party, that has refused to bow to his will. He is a partisan in a sense more dangerous than the normal Republican-Democratic rivalry. Intemperate expressions and intemperate acts are the most distinctive stamps of this Roosevelt administration. In sum, this President whose reelection without opposition would be classified by pansy-and-pink light theorists as a convincing demonstration of unity has incessantly promoted national disunity. The theory that constructive unity could be achieved by establishing him as a practical dictator would appear peculiar even in the pages of Alice in Wonderland.

It seems that Miss Thompson is a mere reflector of the European opinion, at least that part of Europe embraced in the Allies and neutral nations, that Mr. Roosevelt is the best possible American President—for European "democracies." By going to Europe, making certain of that European attitude and becoming a propagandist for it in her own country Miss Thompson has provided Republicans with even more practical incentive to make the best possible nomination for the Presidency from their own ranks this year. She has unwittingly bestowed an accolade upon the Republican Party to attack the radical New Deal with maximum courage and intelligence.

Labor's Stake in Free Government

EXTENSION OF REMARKS
OF
HON. CHARLES KRAMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1940

ADDRESS BY SECRETARY HAROLD L. ICKES

Mr. KRAMER. Mr. Speaker, on last Saturday, May 18, the Honorable Harold L. Ickes, Secretary of the Department of Interior, delivered an address on the occasion of the twenty-fifth anniversary of the Amalgamated Clothing Workers of America at the New York World's Fair Grounds.

Secretary Ickes' remarks were a splendid and deserving tribute to Mr. Sidney Hillman, president of the garment workers' group. It was most gratifying to learn of the great strides that have been made in behalf of labor through the aid of the Democratic Congress, and the far-sightedness and leadership of our great President, Franklin Delano Roosevelt.

The closing remarks of Secretary Ickes inspire me to ask unanimous consent to include in my remarks this radio address, so that it may be read by those who for some reason were unfortunate not to hear the most inspiring address and tribute paid to our great national leader, President Franklin Delano Roosevelt, whom we know will not let the people down and will carry on as a faithful soldier by accepting the demand of the people of the Nation to continue on as our leader for another 4 years.

Friends and fellow workers, I am glad to participate today with members and friends of the Amalgamated Clothing Workers of America in this celebration of its twenty-fifth anniversary. You who are members and we who are friends should be very proud of our association with an organization which has not only vindicated the dignity of labor in its struggle to bargain collectively but which has also demonstrated the capacity of organized labor to be a moving force in promoting industrial efficiency and in maintaining a socially just democratic society.

I have always been sympathetic with and interested in the trade-union movement. To me it is a truism that organized labor, effectively and intelligently led, as your phase of it has been, not only gives strength to the workers but to the Nation as a whole.

Shortly after the Women's Trade Union League was organized in Chicago in 1904, under the brilliant leadership of Mary McDowell and Margaret Dreier Robins, I volunteered my services when it decided to go to the legislature with a bill limiting the hours of labor of women in industry. It was not an easy fight. The manufacturers associations were fighting us, the lawyers were fighting us, and there was a troublesome decision of the Supreme Court of Illinois that seemed to say that our bill was unconstitutional. Fortunately, however, about that time a distinguished lawyer from Boston, Louis D. Brandeis, appeared before the Supreme Court of the United States to defend the State of Oregon in a similar case. He spoke with an eloquence and social consciousness which caused even the Supreme Court of the United States to forget its old precedents. That gave us the strength to press our 10-hour law through the Illinois Legislature and to defend it successfully before the Illinois Supreme Court. Other States soon followed the trail that Oregon and Illinois had blazed, first with 10-hour laws and then with lower limitations.

I am also proud to recall that my association with the Amalgamated really antedates its actual birth by several years. That association dates back to the clothing workers' strike in Chicago in 1910, known as the Hart Schaffner & Marx strike.

My friends of the Women's Trade Union League also threw themselves heart and soul into that fight. So did Hull House, that living monument to the greatest woman of her generation, Jane Addams. Pickets came not only from the ranks of the workers and sympathetic trade unionists but from Hull House, the University of Chicago, and the North Shore. My wife was one of those who took her place in the picket line, while her mother sat in the police station signing the bonds of all arrested strikers and pickets.

The police were needlessly rough with the picketing strikers, but they were careful to be duly respectful to those of us who were lending a helping hand. However, they made an extraordinary slip. They arrested Ellen Gates Starr, cofounder with Jane Addams of Hull House. I undertook to defend her, and much to the distress of the authorities, I insisted that her case be tried even after the strike had been settled and other arrested pickets had been released. Despite the sworn testimony of three hefty policemen that they had arrested Miss Starr, who was a frail little lady, because she had put them in physical fear, she was triumphantly acquitted by judge and jury.

I do not want to give you the impression that the strike was won for the union by its friends outside of the union. On the contrary, the so-called respectable element in Chicago, by and large, was alarmed at the efforts of the garment workers to assert the right to organize and bargain collectively for the improvement of their working conditions. It was bruited about that many of the workers, including their leaders—the "ringleaders," as they were contemptuously called—were immigrants who had no understanding of American institutions.

From my associations at Hull House with Jane Addams I knew too much about the immigrants—"those huddled masses, yearning to be free"—to be taken in by the horrendous reports about their "un-American" activities. But I must confess that when I first undertook to help the strikers—some of them boys still in their teens—I feared that, however good their intentions may have been, they had been rash, impulsive, and headstrong.

But when the first excitement of the strike subsided and employers and workers gathered around the table to discuss their common problems, my smug complacency was jolted. I found that I had more to learn from these boys than they had to learn from me. Even Jane Addams, Raymond Robins, and Margaret Dreier Robins, who had known the strikers much better than I, glowed with relieved satisfaction as accounts of the progress of the negotiations came in. The employers who had come to the conference table reluctantly, expecting an unpleasant ordeal with arrogant troublemakers presenting exaggerated claims, reported back a rare and inspiring experience.

Fortunately some of the members of Hart, Schaffner & Marx were socially minded to a degree that was unusual in those days for a typical employer. They were willing to put their own cards on the table and to listen to the case of their employees. They found that the strike leaders whom they had suspected, resented, and distrusted as young hotheads, had a keen and amazingly broad understanding of their common problems and a social vision and idealism which revealed a rare and abiding faith in the democratic way of life. So impressed were the employers by the

case presented that they were willing to set up an impartial board on which both industry and labor should be represented and which should be presided over by that rare personality, James Mullenbach, once a coal miner and Protestant preacher, and then the head of the Chicago Municipal Lodging House.

The reports which came back from those conferences to us invariably singled out for especial praise one young man, slight of stature and with gleaming black eyes from which flashed intellectual integrity, indomitable courage, and irresistible idealism. He was, we were told, wise beyond his years and a man destined to be a leader among men. He displayed a rare ability to understand the problems and difficulties of those with whom he had to negotiate and in return he expected an equal readiness on their part to understand the problems and difficulties of the workers.

That young man was Sidney Hillman. He has traveled far since those days, but he has never disappointed those who have put their trust in him.

As president of the Amalgamated Clothing Workers of America, Sidney Hillman has applied himself wholeheartedly and without stint for more than a quarter of a century to the advancement of the interests of American labor.

As president of the Amalgamated, Sidney Hillman has been no partisan politician, but he has eloquently and effectively asserted labor's need for legal recognition and protection. Although he has served the Amalgamated well and faithfully, he has also recognized that labor's strength lies in labor's unity; in labor's willingness to work together to promote the interest of the common man and woman.

No one has worked more ably and assiduously than Sidney Hillman to bring about the enactment into Federal law of fair labor standards for the protection of those workers, organized or unorganized, who are least able to protect themselves.

The Amalgamated may be proud of its leadership, and its leadership may be no less proud of the Amalgamated.

For successive terms the Amalgamated has maintained a continuity of effective and responsible leadership. You have been too wise and too regardful of your own best interests not to retain as your leaders those best qualified to serve you without paying any attention to the length of that service. And it is not without significance that there are few labor organizations more democratic than the Amalgamated.

I believe that it is as much the essence of democracy that people should have the right freely to continue a leadership which they desire as it is that they should have the right freely to discontinue a leadership which they spurn. Modern democracy is not a play where each member of the cast takes his turn at enacting the star role. In the dangerous world in which we live, democracy cannot afford to deny itself the most effective leadership available. This is, indeed, a time to recall the salutary and truly sage advice of George Washington, that there is "no propriety in precluding ourselves from the services of any man, who in some great emergency shall be deemed, universally, most capable of serving the public."

We are not living in an era of peace or tranquillity. We are passing through one of the most fateful periods in the history of mankind. At home our domestic economy is adjusting itself to profound social and economic changes. Abroad brute force and strident ambition march mercilessly against peaceful nations. Dictatorships are on the march to enslave the spirit of free democracy and we have been brought up against the realization that the world cannot exist half Fascist and half free.

However high or low our station, each and every one of us is deeply, anxiously concerned about our country's and our children's future; about their safety, their peace, their welfare in the years which lie just ahead of us.

There is no blinking the facts which President Roosevelt reemphasized in his message last January when he said that "the social and economic forces which have been mismanaged abroad until they have resulted in revolution, dictatorship, and war are the same as those which we are here struggling to adjust peacefully at home" * * * and "dictatorships—and the philosophy of force which justifies and accompanies dictatorships—have originated in almost every case in the necessity for drastic action to improve internal conditions where democratic action for one reason or another has failed to respond to new modern needs and modern conditions."

We have reached a fork on the way of industrial progress. We cannot, if we would, go back to the economic habits of our fathers before the power age. America must choose. On the one hand is the path which we elected to take in 1932 under the leadership of President Roosevelt—the path which calls for the strengthening and revitalizing of the processes of democracy, so that, through them, we may meet the exigent social and economic problems of our time. On the other hand is the primrose path which we chose in 1920—the path which we blindly trod for 12 long years—dodging, concealing, forgetting, and ignoring the pressing social and economic problems of our time—and finding ourselves at the end facing chaos. If we again choose the primrose path we may not be so fortunate, when chaos comes, as to have a President with the self-restraint and wisdom of Franklin Delano Roosevelt to save us from abandoning liberty for the illusion of security.

During the last 7 years, under the leadership of President Roosevelt, we have made more peaceful adjustments to profound social and economic changes than in any period of our history. In the interest of free enterprise and of free labor we have challenged the right of a few to control and exploit the lives, the property, and the labor of the many. We have taken effective measures to protect labor's rights to organize and to bargain collectively, and labor's right to obtain a fair wage for a fair day's work. We have taken effective measures to help the farmers to obtain a fair price for their products and to conserve their precious and irreplaceable soil. We have taken effective measures to protect the savings of investors and bank depositors. We have given work to the unemployed. We have initiated a low-cost housing program. We have made a start at providing social security against old age and unemployment.

These things, and many others, we have done to strengthen and revitalize our democratic way of life. Much has been accomplished; much is yet to be accomplished. And in doing and planning all of this, we have given the common man a real stake in the preservation of our democratic way of life. In doing all of this, we may have trod on a few arrogant vested interests, but let no man say that what we have done has not strengthened our national unity. Let no man say that we have destroyed hope, confidence, or enterprise. The hope, the confidence, the enterprise of the American people lies not in the luxuries of the few but in the opportunities of the many.

If American democracy is to survive, the social and economic gains of the New Deal must become a part of the American heritage. The unemployed are not going to be left uncared for. The industrial workers are going to be organized and bargain collectively through representatives of their own choosing; they are not going to be content with company unions organized for them by Ernest Weir or Tom Girdler. The social security now afforded against old age and unemployment is not going to be scrapped, but is going to be extended upward and downward, and also outward into the field of health insurance. The Securities and Exchange Commission is going to continue to protect our people's savings from the arbitrary control of private economic power.

This does not mean that New Deal reforms are safe from attack. This does not mean that the administration of New Deal reforms can be safely entrusted to men who were openly hostile, or coldly indifferent, when President Roosevelt and his liberal followers were struggling to write them into the law of the land. It is not unfair to ask who are the men, who, having worked night and day to accomplish these great reforms, have come to the conclusion that they could be improved or better administered by others who derive their support from those who bitterly opposed or grudgingly accepted them.

At this critical stage we can afford neither the luxury of a reaction nor the stress and strain of the counter-reaction, if not counter-revolution, which would inevitably follow such reaction. The continuance of the Roosevelt administration is necessary to permit the New Deal's concept of social and economic justice to become an accepted part of our American system. Farsighted men of affairs realize that it is better for business to adjust itself to the new order than to fight to upset it. They know that such a fight would stir up bitter resentment and social discontent and, at best, could be only temporarily successful. They realize that this is no time to turn back the clock. They do not want again to be chargeable with the appalling consequences which would almost inevitably follow a relapse into the primrose path. They look across the war-darkened Europe where the ruling classes thought that it cost too much to buy time, and they say that it is much more important that everyone should have enough than that those who have more than enough should have still more.

As all of us look across at tragic Europe and shudder at the barbaric attacks against religion, freedom, and international good faith, we thank God that we have a President who was the first among us to see what was happening there, and seeing, has stirred us to the need of national defense and national unity.

There has been no man in our time in whom our people have placed their faith as they have placed it in President Roosevelt. There is no man whose word carries courage, conviction, and hope around the world as does President Roosevelt's. The inspiration of his leadership to those about to die for democracy was eloquently told by Dorothy Thompson in her column from Paris last Wednesday.

Nor has there been any time since the founding of the Republic that America has needed such leadership as President Roosevelt has given us to hold America—the whole of America, without regard to faith, race, or wealth—united in the face of great danger.

Today, despite the shoutings of politicians and the clamors of newspapers, which no more represent the people or realize what they are thinking than they did in 1936, there is more political unity in America than at any time in the past. There can be no question of partisanship in a year when our need for strong and experienced and trusted leadership is so great; when the lack of continuing such leadership may mean irrevocable disaster.

It is the people who are calling President Roosevelt. It is the people who are looking to President Roosevelt for continued leadership and will not be denied, because they have the right—the right of a democracy—to choose their Commander in Chief. It is the people, regardless of party, and not the politicians, who constitute the movement to continue President Roosevelt at the helm of the ship of state. The politicians, some of them belatedly, may think that they are doing the leading, but, regardless of their place in the procession, they are only following the people. The surprising thing about this popular movement toward the goal of national

unity is that it is being joined daily by many people, rich and poor, Republican and Democrat, who opposed the President in years past and who still differ with him on many points of domestic policy. As these people express it, Roosevelt, at the present juncture of affairs, is the greatest unifying force of the Nation today, and the unifying force which he represents is the country's greatest need today as we see the uncertainties and, perhaps, even the terrors of a social revolution that is shaking the world.

There is no higher law than the law of self-preservation. This law became part of the consciousness of man while he still dwelt in dark caves. This law is just as compelling today as it was in the beginning. It is this law that is bringing together, at a time of grave crisis, men who never before have seen alike on a political issue.

We know that President Roosevelt is not seeking another 4 years. We know that after 7 exacting and exhausting years in office it is his desire to retire to the quiet of his home on the Hudson—a desire that his true friends would be eager to see gratified, if it were not for the imperative need that the Nation, and humanity, has of him.

At this turning point in our country's history President Roosevelt is in exactly the same position as was George Washington when the country confronted a similar crisis 150 years ago.

Washington, after 7 exacting years as the Commander in Chief of the American forces in the War for Independence and after 6 years of patient struggle to establish an enduring Federal Union, was about the present age of President Roosevelt. He desired to retire to his Mount Vernon home, leaving the management of the affairs of state to other and younger hands. Yet, although independence had been won and the Union established, the people looked to him for the leadership necessary to make national unity a living reality. Washington was a faithful soldier in the cause of democracy, and he did not let down those who had fought democracy's battle with him.

And so we say to Franklin Delano Roosevelt: We the people of the United States have twice elected you President of the United States. We have followed and supported your leadership in your efforts to strengthen and revitalize our democracy. You have served us well, but your work is not done. We consider your continuance in office for another 4 years necessary to give a free people national unity at a time of grave crisis—necessary to give hope and courage to those offering their last full measure of devotion to preserve freedom in a civilized world. At such a time, Mr. President, we must hold you to your promise not to let the people down. We propose to nominate you, we propose to elect you, and we, the people, command you to serve as our President.

Parties and the Poll Tax

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ARTICLE BY FRANK R. KENT

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I insert an article from the Baltimore Sun entitled "Parties and the Poll Tax."

[From the Baltimore Sun of May 15, 1940]

There is excellent reason to believe that eight States of the so-called solid South will be let down pretty badly by the Democratic Party, to which they have so long and loyally adhered, when it meets in national convention the last of July. But it will not do them the least bit of good to get sore. There just isn't a thing they can do about it.

The only alternative they have is to go over to the Republicans, and there is even less tolerance in that party for their especially cherished political device for disfranchising the colored voter than there is in their own. The States affected are Alabama, Arkansas, Georgia, Mississippi, South Carolina, Texas, Tennessee, and Virginia; the device is the well-known poll tax, now under so devastating fire from so many important quarters that it seems doomed, indeed. There is slight doubt that the Republican convention which meets in June will vigorously denounce the poll tax as an iniquitous discrimination which violates the spirit of the Constitution and pledge itself to find some means of exterminating it.

Primarily, the Republicans will do this because of the Negro vote, so large a part of which in the northern debatable States was stolen away by the New Dealers, and which, since 1936, they have been making the most strenuous efforts to recapture. In 11 or 12 of these debatable States for 3 generations the Negro vote had been the basic Republican asset. In 1936, 96 percent of it went for Mr. Roosevelt. In 1938 about 53 percent swung back to the G. O. P. Republican success in the 1940 election hinges upon ability to hold that 53 percent, or increase it. Recent agitation about the poll tax presents an opportunity. It can be accepted as sure that they will not overlook the chance to convince the Negro that the Republicans are his real friends.

On the other hand, it seems equally certain that the Republican denunciation of the poll tax at least will be matched by the Democrats. It is the obvious and almost inevitable politics to play. In the first place, President Roosevelt is already on record as against the poll tax. In the second place, the importance of the Negro vote in New York, Maryland, Pennsylvania, Ohio, Indiana, Missouri, Illinois, and Michigan is recognized by every Democratic leader outside of the South. Whether Mr. Roosevelt runs again or not, the Democratic politicians in these States will compete with the Republicans for this vote. The southern protest, in or out of the convention, will not deter them from steps to block any Republican bid.

The case against the poll tax is a strong one. Recently it has been well presented by Mr. Ulric Bell, in the Louisville Courier Journal, and by others. The most devastating point is that, while this provision does keep the Negroes from voting, it also keeps the whites from voting. In some States it keeps more whites than Negroes from the polls. Its net effect has been to reduce the total vote in the eight poll-tax States to a ridiculously insignificant size. For example, in 1936 only 20.4 percent of the adult population voted in Alabama; 18.5 percent in Georgia; 16.2 percent in Mississippi; 14.1 percent in South Carolina; 26.2 percent in Texas; 25.7 percent in Virginia, 33.5 percent in Tennessee.

But an even more trenchant point is made. The election figures appear to convict these Southern States of clear violation of the provision of the Constitution which bases a State's representation in Congress not upon total population but upon the number of citizens who vote. If this provision were applied to the eight poll-tax States, election statisticians assert that they would lose 57 of their 78 House seats, on the basis of the 1936 election figures. Using the 1938 figures, 65 of the 78 would be eliminated. In 1938, 32 southern poll-tax Congressmen received fewer than 11,000 votes each, and the combined vote for all 32 was 221,270, which is 60,000 fewer than the approximate basis fixed for one Congressman in the last reapportionment. One Representative in Chicago, in 1938, received 28,000 more votes than all these 32 southern Congressmen.

Farm Credit Administration

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

Mr. PATMAN. Mr. Speaker, the crisis in agricultural credit which confronted the administration when it took office in 1933 threatened to bankrupt the farmers of the Nation. It was this emergency need that called the Farm Credit Administration into being by Executive order in 1933. This order not only consolidated within one organization the powers and functions of all the then-existing Federal agencies dealing primarily with agricultural credit, but it provided them with additional capital and authority to deal with the crisis.

In addition to meeting a critical condition through emergency measures, the Farm Credit Administration has as its broader purpose the development of a complete, unified system of farm-credit institutions on a permanent basis to provide farmers and their organizations with long-term amortized mortgage credit and short-term credit at the lowest cost consistent with sound business practices.

FORTY PERCENT OF FARM DEBT HELD BY LAND BANKS

From the organization of the Farm Credit Administration in 1933 through March 31, 1940, the Federal land banks and Land Bank Commissioner have loaned a total of over $2,400,000,000, involving almost 600,000 borrowers. Approximately $1,400,000,000 of this amount has been loaned by the land banks, and $1,000,000,000 by the Commissioner. At March 31, 1940, over 800,000 farmers were indebted to these institutions in the amount of almost $2,700,000,000, the latter figure representing about 40 percent of the estimated farm-mortgage debt of the United States.

FARMERS GREATLY HELPED

The farm-mortgage credit institutions under the Farm Credit Administration were confronted in 1933 with an

emergency situation. Defaults on farm-mortgage loans had mounted to large proportions, foreclosures had risen and a large volume of outstanding mortgage obligations needed refinancing. Sources of farm-mortgage credit had practically disappeared under the conditions prevailing after 1929. The administration's immediate task, therefore, was to stop foreclosures and to render such assistance to farmers whose mortgage loans were delinquent as to enable them to continue in the farming business and share in the ensuing improvement in agricultural conditions. To accomplish these ends the Farm Credit Administration undertook to refinance with Federal land-bank and Land Bank Commissioner loans farm mortgages and short-term indebtedness held by life-insurance companies, commercial banks, and other creditors, and at the same time Congress provided funds to enable the banks to defer principal payments, grant extensions, and reduce the interest rates for a temporary period. To reimburse the banks for extensions granted and deferments of principal, Congress has appropriated in the aggregate $189,000,000. Payments for the temporary interest reduction on both land-bank and Commissioner loans through March 1940 totaled more than $193,000,000.

DEBTS SCALED DOWN

During the emergency period in 1933 and 1934 about 90 percent of the Federal land-bank and Land Bank Commissioner loan proceeds was used to refinance indebtedness. In the course of this refinancing some creditors scaled down their claims to bring the borrower's indebtedness within the amount which could be loaned by the banks and the Commissioner. Such scale-downs were effected in the case of one out of every four borrowers and averaged about one-third of their previous indebtedness. For the entire period, May 1933 through 1939, such scale-downs have amounted to more than $200,000,000.

INTEREST RATES GREATLY REDUCED

Interest rates paid by farmers refinancing through the Federal land banks and the Land Bank Commissioner during the period May 1933 through December 1939 have been lowered materially from those previously paid. The average rate paid by such borrowers prior to refinancing was 6.2 percent, which compares with a rate of slightly less than 5 percent after refinancing. In addition, these borrowers received the benefit of the temporarily reduced interest rates on land-bank and Land Bank Commissioner loans provided by Congress. The competitive effect of the land-bank lending activities has also tended to reduce the interest rates charged by other farm-mortgage lenders which, in turn, has been beneficial to farmers outside the land-bank system.

FARM HOMES SAVED FROM FORECLOSURE

Through the refinancing program of the Farm Credit Administration, thousands of farmers were able to retain possession of farms which in 1932 were threatened with foreclosure. In that year forced sales of farms through foreclosure, bankruptcy, and so forth, averaged 38.8 per 1,000 farms for the United States as a whole. Since then the rate has fallen steadily and for the year 1939 is estimated at about 11.

FINANCING AND REFINANCING FARMS HELPS OTHERS

Farmers were not the only beneficiaries from the refinancing program since insurance companies and commercial banks which were hard pressed for funds in 1933 by reason of the general financial collapse received millions of dollars in the refinancing of their farm-mortgage loans and frozen short-term agricultural paper which permitted these institutions in turn to meet the demands of their policyholders and depositors. Likewise, State and municipal authorities were the recipients of similar sums in connection with the payment of delinquent taxes with the proceeds of land-bank and Land Bank Commissioner loans. Thus the refinancing activities of the Farm Credit Administration during the period 1933–35 stand out not only as an important contribution to American agriculture, through assisting many farmers to retain farms which might otherwise have been lost through foreclosure, but also as a contribution to the restoration of order in the economic structure of the country.

GREATER NUMBER OF LOANS FOR PURCHASE

With the decline in the demand for refinancing after 1935, there has been an increase in the percent of loans made for the purchase of farms. While only about 3 percent of land-bank loans closed in 1934 was used to purchase farm property, about 23 percent of loans closed by the land banks and the Commissioner during 1939 was used for this purpose. Since 1935, when the Land Bank Commissioner was first authorized to make loans for the purchase of farms, to the end of 1939, about 25,000 farms, involving almost $85,000,000, have been bought with the proceeds of land-bank and Commissioner loans. In addition, during this period about 57,000 farms, representing approximately $124,000,000, were sold by the banks and the Federal Farm Mortgage Corporation.

SYSTEM ROUNDED OUT

To round out and complete a system which would be fully prepared to meet the credit needs of American agriculture, the powers and resources of certain agencies were enlarged by the Emergency Farm Mortgage Act and the Farm Credit Act of 1933 and provision was also made for certain other institutions. With the addition of these institutions, the Farm Credit Administration now has under its supervision four permanent lending agencies: First, the Federal land banks established in 1917 for the purpose of making long-term amortized loans on farm real-estate security; second, the Federal intermediate-credit banks created in 1923 as agricultural banks of discount; third, the production-credit system authorized in 1933 and made up of production-credit corporations and associations making short-term loans; and, fourth, the banks for cooperatives also authorized in 1933 which make loans to farmers' cooperatives. These institutions are designed to meet the entire range of needs of farmers for credit accommodations to finance their production, marketing, and purchasing operations upon terms suited to their particular requirements and at the lowest rates of interest consistent with those prevailing in the money markets.

OTHER AGENCIES SUPERVISED BY FARM CREDIT

Closely affiliated with the Farm Credit Administration is the Federal Farm Mortgage Corporation, which was established in 1934. It is an independent corporation which has availed itself of the existing organization and services of the Farm Credit Administration and Federal land-bank system in the making and servicing of Land Bank Commissioner loans, which were first provided in 1933. The Farm Credit Administration also exercises general supervision over emergency crop- and feed-loan offices, Federal credit unions, joint-stock land banks, regional agricultural credit corporations, and the Agricultural Marketing Act revolving fund. With the exception of the first two, the remainder are in process of liquidation.

FUNCTIONS TAKEN OVER BY FARM CREDIT

The functions taken over by the Farm Credit Administration in 1933 included general supervisory authority over the joint-stock land banks, which are private institutions established in accordance with the Federal Farm Loan Act to make amortized farm-mortgage loans with the proceeds of the sale of tax-exempt farm-loan bonds. The Emergency Farm Mortgage Act of 1933 provided for the orderly liquidation of these institutions. At the beginning of liquidation in 1933 the gross assets of the 44 joint-stock land banks aggregated slightly more than $487,000,000, with indebtedness totaling about $415,000,000. By March 31, 1940, 7 years later, the number of banks had been reduced to 35, assets to $139,000,000, a reduction of 71 percent, and outstanding indebtedness to $94,000,000, a reduction of 77 percent.

SHORT-TERM PRODUCTION CREDIT

Under the Farm Credit Act of 1933 Congress provided assistance to farmers and stockmen in building a system of local cooperative production credit associations designed to make loans on crop and chattel security and serve as permanent sources of short-term credit. These associations, 528 of which were in operation on March 31, 1940, make short-term loans to farmers. The present rate on such loans is 4½ percent.

The greater part of the capital stock of the production credit associations is owned by the 12 production credit corporations which were established in 1933 to organize, assist in the capitalization of, and supervise the activities of the production credit associations. The remainder of the capital stock is owned by the farmer members of the associations, who subscribe to stock in amounts approximately equal to 5 percent of their loans.

From organization through March 31, 1940, the production credit associations made 1,412,800 loans in the amount of almost $1,525,000,000, and at the end of the period loans outstanding amounted to over $173,800,000.

The Federal intermediate-credit banks provide loan funds for the production-credit associations. These banks, of which there are 12, one in each farm-credit district, were organized pursuant to the agricultural acts of 1923, to supply short-term credit for purposes more suited to the seasonal needs of agriculture than are usually granted by commercial banks. Loans and discounts made by these banks may have a maturity of not more than 3 years. The banks make loans to and discount agricultural paper for State and national banks, livestock loan companies, and other private financing institutions, as well as for production-credit associations and banks for cooperatives. The present discount rate in the continental United States is 1½ percent. Federal intermediate-credit banks obtain the major part of their loan funds through the sale of collateral-trust debentures to the investing public. From May 1, 1933, through March 31, 1940, the intermediate-credit banks have extended credit in the total amount of almost $2,925,100,000, of which about $214,100,000 was outstanding on the latter date.

As the production-credit associations took over the function of furnishing production credit, the regional agricultural-credit corporations, which were organized in 1932 for making loans direct to farmers and stockmen, were placed in liquidation. The amount of regional agricultural-credit corporation loans still oustanding on March 31, 1940, was approximately $7,888,310.

EMERGENCY CROP AND SEED LOANS

In addition to assisting farmers to build a cooperative system of short-term production credit Congress has, from time to time, authorized emergency crop and feed loans from Government funds to meet the credit requirements of those farmers who do not have adequate security to obtain loans through the permanent institutions. This type of loan is made by the Farm Credit Administration from Government appropriations. A total of $199,985,000 has been loaned for this purpose from May 1, 1933, through the end of March 1940. In addition, about $72,000,000 was loaned in 1934 and 1935 to farmers in drought-stricken areas, primarily for the purpose of maintaining livestock in areas seriously affected by the drought. At the end of March 1940, about $124,000,000 of emergency crop and feed loans and about $52,000,000 of drought-relief loans were outstanding.

CREDIT FOR FARMERS' COOPERATIVES

To meet the credit needs of associations of farmers engaged in marketing farm products, purchasing farm supplies or performing farm-business services, a central bank for cooperatives located in Washington, D. C., and 12 district banks for cooperatives located in each of the farm-credit districts were established under the Farm Credit Act of 1933.

These banks make three types of loans to farmers' cooperative associations; commodity loans, operating-capital loans, and loans on physical facilities. The current interest rates on these loans are 1½ percent, 2½ percent, and 4 percent, respectively. Commodity loans are rediscounted with the Federal intermediate credit banks.

From organization through March 31, 1940, about $504,668,000 has been loaned to cooperatives by the 13 banks for cooperatives and at the end of the period about $69,300,000 was outstanding. Following the establishment of the banks for cooperatives the Agricultural Marketing Act revolving fund established in 1929 to make loans to farmers' cooperative associations and to stabilization corporations was placed in liquidation. On March 31, 1940, loans from this fund were still outstanding in the amount of $19,763,000.

FEDERAL CREDIT UNIONS

In addition to its agricultural activity the Farm Credit Administration is charged with the duty of chartering, regulating, and examining Federal credit unions established under the act of June 26, 1934. A Federal credit union is defined as a cooperative association for the purpose of promoting thrift among its members and creating a source of credit for provident or productive purposes. Membership in a Federal credit union is limited to groups having a common bond of occupation or association or to groups within a well-defined neighborhood, community, or rural district.

The first Federal credit union was chartered on October 1, 1934, and during the period ended March 31, 1940, a total of 3,766 charters had been granted. This rate of growth evidences the widespread interest in the credit-union method of saving and borrowing and is of particular interest in view of the fact that these credit unions do not depend for their operation on Government loans or financial aid of any kind.

As of December 31, 1939, the 3,127 reporting Federal credit unions in the United States had a total membership of 837,362 and a total share balance of over $42,000,000. These credit unions have made over 1,850,000 loans for over $170,000,000 from organization through December 31, 1939, and had about 407,000 loans outstanding in the total amount of almost $37,000,000 on December 31, 1939.

CONCLUSION

The accomplishments of the Farm Credit Administration during the past 6½ years should be considered in relation to the objectives of a system designed to meet the credit needs of farmers. Basically the Administration's objective was to provide the facilities through which farmers and their cooperatives having a reasonable basis for credit could reach the investment market and borrow funds essential to their business on terms appropriate to the business and at reasonable cost, or briefly, to achieve credit equality for agriculture as an industry—a credit equality unattainable by farmers as individuals. Such a system could be organized to provide the types of credit ordinarily required in agricultural operations. It should also furnish a permanent and dependable source of credit sympathetic to agriculture to take care of needs in both good times and bad times, upon terms suited to the needs and at the lowest costs consistent with sound business operation. Measured against these objectives it is apparent that the institutions under the supervision of the Farm Credit Administration have made substantial progress in the development of such an agricultural credit program.

Widows and Orphans' Pension Bill

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

LETTER FROM RUTH MILLER STEESE

Mr. MYERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

MIFFLINBURG, PA., *May 21, 1940.*

Hon. FRANCIS J. MYERS, M. C.,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: May I express to you the appreciation of the American Legion Auxiliary for the recognition accorded it by your remarks on the floor of the House of Representatives, May 13, 1940.

As legislative chairman, speaking for 42,000 members in the State of Pennsylvania, and for the personal courtesy, I wish to offer a sincere "Thank you."

Very truly,

RUTH MILLER STEESE,
State Legislative Chairman, American Legion Auxiliary.

The Formula of Federation

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ARTICLE BY FELIX MORLEY

Mr. SHANLEY. Mr. Speaker, few authorities in America have a more comprehensive and cogent knowledge of the philosophy of federation than Felix Morley, editor of the Washington Post and president-elect of Haverford College. Recognized as one of America's foremost authorities in the field of collectivism, anything that he says about post-war conditions is of compelling interest. In the current issue of Asia he has written an article on The Formula of Federation. I have asked permission to include it here.

[From Asia for June 1940]

THE FORMULA OF FEDERATION

(By Felix Morley)

The character of international organization after the war depends primarily, of course, on the outcome of the war.

If Germany should obtain a complete triumph there will undoubtedly be a punitive peace, designed to cripple or at least greatly reduce the war potential of Great Britain and France. In that event no form of league, still less of federation, need be anticipated in Europe. The major question would be how soon the victorious dictatorships—Germany and Russia—would run afoul of each other. And while one might then anticipate an anti-Russian coalition, perhaps including Japan, it would be a temporary grouping having no purpose deeper than nationalistic aggrandizement.

If, conversely, the Franco-British alliance should win a knock-out victory, the peace would also, in all probability, be punitive—at Germany's expense. It might well be even more punitive than in the case of a Nazi triumph, for the French and British will want to insure that there could be no repetition of Germany's remarkable revival as a military power. But since Great Britain and France are not anxious to assume full responsibility for the permanent policing of a disarmed Germany, some sort of league, camouflaged as a peace organization, would undoubtedly be formed to undertake this invidious task.

An alternative to this would be if, after an overthrow of Hitler, Germany should join the Allies in what would be pictured as a crusade against Russia. In that event the Reich would be a member, rather than the victim, of the post-war European league. Again, however, the combination would have been formed for an essentially military and narrowly political purpose.

Obviously, therefore, it is academic to discuss the form of post-war international organization in advance of some positive evidence as to how the war will end. Many imponderables are involved.

At the same time this discussion, as the editor of Asia evidently realizes, is of far more than theoretical importance. Blueprints of a workable mechanism must be drawn, and public opinion must be made receptive to these plans in advance of any settlement. Otherwise civilization, so horribly prepared for war, will again be unprepared to make a lasting peace. And a primary duty of the United States, as the most powerful and most secure neutral in the present conflict, is to concentrate on such plans as promise establishment of a peace which can be relied upon by Americans as well as by the people of other lands.

The consideration is the more feasible because of the possibility—it may well be probability by the time this article is printed—that neither side will achieve a knock-out victory in the present war. And it may be argued that military stalemate, followed by a negotiated peace, offers the best, perhaps the only, opportunity for a more ordered post-war world.

A dictated peace, no matter how enlightened the dictator, cannot be a constructive peace. A dictated peace has as its primary objective the humiliation and degradation of the defeated. No matter how this fact is justified by attributions of war guilt, or glossed by provisions for international cooperation on a new basis, the essential maladjustment between the dominance of the victor and the subordination of the vanquished will remain. In the psychology of this situation, not in the specific terms of the Treaty of Versailles, lay the seeds of the overthrow of the last peace settlement and the collapse of the League of Nations.

A negotiated peace, on the other hand, is from its nature one in which neither party holds the whip hand. Its terms are reached by agreement, reluctantly given, perhaps, but nonetheless free from that searing stigma of enforced subjection which is inherent in the dealings between conqueror and conquered. A negotiated peace, in other words, provides a lasting basis on which stable international relationships can be built up. A dictated peace, as the history of the 1919 treaties shows, is a rotten foundation which threatens eventual ruin to all the superstructure reared upon it.

For this reason many who hold the Nazi doctrine in abhorrence are nevertheless reaching the conclusion that a compromise peace is in the long-range interests of civilization. Of course this would imply that Germany will have her way in Central Europe, but that is as economically inevitable as it is politically unpleasant. The indications that the Allies lack the strength to prevent this outcome, and the certainty that the United States will not resist it, are confirmatory of a conclusion which is not less probable because it is ethically indefensible.

To argue that such an outcome would represent a "betrayal of democracy" is emotional sentimentality in its most idiotic and vicious form. The betrayers of democracy are really those who want to see the war continued until all the belligerents are utterly exhausted—physically, morally, and spiritually. Far from insuring the triumph of democracy, such an outcome would to a certainty guarantee its extinction in the nations now endeavoring to defend that doctrine by force of arms.

Little reflection should be needed to realize that present-day democracy is a luxury system. In the modern world it can operate only among peoples which have developed on a broad basis the wealth, the leisure, and the relatively easy living conditions necessary to maintain a complicated and essentially inefficient form of government. Dictatorship, on the other hand, is primitive. It will inevitably come into control wherever and whenever the conditions of life for the masses are desperate and devoid of promise. When men are confronted with a collapse of living standards they have neither the patience nor the desire to operate the intricate mechanism of democratic government.

It is, therefore, a contradiction in terms to speak of a war to make the world safe for democracy. Modern war, rapidly destroying the ease and stability in which democracy roots, can only make the world unsafe for that system of government. Modern warfare, involving ever-increasing state controls, can only hasten and accentuate the trend toward totalitarianism. The longer the present war continues, therefore, the more parlous the future of democracy will be, in the United States as well as in Great Britain and France.

With peace, on the other hand, and with the rapid growth and better distribution of wealth and leisure possible in a peaceful world, democracy as a refined system of government comes into its own and dictatorships are at an increasing disadvantage. Given protracted peace, the certain evolution of the dictatorships will be toward democracy. Given protracted war, and dictatorship will become ever more strongly fettered on those peoples which have resorted to it; it will also become more probable as the outcome for those nations which are engaged in the ghastly paradox of trying to strengthen democracy by war.

The spreading realization of this simple truth is one reason for expecting a negotiated peace, once a greater or less degree of further suffering has undermined Nazi confidence and convinced all the weary but evenly matched belligerents of the futility of this war. And although the German dictatorship will perhaps seem to gain most from a negotiated peace, as the British and French democracies seemed to gain most from a dictated peace in 1919, the mere appearance of gain will probably hasten the amelioration of totalitarism and the evolution toward democracy of both the Nazi and Communist parties. Indeed, it is only this prospect which makes consideration of post-war organization of a profitable exercise.

The probabilities in Europe therefore seem to point toward some form of continental federation under the leadership of governments which will be drawn together alike by the exhaustion of their strength, the weakness of their currencies and the similarity of the autarchic controls which war is fettering on the economic systems of both democracies and dictatorships.

The lines of this union are already forming in the rapid coordination of Great Britain and France on one side of the fighting lines and the scarcely less definite alinement of Germany and Italy on the other. When the time comes, these axis combinations may readily be extended to group together at least the four major European powers. For political and economic reasons Russia, a continent in herself, is likely to remain outside the western European grouping.

It is insufficiently recognized that the Berlin-Rome axis and that of London-Paris are steadily being hammered on the anvil of war into a malleability which will facilitate their eventual combination. It was also unrecognized by many, prior to last August, that a Russo-German alliance was highly probable, in spite of the superficial antipathies of Nazis and Communists. Mutual necessity can very soon bundle erstwhile enemies into the same political bed, and the necessity for a permanent cooperation between Germany, Great Britain, and France is increasing with every day that they waste their substance in fighting one another.

The role of Italy, seemingly, will be to forward this four-power combination. It was premature at Stresa and premature at Munich, but is now being steadily, if almost imperceptibly, forged in the fires of a war which is rapidly converting Great Britain and France into state socialisms more and more akin to the Nazi and Fascist patterns.

To this anticipated grouping of the great European powers the unscathed nations on that continent would quickly and gladly

adhere. This is so certain as scarcely to need discussion. The role of these neutrals will be to assuage such bitterness as will linger between the belligerents after a war in which singularly little nationalistic bitterness is felt. And the more enlightened neutrals should also exercise effective leadership in liberalizing economic restrictions and lowering trade barriers between the members of a European league who will all be reduced to an appalling poverty.

In the Western Hemisphere, which aside from Canada will presumably not be dragged into the European war almost regardless of events, the general line of development is already clear. Pan Americanism, now actively fostered by the Government of the United States, will develop to the extent that this country is willing to expand its trade—meaning imports as well as exports—with the Latin American countries.

That willingness will increase somewhat as our European markets contract with the growth of autarchy there. We shall, moreover, meet the stiffest kind of post-war European competition in Latin America. To offset that there will be greater effort to give Pan Americanism a political complexion—to build a league of the Americas. And the other New World republics will tend to fall in line to the extent that the United States is willing to advance them loans and credits. This, despite the experience of the twenties, we shall probably do—by action of the Government rather than of private banks. Indeed, such advances will be essential to offset state-aided European competition.

In the Far East political evolution will probably be somewhat similar to that which may be expected in Europe. The condition of mutual exhaustion and stalemate is even more definitely reached in the Sino-Japanese war than is as yet the case in the European conflict. Japan cannot wholly conquer Nationalist China, and the Chungking government cannot successfully loosen the stranglehold of the invader on China's ports and arteries of communication. Whether through the agency of Wang Ching-wei or another compromise, some face-saving formula permitting eventual collaboration between China and Japan will be attained.

A fair guess is that there will emerge a wholly independent but much contracted Chinese republic, two or three antonomous but Japanese-supervised areas more or less after the model of Manchukuo and a debilitated and chastened Japan in which the voice of business will for the first time become politically influential. Regularized cooperation of a regional variety may readily be anticipated between these units, the more so because federal development is logical for a country as vast, as undeveloped, and as parochial as is China.

We may thus anticipate the formation of three rather clearly defined regional combinations—in Europe, in the Americas, and in the Far East. The picture is incomplete primarily because the future of Russia and of the British Empire has not been envisaged.

In the case of Russia, prognostication is fairly safe. This sprawling empire is itself a federation of peoples, ranging from the newly subjected and highly civilized Finnish population to the primitive nomadic tribesmen of Outer Mongolia. To govern this huge and heterogeneous population effectively, and to carry through the tremendous Communist experiment successfully, Russia will need a long period of tranquillity. A western European league, involving the disappearance of a Poland of any consequence, would not arouse antagonism in Moscow. Nor would a far eastern federation which would automatically absorb Japanese energies in the development of eastern China. Stalin, or his successors, could view the outlined picture with complete equanimity.

The future of the British Empire is more difficult to foresee. The war is certain to weld Great Britain herself firmly into the European system, as already indicated by the comprehensive Anglo-French union now in effect. This development is of itself likely to accelerate the centrifugal tendency of the great self-governing dominions, only temporarily checked by their voluntary war participation. On the other hand, the sense of unity in the British Commonwealth of Nations is very strong—perhaps as strong as in the far-flung chain of Crown colonies. Particularly in a world where all the basic forces are working toward unification it is not easy to anticipate a dissolution of the British Empire.

A more likely possibility, it would seem, is that the British Commonwealth, with its self-governing units in Europe, America, and Asia, would operate to pull together and integrate the three anticipated regional combinations in those respective continents.

In such a task British statesmanship could rely on the practical assistance of the present League of Nations, which will undoubtedly come into its own again as a clearing house for technical cooperation in all fields, among all nations. As a central political institution, however, Geneva will be at least temporarily replaced by the three great regional federations, presumably operating under the leadership of Germany, the United States, and Japan, respectively. The rapidity with which the present league, or any other central agency, can bring these three groups into collaboration with one another would seem to depend primarily on the genius of British statesmanship. It will be assisted by that of France; for these two nations, losing their dominance in Europe, will be the more anxious to develop world-wide collaboration among the three regional groupings.

The Inter-Democracy Federal Union idea seems, as a practical development, completely outside the realm of attainment, although this is no reflection on its great educational value in a field of thought alien to most American minds. It is not merely that the scheme would take the United States out of the geographically logical Pan American development and merge it in a European grouping toward which the mass of opinion in this country is apathetic, to say the least. More to the point is the fact that the war is steadily chiseling down the area of capitalistic democracy in England and France. It is converting those countries into state socialisms and thereby giving them a far more natural affinity with Germany and Italy than with the United States.

That is the trend which this war is bringing, and from observation of that trend forecast can be attempted with some degree of assurance. Nor, at this stage of the trend, does it take a large degree of vision to anticipate the general shape of things to come. Those who have studied Spengler will remember the precision with which he mapped the outline, in essentials at any rate, nearly 20 years ago.

Relief Appropriation

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

Mr. BUCKLEY of New York. Mr. Speaker, since the year 1935, when my service in Congress began, I have carefully studied the legislation dealing with appropriations for work relief and relief. I have also had innumerable contacts with the men and women who were obliged to avail themselves of this governmental aid. Too, I have noted the improvements that have been added to our national assets. Of course, there have been some imperfections, as there would necessarily be in connection with any program of such magnitude. However, I have come to certain definite conclusions as to its necessary continuance.

The bill now before the House will appropriate approximately $975,000,000 to be spent from July 1, 1940, to March 1, 1941, a period of 8 months. At this rate we will be spending approximately $1,500,000,000 annually, which was the amount that was appropriated the last fiscal year. Under this schedule there will be employed about 2,000,000 persons. If we appropriate less than this amount, or, as some suggest, reduce the appropriation by one-third of the present schedule, employment will be provided for an average of only 1,300,000 persons, or a reduction and dismissal of 700,000 workers.

In the past I made certain statements to the House which I would like to read at this time. On May 12, 1938:

> What shall we do with these people, for most of them, through no fault of their own, have come face to face with a situation where relief and W. P. A. aid is the only alternative to starvation. We cannot follow the do-nothing policy of the previous administration and just let nature take its course. We must help them until such time as private industry can absorb them into its ranks. I am not of the opinion that relief and governmental work is the solution to this economic problem. I do not even claim that the plan is perfect, but I cannot deny that it is the only way to help these people continue life until a change for the better develops.

Also:

> We will not adopt the do-nothing policy. Congress must and will act in behalf of the people. Any other policy will but give incentive to agitators who foster communism and fascism. We will continue to show the world that democracy can still solve this country's problems.

On June 16, 1939, in my remarks to this body, I said in part:

> I am still as ever convinced that the W. P. A. is responsible for many valuable contributions that are now permanent assets of the Nation, States, and local communities. More than that it has afforded employment to many people, thereby providing money with which to purchase the bare necessities of life. Further, it has preserved the skill of the worker and his morale which are so important for the continuation of an orderly democracy. It has helped the small-business man as those on work projects had means to purchase essential commodities.
>
> We had hoped that private industry would absorb the people from the relief rolls. A certain percentage were successful—a great portion of the unemployed did not receive this opportunity. * * * We are also aware that business conditions are as yet not normal so that we can discontinue or curtail this program.

The provision in the bill for removing all persons who have been employed on relief projects continuously for more than 18 months will work a great hardship on many people. There are many persons who cannot obtain employment in private industry. We have hundreds of thousands of able-bodied men and women between the ages of 40 and 65 who are unable to obtain jobs in private employment solely because of their age. This cannot be denied. I believe these persons should be allowed to continue on W. P. A.

In these days we are appropriating moneys in the preparation of activities for the defense of the Nation from outside forces. It is just as important to defend our country from the subversive forces within who challenge our democracy and preach and point to communism, nazi-ism, and fascism as the panacea. I have always contended that this country will weather the storm and work out its problems. It must, therefore, continue its policy to aid the deserving, who, through no fault of their own, need this comforting hand of our Government. This Nation will not let them down, and so today, in considering this program, let us do what we can to help those who merit our favorable support. I am sure that the moneys disbursed for these purposes will return dividends in the form of happier and healthier American citizens.

On August 5, 1939:

I am wondering how the Relief Act is going to work out. I hope that business makes rapid strides so as to make it unnecessary for Congress to make additional appropriations for W. P. A., but I have doubts in that direction.

The hardship and suffering that the dismissal provision will cause is something that we should try to remedy. I think it was a mistake to enact such a provision in the first place, but Congress owes it as a duty to the many men, women, and children who now suffer as a result of this provision to remedy it and show the unfortunate and underprivileged that they are concerned with their welfare.

Prior to that time, on July 12, 1939, I introduced H. R. 7164, a bill to amend the Emergency Relief Appropriation Act of 1939 to provide for the reestablishment of the prevailing rate of pay for persons employed upon work projects. The bill also contained a provision to repeal section 16 (b) of the Relief Act which relates to compulsory removal of persons who have been on the W. P. A. rolls for 18 months or longer. This bill, I regret to say, was never passed.

Though we had been in high hopes that employment would increase in leaps and bounds, especially due to the war abroad, we have noted in recent months no such hoped-for improvement. Our foreign markets have been virtually closed to American commerce. Outside of a limited field of war implements, there are very few countries in the world that are receiving our wares.

To reduce the small appropriation contained in this bill would be most unfair and would cause suffering in the homes of 700,000 families, cause loss of trade to the small merchants and industry, and would depress the income of farmers who are now feeling the effects in the loss of our foreign markets for disposal of their agricultural products. In fact, I favor a larger appropriation than this bill contains.

With regard to the 18-month clause on W. P. A., I note that the bill contains a provision excepting heads of families, 45 years of age or older, with dependents. This provision is a good one, and I regret that the committee in charge of this bill retained the 18-month clause. A great hardship has been caused to those affected by this provision, and I hope that we will eliminate it and thereby remedy the situation.

The majority of the people in the United States agree that the W. P. A. program has increased the material wealth of this country, and that as a result we can point to the many fine improvements in every city and State of the land, such as the construction and erection of schools, libraries, hospitals, health centers, airports, and swimming pools. Our parks have been enriched in beauty and scope of purpose so that the people can enjoy these facilities to the greatest extent. Other services rendered by the Works Progress Administration are the medical, dental, and nursing assistance supplied to those who require it; furnishing of housekeeping aids; luncheons served to the poor school children; sewing projects furnishing clothing to the poor and needy; educational and recreational projects. I could go on, but many of us are acquainted with this fine work.

The W. P. A. program is necessary, for it conserves the skill of unemployed workers.

In the next few days we will consider the defense bill to provide against possible foreign aggression. We cannot, in face of what is happening in the world today, remain unarmed if we wish our democracy to continue. I shall certainly vote for that bill. By the same token I believe that it is just as important to provide for the needy. As in the past, I have vigorously condemned communism, nazi-ism, and fascism, and stated that inadequate relief measures and social legislation would give aid and comfort to these agitators for foreign philosophies. It is at this time, the most crucial in the history of the world, when we must preserve our democracy against the prospect of any possible foreign aggression, that we provide as a part of that defense sufficient moneys to sustain the morale of our men and women, who through no fault of their own are unable to obtain employment and provide themselves with the necessities of life.

Credit for the Captains of Connecticut's Clipper Ships

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

Mr. SHANLEY. Mr. Speaker, Connecticut has been justly proud of its intrepid men who went out in clipper ships. I have addressed the House before on the exploits of many of them, and especially Capt. Nathaniel Palmer, whose activities in the South Pacific have made us all more conscious of that area's value. I note that the distinguished cartographer, Lawrence Martin, chief of the division of maps of the Library of Congress, has paid additional tribute to Captain Palmer, Capt. Benjamin Pendleton, and others in his address before the Eighth American Scientific Congress.

Incidentally, it might be helpful to those who are interested in maps to know that there is an excellent exhibition of maps in the National Academy Building. There, under the Hispanic Foundation of the Library of Congress, the division of maps has on exhibition the resplendent and valuable showing. The acknowledgment to the catalog says:

The maps have been made available by the diplomatic missions of the several American countries, members of the Pan American Union, by the Pan American Institute of Geography and History, by the departments and bureaus of the Government of the United States of America, and by our leading geographical and geological societies, the National Academy of Sciences, the National Research Council, the American Geophysical Union, the Smithsonian Institution, and the Library of Congress.

The arrangement is by Lawrence Martin, Ph. D., chief, division of maps, and incumbent, Chair of Geography, Library of Congress, whose personal services and erudition have quickened the appreciation and enthusiasm of many a Congressman for the entire field of maps and map making.

Of especial interest to Connecticut people are these entrants:

21. Map of the Western Hemisphere, compiled in 1940, in the division of maps, Library of Congress, on a base map provided by the National Geographic Society, and showing the area concerned in the Monroe Doctrine, together with portraits of James Monroe, President of the United States, and of John Quincy Adams, his Secretary of State (from the division of fine arts, Library of Congress), and facsimiles of three pages from President Monroe's message of December 2, 1823, to the Senate and the House of Representatives of the United States of America (from the original manuscript of this message in the division of manuscripts, Library of Congress, written, signed, and dated in the President's own hand).

27. Connecticut at the time of the ratification of the Constitution, from a 1780 original in the Library of Congress at Washing-

ton—a facsimile of Bernard Roman's Map of Connecticut and Parts Adjacent, 1777. United States Constitution Sesquicentennial Commission.

66. Manuscript map of Antarctica showing the route of Commander Byrd's barkentine *Bear* from Little America to East Base in the Palmer Peninsula, and routes of airplane flights from the ship to the mainland at several points in 1940. Compiled especially for the Eighth American Scientific Congress by Lt. Comdr. R. A. J. English. (U. S. Antarctic Service.)

67. Map of the world showing relative areas and populations of the various continents and countries, and demonstrating that Antarctica is larger than Europe. Compiled by Laura H. and Lawrence Martin, Washington, D. C., 1925. (U. S. Antarctic Service.)

68. Antarctic regions, chart No. 5411, 1939, by the United States Hydrographic Office. (U. S. Antarctic Service.)

69. Southern base, Marguerite Bay, from a survey by A. Stephenson, from Southern Lights, the Official Account of the British Graham (Palmer) Land Expedition, 1934–37, by John Rymill, London, 1938. (U. S. Antarctic Service.)

70. Antarctic regions, chart No. 5412, 1939, by the United States Hydrographic Office. (U. S. Antarctic Service.)

71. Map of the world in 1822, the first map showing any part of Antarctica, from school atlas to accompany Woodbridge's Rudiments of Geography, Hartford, 1822. Note the words "Palmer's Land." (U. S. Antarctic Service.)

72. Antarctica, May 12, 1939, scale 1:16,000,000, with manuscript additions showing various claims to sovereignty. (U. S. Antarctic Service.)

73. Maps of the Ellsworth trans-Antarctic flight of 1935, from the Geographical Review, volume xxvii. No. 3, 1937. (U. S. Antarctic Service.)

74. Bathymetric map of the Antarctic. Compiled by the American Geographical Society of New York, 1929, scale 1:20,000,000. (U. S. Antarctic Service.)

75. Map of Antarctica showing the claims of seven nations, from Life, volume 6, No. 24, June 12, 1939, pages 44–45. (U. S. Antarctic Service.)

EARLY EXPLORATIONS AND INVESTIGATIONS IN SOUTHERN SOUTH AMERICA AND ADJACENT ANTARCTIC WATERS BY MARINERS AND SCIENTISTS FROM THE UNITED STATES OF AMERICA

(Abstract by Lawrence Martin, chief, division of maps, and incumbent, chair of geography, the Library of Congress)

In October 1829 Capt. Nathaniel Brown Palmer, who had discovered the mainland of Antarctica 9 years earlier, sailed from New York in the brig *Annawan*, and Capt. Benjamin Pendleton sailed from Stonington, Conn., in the brig *Seraph*. With them traveled five scientific investigators—Dr. James Eights, of Albany, N. Y.; Dr. John Frampton Watson, of Philadelphia, Pa.; Mr. Jeremiah N. Reynolds, of Wilmington, Ohio; and two associates whose names are not known. These five gentlemen were, as it seems, the first persons from the United States of America who carried on scientific investigations and inland explorations on the continent of South America. The captains of the two brigs independently explored the waters, largely uncharted, between South America and Antarctica.

Eights, of Albany, is the great name in the group. He was a trained physician and an accomplished naturalist, adorning the science of geology, including glaciology, and being highly competent in botany and zoology as well. Testimonials to this effect are to be found in the writings of Pierre Louis Antoine Cordier, distinguished French geologist and academician; of John M. Clarke, State geologist of New York; of H. D. House, State botanist of New York; of Sir Joseph Dalton Hooker, a great English botanist; and of W. T. Calman, celebrated zoologist and president of the Linnean Society of London.

The scientific investigations by Eights commenced in southeastern Argentina where he landed at several places on the east coast of Patagonia in January 1830. He collected, inter alia, a crustacean which he called Brongniartia trilobitoides, and which is now known as Serolis trilobitoides (Eights), and also a plant subsequently identified as Adesmia candida, by Hooker.

In the Isla de los Estados, or Staten Island, southeast of the Straits of Magellan, Eights continued scientific collecting. Here the botanical results included the plants Viola magellanica, Stellaria debilis, Galium antarcticum, Senecio eightsii, Clarionia magellanica, and Pratia repens. Doubtless some of these names have been modified in modern botanical practice.

In extreme southern Chile, upon islands near Cape Horn, Eights pursued his botanical and zoological studies shortly after January 22, 1830. A previously unidentified isopod, described as being found in unusual abundance in pools left by receding tides, was Sphaeroma bumastiformis.

Eights' principal geological studies were carried on in the South Shetland Islands, an archipelago much nearer to Antarctica than to South America. Here he spent the month of February 1830. He was the first professional geologist to say "let (Antarctic) rocks their silence break." He showed that the South Shetlands were underlain by argillaceous conglomerate and sandstone, dipping southeast at angles of 12° to 20°, intruded by basalt, and with carbonized wood in the conglomerate. Among recent plants, he found Usnea fasciata, Aira antarctica, some species of Polytrichum and one or two other lichens of Avena, and a marine fucus.

The sea life included two new species, Glyptonotus antarcticus, and Decolopoda australis, a 10-legged, red sea-spider, to say nothing of the more familiar fur seals, elephant seals, sea leopards, whales, porpoises, etc. Eights identified at least 16 species of South Shetland birds besides 5 species of penguins. He worked out the regime of the South Shetland tides, finding only one ebb and flow every 24 hours in most localities and studied the ocean bottom deposits.

The substantial geographical contribution of the two North American mariners in 1829–31, aside from taking the scientists to the places where they worked in Argentina, the South Shetland Islands, and Chile, was their demonstration that no oceanic islands are to be found southwest of South America along the particular courses independently traversed by the two brigs. A logbook in the Library of Congress, that of the schooner *Penguin*, a consort of the *Annawan* during the voyage from Staten Island to the South Shetlands and on to the Island of Mocha in Chile, contributes to meteorology, oceanography, and ornithology by indicating (1) directions and forces of the wind day by day, (2) days when there was rain or sleet, (3) presence or absence of icebergs and other sea ice, and of floating kelp, (4) distribution of penguins and other oceanic birds. During the 6 weeks' voyage of Capt. N. B. Palmer and his brother Alexander in the South Pacific, they sailed some 3,500 miles between February 20 and April 3, 1821, starting from Potters Cove in the South Shetlands, continuing to a point in the ocean near 58°01′ south latitude and 103°03′ west longitude, and ending at the Island of Mocha south of Concepción, Chile. Watson and Reynolds sailed westward on the *Annawan* with Captain Palmer.

Eights anticipated Charles Darwin some 9 years in observing glacial boulders carried in or left by floating icebergs and deducing from them the geology of unvisited lands poleward from the points of observation in the South Pacific Ocean and in the Shetland Islands. He probably sailed from this archipelago about March 1, 1830, in the *Seraph* with Pendleton and reached Chile early in May, after exploring southwestward and westward from the South Shetland Archipelago in the waters between 60° and 70° south latitude and 54° and 101° west longitude. By convincing deductions from two months of collecting meteorological, oceanographic, zoological, and botanical data, including facts about the prevailing winds, the fogs, snow, sea ice, icebergs with rocks in them, ocean currents, kelp, penguins, terns, and so forth, the Albany naturalist established the existence of a long stretch of unseen land. He thought it to be insular, that is, an extensive chain of islands—but it was actually a portion of the Antarctic mainland west of the Palmer Peninsula, a part of the terra incognita which Admiral Richard E. Byrd mapped by airplane flights from the *Bear* in 1940. The logbook of the brig *Seraph* for this voyage in 1829–31 is probably in some sea chest or some attic in Connecticut. If it is found, the division of maps at the Library of Congress would like to learn promptly where it is.

In southern Chile, where the *Seraph* and the *Annawan* operated together in 1830–31, Eights presumably continued his geological, botanical, and zoological studies, chiefly in the lands adjacent to the Chonos Archipelago, the Gulfs of Ancud and Corovado, the island of Chiloe, and adjacent islands and waters. Reynolds and Watson, landed by Pendleton and Palmer at the mouth of the River Arauco on July 23, 1830, spent 4 months or more in the interior of the so-called Araucania, exploring the lands, investigating the resources, and studying the native people. They brought back 13 chests of scientific specimens which were placed in the Lyceum of Natural History at New York City and two chests which were given to an institution at Philadelphia, Pa. Reynolds presented to the Boston Society of Natural History in Massachusetts a substantial collection of ornithological, botanical, marine, and mineralogical specimens, not only from the South Shetlands and Chile, but from Peru and the Galapagos Islands as well. Fragments of Eights' herbaria are in the State Herbarium at Albany, N. Y., other portions being with the collections of Sir Joseph Dalton Hooker in England. His geological and zoological specimens and his field notebooks have not been located.

These explorations and scientific studies in the southern parts of Argentina and Chile, and in adjacent islands and waters, resulted indirectly from a message which John Quincy Adams, President of the United States of America, sent to our Senate and House of Representatives on December 6, 1825, only 5 years after the discovery of the Antarctic mainland by Palmer. If Pendleton and Palmer had not taken Eights and Watson and Reynolds in 1829–31 to the localities alluded to above, there might never have been a United States exploring expedition of 1838–42 under Admiral Charles Wilkes. Eights' field work in Patagonia and Isla de los Estados in Argentina and near Cape Horn in Chile is one of the very early professional scientific investigations in the coastal regions of South America, as well as in the South Shetland Islands and South Pacific Ocean not far north of Antarctica, by a technically qualified scholar from North America. Reynolds and Watson's studies in Araucania, Chile, seem to constitute the first exploration and scientific field investigation in the interior of South America by learned men from the United States of America.

Let's See the Expense Bill, Tony!

EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

EDITORIAL FROM THE PHILADELPHIA INQUIRER

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Philadelphia Inquirer of May 12, 1940:

[From the Philadelphia Inquirer of May 12, 1940]

LET'S SEE THE EXPENSE BILL, TONY!

One of the minor horrors of war, its cost, is brought home forcibly by Senator GUFFEY'S bill to pay Anthony J. Drexel Biddle $243,361 for personal property lost in the German invasion of Poland. Apparently, in sending Mr. Biddle to Warsaw, it was not the original outlay that counted, but the upkeep.

In the course of his flight, it appears, he left behind him at his two ambassadorial residences a lot of valuable trinkets, antiques, paintings, and the like. In order to have a fitting background, he had had his villas redecorated at considerable cost, and a few vanloads of tapestries and furniture moved in. As the Ambassador didn't want to be encumbered by any chaise longues, champagne buckets, old masters, or similar excess baggage during his strategic retreat, all these valuables were lost.

Mr. Biddle has frequently been cited as one of the world's best-dressed men. His homburg, spats, double-breasted jackets, and his gloves carried just so have elicited sighs of admiration, envy, and heartache from authorities in such matters.

Whether the Ambassador's wardrobe is included in the list of losses is still undetermined, but as he traveled lightly, as well as swiftly, it may be assumed that some of Warsaw's most precious loot was made up of assorted Biddle haberdashery. Perhaps, perish the thought, some of the brighter items have even now been made over to fit the more exuberant style of Herr Goering, in his way another fashion plate.

Mr. Biddle is now resting in France, where, it is hoped, he will keep his person and personal property secure from further expensive losses to the citizenry of this country. Meanwhile, it should not make him wince too much if the taxpayers whom he invites to put up the tidy sum of $243,361 should ask him in turn for a little itemized statement. If we are to pay for such luxuries, we should know what they are.

Boys Clubs of America

EXTENSION OF REMARKS

OF

HON. THOMAS A. FLAHERTY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

LETTER FROM HON. THOMAS A. FLAHERTY, OF MASSACHUSETTS

Mr. FLAHERTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I sent to be read at the Thirty-fourth Annual Convention of the Boys Clubs of America:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 3, 1940.

Mr. HUNTINGTON R. HARDWICK,
Boys' Club of Boston, Charlestown, Mass.

DEAR MR. HARDWICK: It is a great pleasure to send this message to the Thirty-fourth Annual Convention of the Boys Clubs of America, and I regret that due to official business in Washington, I cannot be with you personally.

It is a well-known fact that many of our hero headliners—whose names are constantly in the limelight, on the radio, in the sports and magazine pages, on the stage, and in the movies—have had the good fortune, as growing youngsters, to belong to boys clubs. I say, in all sincerity, and from personal observation, that I know of no better place for an adolescent boy to supplement and round out his home training; no better place to develop stamina and toughness and ability to take it on the chin," all necessary requisites if he is to carve his name in high places and forge ahead to success and happiness.

Sportsmanship is quickly developed through participation in club activities, either educational or competitive. We know that almost the first lesson a boy learns is that although he may win today, he may also lose tomorrow. This primary lesson, which is sometimes a cruel one, teaches a proper respect for another's abilities, toleration and consideration of another's frailties, and the beginning of a larger understanding concerning humanitarian ideals.

With natural and refreshing spontaneity, boys lavish their worship upon national idols; therefore, the responsibility of maintaining that high place in the affections of the boy becomes the obligation of the hero. We all know how this responsibility is accepted without reservation by the hero headliners. It is true that boys need heroes, but I believe it is equally true that heroes need boys.

The Boys Clubs of America are a tremendous moral force whose influence it is impossible to gage. Their past accomplishments in the field of human endeavor will never be fully known; for what they hope to achieve in the future in an almost limitless field of service, they have the good will, best wishes, and earnest support of the American public.

With every best wish, I am,

Sincerely yours,

THOMAS A. FLAHERTY, M. C.

Bituminous Coal Act

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

LETTER FROM JOHN W. HOWE

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herewith a letter written to me by Mr. John W. Howe, vice president of the Truax-Trear Coal Co., of Chicago, Ill. A close study of Mr. Howe's statements demonstrates again the disruptive influence of bureaucratic control of private industry. In maintaining the present Bituminous Coal Act we are gradually suffocating by regulation and red tape one of the greatest American industries. If the Members of Congress would study the history of this legislation instead of yielding to the pressure of self-interested groups, they would wipe the Coal Act from the books with little hesitation. I represent a bituminous coal mining district. If the Bituminous Coal Act had produced a single benefit to operator or miner, I would be among its stanchest supporters. Because this legislation is placing the kiss of death on one great segment of our system of free enterprise, I shall continue to oppose it until modification or repeal has been accomplished.

Mr. Howe's letter to me follows:

On April 25, Director Howard A. Gray, of the Bituminous Coal Division, issued an opinion construing one of the marketing rules established under the Guffey Act, in which he said, in effect, that the Division would not consider invalid agreements whereby the seller of coal agrees to refund the difference between the current market or contract price prior to the effective date of minimum prices and the applicable minimum statutory price paid, in the event that the prices are invalidated in court. Innocent appearing on its face, this statement by the Director upon analysis proves to be one of the most insidiously powerful weapons yet devised by the Division in its efforts to bring the bituminous mining industry under its complete control and dictation, and should be given the widest publicity by members of the industry and their Representatives in Congress, to the end that an aroused public opinion will repudiate this latest step in the progressive demoralization of a great industry.

Director Gray's statement was issued in connection with a request to construe section VII, rule 1 (H) of the Marketing Rules and Regulations, which specifically states that no sales may be made under a condition that a part of the sales price (the applicable minimum price established by the Division) is to be withheld by the buyer or deposited in escrow pending a court decision on the validity of the act. Surprisingly enough, it is Mr. Gray's opinion that his ruling that sales may be made with a clause providing for a refund is not in conflict with this established rule, although it is evident that the rule itself is thus rendered completely impotent, and an insurmountable barrier created to any fair trial of the prices to be established under the Guffey Act in the near future. Mr. Gray has made a distinction without a difference.

Naturally, the immediate effect of this pronouncement will be that every buyer of coal will insist upon a provision in every contract of sale to the effect that a negotiated refund is to be granted

in some specified amount in case the statutory prices are invalidated at any time in the future.

It is illuminating to find how this will work out in actual practice. First of all, it will render absolutely meaningless the established minimum prices under which all coal is supposed to be sold, and substitute therefor a competitive system of promised refunds, with the business going to the seller who is prepared to enter into a sales contract providing for the largest refund in case of the invalidity of the act or the prices established thereunder. The viciousness of this kind of competition can easily be imagined, and all producers, regardless of how irreproachable their business ethics, or how honestly interested in cooperating in a fair trial of the price-fixing provisions of the act they are, will be forced to enter into the mad scramble for business on the basis of who will promise the largest refund in order to survive at all.

After the producer has collected the sales price of his coal, including the portion covered by the refund agreement, he is not to be permitted to put the possible excess into a separate fund to be held against the possible eventuality of paying the refund provided for in the contract, but must put it into his general corporate funds, where it will be regarded as tangible income and be subject to Federal and local taxes, both as to income and personal property. In the case of the larger operators, the amount thus collected will run into hundreds of thousands of dollars per year, all of which must be held idle by the operators, subject to periodical assessment and taxation, because of the fear that at some future time it may be necessary that it be refunded to the various customers. Thus it is seen that this new development will inevitably postpone any possible benefits to be derived from the higher prices to be realized under the Division's proposed schedules for many years to come, until all phases of the act and the proceedings thereunder have been thoroughly litigated, and the statutory period during which such actions may be brought has expired. When understood, this will be a very great disillusionment to those few in the industry who still hold to a hope that some benefit may come from the price-fixing provisions of the act.

Thus, we are left with the inescapable conclusion that the only real beneficiaries of this new development are to be those who are solely interested in the perpetuation of the strangle-hold of the powerful bureau which has been created under this act, at the expense of the complete disorganization of the bituminous mining industry. For it is to be found, on examination, that the inevitable result of the application of Director Gray's ruling will be that the overwhelming majority of the members of the industry who neither believe in nor desire Government control of their business will be effectively prevented from exercising their constitutional privilege of testing the validity of the act and the proceedings thereunder in court, because of the fact that they will have so much invested in possible refunds that they cannot afford to see the act declared invalid and be forced to return the large sums which will have accumulated during the inevitably lengthy period necessary to bring any action before a court of final determination.

This is an insidious new development in the campaign of a powerful few high in the inner councils of the administration to bring one of the country's largest industries under complete bureaucratic domination, and it should be resisted to the utmost by every citizen of the United States who realizes that it is vital to the continued progress of this country that free competitive enterprise not be destroyed. Given complete publicity, it is believed that the people of the country will unmistakably indicate their dissatisfaction with the entire scheme embodied in the Guffey Act, with its record of a completely fruitless expenditure of over $12,000,000 during the past 5 years, which is resulting in the complete demoralization and bankruptcy of this great industry.

Very truly yours,

JOHN W. HOWE.

Forget War Jitters—Look at Our Navy

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ARTICLE FROM THE WASHINGTON TIMES-HERALD

Mr. THILL. Mr. Speaker, the following news article indicates that the American people are protected by a competent, efficient, and strong Navy. There is no reason for war jitters or for feeling that the United States is vulnerable to attack and invasion. Let us look at the naval strength of the leading nations in the world, for only in that way can we properly estimate the potential incursive ability of any future enemy or combination of enemies. We know that no invasion can be successfully carried out without supplies, men, and military equipment, including tanks and artillery.

Let us prepare for defense and keep our Army, Navy, and air force in perfect shape supplied with the latest military devices. But let us prepare with reason, not with emotional abandon.

[From the Washington Times-Herald of May 23, 1940]

LOSSES OF OTHER NAVIES ADD TO UNITED STATES SUPERIORITY—PERSONNEL BETTER THAN ANY IN WORLD, OBSERVERS ASSERT

(By Walter Trohan)

The American Navy today is confident it can defeat any fleet afloat. The Navy high command is certain the fleet can exercise its function of bringing an enemy to terms at a safe distance from American shores.

In his last annual report, released last November 25, Secretary of the Navy Charles Edison told President Roosevelt:

"I am glad to report that in my opinion the battle efficiency of the United States Fleet fully measures up to the confidence reposed in it by the citizens of our country in whose service it is dedicated.

PERSONNEL SUPERIOR

"The morale of our personnel is high. The education and mental caliber of our enlisted men are superior. The fine quality of the leadership of the officers has been again confirmed by gratifying accomplishment in the naval operations conducted during the year."

The American Fleet in numbers is larger than any afloat. War losses of other powers have made and are making it stronger. Though more of its vessels are overage than in the British Fleet, the fleet could, as it stands, hold off the British Navy, in the opinion of its officers.

BALANCED BUILDING PROGRAM

The Navy has a well-balanced building program designed to replace overage vessels. If the Navy should keep within its present limits with underage ships, it would be able to protect the United States, its possessions, and enforce the Monroe Doctrine, officers are confident. A 25-percent increase would provide a margin of safety, which may be desirable, it is felt.

The strength of the American Navy as compared with that of other powers is given in the following tables:

Type	Underage	Total	Building
UNITED STATES			
Battleships	12	15	8
Aircraft carriers	5	5	2
Heavy cruisers	18	18	0
Light cruisers	15	17	8
Destroyers	57	219	40
Submarines	27	95	19
Total	134	369	77
GREAT BRITAIN			
Battleships	14	14	9
Aircraft carriers	6	8	7
Monitors [1]	3	3	0
Heavy cruisers	15	16	0
Light cruisers	26	49	23
Destroyers	109	182	32
Submarines	44	56	10
Total	217	328	81
FRANCE			
Battleships	6	7	4
Aircraft carriers	1	1	2
Heavy cruisers	7	7	0
Light cruisers	11	11	3
Destroyers	72	73	32
Submarines	73	77	25
Total	170	176	65
ITALY			
Battleships	5	5	3
Aircraft carriers	0	0	0
Monitors [1]	5	5	0
Heavy cruisers	7	7	0
Light cruisers	12	14	14
Destroyers	98	130	12
Submarines	104	154	26
Total	231	315	55
JAPAN			
(Following are only available estimates of Japanese Navy, which has refused to exchange any data)			
Battleships	10	10	3
Aircraft carriers	11	11	2
Heavy cruisers	12	17	0
Light cruisers	15	23	5
Destroyers	75	134	9
Submarines	40	59	3
Total	163	254	22

[1] Monitors are vessels of light draft carrying guns of more than 8-inch caliber for duty in shallow waters.

Increase in submarines since the outbreak of the war unknown.

As to Politics and Defense

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

EDITORIAL FROM THE WHEELING (W. VA.) INTELLIGENCER

Mr. SCHIFFLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Wheeling Intelligencer:

The usually reliable New York Times says President Roosevelt is "seriously considering the appointment of several Republicans to secretaryships in a coalition Cabinet." And among the prospective appointees mentioned are Col. Frank Knox, Chicago, publisher, as Secretary of the Navy, and Alf M. Landon as Secretary of War.

If this isn't playing politics with national defense it would be interesting to know what it is. Mr. Landon and Colonel Knox were the Republican candidates for President and Vice President in 1936. That, apparently, would be their sole qualification for the Cabinet posts suggested. Certainly neither man has had the practical experience to fit him for the task of heading either of our arms of defense, at a time when we are told we must prepare to repulse invasion. Presumably, the functions of these two gentlemen would be to line up the Republican Party back of Mr. Roosevelt for a third term; to satisfy the political appetite of the opposition.

If Mr. Roosevelt is considering these or any similar appointments, nothing could expose more fully the hollowness of the whole movement for a third term on a national defense basis. If we can safely switch the heads of the Army and Navy at a time of alleged crisis, and particularly if we can entrust the portfolios to men without specialized training in, or particular knowledge of, the business involved, what danger is there in trying a new President?

The whole thing, of course, is absurd. And the louder the ballyhoo gets, the clearer it becomes to this newspaper that Mr. Roosevelt is anybody but the man to lead us in time of crisis.

It is illuminating, we think, to note the reaction of airplane manufacturers to yesterday's dramatically called Washington conference. When it was all over, some of the men who had come to the Capitol with the expectation of hearing something definite and concrete expressed the disgusted opinion that the whole thing was chiefly a "publicity stunt" to help influence speedy enactment of the President's new defense program, and all agreed that little or nothing was accomplished. As one man expressed it, according to the United Press, "The Army people indicated that this whole thing was thrown at them so fast they didn't have a chance to get prepared for the meeting."

In this connection The Intelligencer is in complete agreement with the statement made by Colonel Lindbergh on Sunday night, and it directs attention of readers to what General Johnson has to say on page 1 of today's issue. As Colonel Lindbergh says, we are in no danger of attack from anybody unless we bring it on by meddling in foreign affairs; nor is our defense job, whatever enemy we may face eventually, one of rushing through, pell-mell, an order for 50,000 airplanes to be built on the spot, etc. The job is one, as indicated in this column yesterday, of working out a long-term program for defense of this continent. That is a task for years, for decades, not for days or weeks, and it has nothing whatever to do with the Presidential succession.

Many strange things happen in American politics. But we cannot believe that the judgment of the American people has been so warped that they will keep in the White House, in defiance of the sensible third-term tradition, a man who has so bungled the job of managing the country in peacetime on the ground that he is the only one capable of leading us or in protecting us from war.

Cooperation Between the Republican and Democratic Parties

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

LETTER FROM MELVIN G. WINSTOCK

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein, at the request of Melvin G. Winstock, journalist and radio broadcaster, Seattle, Wash., his letter to Mr. John D. M. Hamilton, Republican National Committee, Washington, D. C., as follows:

MAY 18, 1940.

Mr. JOHN D. M. HAMILTON,
Republican National Committee, 718 Jackson Place, Washington, D. C.

DEAR MR. HAMILTON: I submit the following suggestions and trust that you will find it expedient to act thereon without delay.

First. That the Republican National Committee authorize negotiation with the Democratic National Committee in the discussion of all matters concerning the present national emergency.

Second. That the Republican Party offer to nominate Franklin D. Roosevelt to succeed himself without opposition.

Third. That the Democratic National Convention nominate as vice president a Republican who shall have been chosen by the Republican National Convention.

Fourth. That the President give assurance that immediately he will form a coalition cabinet embracing representatives of major political, industrial, and financial groups.

Fifth. That Congress shall agree to the immediate passage of such legislation as will secure the maximum productivity of the Nation and shall conscript wealth, industry, agriculture, and labor.

Sixth. That in spite of all outcries that all "fifth columnists" be segregated and rendered harmless for the sabotaging of our program for national defense.

Seventh. That we make more certain the cooperation of all Central and South American republics for the defense of this hemisphere.

When Hoover, Taft, Knox, all Republicans, whose deep-rooted Americanism cannot be questioned, endorse the President to the limit in his foreign policy and declaration for national defense, it would seem to me that Americans all should set aside partisan politics and present a united front to the peoples of the world as evidence of the fact that democracy can speedily work to maintain the happiness and security of its people.

I am taking the liberty of forwarding a similar letter to the Honorable James A. Farley, chairman of the Democratic National Committee, confident that if you two loyal, devoted, patriotic American citizens sit around the council table in conference over this vital situation that as realists and practical men you will agree that the course herein recommended will solidify the Nation and go far toward saving our Government and its institutions from grave peril.

Respectfully,

MELVIN G. WINSTOCK.

Federal Strikes

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 23 (legislative day of Wednesday, April 24), 1940

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Evening Star of this city referring to 1,116 Federal strikes.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star]

ONE THOUSAND ONE HUNDRED AND SIXTEEN FEDERAL STRIKES LISTED IN STUDY BY DR. DAVID ZISKIND—NUMBER IS INCREASING STEADILY, AMERICAN UNIVERSITY LECTURER ASSERTS

Eleven hundred and sixteen Government strikes are recorded in a study by Dr. David Ziskind published by the Columbia University Press.

These have been, according to Dr. Ziskind, at least 66 strikes in agencies whose function is public protection, 3 in public legislation and administration, 23 in public education, 94 in public health and sanitation, 72 in public-road construction, 18 in public parks and recreation, 62 in public-property maintenance, 114 in publicly owned utility operation, and 664 in the depression employment program.

"This list is incomplete, and the number of Government strikes is increasing steadily," says Dr. Ziskind, who is lecturer in labor law and legislation at American University.

The peculiarities of Government strikes are found not so much in their character as strikes as in the nature of the Government employment in which they have occurred, Dr. Ziskind points out.

SAME STRIKE TECHNIQUES

"The strike techniques of Government workers have been for the most part the ordinary methods of strikers in normal private employment," he adds. "The formation of unions, the election of grievance committees, the presentation of complaints or the spontaneous protest of the unorganized and the declaration of a strike have been similar for all employments.

"The picketing of places of employment and the delegation of representatives to bargain for adjustments have been essentially the same. Even the calling of police and the prosecution of offenders against the law have proceeded in the same fashion. But the difference between Government strikes and private strikes—differences in cause, conduct, and social import—have arisen because of the different types of employment interrupted by the strikes.

"A strike of W. P. A. bricklayers has differed from a building-trades strike in the construction industry because of the nature of the W. P. A. program, and W. P. A. strikes have differed from city firemen's strikes primarily because of the different jobs involved. It is essential, therefore, to observe the peculiarities of Government employment.

NO ABSOLUTE CHARACTERISTIC

"There is no absolute and universal characteristic of public employment that distinguishes all of it from all private employment. The nonprofit, monopolistic, impersonal, impartial and indispensable characteristics of the Government have been offered at various times as the distinctive aspects of Government employment. Those qualities are supposed to elevate Government work above all private enterprise and to entitle it to special consideration in labor disputes. However, these pretentions to uniqueness are not always well-founded.

"The nonprofit character of most public works does not apply to Government business such as the Panama Railroad, nor are public works any more nonprofit in nature than many privately endowed institutions such as universities and hospitals. The monopolistic character of most Government enterprises, such as the mail service, does not differ from the noncompetitive character of most private utilities, such as water systems and telephone companies.

"The impersonal quality of the Government and its absolute dependence upon human employees is shared by every private corporation. The alleged impartial, nonsectarian, nonfactional virtue of government is often more true of large-scale business organizations such as railroads and the telephone system.

PUBLIC'S DEPENDENCE

"The public is as much dependent upon various private utilities as upon certain branches of the Government. It would be much simpler to forego the reporting of weather than the packing of spring vegetables, and perhaps just as dangerous to dispense with private garbage disposal as with public street cleaning.

"The attributes of public employment that may call for special consideration do so not because they are unique or peculiar to Government employment, but because they have important social consequences—social consequences that flow from some private as well as some public employments. The correlation between these social consequences and Government employment must be sought separately in each form or type of Government employment."

The Defense Program

EXTENSION OF REMARKS

OF

HON. CHARLES F. McLAUGHLIN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

LETTER AND RESOLUTION FROM OMAHA CHAMBER OF COMMERCE

Mr. McLAUGHLIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution, which I have today received from the Omaha Chamber of Commerce, of Omaha, Nebr.

The Omaha Chamber of Commerce has set an example of patriotic conduct which will commend itself to all Americans who are unselfishly interested in the welfare of their country. Sound national defense calls for the subordination of sectionalism and desire for personal profit to the broad aim of united action for united security. The following letter and resolution point the way to such action:

OMAHA CHAMBER OF COMMERCE,
Omaha, Nebr., May 22, 1940.

Hon. CHAS. F. McLAUGHLIN,
House of Representatives, Washington, D. C.

DEAR MR. McLAUGHLIN: We have naturally sensed an opportunity for Omaha and Nebraska in the new defense program. We feel, however, that this opportunity should be subordinated to the defense needs of the country as a whole.

Actuated by this feeling, our directors have unanimously passed the enclosed resolution which will guide and control our actions with respect to the proposed new units of the national defense. In the spirit of this resolution, we expect to make a complete and dignified presentation of the assets and advantages of this territory.

At the same time, however, we expect to refrain from pressure tactics and lobbying of a kind which would divert you and the other congressional and administrative officers of the Government from the discharge of your duties.

It may be of further interest to you to know that we are sending this resolution to the principal chambers of commerce throughout the United States, urging them to emulate our example. If this is done, we feel that it will represent a major contribution to the efficient rearming of the United States.

Yours very truly,

J. L. HAUGH, *President.*

RESOLUTION ON THE NATIONAL DEFENSE PASSED BY THE OMAHA CHAMBER OF COMMERCE BOARD OF DIRECTORS MAY 21, 1940

Present world conditions, with millions of men engaged in the most destructive war in history, plus the demonstrated efficiency and ruthlessness of modern warfare, convince all thinking men of our inadequate preparation for defense and immediate need of military preparedness.

While our Government now proposes to spend hundreds of millions, and possibly billions of dollars for this purpose, organizations of every kind are already taking action seeking to have a part of these moneys spent in their respective communities.

This is no time for political or sectional log rolling. In the past our governmental expenditures for military purposes have been influenced by organized groups lobbying for the commercial or financial benefit of particular communities and without regard to military efficiency. With the world ablaze, such activities are deplorable and cannot be countenanced. An adequate defense for our Nation is paramount to the commercial or financial advantages of any city or section of our country.

The only question is where and how can this money be spent to attain value for every dollar and effectively place our country in a condition to withstand assaults of every kind from within as well as without: Therefore, be it

Resolved, That the Omaha Chamber of Commerce states its policy to be one of offering and tendering its services to our Government for the attainment of the objectives stated. We stand ready to furnish information, make researches, assemble data, and to cooperate with the military and naval branches of our Government, local and national, in every possible way, and

We call upon the various chambers of commerce of the United States and all other groups of our citizens to join us in putting a stop to the deplorable practice of hounding the governmental departments for their own selfish purposes. We ask every citizen and every community to permit our military and naval branches of government to determine their necessities based on their technical knowledge and not on political pull.

We take this stand and ask others to do so, to the end that we shall be enabled in the shortest time possible, without waste and without favoritism, to make America safe and America efficient.

OMAHA CHAMBER OF COMMERCE,
J. L. HAUGH,
President and Chairman, Board of Directors.
W. C. FRASER,
Vice President and Chairman, Executive Committee.

Being Fair to T. V. A.

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

EDITORIAL FROM CHRISTIAN SCIENCE MONITOR

Mr. SPARKMAN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Christian Science Monitor of May 17, 1940. This short editorial describes well a situation in which the House is interested. The bill mentioned was introduced in July 1939. Hearings were started before the House Military Affairs Committee on January 21, 1940, and were concluded many weeks ago. No testimony whatever was offered in opposition. Nevertheless, the measure remains locked up in the committee.

The editorial follows:

[From the Christian Science Monitor of May 17, 1940]

BEING FAIR TO T. V. A.

Critics of Uncle Sam's big power experiment in the Tennessee Valley have repeatedly emphasized the charge that T. V. A. is taking millions of dollars' worth of property off the tax rolls in the States where it has built reservoirs and bought up private utility systems. Clearly, T. V. A. ought to do something about this. It is estimated that the State of Tennessee and its counties will lose this

year $800,000, much of it badly needed to keep schools open and roads in repair.

But, rather interestingly, T. V. A. is eager to pay Tennessee and the other affected States the equivalent of these taxes. The T. V. A. Board is asking Congress to authorize it by legislation to distribute 10 percent of its gross revenues to the States and counties in question instead of the 5 percent which it now is instructed to pay only two States. This bill, sponsored by Senator GEORGE W. NORRIS and Representative JOHN J. SPARKMAN, was passed by the Senate on April 30. The House Committee on Military Affairs more than 3 months ago held hearings in which testimony overwhelmingly favored the proposal, yet the committee has not reported the bill.

What is holding it up? Opponents of T. V. A. have insisted that it ought to pay taxes or their equivalent if it is to pretend to be a yardstick for power rates or to compete at all fairly with the private electrical industry. Are these same people now responsible for holding this bill in committee? If so, by what reasoning can they justify hindering it from doing what they have demanded it should do?

The Third-Term Movement

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1940

EDITORIAL FROM PASADENA (CALIF.) POST

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief editorial from the Pasadena Post of May 17, 1940:

[From the Pasadena (Calif.) Post of May 17, 1940]

MISS THOMPSON IS PERSUASIVE BUT NOT WHOLLY CONVINCING

Dorothy Thompson, always a surprising person, has taken one grand plunge and landed squarely in the middle of the third-term movement. The feeling and part of the reasoning which prompt her commitment to President Roosevelt can be understood and appreciated. The President has more truly expressed the prevailing and growing sentiment of the American people on foreign affairs than has any other present-day leader. This column attempted to point out in June 1939 that the Republican Party, with victory assured on questions of domestic policy, seemed about to commit the blunder of permitting the campaign of 1940 to be fought on questions of foreign policy.

As matters have turned out foreign affairs would have assumed great importance in the campaign without Republican help. And it is true also that the Republican leaders have not blundered quite as badly as then seemed likely. The fact remains that the chances of Democratic victory in November have been greatly increased by reason of the foreign-policy issue.

The second of Miss Thompson's points is undoubtedly sound. It is that President Roosevelt today occupies a position somewhat comparable to that occupied by President Wilson in 1917–19 as a leader of world democracy.

The third point which seems tenable is that a hard-fought political campaign in a democracy is often interpreted as an evidence of grave national disunity. This is an interpretation which could only be made by nations and peoples having little knowledge of democracy and little experience in its practical operation. But unquestionably it would affect the attitudes of the aggressor nations.

When all this is said, there still remains an undisguisable error in the premises accepted by Miss Thompson, and on which she rests her half-emotional and half-intellectual case for the reelection of President Roosevelt. This error, in my opinion, destroys the soundness of her conclusion. Miss Thompson says:

"Alone among all the leaders of the three great free nations, the President of the United States has from the first faced and grasped the whole bitter reality."

And again:

"The President has been right. He foresaw what has happened, when people were branding him as a calamity howler. He has been thinking ahead of events while the rest of the democratic world has been thinking one lap behind them."

I submit that these statements are not true, and that to accept them as true would be to brand President Roosevelt as the worst of all Presidents.

If the President "has from the first faced and grasped the whole bitter reality" and has at the same time piled up such a mountain of public debt in time of peace as to make it tragically difficult for us to face a defensive war or even an adequate armament program, then he is a man inhumanly callous to the fate of his country.

I do not believe it. I believe President Roosevelt is a patriotic man who can voice America's aspirations eloquently. But the man to lead the country through the next 4 years must be one who can so revive our domestic economy that we can afford to have a foreign policy.—W. L. B.

Franklin Foresaw Mischief in the Skies

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1940

Mr. SHANLEY. Mr. Speaker, one never gets tired of encountering the amazing versatility and imaginative faculties of Benjamin Franklin. With the present interest in the development of transportation of armed forces by air and their descent by way of parachutes it ought to be of interest that the sagest of American geniuses foresaw the possibilities of the mischief in the skies.

SCIENTIFIC CONSCIENCE

In two of the recent numbers of Science, Professor Ashley-Montagu has pointed out how two early writers (Leonardo da Vinci and Francesco Lanza Terzi), both pioneers, exhibited fear that inventions with which they were concerned might be used for the destruction of mankind, rather than its preservation. In this light, it is interesting to note what Benjamin Franklin had to say on the subject.

Franklin had been present at the balloon ascents of Montgolfier and Charles, and had written from Paris detailed accounts of these ascents to Sir Joseph Banks, the president of the Royal Society. In a letter to his friend, Jan Ingenhousz—the physician to Maria Theresa—dated January 16, 1784, he wrote:

"It appears, as you observe, to be a discovery of great importance, and what may possibly give a new turn to human affairs. Convincing sovereigns of the folly of wars may perhaps be one effect of it; since it will be impracticable for the most potent of them to guard his dominions. Five thousand balloons, capable of raising two men each, could not cost more than five ships of the line; and where is the prince who can afford so to cover his country with troops for its defense, as that 10,000 men descending from the clouds might not in many places do an infinite deal of mischief, before a force could be brought together to repel them?"

Franklin's abhorrence of wars is well expressed in another letter to Ingenhousz, dated February 11, 1788, in which he said:

"I lament with you the prospect of a horrid war, which is likely to engage so great a part of mankind There is little good gained and so much mischief done generally, by wars, that I wish the imprudence of undertaking them was more evident to princes; in which case I think they would be less frequent."

I. BERNARD COHEN.

Carnegie Institution of Washington.

Mr. Speaker, I am indebted to Colonel Martin, of the Congressional Library, for this facet of the many-sided American polygon.

The National Defense

EXTENSION OF REMARKS
OF
HON. WILLIAM J. MILLER
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1940

Mr. MILLER. Mr. Speaker and Members of the House, one week has gone by since the President startled the Congress and the country by appearing in person to deliver a message to a joint session of the House and Senate. I listened attentively to the message of the President. I have read and re-read that message. In addition to asking Congress to appropriate another billion dollars for the purpose of strengthening our national defenses, the President asked for the cooperation of the Congress and, in turn, pledged his cooperation to the Congress.

In such a trying period there must be teamwork between the executive and legislative branches of our Government. No loyal American can permit his decisions or actions to be influenced by partisanship. With such thoughts going through my mind, it was indeed a shock to read in the Washington Evening Star, just 3 days after the President had delivered his message to Congress, the following words uttered by Mr. Harold Ickes, Secretary of the Interior and, of course, a member of the President's official family:

Today the continuance of President Roosevelt in office is necessary to give a free people national unity at a time of grave crisis and to permit the New Deal's concept of social and economic justice to become an accepted part of our American system. Speaking before the Amalgamated Clothing Workers of America at the World's Fair on the occasion of their twenty-fifth anniversary, Mr. Ickes said, in a prepared speech, that the people are looking to President Roosevelt for continued leadership "and will not be denied because they have the right—the right of democracy—to choose their commander in chief."

Such a statement should be repudiated at once by the President.

Going back to the President's message, there is no doubt in my mind that Congress will, as speedily as possible, appropriate the money asked for by the President. A strong Army, Navy, and Air Corps is the best possible insurance the country can have. We must, at the earliest possible moment, provide whatever is necessary to make certain that if the occasion ever arises we will be able to defend ourselves from any possible attack from any possible direction.

While I intend to vote for the appropriation of the money requested by the President for the Army and Navy, I have serious doubts as to the wisdom or necessity of giving the President a blank check in the amount of $200,000,000. Under the emergency powers of the President—powers he now possesses by virtue of the emergency proclamation issued last fall—he can transfer funds within the Army and Navy Departments' appropriations. Undoubtedly it will be claimed by those who favor the issuing of this blank check that such a blank check was given to President Wilson in 1917. However, it is well to remember that at the time Congress gave President Wilson $100,000,000 to spend as he saw fit, we were at war, while at this time we are at peace and, with the help of God, we intend to remain at peace with all of the world.

In connection with the question of issuing this blank check for emergency purposes, I want to quote the words of Congressman Mondell, spoken on the floor of the House during the debate on the question of giving President Wilson $100,000,000 for emergency powers. He said:

In time of peace, in a country like ours, there should be no large general fund in the hands of the executive officers to be used at their discretion.

On June 17, 1918, President Wilson asked for an additional $50,000,000 and, at that time, he gave to the Congress a report on the expenditure of the first $100,000,000. This report was as follows:

Department	Permanent	Reimbursable	Reimbursed
Treasury	$1,454,161.54	$4,200,000.00	
War	14,706,986.37	77,583,280.00	$65,000,000.00
Navy	1,498,000.00		
Interior	200,000.00		
Commerce	1,715,550.00		
Labor	1,067,000.00		115,370.24
Secret Service	6,807,507.00	275,000.00	
Executive Office	5,000.00		1,180.00
Civil Service	250,000.00		
Committee on Public Information	2,100,000.00		
Council on National Defense	600,050.00		
Priority Transportation	25,000.00		17,265.37
Alien Property Custodian	50,000.00		
Export Advisory Board	250,000.00		
War Trade Board	1,605,500.00	200,000.00	
Director of Railroads	50,000.00	25,000.00	
Shipping Board	19,561,211.07		
Food Administration	590,000.00		
Food and Fuel	2,400,000.00		
Fuel Administration	300,000.00		
Federal Trade Commission	700,000.00	116,000.00	
Total	55,935,965.98	82,399,280.00	65,133,815.61

Regular allotment		$55,935,965.98
Deduct amounts returned		133,815.61
		55,802,150.37
Reimbursable allotment	$82,399,280	
Deduct amounts reimbursed	65,000,000	
		17,399,280.00
Net allotted		73,201,430.37
Balance unallotted		26,798,569.63
Appropriated		100,000,000.00

Is there any good reason why Congress should not have allocated these funds to the departments concerned? Note the item of $2,100,000 turned over to Mr. George Creel for publicity purposes. How important such an item could be at this time if an effort should be made by the President to influence public opinion to approve another American expeditionary force.

Last Friday the President told his press conference that if Congress gave him the first $100,000,000 he had requested, he would, in all probability, use some of it in the expansion of aircraft factories. I have also been told that the President intimated that if any of this money was used to expand the aircraft industry it would be used to build new factories or to have new factories built in the Middle West. To put it bluntly, this money could be used as a club to force units of the aircraft industry to move to the Midwest.

On February 13 last I addressed the House in opposition to the suggested plan of moving our aircraft factories to the interior. It might be of interest to the Members of the House to consider the fact that if we take the 10 most probable points of attack by air, Chicago, Ill., is closer to the probable point of attack in 5 cases, than is Hartford, Conn. To be sure Hartford is equally near the probable point of attack in 5 other cases. I shall not mention the locations I have in mind as we are on rather thin ice when we start to discuss points of attack on the United States, but taking the 10 most likely points of attack we find that they divide 50–50. We cannot put a great deal of weight in the suggestion that the East or even the Pacific coast is more likely to be subjected to attack from the air than is Illinois.

Not so long ago a manufacturer of national reputation employed a firm of industrial engineers to make a survey of several different parts of the United States with the view to building a very necessary part of an aviation engine. This group of industrial engineers surveyed several States of the United States and then made their recommendation to the manufacturer who engaged them. Among other things mentioned in the report was that Connecticut has the largest supply, generally distributed, of skilled labor in the United States. The following table shows, for a number of States, the number per square mile of workers in certain machine and technical product industries requiring skilled labor:

	Per square mile
California	0.17
Connecticut	13.69
Illinois	1.58
Maryland	.25
Massachusetts	6.27
New Jersey	5.29
New York	1.53
North Carolina	.01
Ohio	2.10
Pennsylvania	1.66
Virginia	.02

This same firm of industrial engineers, having ascertained from experts on defensive tactics against aircraft the ideal type of territory to defend, stated in this report that of all the places studied in the plant survey, the central part of Connecticut appears to be closest to the ideal.

Last Sunday I received the following message from a constituent of mine to whom I often turn for advice. Before our entry into the World War, this gentleman spent a great deal of time, effort, and money to point out the need for preparedness, and I believe he was at least partly responsible

for the establishment of the first officers' training camp at Plattsburg, N. Y. He says:

You have so often proved that the Nation comes ahead of local considerations with you that I hope you will oppose the President's suggestions of establishing new airplane factories since this would not step up production but slow it down. First it would discourage existing plants from expanding in size or production. Secondly, it takes more time to build new factories and get them into production than to expand those now in operation. Thirdly, airplane design and construction requires engineers of very special training and experience and they must be at point of manufacture. Therefore, establishing new plants would either deprive existing plants of the expert engineers they need or leave new plants without them. In either case inferior airplanes would result since aircraft and engines cannot be turned out like tin cans and poor quality means weak air defense besides death of many pilots. If efficient and speedy defense is our real objective we should strengthen and assist all existing airplane facilities wherever they are. This danger which you and I have seen for so long and which the President now points out has become an immediate danger and therefore the remedy must be immediate. Clearly the quickest and best method is to use and improve what we have rather than attempt experiments which will require months to complete and then produce inferior product. The public wants what is truly fast and efficient rather than what is spectacular or hysterical. Finally, we should combat delegation of expenditures or other centralization under excuse of emergency. Sound defense and preservation of democratic methods help each other while any attempted short cut of Government control is dangerous both to liberty and to defense. Why aid democracy abroad and lose it here? In the World War, General Pershing refused to scatter our strength in spite of Allies' wishes but insisted on creating an American Army and everyone now recognizes that this helped both ourselves and our Allies. In like manner we should develop our own strength in this crisis along American lines. Our liberties go hand in hand with our safety. They should be maintained together.

Speed, quality, and quantity are essential at this time. If we want the best possible aircraft at the earliest possible date, it is apparent that the thing to do is to provide adequate protection for our aircraft factories at their present sites, where trained skilled employees, power, and other utilities are already available. Perhaps it can be done in a totalitarian state but in a democracy large groups of our citizens cannot and will not be uprooted and moved to another part of the country for no good reason.

In at least one respect the President's message was a typical New Deal message, in that no mention was made of where the money was coming from to pay for this enlarged national-defense program. Admitting, as I do, that the needed defense must be provided at once, it can do no harm to consider where we are to get the needed money. Right now we are over our legal debt limit of $45,000,000,000, and let it be noted in the RECORD that our huge debt cannot be charged to the cost of providing a more adequate national defense. Comparatively little of the billions spent since 1933 has been spent on building up our Army, Navy, and air services.

Following the World War we heard a lot about the war millionaires. Much has been said during the past 20 years about taking the profit out of war but nothing has been done to prevent the growth of another crop of millionaires. Before going home, Congress should consider legislation to take the profit out of war and to tax any excess profits that may come from the spending of $3,000,000,000 on national defense during the next year, to say nothing about the huge sums that the Allies will spend here for aircraft and other war materials. This legislation should be tax legislation, and nothing more. It is not necessary to set up a dictatorship, nor to extend additional powers to the President in order to capture excessive profits, if any are made.

In these trying days, when the blood of every red-blooded man boils as he reads of the attacks on peace-loving people; when he reads of the bombing of innocent women and children in quiet, peaceful villages, it is important that we keep our feet on the ground and our heads as cool as possible in order that we can do whatever is best for our people, our country, and for the world.

Influx of Germans Into Mexico

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ARTICLE FROM THE NEW YORK TIMES

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from this morning's New York times:

[From the New York Times of May 23, 1940]

INFLUX OF GERMANS DISTURBS MEXICANS—INQUIRY BEGUN INTO ACTIVITY OF NEWLY ARRIVED "TOURISTS" AND "SALESMEN"—NAZIS WORKING WITH "REDS"—AIM IS TO KEEP UNITED STATES OCCUPIED ON BORDER TO FORESTALL INTERVENTION IN EUROPE

MEXICO CITY, May 22.—Concern over the influx of Germans into Mexico has spurred a Government investigation of possible "fifth column" activities, it was reported reliably today.

Normally about 6,500 Germans live in Mexico, with approximately one-half in Mexico City and the others scattered, chiefly in the states of Chiapas and Vera Cruz. Most of the new arrivals were believed, however, to be concentrated in the capital, with some in the ports of Tampico and Vera Cruz.

Between 50 and 60 Germans have entered Mexico since the middle of April. They came from all parts of Latin America and a few from the United States. Nearly all, it was said, arrived by Pan American Airways.

One German-born anti-Nazi author said he had "never seen so many Germans as there are now in Mexico." Other sources said they did not believe the influx included refugees.

"There are many new faces," said another informant, "mostly of men upward of the age of 30. They include tourists, some actual salesmen and some posing as salesmen.

Arthur Dietrich, press attaché of the German Legation, disclaimed any knowledge of increased German arrivals.

AIM TO DIVERT UNITED STATES ATTENTION

(By Arnaldo Cortesi)

MEXICO CITY, May 15.—The "fifth column" tactics used with success by Adolf Hitler in Europe are likely to give further proof of their effectiveness if plans of the Nazis in Mexico work out as they hope.

The objective in Mexico is not, as it was in more than one unfortunate European country, to pave the way for invading armies, but is no less important from the German point of view. It is to create a diversion south of the Rio Grande capable of diverting the attention of the United States in peace or in war, from events in Europe.

Germany's purpose in Mexico now, as in the World War, can be achieved only by working upon the domestic situation, since the Nazis, even with the help of their partners, the Communists, have obviously not sufficient strength to undertake even the slightest independent action against the United States. They intend to exploit the nuisance value of Mexico by stirring up internal trouble, and at the same time by playing upon Mexican public opinion in such a way as to make sure that whatever outbreak may eventually take place shall have a marked anti-American character.

If an upheaval of sufficient proportions can be brought about in Mexico, the Germans trust that the dreaded intervention of the United States in the European war may be delayed long enough to enable Herr Hitler to realize his dreams of empire without interference from this continent.

BASE FOR ESPIONAGE

Should this fail and the United States unsheathe the sword in aid of France and Britain, Mexico would still have uses for Germany. A convulsed Mexico, especially a Mexico hostile to the United States, would require Washington to keep an army in the territory just north of the Rio Grande, and every soldier occupied in watching Mexico would mean one less available for service in Europe. Moreover, Mexico would be an excellent headquarters for espionage in the United States and an equally excellent base for submarines and other commerce raiders whose activities would oblige part of the United States Fleet to remain in home waters.

A glance at the map shows how admirably suited Mexico is for the purposes Germany has in mind. The frontier between Mexico and the United States is 1,700 miles long. Much of the land immediately to the south of it, wild and sparsely populated, is

full of good hiding places for bands of guerrillas who could immobilize a considerable force on the American side of the border by the mere threat of their presence. In case of war the whole of the frontier would have to be watched to prevent the entry of secret agents on missions of espionage and sabotage.

Moreover, Mexico has long coast lines on the Gulf and the Pacific, from either of which submarines and surface vessels could operate against American shipping. Especially in southern Mexico the coast is deeply indented and virtually deserted. Necessary bases could be maintained there with little risk of detection.

The Germans can count up to a certain point on the cooperation of the Communists, each operating in the field that is particularly adapted to their special talents. The Germans work principally in the political sphere, pulling the hidden strings that move some politicians, exercising a strong influence over the Mexican press, and carrying on an intense propaganda campaign by every means at their disposal. Joseph Stalin's emissaries, on the other hand, have found ready tools for their needs in the Mexican Communist Party and have reached eager hands toward the Mexican labor organizations, most of which are decidedly radical and not entirely deaf to the siren voice of Moscow.

WORK FOR SAME END

The Germans and Communists, although possibly actuated by different motives, are working toward a common end. The Germans are interested chiefly in exploiting the internal Mexican situation as an aid toward winning the war in Europe. The Communists aim at a social revolution, having apparently selected Mexico as the American republic in which communism is most likely to gain the foothold it needs if it is to spread to the whole of the continent.

The Housing Bill

EXTENSION OF REMARKS
OF
HON. CAROLINE O'DAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1940

Mrs. O'DAY. Mr. Speaker, during the past few weeks many inquiries have come to me as to the status of the housing bill, and many women from New York, as well as a number from other States, are calling daily at my office to ask if something cannot be done to speed up the interest of Congress in the matter of providing decent homes for low-income families.

The need for such homes is acute and the women who voice this need fear that the housing bill may be overlooked or put aside in the rush of the closing days of Congress. They fear, also, that the great appropriations asked for defense will curtail the appropriations made for housing and slow up work on these vitally important projects.

Feeling keenly the danger of any such happening it is heartening to find that the wife of our President is, also, deeply interested in the plans for low-cost, decent housing.

In a recent column Mrs. Roosevelt writes:

A group of people interested in housing came to see me this morning to talk about housing bill S. 591. They made the point that, unless housing went on in this country at an accelerated pace, we would be paying more year by year in every community for the evils that come from bad housing and that we would build a better defense and healthier young people through giving them decent places in which to live. I am in entire accord with their stand, and I only hope that women all over this country are going to take up the crusade for better housing. They should write to their Representatives and say that they would rather pay for preventing crime and disease through better housing and that they have a personal interest in improving the homes of the Nation both from the economic and moral standpoint.

Outstanding Examples of "Fifth Column" Agents

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1940

Mr. MASON. Mr. Speaker, in connection with the consideration of our emergency defense program, and the President's recommendations thereon, I believe we should be concerned about present real danger from within, as well as future possible danger from without. To put it more directly, the danger we are in from airplanes that may cross the ocean at some future time to attack Omaha is not nearly as immediate nor as threatening to our welfare and our institutions as the "fifth column" agents that have already crossed the ocean; that are now in our midst; that are now carrying on their subversive activities, doing their best to undermine our form of government and destroy our economic system; and while doing so are enjoying the sympathy, the encouragement, and the protection of Federal officials and people in high places.

To my mind the danger from within from these so-called "fifth columns," judging from what has happened in European countries, is much more immediate, much more threatening, and much more dangerous, than 100,000 Hitler airplanes could possibly be. For that reason I cite 3 concrete outstanding examples of protection, of sympathy, and of encouragement lately given to "fifth column" agents that are at work in our midst. I leave it to your judgment as to the importance of these examples.

HARRY BRIDGES, COMMUNIST

Every American has heard of the case against Harry Bridges, but few Americans know the real facts in the case. I propose to give you those facts as found in the testimony presented to the Dies committee.

Bridges is an alien, a guest within our gates, possessing no rights as a citizen, enjoying only the privileges this Nation extends to its guests. Bridges is a Communist. He has advocated the overthrow of this Government by force, and we have the sworn testimony of witnesses to that effect. This is a deportable offense under our present law.

Bridges has been arrested twice to face deportation proceedings. The first time the proceedings were canceled by Madam Perkins, our Secretary of Labor; the second time the proceedings were postponed while awaiting the decision of the Supreme Court in the Strecher case.

The Strecher case was not a parallel case to the Bridges case in any sense of the word. The Strecher case was to decide whether past membership in the Communist Party constituted a deportable offense under our laws. The Bridges case, on the other hand, was based upon present membership in the Communist Party, and advocating the overthrow of this Government by force.

After the Supreme Court decided in the Strecher case that past membership in the Communist Party did not constitute a deportable offense, the Bridges case was then brought to trial. However, the Federal judge in whose district Bridges naturally and normally should have been tried was not permitted to sit in the case. He had previously ordered deported other aliens who had advocated the overthrow of this Government by force. The Secretary of Labor insisted that a special judge be selected to try Bridges, and Judge Landis, dean of the Harvard Law School, and one of the best legal minds in the United States, was selected to try the Bridges case. Agents of the Department of Labor prosecuted the case before Judge Landis. They presented much questionable and flimsy evidence in support of the charges, but neglected to present much real evidence that was available. Since a judge may not go behind or beyond the evidence presented in his court, Judge Landis, on the basis of the evidence presented to him in this case, had to find that the charges brought against Bridges were not sustained by the evidence, and so Bridges was cleared and let loose. Bridges, therefore, is free to again foment trouble in the maritime unions on the west coast and to tie up all transportation in that area.

That was the status of the Bridges case until the Immigration and Naturalization Committee of the House voted out a bill to deport Harry Bridges as an undesirable alien, and ordering the officials of the Labor Department to do so forthwith. This is a move without precedent. It is predicated upon the principles that if Congress has the power to pass laws to permit aliens to enter the country and specify the

conditions upon which they may enter, and if Congress can pass laws to cancel deportation proceedings against aliens that have entered this country illegally, and grant permanent residence to such aliens—hundreds of bills of this kind have been passed—then Congress must also have the power to expel any alien that is considered a menace to our well-being and a threat to our American institutions. This new method of attack upon the problem of getting rid of Bridges is a direct outgrowth of the work of the Dies committee and was suggested by a member of that committee. It will be interesting to watch the action of Congress on H. R. 9766, a bill providing for the deportation of Harry Bridges. If passed, I predict its effect upon other alien leaders of America's "fifth column" will be immediate and salutory.

WILLIAM HINCKLEY

I wish also to call the attention of this House to an astonishing appointment to a position in our Federal Government. Two months ago William Hinckley was appointed Administrative Assistant to the Commissioner of Education.

For a number of years William Hinckley was national chairman of the American Youth Congress. I call the attention of the House to the fact that the American Youth Congress, from its inception, has been a subservient follower of the Communist Party line. There is not a shadow of doubt about the Communist Party's control of the American Youth Congress. The organization has been functioning for several years as Stalin's "fifth column" among the youth of this country.

The Dies committee has had presented to it testimony which clearly indicates that William Hinckley was, and, for all I know, still is, a member of the Communist Party. I call the attention of this House to the testimony of Kenneth Goff, formerly a member of the Young Communist League and of the Communist Party, who stated under oath that he had personally known and worked with William Hinckley as a member of the Communist Party.

Up until the time the American League for Peace and Democracy went out of business William Hinckley was a member of the national committee of that Communist-controlled organization.

Another item in Mr. Hinckley's Communist record is his appearance as a sponsor of the China Aid Council, an organization which was set up by the American League for Peace and Democracy.

Still another item shows that Mr. Hinckley was secretary of the American Union for Concerted Peace Efforts. This organization was a Communist united-front group functioning in the days when the Communist Party vociferously advocated the doctrine of collective security against Nazi Germany.

In a recent issue of the New Masses, an out-and-out Communist publication, there was published a letter which was signed by scores of Communists and fellow travelers. Mr. Hinckley's name appeared on the list of signers of this letter, which was a protest sent to the President of the United States against various efforts of governmental agencies to expose the "fifth column" of the Communists.

A few years ago the Communists published a periodical known as the Champion. A glance at its place of publication, its editorial board, its articles, and policies will show that the Champion was a straight Communist Party publication. Mr. Hinckley was one of the contributors to this Communist Party publication.

Finally, among other items which I might mention, Mr. Hinckley sent greetings to the International Workers Order, an organization which the Dies committee has unanimously found to be a Communist outfit. Every national officer of the International Workers Order is publicly known as a member of the Communist Party. Its national chairman, William Weiner, has recently been convicted as an imposter, falsely claiming to be an American citizen. I read you the greetings which William Hinckley, our new administrative assistant to the Commissioner of Education, sent to the International Workers Order:

Congratulations to the International Workers Order on passing its first milestone on the road to a membership of 1,000,000 militant workers. The work of your youth section earned my admiration long ago.

Sincerely yours,

WILLIAM W. HINCKLEY.

It is my understanding that Mr. Hinckley obtained his present position in the Department of Education through the recommendation of Mrs. Franklin D. Roosevelt.

It is nothing short of a national disgrace that one so prominent in the operations of the Communist "fifth column" as Mr. Hinckley, should be placed in a strategic position in our Federal Government and particularly in our Department of Education.

AN INTERESTING DINNER

We have heard a great deal lately about the American Youth Congress, about its communistic units, about its communistic guidance and control, and about its communistic actions and sympathies. I am sure we were all shocked a few weeks ago when the members of this American Youth Congress, then holding its annual convention in Washington, were so lacking in respect as to boo the President while they were guests upon the White House grounds, when the President in an address to the group condemned the Soviet Government for its unjustified attack upon Finland.

In view of these facts, and especially in view of the present serious situation in Europe, which has had, and still has, a direct impact upon our own safety and preparedness, the following copy of an invitation to a buffet supper sent out to a selected group by Edward J. Flynn, of New York City, should be of interest to the Members of the House. The interpretation of the purposes of this buffet supper, as given in the accompanying newspaper editorial taken from the May 16, 1940, issue, page 22, of the New York World-Telegram, should also be of interest.

EDWARD J. FLYNN,
60 East Forty-second Street, New York.

At the suggestion of Mrs. Franklin D. Roosevelt, I am asking a small group of people to my home, 2728 Henry Hudson Parkway, for a buffet supper, on Wednesday evening, May 8, at 7:30 o'clock. I should be delighted if you could join us.

The purpose of the gathering is to introduce a few representatives of the American Youth Congress who are anxious to present their problem to people who are in a position to help them financially. As you know, Mrs. Roosevelt is keenly interested in assisting these young people, and she will be with us on that evening to introduce their members.

Will you be good enough to let me know if it will be possible for you to join us? Would you address your reply to 2728 Henry Hudson Parkway?

Yours very truly,

EDWARD J. FLYNN.

New York World-Telegram, May 16, 1940, page 22:

"COME ACROSS" DINNER

Not all successful dinners get into the society news. Not even the one Edward J. Flynn, Democratic patronage supervisor of this State, gave on May 8, last, at the suggestion of Mrs. Eleanor Roosevelt, to raise funds for the American Youth Congress, an organization to which Mrs. Roosevelt still clings despite charges from many of its own members that it has been dominated by Communists. This dinner was informal, not to say secret. The guests were carefully selected. Mr. Flynn's invitations made it plain that contributions would be expected. Mrs. Roosevelt's speech at the dinner doubtless made this plainer still. While the dollar-and-cent results have not been announced, it was hoped they would amount to much more than the $2,000 needed to finance the American Youth Congress convention at Lake Geneva, Wis., next July. The American Youth Congress is indeed blessed in its sponsors. Few other groups, Communists or not, could count on the President's wife and the Democratic job dispenser of New York State, who is the President's friend, to engineer these little "come across" dinners, invitation to which might almost be considered a command. All done, in Gilbertain phrase, "most politely, most politely." Quite different, of course, from the kind of thing courts brutally term "coercion."

I have cited these three examples—protection for Harry Bridges, a Government position for William Hinckley, and the "come across" dinner, sponsored by the First Lady of the Land—because they illustrate the protection, the help, and the sympathy that has been given, and is now being given, these "fifth column" agents of a foreign government by high

Government officials. I am sure each of these three examples can be multiplied by hundreds of similar cases that have happened during the past 6 or 7 years. Is it not time to clean house?

New Tax Set-Up Called for by Defense Plan

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

ARTICLE BY PHELPS ADAMS

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following special dispatch to the New York Sun by Phelps Adams:

[From the New York Sun of May 20, 1940]

Indications that the New Deal may be forced to revise its entire tax policy in order to finance its huge new program for national defense were evident here today as both Houses of Congress were flooded with proposals ranging from the inflationary Boren bill, calling for the issuance of $2,000,000,000 in non-interest-bearing bonds, to demands for the enactment of a stiff excess-profits tax.

While President Roosevelt was criticized in several quarters for his failure to recognize in the United States Treasury the vital nerve center of the Nation's defense system and to recommend a specific program for the protection of the Federal credit. Majority members of both the Senate Finance Committee and the House Ways and Means Committee were rapidly arriving at the conclusion that no action to raise the existing debt limit or to increase taxes should be taken at this session of Congress.

In part, this growing determination to let the whole fiscal question slide until after the election, is the outgrowth of the realization among experts, both in and out of Congress, that the wealth-distributing, profit-curbing tax theories upon which all New Deal revenue legislation has been heard, cannot be expanded to meet present needs without destroying the tax sources themselves and greatly impairing the productive capacity of industry.

NEW TAX LAW DEMANDED

The need, according to these experts, is not only for new taxes; it is for a fundamentally new tax law.

The whole problem that confronts the Congress, together with a detailed and specific plan for coping with it was discussed today by Ellsworth C. Alvord in an exclusive interview with the Sun. Mr. Alvord, formerly special assistant to the Secretary of the Treasury, is widely regarded in Washington as one of the outstanding authorities of the country on problems of taxation, and has aided in writing some of the most successful tax legislation passed since the income-tax amendment to the Constitution was adopted.

The fundamental points raised by Mr. Alvord in this interview, and the basic proposals and arguments he advanced, may be outlined briefly, as follows:

There are three essential needs in any national-defense program:

1. Adequate military and naval forces, adequately equipped.
2. Maximum industrial productive capacity, including plant facilities, machinery, equipment, and an adequate supply of skilled labor.
3. A sound Treasury.

Without maximum industrial productive capacity it is impossible to have adequate armed forces adequately equipped, and without a sound fiscal system it is impossible to have maximum industrial productive capacity. Therefore a sound Treasury is the foundation stone of a sound defense program.

FOUR SOURCES OF FUNDS

There are only four possible sources of Treasury funds:

1. Taxation.
2. Borrowing within limits permitting ultimate repayment.
3. Confiscation.
4. Inflation and repudiation.

Only through the last two—confiscation or inflation—would it be possible for the Treasury, burdened as it is with $45,000,000,000 of debt, to finance American participation in the present war; but it is still possible to devise a reasoned tax program that would finance national-defense needs during the coming years out of taxation and controlled borrowings.

At this point it should be noted that there is no such thing as an unrelated, unintegrated tax policy. Every national tax policy must conform to the broad economic and political policies of the administration in power. The existing law does so in that it is essentially a reform program, designed to break up and to prevent the accumulation of concentrated wealth, and to limit the profits of industry sharply.

In the light of altered world conditions, however, the Treasury's needs now demand a new tax policy aimed at two wholly new objectives:

1. The production of the maximum possible revenues over a period of years.
2. The maximum productive capacity of industry.

STRUCTURE OF NEW BILL

In attempting to devise a tax bill consistent with these objectives, it is necessary to recognize three indisputable facts:

1. Present tax rates—the highest on peacetime record—have soared far above the point of diminishing returns. Just as a company which charges unreasonably high prices cannot sell its product, so a government that levies unreasonably high taxes cannot collect maximum revenues. Therefore, taxes must be reduced to the point at which their productivity is most efficient.
2. If larger revenues are to be collected from lower tax rates, then obviously production must be increased through plant expansion and more efficient operation. New plants and new machines require the investment of new capital. Therefore the tax rates must be so devised as to permit investors to get and to retain a large enough return on their capital to compensate them for the risk they incurred when they invested their funds.
3. Total revenue collections of Government bear a close relationship to the corporate tax yields, and corporations pay taxes only on their net income; in other words, their profits. Therefore it is not enough that business activity and the total corporate income should be increased. In order to produce greater revenues, it is necessary that corporate net profits also be increased.

WHERE PROOF IS TO BE FOUND

Ample proof of these contentions is to be found in the Treasury's own records, as may be illustrated by a comparison of the years 1927 and 1936, when industry produced approximately the same amount in each year, the index of industrial production being 106 and 105, respectively. Under the fiscal and economic conditions of 1927 corporate net profits were nearly $9,000,000,000, while under the burdensome policies of 1936 they were only six and three-quarter billion dollars.

The low tax rates of 1927 yielded the Federal Government $1,131,000,000 in corporate income taxes, while the confiscatory rates of 1936 netted the Government $1,191,000,000—a negligible difference. Actually the Treasury suffered a loss in 1936 because it had a national income of only sixty-two and one-half billions upon which to levy taxes of all kinds, as compared with a national income of seventy-three and one-half billions in 1927 under the lower rates then prevailing.

Thus, by applying lower tax rates to a larger volume of industrial profits the Treasury can actually raise not only a larger revenue than at present, but can also—by its tax policy alone—contribute to the industrial expansion which is regarded by the President as such an essential feature of his defense program. Additional incentives to industrial expansion through the removal of unnecessary legislative curbs placed on business in the last 8 years would, of course, be an essential corollary of such a program.

A SIX-AND-ONE-HALF-BILLION RETURN

On the basis of these facts Mr. Alvord advances a tax program which, he asserts, would produce an average annual revenue of six and one-half billion during the next 10 years—a sum considerably higher than the New Deal has ever been able to reach by any tax system it has devised during the last 8 years.

The main features of a program he outlines is as follows:

1. A stable tax law to remain unchanged in its essential features for 10 years. Constantly changing tax legislation would wipe out many of the advantages of the proposed policy, just as industrial production has been hampered by the enactment of nine different tax laws in the last 8 years.
2. A maximum surtax of 40 percent.
3. Maximum corporation tax of 15 percent.
4. Substantial earned-income credit.
5. Maximum capital-gains tax of 12½ percent.
6. Consolidated returns for affiliated corporations.

Even with such a revenue system Mr. Alvord points out, the Treasury must still be protected from the opposite—or expenditure side—as well.

To this end he recommends that at the outset of every session when the President's Budget is submitted, Congress should by concurrent resolution fix a definite ceiling on total expenditures of the Federal Government for the year—this to be done after a thorough canvass of the Budget and before any appropriation bill is considered. Should the prospective expenditures exceed the estimated revenues Congress would also authorize the Treasury to borrow a specific sum calculated to make up the difference and would increase the statutory debt limit only by the amount it decides to borrow for that year.

Thereafter it would be impossible for Congress to exceed this authorized total of expenditures without reconsidering and amending this act.

This, Mr. Alvord believes, would tend strongly to prevent runaway appropriations, pork-barrel legislation, and Treasury raids by organized pressure groups, and at the same time would focus public opinion sharply on the Government's fiscal condition.

W. P. A. Pay

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 23, 1940

EDITORIAL FROM THE POTTSVILLE (PA.) REPUBLICAN

Mr. FENTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pottsville (Pa.) Republican on W. P. A. pay.

[From the Pottsville (Pa.) Republican of May 22, 1940]

W. P. A. PAY

Congressman FENTON is again making an effort to have the pay of W. P. A. workers in this region raised to at least $60, the maximum provided for these jobs. About 25 percent has been cut from the pay of these workers by the Federal authorities who are enforcing regulations to establish pay rates according to the population of the community in which these workers live and are employed.

The employees from the largest metropolitan centers are given the high rate of pay, under the assumption that wage rates are higher in those sections than in Schuylkill County. Such is not the case. The pay of workers in this section compares with that paid in the metropolitan areas in most lines of work, and the cost of living is also proportionately high.

By cutting the pay of these workers they are being unfairly discriminated against. There are some rural communities in this or other States where rate of pay may be low, and where the cost of living is proportionately low, but Schuylkill County does not constitute any such locality.

Another Republican Congressman, Representative DITTER, from Pennsylvania, demands that W. P. A. regulations be put into effect to bar Communists from W. P. A. employment. This should be broadened to include Nazis and Fascists. If these fellows are not satisfied with the type of American Government, and would conspire to overthrow it, they should not complain if they are denied the financial support of the Government in their personal lives.

It has been shown throughout Europe that strong revolutionary groups and organized bands of traitors, known as the "fifth column," were organized in every country to assist in the overthrow of those governments. Norway fell largely because of treason within. Holland lost the use of its defensive dikes through these traitorous groups, which made possible the landing of a parachute army.

The Dies committee has exposed the revolutionary organizations in this country that are functioning, even in the ranks of Government employees, and it is charged, within the ranks of the Army. These "fifth columnists" may well be expected to be largely represented in our most important industrial plants, ready to destroy them or handicap them through sabotage activities, when the word is given.

We have been nurturing these organizations on the theory that to destroy them is to destroy free speech and personal liberty. Free speech and personal liberty do not give license to any band of revolutionists to operate to overthrow our Government and, since it has been forcibly presented by this congressional committee and by the developments in Europe, it is time that we become alert to the danger surrounding us.

An organized band of this kind, though relatively small, can accomplish much by carefully worked out plans against peaceful communities, unarmed and unsuspecting.

Ukrainians in the United States

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered this morning before the Congress of Ukrainian Organizations in the United States, with more than 1,000 delegates present.

It is estimated that in the United States and Canada there are 1,000,000 Ukrainians. Most of them were born across the water. They came to this country to escape terrible oppression, intolerance, and exploitation. Here are a people who have tasted the bitter pills of despotic imperialism and dictatorship. In this country they have tasted the more pleasant things of life. Their desire is that the fellow countrymen they left behind may enjoy the freedom and good living they have experienced in this land of opportunity. Their's is a noble purpose. They are fine, upstanding, patriotic Americans, wishing for others the good things they are able to enjoy.

There being no objection the address was ordered to be printed in the RECORD, as follows:

I come here today as one who was born on foreign shores. Our ancestors and many of us here today were also born on foreign soil. We have brought with us and transplanted on the fertile soil of this young Nation the best that our native countries had developed down through the centuries. We left behind those things which we thought were not fair nor just. The roots you planted were firm, the soil was rich, and America has taken your offerings and made them a part of the American way of life. The American way of life did not result from the contributions of any one group of people. It is a mixture of the best that many national groups have brought with them and planted on the soil of this Nation. You may be justly proud of the fact that the Ukrainians have done their part.

The Ukrainian people are a distinct asset to this Nation. Their tradition has always been the essence of vitality. From this spirit has flowed a quickening of life for the entire Nation. What you have given America you have given freely and from the heart. You have claimed nothing in return but the advantages of liberty through which you have ever sought to add more and more to the noble stature of the American way of life. The Ukrainian people are hard workers and have an everlasting faith in all that is good. You are here today because of your ability to define an ideal and pursue it with the characteristic persistence of your people.

As one who came to these shores at less than 8 years of age, I have rubbed shoulders with many Ukrainian workers during my early life in the iron and steel mills of Pennsylvania. My father and I both were iron puddlers and worked in the Pittsburgh district—the Sharon, Woods Run, and the South Side iron and steel mills.

I remember one Ukrainian boy with whom I worked. He taught he how to say "How are you" in Ukrainian, and I still remember greeting him each morning as we met with "Yak-sha-my-yet-te." In return I taught him how to say "How are you" in Welsh, and he answered my Ukrainian greeting with the Welsh "pa fodd yr ydych."

We are not strangers to each other. It may surprise many of you when I tell you that had fate been different I might possibly have come to this country not from Wales but from the Ukraine itself. The Ukraine has some very rich iron-ore deposits. When the czar decided to industrialize Russia he called upon Welsh iron and steel experts to come into the Ukraine to build blast furnaces to develop the iron and steel industry, and to open up coal mines. My grandfather was one of the many Welshmen who went to the Ukraine. There he spent a number of years building blast furnaces and instructing the Ukrainians in the art of making iron and steel. After a number of years my grandfather returned to his native Wales. But had he decided to remain in that beautiful country on the Black Sea my father and I might have been born there and became good Ukrainians.

With her rich resources and her advantageous position on the Black Sea, Ukraine has been coveted by foreign powers in the past. Today she is under stranger's rule and is looked upon as a choice morsel for conquest by ambitious imperialists of the hour.

At the same time, the flame of freedom in her is still burning. Through the centuries governments have tried to extinguish this flame which Voltaire called "Ukraine's aspiration to be free." The history of the Ukrainian people is largely a record of their exploitation, persecution, enserfment, and struggles for freedom. Here indeed is a people of whom it might well be said that—"They were tortured, they were stoned, they were sawn asunder; they were set wandering in the deserts and mountains, in caves, and in dens of the earth." So it is that leaders rose among them from time to time fired with dreams of freedom and national independence. These leading men and women were exiled, imprisoned, and even put to death. But nothing has been able to stamp out their desire to be free and independent. The task of your countrymen is not impossible, for they have already tasted freedom. In 1918 the prompt formation of a Ukrainian government at Kiev proved that the Ukrainian people were constantly on the alert. Their opportunity will come again.

You realize that the Ukrainian people can win their rightful claim to mastery over their own land only through their own efforts. But you also realize that it shall be easier to attain this right with the victory of democratic freedom in Europe. Your duty is to bring to the attention of the whole world the plight of your fellow countrymen. Your efforts shall not go unheard nor without reward. There must be a reward far better than this material world can provide awaiting all of you on that far and green shore of the Great Beyond.

You and I came to this country at a time when America needed us most. America needed hard-working, clear-thinking, and clean-living men and women to develop the natural resources of this Nation. We and others from across the waters responded in a way that soon this Nation became the envy of the world. You have shown that given freedom of action, freedom of religion, freedom of education, and freedom to participate in the institutions of America that you as a people have proven conclusively that Ukrainians can govern themselves. You have built large organizations, mainly on a fraternal basis. As a fraternalist I would say that, if the children of Ukraine understand the work of fraternal orders as well as you do, then they deserve to be masters of their fate in their own homeland, where they have lived and toiled for centuries untold.

Ukrainians live in every country in the world. In all of them it is your custom to give your first and unquestioned allegiance to the flag under which we dwell. The Ukrainian spirit in America is a thoroughly loyal American spirit. It should be so. Your patriotism has proven true under every test and has never failed. This same loyal spirit is expected of Ukrainians in every land of their adoption. You give your very best where you live and work. This has made of you a constructive influence in the world because wherever you go you uphold the cause of peace and good will.

It is with gratification that I note that you have sought within the fold of your Ukrainian ancestry to avoid petty jealousies which so often eat as a cancer into the hearts of those who strive for a common goal. You know that the principle of cooperation is necessary in order that you may be of the greatest service to Ukrainians in this country and to your fellow countrymen in the homeland. Long experience has shown that the deepest satisfactions of life come through the united acceptance of responsibility rather than through the isolated efforts of the individual who tries to work out his personal destiny in a lonely way. The spirit of fraternity and brotherhood must guide all of you as you move forward with your tasks.

The Ukrainian people have a long history of loyal devotion to the liberal faith. They have long believed in the rights of the average man. They have believed in the principles which make for better conditions of life and labor. Centuries of struggle for freedom and better living in your homeland records the Ukrainian people as giving firm support to liberalism and labor. They have always stood for freedom of opportunity in business, education, and politics. They have believed that the state exists for the best interests of the greatest number of individuals rather than the regimentation of individual lives for the dictatorial advantage of the few who control the state. When they came to this country they brought with them the ideals of liberalism and unoppressed labor. Most of you here today and your ancestors have observed through practical experience the bitter lessons of bureaucratic control which oppressed the lives of working men in Europe. You turned your backs upon a regime which gave privileges to the few and came to this land in order that you and your children might enjoy freedom of opportunity for the many. Your people brought with them a passion for liberty and an undying hatred of tyranny.

The Puritans, William Penn and his Quakers, and countless other groups came to this wonderful country to escape something. They came to escape oppression, intolerance, poverty, wars, and misunderstanding. You people are unique in that you have tasted a portion of these bitter pills. That is why you came to America. That is why you are so much more appreciative of the fine things America has to offer than many people who have been born in this country. They take their liberties and blessings for granted. You are a people kindly and hospitable by nature. You have known the crushing burden of life in the homeland. Tied to the soil by a knot your countrymen have been unable to untie, they could have been one of the people about whom Edwin Markham wrote in his poem The Man With a Hoe, when he said:

"Bowed by the weight of centuries, he leans
Upon his hoe and gazes at the ground;
The emptiness of ages in his face
And on his back the burden of the world."

Successive generations of Ukrainian folk have added their contributions to a better life for the many in this free land; in mine, mill, field, forest, and factory, but never have you turned your backs on the ideals of Jefferson and Lincoln, which we early came to love, even before we landed on these shores. The liberal faith has given your people a love for the productive forces which have advanced the well-being of the average man. You have rejoiced with all of us that out of our abundance here it has been possible for every normal, hard-working, thrifty person to enjoy possessions and opportunities for improvement which far exceeded the best which Old World kings knew a few generations ago.

Many of your people have gone back to the homeland. They have undoubtedly told their countrymen of the freedom and growth that is possible among people in a representative government. I do not believe that if the Ukraine had its own government that it would be communistic or fascist. I do not believe that the Ukraine would be intolerant of religion. At the present time a new type of state religion has been superimposed on your countrymen. But you can never destroy a faith. Suppression only makes their faith more fervent. I don't believe that freedom of speech or press would be stifled in the new Ukraine. Knowing the spirit of the Ukrainian people, I believe they would have a constitution similar to that of the United States. The Ukrainians, who have fought for freedom all their lives, would know what to do with that freedom when they got it. They and their land could become a bright, shining star in a part of the world gone mad. They would be for peace. They would fight, but only when their freedom and country was threatened. And woe befall the nation that would want to take that freedom and country for their own. The Cossack spirit and the Cossack bravery would prove too much for any would-be conqueror. They would fight just as hard to retain their freedom as they are now fighting to achieve freedom. It is relatively easy to fight for something one has already, but it takes courage, stamina, and faith to fight for something one does not already have. That is why I want to take this opportunity to sincerely congratulate all of you for defining a purpose and fighting for it.

Your's is a noble purpose. It is a purpose for which none of you should feel ashamed. Neither is it un-American. On the contrary, the spirit you are showing is typically American. America has always stood for fair dealing and freedom for all people. That was the breath which gave life to this Nation. It is now the blood that has kept this Nation healthy and full of life. The precepts of liberty, humanity, and tolerance are universal. We in America—all of us—have a strong desire that such principles should prevail throughout the world.

Your appeals for a free Ukraine do not take away from you the fact that you are loyal Americans. You have seen the happiness that is possible in a land where freedom and not oppression rules. It is only natural that you contrast this with your experiences in the homeland and realize how shameful the plight of your countrymen is. It is only natural that you desire for them some of the good things that are yours today.

It must be a wonderful feeling on the part of your countrymen to know that somewhere in a land that is free and where one can speak without censorship, that their cause is being brought before the world. It must be a wonderful feeling on your part to know that you are able to do something in behalf of a cause that is noble and just. You have manifested a spirit of love of man for man. That is in direct contrast to the principle of man's inhumanity to man that has become so prevalent in Europe today.

God speed your efforts, and good luck to all of you.

An Appraisal of the New Deal—Defense, Politics, and Other Matters

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

ARTICLE BY ARTHUR KROCK

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Arthur Krock in today's New York Times:

[From the New York Times of May 24, 1940]

AN EPISTOLARY ACCOUNT OF THE SITUATION

(By Arthur Krock)

WASHINGTON, May 23.—If one of the many gifted spokesmen of the New Deal were authorized to write a candid account of its present attitude on defense, politics, and other matters he could accurately turn out—though with greater literary skill, of course—something like the following open letter:

"DEAR COUNTRY: The apparent success of the German drive has greatly imperiled our national security, and more suddenly than even the President thought likely. If the war should be terminated as quickly as the Germans say it will, the United States must be ready to defend that security sooner than we had feared.

"Accordingly, your Government is taking immediate steps to organize defense and make it invincible. This will be done principally by members of the President's executive staff. Unlike previous administrations, we, thanks to the high efficiency and broad experience of New Deal statesmen in all pertinent matters—industry, finance, engineering and the military arts—will require only subordinate assistance from outsiders who are the heads of American production.

"Some of these will doubtless have good ideas. But the measure of a man's wisdom is determined by his ability to rise to an occasion. Therefore, any industrialist, financier, engineer, etc., who is critical of the record of this administration, or thinks a change of party control would be good for the country, obviously cannot be looked to for such ideas.

"We have in 7 years spent something more than $7,000,000,000 for national defense, and the results are impressive. We have one modern antiaircraft gun; the Army is in a position to defend the Mexican border and to garrison the Panama Canal; the Navy is strong enough to prevent the capture of Hawaii, or to protect the Atlantic coast from a threat in that quarter. But only one at a time.

"The air force is splendid, but unfortunately afflicted by unavoidable obsolescence. It can protect our shores, but hemisphere defense would be a bit beyond its powers. However, steps

are now being taken to bring the air force and the Navy into the scope of the President's 1937 foreign policy. This will not require more than a few years.

"To contract this period it has been suggested by volunteer advisers that we should bring to Washington from the aviation industry an experienced coordinator who has had years of training in this field; who knows how to allocate contracts according to types and how to remove the bottlenecks in this production. It has also been unnecessarily proposed that pilot training be coordinated under an expert outside the Government.

"Fortunately none of this is needed. We have in Secretary of the Treasury Morgenthau a man who in a few weeks has fully acquainted himself with every detail involved in this problem. Under his guidance the industry will soon be turning out 4,000 planes a month; the machinery and engine problems will be solved; and we shall have five pilots for every airplane.

"Other administration heads, who have had long training in politics, law schools, and welfare associations will assume full control of the coordination of technical business matters on which national security and defense depend. Notable among these is Secretary of Commerce Hopkins, whose labors in C. W. A. and W. P. A. have brought him the deserved reputation as the finest industrial mind in America.

"Because of the careful staffing of the Government with business and production experts of this type, it will not be necessary to risk the great social and economic reforms of the New Deal by giving leeway to outside experts. We shall be able to retain all the restrictions on production which are represented by New Deal laws, and keep the well-known clubs over the heads of business and finance, yet still quickly gear the production machine to the required speed and efficiency. Our record is proof. Other governments may be obliged to suspend peacetime reforms to meet a crisis; not this one.

"We shall make no concessions of any kind to nonmembers of the Government of the New Deal while requiring from them absolute conformance to plans and policies. This, of course, will not apply to organized labor. But it applies to every other group, and we shall insist on this in the name of patriotism.

"Patrictism is forsaken when any critic questions what has been done with defense funds so far, or when Congress asserts a right to check the disposition of whatever appropriations we shall require.

"We were willing to abandon partisan politics completely in this crisis by permitting titular Republican leaders to enter the President's Cabinet. Our only condition was that they accept the third term and all policies, past, present, and future, and refrain from campaign discussion of defense and foreign affairs. Mr. Landon presumed, before lunching with the President, to express disapproval of this plan, and the President instructed his secretary to call off the luncheon. But Mr. Landon refused to say, as requested, that he had called it off himself because of illness; the resultant press looked pretty bad; and so the President gave him lunch but naturally asked no counsel of such a noncooperator.

"Trust us, and listen to the fireside chat.

"THE NEW DEAL."

Press Opinion on Proposed Labor Board Amendments

EXTENSION OF REMARKS

OF

HON. HARRY N. ROUTZOHN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. ROUTZOHN. Mr. Speaker, in the next few days the House is scheduled to consider bills providing large expenditures of money for national defense. I am sure that all my colleagues realize how imperative it now is for us to adequately equip and prepare our armed forces. They also realize that the work and efforts necessary to be done must go forward without delay or retardation from any source.

There is no question but that the maladministration of the National Labor Relations Act by the National Labor Relations Board is a potent factor in the retardation of our national recovery. This fact makes it all the more important for us to amend the act and change the personnel of the Board that our labor relations may not be further jeopardized by a Government agency that has been weighed in the balance and found wanting.

My colleagues, if you are inclined to believe that I am alone in the expression of these sentiments, kindly peruse the following:

A study of Nation-wide editorial opinion made during the early months of the investigation of the National Labor Relations Board by the House committee headed by my colleague from Virginia, Mr. HOWARD W. SMITH, showed practically unanimity on the part of the newspapers of the Nation in its condemnation. Out of 1,000 editorials selected at random by the Division of Press Intelligence, but 1 was found that defended the Board, and its support was a questionable compliment since it was from the Daily Worker, reputed official organ in this country of the Communist Party.

Examination of an additional 1,000 editorials, taken 3 months later, after the report was filed recommending 17 amendments to the National Labor Relations Act, the situation was found to have changed a little, but not materially. Where there had been 1 defender of the Labor Board in 1,000 found in the earlier study, it turned out that there was 1 editor out of each 150 or 200 who put himself on record as disapproving the Smith amendments.

Here are extracts from the current editorials of the newspapers of the Nation, taken as they came:

The San Antonio Express:

Constant failure is the New Deal's record for 7 years' meddling with employer-employee relationships. The National Industrial Recovery Act was invalidated by the Supreme Court after it had all but wrecked the American system of free enterprise and had added several million persons to the unemployment lists. Its successor, the National Labor Relations Act, continued the N. I. R. A.'s destructive work after a brief interval during which business and industry—given respite from governmental controls and an attendant opportunity to exercise initiative—had begun to recover.

The Wagner Act became law in 1935 and was upheld by the Supreme Court in 1937. Even by that time the detrimental effects of its administration had become apparent. Its entire history to date is a record of unwarranted strikes and violence, jurisdictional disputes, coercion of employers, vanishing investor confidence, stagnation of private enterprise, and aggravated employment.

The San Francisco Chronicle:

Do any of these (Smith committee) changes attack the right of workers to organize and bargain collectively? Do any of them injure the original declared purpose of the Wagner Act to bring labor justice and peace? On the contrary, they seem calculated to advance that purpose. They would put fairness into the act. This we believe to be as much in the interest of the workers as of employers and the general public. An unfair statute cannot operate indefinitely with unjust favoritism to one group and, without bringing about a popular revulsion, likely to go to the other extreme and visit injustice on the erstwhile favorite. If there is emasculation in these amendments, it is not of the rights of labor, but of an unbalance dangerous to labor.

The Portland (Maine) Press-Herald:

Everybody knows that the recommendations (Smith committee) go directly to the heart of the matter and would form an excellent basis for such amendments as are badly needed, both in the Wagner Act and its administration. The conclusions are inescapable. Sometime, and the sooner the better, they must receive enactment.

The Boston Transcript:

The Smith body struck with pile-driver force against the entire fabric of the administrative process. For there can be no other meaning to the committee's proposal that the present Labor Board be abolished and divided between a judicial board and a single administrator. * * * This newspaper is certain that the remedy for the difficulties lies in such a basic functional reform as the Smith committee has proposed.

The Wilmington Journal-Every Evening:

By the recommendations of the special congressional committee the door is open to a sorely needed and long-overdue revision of the Wagner Act. Congress itself, therefore, has an opportunity to pass a constructive piece of legislation and to make a notable contribution to the cause of industrial peace.

Dissatisfaction with the present Wagner Act and its creature, the National Labor Relations Board, is so widespread that any effort to shelve the 17-point program now presented will be highly regarded as an affront to the whole public. The very least that Congress should do is to give the matter immediate and sympathetic attention. Every consideration of justice and fair play to both parties to our industrial structure demands that some action be taken.

The Brooklyn Eagle:

We have long urged in these columns the need for amendments in the Wagner Act. Its defenders have generally conceded that there was room for improvement, but they have consistently objected when specific suggestions were advanced. Yet they have done nothing about it themselves. * * *

A crying need of the day is to put an end to the constant turmoil which now marks industrial relations. This will never be accomplished until the present Labor Act undergoes an overhauling. Any attempt to pigeonhole in committee the recommendations of the Smith group is bound to be widely resented throughout the country and become a leading issue in the coming election.

The Cedar Rapids Gazette:

According to reports from Washington, the apparent disposition of Congress is to change the personnel of the Labor Board and postpone proposed amendments to the labor law itself. This may be political prudence, but there is reason to doubt that it is good common sense. Until the bugs are culled out of the Wagner Act, undesirable and unnecessary friction is bound to arise in the process of administering the act, regardless of how wise the members of the Labor Board may be. The best way to get a new Labor Board off to a good start is to give it as flawless a law as possible to work with.

These criticisms are from the most important papers of the Nation, many of them beyond any charge of representing mere self-interest.

The Salt Lake City Desert News:

There is nothing more important in the entire field of national legislation than the working out of just and honorable relations between employer and employee. The relationship between these two may hamper business recovery to the injury of both, or may promote recovery for the benefit of both. The purpose of the recommendations of the Smith committee is to obtain a Labor Board which will be absolutely impartial in its decisions and which will put the Government in the position of an umpire rather than in the position of a labor partisan. * * * It is within the power of industry and labor to establish intelligent and honest industrial democracy voluntarily without the coercion of Government. Neither labor nor the leaders of industry should be compelled to fight for life against injustice and wrong.

The Christian Science Monitor:

Possibly it (the appointment of a five-member board) may forestall any other amendments for the current session; or it may not. But whether at this session or next, there is sure to be insistent demands for other perfecting amendments to the Labor Act, demands which cannot be denied. Among these are the clarification of the right of free speech on the part of an employer, an outlawing of the use of force or intimidation from whatever source, and a solution in some form for the troubled question of how to determine the bargaining unit. These and some other amendments will continue to press for consideration, whatever the size of the Board.

The Dayton Journal:

Turned loose to draft its own rules and regulations under a loose statute, permitted to administer those rules and regulations as it saw fit, and allowed to pass sentence on those men it convicted of violating rules and regulations, the Labor Board did become a dictator which a democracy had created. The three branches of Government serve as checks on one another; but there were no checks on a Board that was a law unto itself.

The application of this democratic system to labor relations should accomplish what the Wagner Act administered by a dictatorial Labor Board failed to do—promote industrial peace. It is a system which has worked equally well in that phase of human relations where democratic principles are most needed.

The Rochester Democrat and Chronicle:

Changes in the Wagner Labor Act recommended by the special House committee which has investigated the operation of the present law move straight toward the heart of complaints that have been made both by employers and labor. All in all, they appear to be well-conceived and in the best interest of all concerned. * * * Much of the resentment aroused by the present administration of the law has come from the Labor Board's power to act as prosecutor, judge, and jury, an obviously unworkable combination. * * * The aim of the law should be to hold the scales of fairness as evenly as possible for all parties concerned in labor and industrial relations. Continued experiment may be necessary to find the exact point of balance, but a much closer approach to it can be made than the present law permits.

The New York Sun:

Senator WAGNER's attack on the proposed amendments to the Labor Relations Act was made up of arguments which, to those who have read the amendments, are baseless. * * * The truth is that the Smith amendments, if adopted by Congress, would still leave the Wagner Act a piece of legislation that only employers could violate. The amendments do include long-overdue protection of employers: Federal courts would be authorized to void decisions of the Labor Board not supported by substantial evidence. Without such a provision the Labor Board will continue to be the oppressor of both employers and labor. But that fact seems to be of slight consequence to Senator WAGNER when his own prestige is suddenly exposed to the hazards attending congressional repair of his pet legislation.

The Pittsburgh Press:

Regardless of the outcome after all the other recommendations of the Smith investigating committee have been debated at Washington, one proposal certainly should go through. That is the abolition of the present National Labor Relations Board and a complete new deal.

For the other recommendations stem to maladministration by the Board at the top and its agents through the country. If there had been justice instead of zealotry in the conduct of the Board from the beginning, most of the hullabaloo and the public resentment would never have occurred, and investigation such as the Smith committee's would not have been necessary.

The National Labor Relations Board has been weighed and found wanting. A clean sweep is the first move toward making the Wagner Act what it originally was intended to be—an instrument to bring about peace in industry through orderly collective bargaining.

The Houston Post:

After investigating the National Labor Relations Board, three congressional committeemen have devised a series of amendments to the Wagner Labor Act. Such an inquiry should impress anyone deeply of the need for fundamental revision of that law, for it is so one-sided and the functioning of the Board under its terms is so biased as to render the whole thing a farce in the eyes of disinterested observers.

The operation of the Labor Board in considering charges against an employer is a legal travesty; the presiding trial examiner, who acts as judge and jury, is a Board employee, and the prosecuting attorney is a Board employee working more or less under the trial examiner's supervision. And most of the rulings are such as would be expected of such a set-up.

The Camden Courier:

It is not surprising that three of the five members of the House N. L. R. B. Investigating Committee should recommend 21 amendments ripping the Wagner Act from stem to stern. From the first the committee has been hostile to labor. * * * In the face of such a set-up the wonder is that the majority of the committee did not recommend wiping out the Wagner Act completely and putting all labor leaders in jail. * * * There is no secret about the amendments. They are sabotage. They would defeat the very purpose for which the Board was created: To settle labor disputes so as to reduce the number of strikes and stoppages of production.

In the entire South no single editorial voice is found that is raised in defense of the Labor Board. Here are a few typical declarations:

The Miami Herald:

The Wagner Act, particularly as it has been applied by the N. L. R. B., has satisfied no one, neither industry nor the two great labor organizations. Something is wrong with it. Even Mr. Roosevelt, in questioning the proposed committee recommendations, makes it clear that he does not oppose some changes. N. L. R. B. is an embarrassing issue for a Congress facing elections. But something ought to be done, and that quickly, to remedy a situation which has thoroughly disturbed industry and contributed directly to intensifying the strife between the battling labor groups.

The Fort Smith American:

The majority of the special investigating committee proposes that the present Board be abolished and a new Board of three members be created. Two members of the present Board, J. Warren Madden and Edward S. Smith, have been subject to much of the criticism. William M. Leiserson, newest member, has met more general approval. He was put on the Board by the President to try to mollify criticisms by improving administrative practice, but he had met resentment and opposition by other members. The basic principle of the Labor Act, collective bargaining, will stay and ought to stay. Abuses that have been so evident ought to be wiped out.

The Nashville Banner:

The faults which America by and large has found with the National Labor Relations Board are not such as could be cured by enlargement of its personnel any more than physical afflictions of the human body can be remedied by multiplication of the conditions causing them. Congress has a duty to perform with relation to the Labor Board and the act creating it. That duty has been outstanding now for two congressional sessions. Unless the Board is Americanized as public sentiment so widely demands, those responsible will be on the defensive far more strenuously than they now realize. Developments now in the making will show whether bureaucracy has, or can, become bigger than government.

The Memphis Commercial Appeal:

The Smith committee, not contentious about the precise letter of its suggestions, proposes to end the state of affairs in which the N. L. R. B. may and does function as detective, witness, prosecutor, judge, and jury in the same case. With that simple, forthright, and democratic idea the people may and do agree. It remains to be seen whether the Democrats are smart to satisfy the popular demand for justice in this connection or will leave it as a splendid campaign issue for the Republicans.

New Orleans Times-Picayune:

Under ordinary conditions some revision of the Labor Act could be taken for granted. The attacks—aimed chiefly at the administrating Board, but seeking remedial amendments of the law itself—have come from nearly all directions, from one of the greatest labor organizations, as well as from employers and the spokesmen of business and industry. The Labor Board's undertaking to function as detective, prosecutor, judge, jury, and examiner has been

widely condemned as unfair, contrary to sound policy—and in practice harmful, rather than helpful, to labor relations.

The Nashville Banner:

No more striking proof of the disregard by intrenched political power of laws objectionable to its interests can be revealed than that which has been disclosed before the House committee investigating the National Labor Relations Board. Convincing proof was laid before the committee of lobbying by regional officials and employees of the Board to prevent reduction of congressional appropriations for it. Edwin S. Smith, a member, went to the extent of telephoning a subordinate in Seattle requesting him to get in touch with labor leaders and others in that section in regard to a possible cut in the Board's revenues. Mr. Smith nonchalantly replied, when he was asked if the message was paid for by the Government, "Oh, yes." Yet there is a direct statute which Mr. Smith and his subordinate violated.

Among the papers of the city of Washington, the Nation's Capital, so close to matters of legislation, there is no difference of opinion.

The Washington Post:

Smith committee has certainly assembled evidence showing the need of prompt action to enable the N. L. R. B. to function more efficiently * * *. For various reasons the present Board has suffered a serious loss of prestige, and its usefulness has been correspondingly impaired * * *. It should be apparent by this time that the Wagner Labor Relations Act is a faulty legislative instrumentality in need of overhauling. If the task is delayed too long, the progress of collective bargaining is likely to be seriously retarded due to public hostility aroused by public bungling.

The Washington News:

It is already clear that the Labor Act has been badly administered in many respects; that amendments are needed to correct present abuses and prevent future ones, and that delay plays into the hands of the act's bitterest enemies. Mrs. NORTON typifies the attitude of a New Deal group which is determined to "save" the act and the Labor Board by staving off action on even the mildest proposals for change. Meanwhile, evidence of bad administration is piling higher and resentment is increasing. The result may well be that administrative action, when it does come, will not be moderate and corrective, but extreme and destructive.

The papers of the West speak as with one voice in their condemnation of the Labor Board.

The San Francisco News:

We believe that this session of Congress should remedy those defects that have become so obvious in the National Labor Relations Act. Therefore, we welcome the suggestions now offered by a majority of the special House committee which is investigating the enforcement of this law.

The Kansas City Star:

After months of special investigation the special House committee has reported its recommendations on the Labor Relations Board and the Wagner Act. It appears that the committee has done a thorough piece of work and that the changes its majority now advocate are in harmony with the professed purpose of the legislation, which is "to diminish the causes of labor disputes."

The Butte (Mont.) Standard:

The idea of one-way justice—a Board which listens to but one class of complainants and concedes the other side no rights of standing whatever, which is at once prosecutor, judge, and jury—is abhorrent to the American idea of justice. Neither the law which permits such a mockery of justice, nor the Board which carries it out, can long prevail under the American idea of fair play.

The Tulsa World:

No law of such wide and deep application can succeed without changes suggested by experience. It has already been shown that the Wagner Act, as administered by the N. L. R. B., is more an agent of explosion and distrust than of composure and fairness. Therefore, the logical thing to do is to abet radical procedure and so distribute powers that equity may come into practice and that discrimination may be avoided.

Los Angeles Examiner:

Robert H. Jackson, the recently appointed Attorney General of the United States, is accused of misquoting the law in an attempt to defend his Department's apparent unwillingness to prosecute certain New Deal officials and employees for an alleged violation of the law. No doubt, when he has thought the matter over fully, Attorney General Jackson will agree with Representative SMITH of Virginia that he may, and should, "resort at least to the documentary evidence."

The Phoenix (Ariz.) Republic:

In view of Chairman HOWARD SMITH'S House Committee on Labor, the Wagner Act needs a good many changes, requiring at least 21 patches, so many that seemingly adequate repairs may be made only by repealing the act and kicking out the National Labor Relations Board. The act would be bad enough even if it were administered by a board composed of honest and intelligent men. It has never in the last 2 years been so administered.

The Los Angeles Times:

If the amendments proposed by the committee were adopted immediately, as they should be, the original purposes of the Wagner Act as they were set before the country at the time of its passage would be furthered. The public was told that the act was intended to further the principle of collective bargaining in industrial relations for those who desired it. It was never intended that a partisan and biased board should take advantage of certain equivocal sections of the act to thrust unionism down the throats of free workmen, to cut off free speech and put shackles on a free press, to encourage strikes and disorder, and to put the management of industry into the hands of the unqualified.

In a thousand editorials a few less than one in a hundred defend the Labor Board. Here is one:

The Philadelphia Record:

Some facts are clear enough now. One, that the Smith committee, regardless of hearings or findings, is out to kill the N. L. R. B. * * * There is no secret about these amendments. They are sabotage. They would defeat the very purpose for which the Board was created—to settle labor disputes so as to reduce the number of strikes and stoppages in production. * * * Fortunately the Smith report is nothing more than a report. We do not believe the House, faced with the question, will undercut the rights of labor it guaranteed only 3 years ago.

The mass of them run along like the following:

The Columbus Citizen:

Regardless of the outcome after all the other recommendations of the Smith investigating committee have been debated in Washington, one proposal certainly should go through. That is the abolition of the present National Labor Relations Board, and a complete new deal.

The Cincinnati Times-Star:

Not content with browbeating employers and promoting strife among the unions, the National Labor Relations Board, through the testimony of its own Chairman, now admits attempting to blackjack business by persuading other governmental agencies to hold up loans and contracts with forms against which it has not made a case but which it accuses of unfair-labor practices, or perhaps merely suspects. Fortunately the congressional committee has been able to bring these things to light.

The Troy Record:

To the long list of Labor Relations Board's incongruous activities, including the role of investigator, prosecutor, judge, and jury, there must be added that of legislative lobbyist. The astounding story of the Board's efforts, fortunately futile, to block loans from Government agencies to employers who had incurred its displeasure has already been spread on the record. Now from the lips of unwilling and interested witnesses comes the sordid tale of a campaign organized by the Labor Board to prevent adoption of any amendments to the Wagner Act that would weaken its arbitrary powers.

The Newark Call:

Washington observers, watching the tactics of friends of the Wagner Labor Act, are reminded of the stubbornness of the prohibitionists a decade ago. Volstead Act supporters would accept no modification, no compromise. Blandly indifferent to conditions which demanded correction and contemptuous of growing popular dissatisfaction, they resisted changes which would have retained what was good and diminished what was bad in prohibition. They stood out to the end and the end was destruction. The attitude of the Wagner Act people is much the same. They oppose all the amendments proposed by the majority report of the Smith committee. They dismiss the whole program as a foul attack on labor. It means nothing to them that some of the Smith recommendations appeal to a lot of folks as common sense and justice. Failure to accept modification of the Volstead Act * * * created the irritation that repealed the eighteen amendment. The parallel is deadly.

The New York World Telegram:

Regardless of the outcome after all the other recommenadtions of the Smith investigating committee have been debated at Washington, one proposal certainly should go through. That is the abolition of the present National Labor Relations Board and a complete new deal.

The Macon Telegraph:

When the Supreme Court of the United States hands down decisions in accordance with what the New Deal wants it to decide, perhaps we should not be surprised to find the Attorney General of the United States adapting law enforcement to the requirements of the New Deal * * *. The special committee appointed to investigate the N. L. R. B. and the Wagner Act had before it the admission of J. Warren Madden, Chairman of the Labor Board, that Government funds were used in bringing pressure to bear on Congress for appropriations to the Board. Chairman SMITH * * * wrote the

Attorney General asking if Madden and his colleagues had not violated the law * * * replied that the Attorney General could only give out opinions by request of executive departments. * * * It is an outrageous situation, but we need not be surprised at anything the New Deal may do when we consider the degree to which it has debauched the Supreme Court of the United States.

The newspapers had this to say of Attorney General Jackson, when he declined to give the Smith committee an opinion as to whether the Labor Board was violating the law in its lobbying activities.

The Pittsburgh Post-Gazette:

Attorney General Jackson will not tell the House committee investigating the conduct of the National Labor Relations Board whether the Board has violated the Federal Antilobbying Act. * * * Perhaps Mr. Jackson should not advise the committee. But the question the committee raised involves violation of a Federal statute, and even though he cannot go so far as to give the House committee an opinion, Mr. Jackson, as head of the Department of Justice, should be interested in the matter himself.

The Charleston (W. Va.) Mail:

It will be extremely interesting to see what course the Attorney General adopts toward evidence uncovered—of Labor Board unlawful lobbying—not by his department, but by the investigating committee. If the Attorney General shows the same high regard for ethics and legal precedent as he correctly did in the matter of rendering an opinion to the congressional committee, a thorough and vigorous prosecution would seem to be assured.

The Los Angeles Times:

Jackson declines to say whether Madden was violating the lobby law, declaring that the Department of Justice can give opinions only to the President, or the head of an executive department, and says that this uniformally has been held from the beginning of the Government. That is true enough, but Jackson is the last person who ought to be saying so or can consistently take advantage of it. One can only wonder what he would have said if it had been somebody opposed to the administration who was under investigation.

The Canton (Ohio) Repository:

It would be interesting to hear Attorney General Jackson announce that he is looking into the allegation that Labor Board funds have been misused. His hands are not washed of the Labor Relations Board merely because precedent restrains him from making a report on it to Congress.

The Greensboro (N. C.) News:

A large segment of the citizenry is going to wonder, with no subsequent development of confidence and respect for the Department of Justice as a byproduct, whether the Attorney General would have assumed such a position had the issue not involved such political factors or had the opinion sought been aimed at unfriends rather than friends of the Labor Board itself.

The Kansas City Star:

Attorney General Jackson finally has refused to give the House investigating committee a legal opinion as to whether the Labor Board's lobbying activities were in violation of a Federal law. * * * It is suggested that if the Attorney General does not feel that he can pass directly on the case the evidence can be submitted for court and grand-jury action.

The almost universal exasperation of the press of the Nation goes on thus with almost no dissenting voice, Democratic and Republican, north, east, south, and west, week after week and month after month. Was there ever an issue in the history of the Nation, one wonders, with relation to which there was such universal agreement.

The Augusta Kennebec Journal:

The National Labor Relations Board has become No. 1 problem child of the new dealers. Revelations of the unorthodox, to be as kind as possible, tactics and policies of the Board have made it obvious that the severest sort of discipline and most careful sort of training are needed if it's ever to amount to anything. Even hardened Congressmen from the big city districts have been astonished by some of the evidence before the Smith committee that has been investigating the Board. Congressional sentiment, especially in the House, has plainly turned strongly against the present personnel of the Board and even the Wagner Act that brought it into being.

The Greenville (S. C.) News:

If the Democratic leadership in the House fails, through indifference or hostility, to make genuinely sincere efforts to remedy the glaring defects of this measure at this session, the party will face the serious charge of neglecting to make any move toward making workable one of the main policies of the administration. As the measure stands with its present administrative set-up, it can accurately be charged with being a detriment to economic progress in this country.

Up New England way.

The Hartford Courant:

The net result of the Wagner Act and its administration has been not to diminish but to increase the number of labor disputes. There is nothing of greater importance to the rank and file of employees, to honestly conducted labor unions and to fair-minded industry than that the act should be made an equal and exact instrument of law, and that the Board administering it should be shorn of its power to perform the function of prosecutor, judge, and jury.

The New Haven Journal-Courier:

It would be charitable to conclude that Representative MARY T. NORTON was misquoted. But obviously she was not, for she stands by the statement. She is chairman of the House Labor Committee and she has announced that she will do everything in her power to prevent committee approval of the Smith amendments to the National Labor Relations Act. Why will she do just that? Because the Labor Committee was organized "to protect the rights of labor * * *."

The House Labor Committee is simply organized to act for the House itself and give guidance on measures in its field. It is not supposed to be representative of any single group within the Nation, the champion of any pressure bloc. It acts for Congress which in turn acts for the entire country.

The Providence Journal:

One amendment seeks to separate the legal and judicial functions of the Labor Board, and, to that end, provides for the appointment of an administrator whose duty it will be to receive and investigate charges of unfair labor practices, to issue complaints, and to prosecute such complaints before the Board.

This plan should be adopted, for there is every reason to believe that it will go far toward eliminating some of the worst evils in our system of administrative law. Certainly it is worth trying out on a board which up to this time has been conspicuous for acting, in most cases, as judge, jury, and prosecutor.

In the Middle West.

Chicago Journal of Commerce:

It cannot be questioned that the act was passed in a spirit of labor partisanship. The administrative board accepted this spirit. Only after great pressure and long resistance did the Board finally make a gesture toward impartiality by agreeing to entertain petitions from employers for bargaining elections. If amending the act to prevent abuses revealed by the Smith committee's investigation of the Labor Board deprives labor of its fundamental rights, then we have come to a distressing state of affairs in this country. If labor persists in its resistance to changes which give the employer equal rights at law, it may count with certainty upon the day when the public will demand repeal rather than amendment.

The Indianapolis News:

The amendments to the Labor Relations Act which were proposed to the House on March 6 by Representative SMITH, chairman of the special committee that inquired into the working of the act, were referred to the committee on labor. This committee demonstrated during the 1939 session, in its handling of proposed amendments to the Wage and Hour Act, that its policy is one of obstruction. It has taken the same attitude toward the Smith proposals.

The Cleveland Press:

We believe that this session of Congress should remedy those defects that have become so obvious in the National Labor Relations Act. Therefore, we welcome the suggestions now offered by a majority of the special House committee which is investigating the enforcement of this law.

The Grand Rapids Herald:

Elliot Roosevelt, second son of the President, seems to be once more in rather violent conflict with the policies of his father. Elliot Roosevelt openly says that he thinks the Wagner Labor Relations Act should be amended in order to give business an equal right with labor, and calls for "a thorough house cleaning of the National Labor Relations Board." If only the President would take as realistic a view of the situation as does his second son, not only would business rejoice, not only would honest labor—not the racketeers—bless him, but many of our problems of unemployment and relief would be solved.

The Portland (Oreg.) Journal:

The Smith bill to amend the Wagner Labor Relations Act provides a basis for action on a reasonable revision that will bring that law and its administration closer to what Congress intended—and closer to the hearts of the American people.

The Smith bill is not the last word. It should be laid alongside other proposals and given consideration with the rest. But the country does not want to go backward. The people want a law that will operate with judicious regard for the rights of all concerned, one that will contribute to labor peace and sweep into oblivion the absurdities and backstair procedures exposed by the Smith committee's investigation. An intelligent effort along these lines is now due.

The Colorado Springs Gazette:

Impatience is again manifesting itself in the House in the delay in a show-down on the Wagner Act. As before, the butt of criticism is the Labor Committee. * * * The testimony already adduced leaves no doubt of the necessity for amending the act. In fact, the Labor Board itself settled the point when it radically changed its rules. The fault, however, is in the act itself, and the only sure remedy is amendment.

The Pueblo Chieftain:

None of the fundamental principles of the Wagner Act were changed by the committee. All the rights of employees are preserved, but protections are provided for employers who feel that they have been forced or coerced into organizations through opposing labor groups. * * * We sincerely hope that the Congress takes upon itself correction of the evils, which are administrative evils rather than defects in the purpose of the law itself.

Here is another voice raised in opposition.

The New York Evening Post:

The difference between this destructive (Smith committee) approach and the measured responsibility implicit in every word Senator WAGNER spoke is impressive. It seems clear to Senator WAGNER, for example, that to change the act so as to deny reinstatement to any striker guilty of any unlawful action is an economic sentence of death. He points out that the Labor Act does not take a corporation charter away and put it out of business for violation of the law; it merely restrains the corporation from repeating the violation. The Senator cannot see why extraordinary punishment should be laid upon a striker, after he has paid the specific penalties provided under local law for disorder.

And again the reputed official organ in this country of the Communist Party appears as a defender of the Wagner Act. It, in fact, has presented many editorials, of which the following is typical.

The Daily Worker:

The Smith amendments to destroy labor's basic rights as embodied in the Wagner Act are meeting with opposition from every section of labor. The C. I. O. has launched a vigorous drive for the defeat of these ripper amendments. * * * Even William Green has been forced to state that the Smith amendments "as a whole strike in a destructive way at vital fundamental principles of the act. * * * But the fight against the Smith amendments is threatened from another quarter, namely, the apprehensive policy of the Roosevelt administration, which began with the appointment of William Leiserson to the National Labor Relations Board.

Labor must speak out more emphatically than ever if the rights it has won over the course of years are not to be destroyed. The Senate Education and Labor Committee, headed by Senator ELBERT THOMAS, and the House Labor Committee, headed by Representative MARY NORTON, should be notified of your unqualified opposition to the Smith and all other amendments which would emasculate the act. Let the cry be: "Unless Congress is willing to put teeth into the Wagner Act, as provided by the C. I. O. amendments, then keep hands off the law altogether.

National Defense

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. BRYSON. Mr. Speaker, to prepare this Nation against any eventuality—that must be our major objective during these grave days. Well do we realize that in the swiftly changing world of today this Nation faces a future charged with great uncertainties. There can be but one answer to our problem: We must prepare and prepare quickly; defend and defend adequately. In short, there is but one thing for us to do, and that is to provide for our country a system of national defense adequate to cope with every conceivable threat to the happiness and security of the American people.

Today, as never before, we witness the grim tragedy of unprepared nations throughout Europe falling to pieces under the shattering impact of modern warfare. It is a ruthless affair, in which one nation after another, unable to defend herself against invading armies, loses freedom and independence—and the end is not yet in sight. "Unprepared," that is the word which is spelling disaster for two great democratic nations of Europe, who, at the beginning of the present war, had every economic advantage over their enemy.

But to possess economic advantage is not enough; to have superiority in resources is not enough; to live by the high ideals of justice and right is not enough; nothing will suffice save force. England and France did have the resources to match Germany tank for tank and plane for plane, but the important point is that they failed to build the necessary tanks and planes. Because they failed to build defenses when defenses should have been built, their fate at this very moment hangs in the balance. They may be building feverishly at the present time, but on every side there seems to echo an awful cry, "Too late! Too late!"

The lesson for us is clear: We must not, we shall not, wait until it is too late. Of course, it is the events of the past 2 weeks which have suddenly made us realize that things fantastic, almost impossible, can and do happen. What has occurred in Europe seems almost incredible, and a short while ago we were prone to regard as utterly fantastic the idea that the United States could be made an object of invasion. From now on out, however, there should be no excuse for lulling ourselves into a false sense of security, because the facts will not support such wishing.

We must do a tremendous job in the upbuilding of our national defenses before we can count this Nation invulnerable. We need airplanes, thousands of them; we need units of antiaircraft artillery, thousands of them, plus millions of other pieces of equipment. Then we need to double and redouble the size of our Army, so that it will no longer appear infinitesimal in point of numbers with other armies of the world.

Without delay we must at once take this long step toward meeting these defensive needs by adopting the bill which the President has recommended and is now before this House for action. In his speech to the Congress the President clearly outlined the ends which this appropriation would serve. Support of the measure has been urged from all quarters. Ours is the responsibility to take immediate action on this national-defense measure. The path we take is clearly indicated. We must, as already pointed out, provide for our country a system of national defense adequate to cope with every conceivable threat to the happiness and security of the American people.

National Defense

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. LANDIS. Mr. Speaker, our main objective is peace, but I firmly believe Washington was right when he urged full preparation for war as the surest guaranty of peace.

Last year we adopted a vast program for the expansion of the aviation service of the United States Army. Now we are told we have only 58 airplanes that are not obsolete.

Maj. Gen. H. H. Arnold, Chief of Air Corps, testified before the Senate Subcommittee on Military Appropriations and declared, in regard to obsolete airplanes, that—

If you take the B–18 (which are the Army's twin-engine bombers) and send it out against modern equipment, it would be suicide. However, we will use the B–18's for training purposes.

Asked how many of the Army's fleet of 2,700 planes could be modernized, he replied:

Offhand, I should say half a dozen.

Asked whether the Army has any ultramodern planes, with self-sealing tanks and cannon armament, he said:

None; we are just now going into it.

We are supposed to have a standing Army of 241,000 men, but Gen. George C. Marshall, Chief of Staff, declared when questioned before the Senate Subcommittee on Military Ap-

propriations that the Army could only put 75,000 men in the field today, and that for them "some equipment is still lacking."

Our Army is now equipped with the World War Springfield manual rifle, over 20 years out of date. There are 38,000 automatic rifles on hand, 131,000 ordered, and 240,000 asked.

General Marshall stated that it should be equipped with Garand rifles.

It would lack the 37-millimeter antiaircraft guns.
It would have a fair compliment of 37-millimeter antitank guns.
It would have at the moment a little less than half of the modernized 75-millimeter guns.
It would be lacking modern 155-millimeter guns and some corps troops.
It would be lacking some essential engineers and communications units.
Other than that, it would be all right.

There are 218 antitank guns on hand, 526 ordered, and 1,556 asked. There is a serious shortage of modern 75-millimeter artillery—141 on hand, 411 ordered, and 1,380 asked.

There is also a serious shortage of 75-millimeter antiaircraft guns, but the Army is switching to 90-millimeter antiaircraft guns to get longer range.

We have no howitzers at all—48 are ordered and hundreds needed.

Many of our coast defenses are obsolete. There is a shortage of 30 to 50 percent of tanks and there is a critical shortage in ammunition.

In regard to the availability of the National Guard, General Marshall said:

National Guard divisions are now tied to the ground—immobile. They cannot take the field as such.

We also have a shortage of uniforms.

This administration has spent seven thousand million dollars for preparedness. Most of the money spent on national defense has gone to the United States Navy, which is stronger today than at any time in the Nation's history. Why should our Army and air force be inadequate? With ruthless military aggression unleashed in the world, America must lose no time in strengthening her defenses. We must restore our whole economy to health and vigor after the ravages of the 7 lean years, and we must build up the power and efficiency of our Army, Navy, and air forces to levels which will make this country impregnable to attack. We must have a well-equipped Army and Navy, which must be accompanied by the best air force in the world. Republicans and Democrats should work together on our defense program and remain in session until the job is completed.

We are determined that no American forces shall ever again be sent to fight in Europe. Always remember, our biggest danger lies from within. Let us ever be watchful of the "fifth column" movement in America. Keep cool, and do not become freightened, in order that we shall always be able to preserve, protect, and defend our American liberties and institutions.

Our Representation in Canada

EXTENSION OF REMARKS
OF
HON. J. FRANCIS HARTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1940

EDITORIAL FROM THE BUFFALO EVENING NEWS

Mr. HARTER of New York. Mr. Speaker, under leave granted to me, I insert the following editorial from the Buffalo Evening News of May 23, 1940. When you read it, I know the membership will agree with me when I say that the editorial calls to our attention a deplorable situation.

[From the Buffalo Evening News of May 23, 1940]

CANADA TREATED CASUALLY

Canadians have reason to be critical of the Roosevelt administration in the matter of the diplomatic representation of the United States at Ottawa. Ministers come and go so fast that even officials of the Dominion Government must find it difficult to keep track of them. James H. R. Cromwell, who was appointed Minister to Canada last January 4, resigned the post on Wednesday to run for United States Senator from New Jersey on the Democratic ticket.

"Ministers have been staying with us so short a time," says the Ottawa Journal, "that they saw little of this country beyond the vicinity of the capital itself and had no opportunity to study Canadian conditions and the place of Canada in the continental picture."

Mr. Cromwell had had no diplomatic experience whatever when he was appointed Minister to Canada. Indeed, he had no qualifications for the post, as he soon demonstrated in a most undiplomatic speech at Toronto, a speech which drew a rebuke from Secretary of State Cordell Hull. But the administration felt indebted to Mr. Cromwell, because his wife had contributed $50,000 to the Democratic campaign fund. The rich young man, wanting dignity of any performance as a private citizen, was invested offhand with the dignity of the high office of Minister to Canada. Straightway he proceeded to kick over the diplomatic apple cart. But his offense did not cost him the esteem of the President. Not at all. Mr. Cromwell entered the New Jersey senatorial primary with the blessing of the administration. It was as if his service at Ottawa had been altogether commendable. Since he had the stamp of New Deal approval no one dared contest with him for the nomination.

The casual treatment of Canada in the matter of diplomatic representation does not sit well with the American people; for they regard the position at Ottawa as one of the most important in the Diplomatic Service. Not only is Canada the best friend that the United States has among the nations but also it is this country's best customer. In view of the close relations existing between the United States and the Dominion and the multiplicity of their common interests a representative of the highest type should be selected as American Minister to Canada. The close of the war may see matters of vital importance claiming their joint attention; and the United States should then have at Ottawa a representative who has the confidence of the American people and who will deserve the respect of the Canadians. The post at Ottawa should be filled by a career man of the State Department.

Strain Would Be Too Heavy

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1940

EDITORIAL FROM THE NASHVILLE BANNER

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Banner, Nashville, Tenn., under date of May 10, 1940:

[From the Nashville Banner of May 10, 1940]

STRAIN WOULD BE TOO HEAVY

It is said that Rear Admiral Joseph K. Taussig, in reading a prepared statement on the pending Navy appropriation bill to the Senate Naval Affairs Committee, omitted reference to the national debt. The sentence which the admiral is said to have struck from his manuscript is reported to have been as follows: "Our financial structure, none too proud at present, on account of the huge public debt cannot stand such a strain."

If the admiral indeed did omit such a statement it must have been that he realized that the continuous expansion of the national debt already nearing the legal limit might be a positive factor affecting the national security.

In the last decade that debt has increased by nearly $30,000,000,000 and it is increasing now at the rate of $10,000,000 a day. The question arises, How long can such a condition be continued without serious peril?

Secretary of the Treasury Morgenthau is on record as declaring that the indebtedness could safely be raised to $50,000,000,000, though he would not venture an opinion beyond that figure. The direct and indirect, but positive, obligations of the Government approximate that figure now.

It will be recalled that when the United States entered the World War it had a debt of less than $2,000,000,000 and it encountered no really serious difficulties in increasing it by $25,000,000,000; but war is much more costly now to every nation than it was a quarter of a century ago. It is estimated that the expenditures of the United States now would approximate $20,000,000,000 the first year.

With taxes already high and the public debt rapidly nearing the point where it would be twice that at the end of the world conflict of a quarter of a century ago, the matter of raising enormous funds would be much more serious now than then. The needful money could be obtained only by raising taxation to a point imposing

well-night intolerable burdens and by increasing the public indebtedness to a staggering and dangerous point.

The interests of the taxpayers of the country, who would be called on not only to provide all the current revenues possible but would have ultimately to face, in this or ensuing generations, the discharge of the enormous and almost confiscatory public debt, constitute strong reason, quite apart from the even more important consideration of preserving the institutions of the Republic from impairment, calling for the avoidance of the United States from involvement in the struggle across the seas.

The American Way Versus Dictatorships

EXTENSION OF REMARKS

OF

HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

EDITORIAL FROM THE OMAHA WORLD-HERALD

Mr. CURTIS. Mr. Speaker, on this day, when we are voting to increase our national defense, I think it well also to guard ourselves against those things that we do not lose by invasion, but by our own indifference and folly. I hope that every Member will carefully read the following editorial. It was published in the Omaha World-Herald. It expresses the American view.

Liberty can only be preserved by following a middle course, between the one extreme of blindly following a dictator, or the other extreme of resorting to a course of unfair, unjust partisan bickering. In time of an emergency or crisis we should think things through clearly and give due consideration for the opinion of all men. Then as intelligent Americans we can stand united and loyal. We need two parties.

ON CHANGING HORSES

All of a sudden a number of political orators have awakened to the supposed danger of "changing horses in the middle of the stream." Some of them have become so alarmed that they suggest that politics be adjourned for the duration of the war while everybody climbs on the New Deal bandwagon.

Harold Ickes, the secretary of the ulterior, may be taken as the spokesman for this group. He says another term for Mr. Roosevelt is necessary "to give a free people national unity at a time of national crisis," and "to permit the New Deal's concept of social and economic justice to become an accepted part of our American system."

It is, of course, perfectly preposterous.

Great Britain found that "to give a free people national unity at a time of national crisis" it had to throw out one government and get another. France found, not only that it had to change governments, but also that it had to remove its commander in chief, right at the moment when the most savage battle in history was at its furious peak.

At a time of crisis there is even greater need than ordinarily for debating national issues.

The New Deal has been in office for more than 7 years. For most of that period it has been blessed with a compliant Congress. It has been given unprecedented sums to spend. Never, except in time of war, has any administration had such authority or such appropriations.

Come next November that administration will be represented on the ballot, either by the President himself, seeking an unprecedented third term, or by some substitute approved by him.

That candidate, whoever he may be, should be called to account just as sharply as Daladier and Chamberlain were in their respective lands. He should be asked about the state of our national defenses, about the condition of our Treasury, about the foreign and domestic policies which he proposes to follow if elected, or reelected, to the White House.

Against that candidate there should be the strongest man that the Republican Party can find, running on a platform written by the wisest men of his group. He, too, should be asked in specific detail about his plans and purposes.

After a furious and typically American campaign the free voters should choose between those two.

Another curious proposal is the one recently made calling for a coalition, or national, Cabinet. Under the latest of these suggestions, Alf Landon and Frank Knox, the Republican candidates in 1936, would be invited into Mr. Roosevelt's official family. In return, it must be assumed, they would advocate a political truce for the duration of the war.

Such a coalition seems not only unnecessary but a foolish yielding to hysteria. There are plenty of good, honest, and patriotic Democrats who can perform any routine secretarial jobs just as well as the Messrs. Landon and Knox. Republican leaders would do better to stick to the traditional role of the minority—the role of critic, gadfly, and rival candidate.

We Americans are interested in world politics largely because we love democracy and despise despotism. Why, then, at the first sign of danger, should we throw our own democracy overboard?

We don't believe the mass of American voters will do it. We don't believe the suggestion comes from them. We believe that it comes mainly from men like Harold Ickes who have reasons of their own for wanting a coalition—on their side of the fence.

Belgium, We Salute You

EXTENSION OF REMARKS

OF

HON. C. JASPER BELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

ADDRESS BY HON. JOSEPH W. DAVIES

Mr. BELL. Mr. Speaker, knowing that the entire citizenry of the United States has been touched by the stirring valor of the Belgians in the recent days of its national catastrophe, I wish to insert here a copy of an address by the Honorable Joseph W. Davies, Special Assistant to the Secretary of State and former Ambassador to Belgium. It expresses the sentiments of our Nation fully and adequately. His address, delivered at the opening of the Belgian Pavilion at the New York World's Fair on Saturday afternoon, May 18, 1940, is as follows:

In these terrible, tragic days the heart of America and of the liberty-loving world aches for Belgium, its gallant King, its great people. I am but one of millions of Americans who have been shocked and saddened by the cruel disaster which has befallen the brave people of Belgium. What makes this disaster all the more horrifying is the realization that it was no act of its own, either of the Belgian Government or the Belgian people, which brought upon their lovely country the horrors of war.

For me it is particularly painful to give witness to my own emotions in the face of this catastrophe, for I came to know Belgium well and to love it. As Ambassador of the United States, I came into contact with the strength of government and people and made many warm and lasting friendships. I know, personally, of the thrift, courage, energy, Christian faith of the Belgians. I traveled through the country extensively. I saw the boys and men who made up their army. I came into contact with the peasants who cultivate their farms—the same families for many generations—and I respected their love for their soil and their pride in their civilization. Belgium is to me more than a beautiful country; it is a country of friends. Belgium has always had a warm place in the heart of the American people and today more than ever before.

Under the wise and far-sighted leadership of King Leopold, 3 years ago, Belgium gave its honorable commitment that it would remain neutral between the great nations of Europe. Belgium then gave its solemn word that would prevent the territory of Belgium from being used by either belligerent as a passage or as a basis of operation by land, sea, and air in case of any aggression by another state. This pledge, in turn, was met by the voluntary formal agreement on the part of all the three warring powers that they would respect Belgium's sovereignty, the inviolability and integrity of its territory and each gave formal promise of assistance to Belgium in case Belgium were attacked or invaded.

When war broke in September, at back-breaking cost to itself, Belgium prepared to honorably fulfill its pledge of strict neutrality. One-tenth of its entire population was mobilized into an army to safeguard this promise which Belgium had given to both sides. Despite great pressure, the plighted word of Belgium was sacredly held and scrupulously maintained as a matter of the personal honor of the King, his government, and the Belgian people. Until the very moment when their country was invaded, Belgium maintained scrupulous and sincere neutrality in the belief that it could rely on the pledged word of governments and upon the traditions of morality in the European civilization.

Whatever else may be said, the honor of Belgium has been kept clean and high. Never did knight in shining armor go forth to do battle for honor more nobly than did King Leopold, his Government, his troops, and his people.

If to be worthy of life as a nation is to be capable of fighting for the preservation of its existence, for its peace and its honor, then the Belgian nation has demonstrated that worthiness a millionfold.

And so in conclusion I say to you:

Belgium, the heart of America and of the entire Christian and liberty-loving world aches for you in these sad days. You and we

are sustained by the faith that man was created in the image of his Maker and so we know that love of liberty and honor will never die in the hearts of men. Whatever else may come, the names of Albert of Belgium, his great and noble son, Leopold, and that of the Belgian people will live while civilization lasts to inspire the hope, courage, and faith of free men. Liberty-loving men and women everywhere are hoping and praying that the day may soon come when peace, justice, and the rule of law shall again be restored to a free, independent, self-respecting nation of God-fearing men and women—Belgium.

Belgium, we salute you.

National Defense

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1940

Mr. WOLVERTON of New Jersey. Mr. Speaker, today as Members of Congress we are face to face with a situation that is so vital to the security of our people that it precludes the propriety of discussion based upon solely partisan considerations. In a time such as this our patriotism and love of country carries us beyond the usual limitations of party affiliation. We move forward into a great and united American party that destroys the middle aisle of the House as a line of separation between Republicans and Democrats. We become members as of one party to establish and make certain the security of our people and the principles upon which this Nation was established.

The President has announced that our national defense is inadequate, and that an emergency exists that requires it to be immediately strengthened. The announcement of the insufficiency of our national defense was in itself very disturbing; but, even more disturbing have been the revelations of how woefully inadequate our national defense now is. To me it is inconceivable that, notwithstanding the wars and rumors of wars that have enveloped the world during the last 7 years, little, if any, attention seems to have been paid by the present administration to providing an adequate national defense.

During the last 7 years Congress has appropriated about eight and one-half billion dollars for our Military Establishments. Approximately $7,000,000,000 of this has been expended. What has been done with it? Why are we not better prepared? In the face of the demand now made by the President for additional funds to buy what we lack in military equipment, how can it be denied that the money already appropriated and spent must have been to a large extent unwisely spent? If this is not so, then why do we not have more to show for it in the way of military equipment? There has been no satisfactory answer. But the fact does remain that we are deficient to such an extent that the President considered it necessary to appear in person before Congress and state the need. Congress has responded with patriotic fervor, and party lines have been eliminated for the time being, in order that there may be unity of thought and purpose. If the appeal had been made by the President at an earlier date the response, in my opinion, would have been equally enthusiastic as it is now. While it is unfortunate that there has been delay in calling the attention of Congress to our needs until a crisis in the European war impelled the President to do so, yet that is no excuse for further delay based upon useless criticism. The time for action to remedy the situation is at hand. It is our duty to respond—and I do so in the hope that it may be never necessary to use the implements of war to be provided, but that the military strength they give will ever be a deterrent to nations less peaceably inclined than our own.

In times such as these there are many individuals throughout the Nation who are fearful that the present program to build up and strengthen our Military Establishment is but a forerunner of our entrance into the war now raging in Europe. I do not think so. I believe it will help us to remain clear of the war no matter what the final result will be as between the nations now engaged. As long as force is the dominating policy of aggressor nations it is incumbent upon us to have the means that will help make certain and secure our own peace. We have seen in the last few months that good intention and the desire to remain neutral is no guaranty against war. Force does not recognize or respect any such considerations. Thus, for this Nation to overlook the consequences that have come to other peaceably inclined nations through lack of preparedness would be foolish, and no Representative of the people in Congress, or elsewhere, would be true to the trust reposed in him if he should fail to do everything within his power to provide adequately for the continued peace and security of our people.

Frequently the question is asked of me, "Are we going into the war?" It seems to be a fear that is in the heart of the mothers and fathers of the young manhood of our Nation who would be called to service in such an event. I reply to all such inquiries with a positive "No." I tell them that Congress in my opinion would never vote this country into war except to withstand an invader.

America is a peace-loving Nation. The desire for peace is the very heart and soul of America. We have led every effort that has been made to substitute peaceful means for settlement of differences between nations. Thus, there is nothing further from our thought than a desire for war when we, as Representatives in Congress, vote in favor of the bill now pending before us to give additional strength to our Military Establishment. When we do so we respect the overwhelming desire that exists in America for peace. We vote for defense, not war.

My Obligation as a Citizen Under the Constitution

EXTENSION OF REMARKS
OF
HON. LYLE H. BOREN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1940

ORATION BY FLORENCE HAMMONS, OF WEWOKA, OKLA.

Mr. BOREN. Mr. Speaker, under leave to extend my remarks in the RECORD, I present for the consideration of my colleagues, an original oration by Miss Florence Hammons, of Wewoka, Okla., entitled "My Obligation as a Citizen Under the Constitution."

This oration won the American Legion contest. It is full of good thought and is an expression of the splendid citizenship that lives in the mind and heart of America's youth.

Miss Hammons is a young lady of unusual fine character, ability, and good training. I present this production of her thought with sincere pride in her achievement.

MY OBLIGATION AS A CITIZEN UNDER THE CONSTITUTION

(By Miss Florence Hammons, of Wewoka, Okla.)

As one of the representatives of the younger generation I feel that it is time for us to think of our obligations as citizens under the Constitution. Although we are not of voting age we should start training ourselves for good citizenship. You, the American Legion, are, in my opinion, the best example of citizens bound together trying to fulfill their obligations under the Constitution. I feel that we could find no better example to follow than you and the obligations set forth in the preamble of the American Legion constitution.

Recent world events have made Americans realize how lucky they are to live under their Constitution, and started them thinking of their obligations to the Constitution which has survived the changes of over a century and a half. Today, more than ever before, it is a distinction to be an American citizen. It may be heard on nearly every street corner of America: "Thank God I'm an American" or "Boy, it surely is great to live in a democracy and have 3,000 miles of water between us and Europe." These are typical of the feelings of all loyal Americans. They are proud of their Constitution and that they are Americans. When the flag goes by we stand erect and salute, not in dread or fear, not because some law compels us to do so, but because we are proud of what

our flag symbolizes. But too often we forget that we owe something to this Nation of which we are so proud.

As I thought of this subject, the following obligations came into my mind and these are the obligations that I am going to try to fulfill as a citizen.

It is my obligation as a citizen to vote and take an active part in the Government. This is the obligation in which many of the so-called best citizens fail. As long as business is good and things go all right, people have a tendency to say, "My, we have a good Government"; but they let the Government run itself. The minute something goes wrong they start criticizing the Government and taking an interest in it. This apathy of the American people is one of the greatest weaknesses of our democracy. The best friend of graft, inefficiency, and extravagance is public indifference. The right to vote is a very powerful weapon placed in the hands of our citizens and as citizens we must be careful of how we use this weapon. We all know that the ordinary man is not fit to lead us in our Government. Men of superior abilities should be selected to run our Government. The United States has a mixed population. There are men and women from parts of Europe and Asia who have never known self-government. There are men and women from remote parts of our country who are illiterate and ignorant. There are men and women from the slum districts. There are respectable citizens who have no public spirit and then there are just plain crooks. We must keep these people in the minority. This problem will be partly solved when all good citizens vote. It is my duty to know for whom and what I am voting before I go to the polls.

I am obligated to help maintain law and order. I don't mean that I should join the police force, but that I should obey all laws and try to influence others to do the same. Many of us are guilty of disobeying some laws that don't seem important to us, such as running stop signs. A good citizen will try to obey all laws rather than avoid them or merely stay within them. Parents often neglect to teach their children the importance of respect for the law. These children grow up with no respect for the laws of their country. We little realize how much we influence others. Some person may hold you or me up as an example and they will say, "Well, if he does it, it must be all right." So as a citizen I believe I should obey all laws, no matter how insignificant they seem to me. J. Edgar Hoover said: "I believe that respect for the law is the highest type of patriotic citizenship."

It is my obligation as a citizen to help promote the education of Americans in the principles of Americanism and good citizenship. Too many of us take patriotism for granted. We leave the studying and spreading of the principles of Americanism to the other people. Education is the foundation of our democracy; therefore the schools today are the foundation of our Government tomorrow. The schools today are realizing their responsibility to mold better citizens. They are including in their curriculums more and more the teaching of good citizenship. Much of this can be attributed to the great work done by the American Legion. This organization has done more than any other to promote the education of both adults and young people in the principles of Americanism and good citizenship.

There are several un-American activities in our country that are trying to undermine the principles of our Government. I believe that the growth of communism, fascism, nazi-ism, and all other un-American organizations should be watched carefully. Their chief aim is to destroy our democratic Government. President Roosevelt, while talking to the American Youth Congress, said: "It has been said that some of you are Communists. That is a very unpopular term today. As Americans you have a right, a legal and constitutional right, to call yourselves Communists, those of you who do. You have a right, peacefully and openly, to advocate certain ideals of theoretical communism; but as Americans you have not only a right but a sacred duty to confine your advocacy of changes in law to the methods prescribed by the Constitution of the United States. You have no American right, by act or deed of any kind, to subvert the Government and the Constitution of this Nation." The people of the United States hold very dear their civil and religious liberties, and they will never follow any foreign system of government so long as they have hope for a job, security for their family, and reasonable economic opportunities under our system of government. You can't talk to an unemployed slum inhabitant of the advantages of liberty and of living in a democracy when living in a democracy means the kind of life he is living. As citizens we should study these problems of unemployment, slum districts, conflict between capital and labor, and other problems of our Government, and we may find some way that we can do our part to help solve them. I know that it may seem that what one citizen does or thinks makes little difference in our Government, but that is wrong. It will take all of the citizens of America and what they think and they do to make our Government better. These problems must be solved or partly solved before some Americans can be taught the true spirit of Americanism and good citizenship. It is my obligation as a citizen to do all I can to solve these problems.

Lately there has been a lessening influence of religion. No one can say exactly what caused it, but one thing for certain is that the influence of religion must not decrease any more. We must take the warning of what has happened to the young people of Germany, Italy, and Russia. Bishop E. Freeman said, "It is the recognition of our moral obligations and those enduring principles that have been our stay through the 150 years of our existence as a Nation. Those who founded the Republic and the strong leaders that led us in later years acknowledged the dependence of the state upon the Almighty God." Washington once said that morality and religion were the two indispensable supports of the Republic. Patriotism and religion are closely related. The kind of citizenship that shows its patriotism in consecration to American ideals has its beginning in obedient recognition of God's place in all human concerns. Loss of confidence has been directly responsible for our economic decline. Confidence is lost when moral and religious rules are forgotten and abandoned.

As citizens we believe in all our Nation stands for; today we are called upon to give new and definite exhibition of our citizenship. It is more than exercising our civil right at the polls. It is that in all our relations we should show those qualities of character which bear the mark of faith in God and faith in our country.

I am obligated to use in my everyday life those religious and moral precepts that show faith in my God and my country.

When I think of my obligation as a citizen under the Constitution, I feel as Webster did when he said, "I was born an American, I live an American, I shall die an American, and I intend to perform those duties incumbent upon me in that character until the end of my life. No man can suffer too much, no man can fall too soon, if he suffer, if he fall, in defense of the liberties and constitution of his country."

Methods of Public Discussion

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ARTICLE BY HUGH S. JOHNSON

Mr. BRIDGES. Mr. President, Gen. Hugh S. Johnson wrote a column on May 8, 1940, which I believe is deserving of consideration, and I ask that it be inserted in the RECORD.

General Johnson, in this article, gives his views on the various types of public forums.

The general calls attention to the type of radio forum being conducted by Theodore Granik. Mr. Granik is a well-known attorney in this city, and has devoted a great deal of time to the development of the nationally known program called the American Forum of the Air. A number of Senators, like myself, have appeared on this program, and I think we all agree that it is an important public service.

Evidently Mr. Granik and General Johnson are thinking along the same line, for I understand the American Forum of the Air has inaugurated audience participation as a regular feature of the program. I understand that it was a great success.

Programs of this kind are typically democratic and genuinely American. They should be fostered and encouraged, and I believe that Mr. Granik deserves a good deal of commendation for his work.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE MAN'S OPINION

(By Hugh S. Johnson)

NEW YORK CITY.—General Motors gave a party at the New York "World of Tomorrow" Fair—to 400 students selected by the presidents of 80 colleges without regard to size or age of the seat of learning—from fresh-water Siwashes to the greatest universities.

It was a youth congress without communism or even politics. High point was a forum conducted by Clifton Fadiman, impresario of Information Please, along lines developed in that popular program. His experts were college presidents, a General Motors' chief of research, and a newspaper columnist. The subject was Opportunity of Youth in Industry and the few questions were culled from hundreds which the eager kids had asked.

This forum coupled with short, sensible, and highly appreciated talks by Mr. Sloan, Mr. Knudson, and Mr. Kettering—General Motors' chairman, president, and chief of research, completed the first attempt of one of our greatest employers to give guidance to the solution of a principal social problem. It was a complete success.

It also helped prove another theory to which I am devoted—the tremendous value of the public-forum type of discussion. There are several varieties. I think I have participated in them all.

One is the so-called Town Hall debate. In this, an advocate of an idea reads a canned speech, his opponent another, and then both respond to fairly well-regulated heckling from the audience. Another is the Granik method of more or less informal discussion

by a panel of four—two on each side of a particular issue without questions from an audience.

The Chicago University round table uses a moderator to regulate a face-to-face argument between two adversary advocates—without an audience. The Information Please type is confined altogether to selected written questions to a panel with no controversy involved—just like this General Motors youth dinner.

Finally, there is the one-man show of some speaker who, without any moderator, conduct their own debate by means of unpulled punches in questions from a more or less adversary audience after a brief discussion by him of his particular subject. Every single one of these methods has been successful in various degrees, depending on method.

Our public is more alert than ever and more skeptical. It wants to hear both sides. It loves a scrap. It has ideas of its own. It also wants to participate—just as any fan at a ball game or a prize fight finds himself tensing his muscles and gritting his teeth. If that analysis is right, all these methods have panned "color" on the edge of a rich vein of ore but none has struck the mother lode.

The first requirement is to get a real issue on which public opinion is hotly divided. The Information Please approach doesn't do that. Neither did this General Motors show. Both are attractive as mental acrobatics but there was only one difference of opinion at the World of Tomorrow and never any in Information Please.

"Town Hall" recognizes the element of human wish for getting in there and socking—public participation—by heckling, but the preceding debate is no contest. It is just one stuffed shirt exhibiting his stuffiness against the other. This is no real debate.

The Granik and University of Chicago method recognizes this shortcoming and puts debaters on their own resources, but it does not give the public the joy of active and instantaneous participation. Also, the moderator in the university contest insists on debating himself—and usually nobody cares to hear him.

Out of all this confusion of good principle and proved popularity I think there is an ideal answer: (1) A specific issue; (2) a panel of say two against two adversary advocates to start a veritable contest; (3) a very short but peppy argument without any butter-in partisan moderator; (4) absolute freedom of audience questioning. You can call it heckling, but it supplies the missing link of popular participation. Put these three necessary elements together honestly and we shall have one of the most valuable and popular American institutions.

War Resources Board

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM NEW YORK SUN

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Sun entitled "The Short, Sad Story of the War Resources Board."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SHORT, SAD STORY OF THE WAR RESOURCES BOARD

In the Senate yesterday Mr. VANDENBERG suggested that President Roosevelt make available to Congress the report of the War Resources Board. The President received this report last fall, but it has never seen the light of day. Senator VANDENBERG realized that there might be something in the document the publication of which would not be compatible with the public interest, but at least the Senate and the House, now engaged on preparedness, should be allowed to inspect it. Whatever the contents of the report, the history of the War Industries Board and its sudden demise is highly interesting now.

The announcement of the formation of that Board as a civilian advisory committee to work with the Army and Navy Munitions Board was made on August 9 last, about 3 weeks before Britain and France declared war on Germany. The Board was to do, so far as preliminary work could be done, what the War Industries Board, with Bernard M. Baruch as chairman, did in the World War. The new agency had the approval of President Roosevelt, but the personnel was chosen by the Acting Secretary of War, Louis Johnson, and the Acting Secretary of the Navy, Charles Edison, who were joint chairmen of the Army and Navy Munitions Board.

Edward R. Stettinius, Jr., head of the United States Steel Corporation, was named as Chairman of the War Resources Board, and his fellow members included:

Dr. Karl T. Compton, president of the Massachusetts Institute of Technology.

Walter S. Gifford, president of the American Telephone & Telegraph Co.

John Lee Pratt, a director of General Motors.

Gen. Robert E. Wood, chairman of Sears, Roebuck & Co.

Harold G. Moulton, president of the Brookings Institution.

Many rubbed their eyes on reading the names and positions of the members of this War Resources Board. Here was the New Deal, after fighting business for years, calling upon corporation heads and scientific investigators to help in getting ready for what the future might hold. The Board met on August 17. Louis Johnson described its task as "a precautionary measure to guarantee that our great national-defense asset, which is our material resources, can be effectively mobilized and controlled in an emergency." Mr. Stettinius said that his Board would "consider primarily how the industrial and economic resources of the Nation can best be prepared for the part which they must play in the event of war." In short, this Board was setting out to answer the questions that are being asked now, 9 months later.

And what happened? On September 26, with the European war in motion and the War Resources Board engaged only 5 weeks on its huge task, President Roosevelt announced at a press conference that the Board would complete its work within 2 weeks and then disband. What had happened was told in the columns of the New York Times, a supporter of Mr. Roosevelt, on September 28 by one of its Washington staff, Mr. Kluckhohn:

"New dealers of the inner circle believe that after weeks of effort they have succeeded in neutralizing or sidetracking the War Resources Board * * * as an administrative unit. The inner circle, of which Thomas G. Corcoran and Benjamin Cohen are members, is convinced that the President has shifted from favoring the use of industrialists as key men in meeting emergencies created by the war to their position, namely, that the agencies created during the New Deal, such as the Securities and Exchange Commission, the Federal Power Commission, and the Agricultural Adjustment Administration, must bear the chief, if not the entire, burden of present and future wartime problems. * * * The new dealers took up the gage of battle as soon as the industrial complexion of the War Resources Board was made known. * * * The Corcoran-Cohen group is reported to have gone into action immediately."

On September 29 the Times, in an article by its chief Washington correspondent, Arthur Krock, said:

"The young radicals and business baiters of the White House circle * * * are giving out private victory communiques and assuring the even younger band of Government employees for whom they have found places that Wall Street has been routed and the President's heart is, as ever, in the right place. * * * The entire experience of the War Resources Board has been typical of what happens to businessmen and financiers drafted by the New Deal."

Thus was torpedoed a Board which by now, or at least by a year after its beginning, could have offered a complete report on American resources in wartime. Mr. Roosevelt having announced the doom desired by the Corcoran-Cohen group, the Board presented to Assistant Secretary Johnson on October 19 a preliminary draft of a report, and this was submitted to the President. The public has never seen it. The Board members, not having had time to complete their job, may not wish to have it made public even if the White House so desired.

It may seem grotesque, this picture of Corcoran and Cohen, and their like, stopping the work of men who know business from A to Z. But there is the evidence. Will the New Deal maintain that attitude? It would be pleasant to say that it cannot maintain it and that Mr. Roosevelt must turn, as President Wilson had to turn, to businessmen in the hour of preparation. Let us see what Mr. Krock had to say on this point in the Times last Sunday:

"Mr. Roosevelt can have the services of the leading industrialists, as Woodrow Wilson had, merely by asking for them. Up to the hour of this emergency he has reflected the objections of his young new dealers to such assistance, but the emergency may change his policy in this regard. Political appointees and military officers cannot run the industrial machine."

Whatever hopes the country may have for a change of heart in the White House, the story of the War Resources Board is illuminating: Created on August 9 without the consent of Corcoran and Cohen; dissolved by the President on November 24, and never heard of again.

Perspective

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

EDITORIAL BY RAYMOND MOLEY

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial

by Raymond Moley, published in Newsweek of May 27, 1940, entitled "Perspective."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From Newsweek of May 27, 1940]

PERSPECTIVE—ON ALL FRONTS

(By Raymond Moley)

We shall be dealing with what has been happening these hours and days and with its consequences, as long as we live. What we face isn't a matter of walking—not running—to the nearest exit. It isn't a matter of exits at all. There are no exits for a nation. It must stand, fall, or kneel to conquest. It cannot escape. Whether we like it or not, we, the people of the United States of America, are in this world, and we are going to have to continue to live in it.

We couldn't avoid emotion, even if we would, in the present situation. Indignation, horror, and the sense of frustration that springs from our inability to do much about what is happening in Europe at this juncture are so poignant because the values at stake are so transcendently precious to us, and yet we must do the impossible. We can't permit ourselves either agonized hand wringing or unthinking bursts of activity. We can't retreat into national hysteria except at our mortal peril. We must prepare ourselves for whatever lies ahead. A clear mind must be our first line of defense.

It is plain at the outset that we shall be making a fatal error if we do not accept the fact that either side may win this war. Our course of action cannot be shaped by our hopes alone. It must take account of all possibilities. Unless it does all our talk of preparedness, all the thousands of millions of dollars we appropriate for preparedness, all our calculations about our Army, Navy, air force, industry, may not serve us in the years to come. We shall be incapable of those major adjustments that events may enforce.

Peace may be dictated in Paris or Berlin or London, but, in any event, the machine has won. The future has already been determined in the laboratories and machine shops of the world. Our traditional identification of our own interests with those of the Allies may momentarily blind us to the significance of that fact in terms of our own defense needs and our needs after the war has ended. What has made Germany so formidable in a military sense is what we have or can have. Germany's instruments of conquest are what can make for our own security. Is it the submarine, the airplane, tanks, tractors, other motorized equipment? We have the capacity or the potential capacity for the production of such material.

But there are critical economic problems involved in getting from industry the essential and immediate requirements of our defense program. Some of these are suggested in this issue of Newsweek by Mr. Robey. Fundamentally, they are problems of scarcity—scarcity of men and of plant. That so many of them center in restrictions of one kind or another is tragic. No one wants to break down the general gains achieved by labor in the past few years. But we must either be shown how production can be speeded up despite present restrictions or remove those restrictions. Investors are going to face heavy taxation and tremendous risks; management faces exacting problems of production; labor must meet its responsibility, too.

Government is right in concerning itself primarily with those specific areas of industry that supply the immediate needs of our military machine. But it cannot get very far unless it considers the whole of industry. For industry, as Maitland said of history, is a seamless web. American industry is strong and resourceful—the strongest factor in world affairs. Yet the stark fact to which the country has awakened only within the past 2 weeks is that American industry is not as strong as it must be. There must be vast replacements, the perfection of new techniques, of new products, some of which will act as substitutes for essential raw materials we have dillied and dallied about acquiring. The factors that have blocked these developments—blocked them needlessly—must be removed if industry is to play its part in building the national strength to meet any emergency.

It goes without saying that if our objective is to defend our institutions on this side of the world, we must do it in terms of the democratic method. We must not and we need not, in the process of protecting freedom from possible foreign attack, lose that freedom at home. That would be to give up the substance while we gird ourselves to safeguard the shadow. And that, exactly, is what we are asked to do when we are told that one of our two great parties should fail to nominate an opposition candidate for the Presidency this year.

The French and English judge governments and test the work of those governments in parliamentary debates and votes of confidence. We cannot. Our chosen constitutional system provides for periodical elections in which such decisions are made. One of those periodical elections is at hand this year. To observe it only in form would be to succumb to the disease we are trying to ward off.

This is not to say that the campaign should not be as calm as possible, as reasonable as we can make it. But it should not, for specious reasons, avoid the basic issues of national defense as well as domestic policy. There is no other way of enforcing responsibility in our democratic Republic.

This year the opposition will present its case to the country for a change of administration. It is already clear that it will ask a number of pertinent questions. It will ask:

Has this administration, while professing to know a great deal about conditions and developments abroad, failed to take account of the possibility that Germany might win this war and thus revolutionize American conceptions of defense? Has this administration failed to prepare the way for such a contingency?

Has it been unnecessarily slow in executing the authorizations and appropriations of Congress for arms of defense—especially for mechanized equipment for the Army and the air forces?

Has it, like the Blum Government of France, given undue attention to social reform while it neglected the basic necessities of national security? In short, has it pursued the ideal of personal security to the neglect of national security?

Has it hampered the expansion of American plant and the spirit of initiative to the point where our industrial strength is seriously impaired? And, in the light of the past, can it be expected to provide the leadership for the greatest job of industrial production this country has ever faced?

Has it weakened our financial security by deficit spending without achieving the objectives at which it aimed?

Has it failed to call to the service of Government experienced and able men, especially in those fields that involve our military, naval, and industrial preparedness?

Has it permitted the efficiency and adequacy of skilled labor to fall below national needs?

Has it impaired national unity by setting class against class and interest against interest?

That these questions should be asked—and answered—is a sign of strength, not of weakness. Democrats as well as Republicans should welcome the opportunity to face them and to get a clear-cut verdict from the country. For all the questions are facets of a supreme question—the competence of this administration. The issue is not one of good intentions, nor of wholly admirable objectives. It is the simple need to get things done.

"Give us to build above the deep intent,
The deed, the deed!"

Americanism

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

STATEMENT BY CHARLES HALL DAVIS

Mr. BYRD. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a statement prepared by Charles Hall Davis, of Petersburg, Va., entitled "Americanism Defined." Mr. Davis is a member of the Virginia bar.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AMERICANISM DEFINED

We affirm that Americanism is a political philosophy based on a religious creed, coupled with a governmental plan for carrying into effect the principles of that philosophy in the social relations of human beings in a politically organized State, and designed to establish and maintain the ethical teachings of Jesus—not requiring the acceptance by anyone of a belief in the diety of the Christian God, but recognizing and guaranteeing to each citizen complete religious freedom, along with an equality of other God-given individual rights.

BASIS OF AMERICANISM

That Americanism is based on a belief in a personal God who created all things visible and invisible, who established and maintains general laws and principles of right and justice for the regulation of the universe, which laws and principles control all matter and forces, all human beings, and human institutions, and govern governments.

In that belief, we deny all idea that might makes right or that force should control in individual, national, or international relations, and affirm our allegiance to the principles of right and justice, divinely imbedded in the common conscience of mankind.

THE SUPREME IMPORTANCE, UNDER AMERICANISM, OF THE INDIVIDUAL RIGHTS OF MAN

We recognize that man is the highest creation of God, made in His own image and likeness, endowed with free will and free choice, so as to enable him to develop his personality along lines of his own

choice, with individual accountability to his Maker for that development; that each human being has been directly and equally endowed by the Creator with certain inalienable and individual rights, the orderly exercise of which along such lines of his own choice is necessary under the divine plan for the spiritual growth and development of human personality and for the promotion of the happiness and welfare of the human race; that among these inalienable, individual human rights are the right to life, to liberty, to the pursuit of happiness, to religious freedom, to freedom of speech, to freedom to write and publish what one chooses, to freedom of assembly, and countless others, subject in all cases to individual liability for any abuse of those rights which defeat or impair the equal and similar rights of others; and that each human being is justly entitled to an equal opportunity for the orderly exercise of those rights with every other, and is justly chargeable with an equal duty or burden to maintain this equality of rights and of opportunity.

GOVERNMENT IS A HUMAN INSTITUTION AND HAS NO INHERENT RIGHTS

We hold that government is a human institution, having no God-given or inherent rights, but established by men so as to enable them to enjoy ordered liberty in a politically organized social state, and justly administering only such delegated and limited authority as may be temporarily entrusted to it by the sovereign people who created it from time to time.

THE INDEFEASIBLE SOVEREIGNTY OF THE PEOPLE OVER GOVERNMENT

We assert the indefeasible sovereignty of the people as creators over their governmental creatures, their inherent right to govern themselves without a master, and declare the essential falsity of all political theories which assert the sovereignty of government over the people, or which advocate a government of unlimited purposes, powers, and functions.

NATIONAL SOVEREIGNTY IS A LIMITED SOVEREIGNTY

But while each independent politically organized group of people is sovereign over its governmental agents, yet this national sovereignty is a limited sovereignty, and is not absolute. National sovereignty imports complete independence of outside human beings and human institutions, but it does not import exemption from the operation of divinely established principles of right and justice, nor does it import authority to disregard or defeat the individual human rights with which the Creator has directly and equally endowed each human being; so that any national sovereignty which is so administered as to defeat those principles of right and justice, or so as to defeat or impair divinely bestowed human rights, is improperly administered, is a distortion of such sovereignty; and, in its last analysis, is really an assertion of the sovereignty of government or rulers over the sovereign people, whose inalienable rights are thereby defeated, and who are thereby deprived of a rule of justice, and subjected to a rule of force. Absolute and complete sovereignty is vested only in Deity itself.

WHY TOTALITARIANISM IS CONDEMNED AND REPUDIATED

We condemn and repudiate the political theory of totalitarianism, whether functioning under the guise of communism, bolshevism, sovietism, socialism, social democracy, nazi-ism, fascism, paternalism, or under whatever political guise; because it is based on the rule of force, rather than of justice; because it asserts the sovereignty of government over men, rather than of men over government; because it denies the supreme dignity of individual human rights, rejects the theory that they are held under a title higher than that under which government holds its powers, and the theory that the just purpose of government is to secure their orderly exercise; because it repudiates the idea that the principles of right and justice established by the Creator should govern governments, asserts that the state is an end in itself rather than a mere means to the end of securing ordered liberty to the people, advocates the rule of materialism, and in some of its manifestations denies God and endorses atheism.

AMERICAN GOVERNMENT AND ITS LIMITED PURPOSES

We affirm that the Government of the United States is a Government expressly limited both as to its purposes and as to its powers.

The Declaration of Independence, which was the first political act of the Original Thirteen Colonies as independent States, which formulates our political philosophy, and in the light and spirit of which all our governmental activities should be construed, declares that the purpose of American Government is to secure the inalienable individual rights with which each human being has been equally endowed by the Creator. That is the sole declared purpose of American Government.

Hence the only justifiable activities of American Government should be directed:

1. To securing and guaranteeing to each American citizen the recognition of an equality of God-given rights with every other;
2. To assuring to each citizen an equality of opportunity for the orderly exercise of those rights along lines of his individual choice;
3. To imposing on each citizen an equality of duty or burden in maintaining that equality of right and of opportunity.

The limited purpose of American Government is therefore to secure "equal rights to all, and special privileges to none."

THE LIMITED POWERS OF AMERICAN NATIONAL GOVERNMENT

Being established to accomplish limited purposes, the Government of the United States was necessarily entrusted only with limited powers; for if unlimited powers had been delegated to it, that Government could have extended its purposes indefinitely, becoming a tyrant and the master of the people.

LIMITATIONS ON NATIONAL GOVERNMENTAL POWERS

The powers entrusted to the National Government of the United States were enumerated, defined, and limited by the Constitution of the United States; and the Government of the United States has no just power or authority except that expressly conferred by the Constitution, plus those implied powers necessary to the exercise of the granted powers.

WHENCE NATIONAL POWERS WERE DERIVED

The delegation of powers to the National Government was made by the several politically organized State groups of people, each acting separately and as an independent sovereign group, and each reserving to itself as such an independent sovereign group all powers not delegated by the Constitution, or the exercise of which by the States was not prohibited thereby, so that each State group remains as completely sovereign as any independent nation on earth, except as to that portion of its sovereignty delegated for administration to the Government of the United States by the Constitution. All such sovereignty so delegated to the United States was to be administered only to carry out the declared purposes outlined in the Declaration of Independence and in the Constitution itself.

THE CONSTITUTIONAL GUARANTEE OF RESERVED STATE POWERS

Hence the Constitution of the United States equally guarantees to the National Government the authority to administer its delegated powers for these declared purposes, and to each politically organized State group the complete power to administer its reserved sovereignty. The protection of each State group in the exercise of its reserved powers is as much the duty of the National Government and of Federal officials as is the protection of the United States Government in the exercise of its delegated powers.

USURPATION OF STATE POWERS BY THE NATIONAL GOVERNMENT CONDEMNED

We condemn all invasions by the National Government of the reserved sovereignty of the respective States, all attempts of national governmental agencies to extend the purposes, enlarge the powers, or increase the functions of that Government beyond the limits imposed by the Declaration of Independence and the Constitution of the United States.

SPECIAL PRIVILEGES CONDEMNED

We pledge ourselves to the effort to abolish as rapidly as possible special governmental privileges of any and every kind as being contrary to the spirit and purpose of Americanism, and to the effort to reenforce on all national governmental agencies the limitations, both as to their purposes and powers, which have been imposed on them by the American people through the Declaration of Independence and the Constitution of the United States.

THE NATIONAL GOVERNMENT TO BE PRECLUDED FROM BUSINESS COMPETITION WITH PRIVATE CITIZENS

In particular, we pledge our efforts to terminate the business activities of the United States Government now carried on in competition with private citizens.

BUREAUCRACY TO BE ABOLISHED AS RAPIDLY AS POSSIBLE

We pledge ourselves to abolish as rapidly as possible all national bureaucratic government.

THE CONSTITUTIONAL POWERS OF THE COURTS TO BE REASSERTED

We pledge ourselves to recognize and enforce the judicial power of the courts, conferred directly by the people through the Constitution, and to maintain their inherent right to review and adjudicate the rights of the people under any rules or orders promulgated by commissions or bureaus established by the Congress, in spite of any congressional declaration to the contrary.

INDEPENDENCE OF THE COURTS

We hold that the existence of independent and impartial judicial tribunals, fully empowered to hear and determine controversies involving questions of whether government is exceeding its delegated authority, is necessary to the maintenance of any plan of limited government; and particularly we reaffirm the power and authority of the Supreme Court of the United States to pass upon the constitutionality of an act of Congress

FEDERAL EXPENSES TO BE REDUCED—THE FEDERAL BUDGET TO BE BALANCED

We pledge ourselves to the effort to reduce Federal expenses by the abolition of unconstitutional and non-Federal activities by the National Government; by opposing bonuses, special privileges, and Federal largesse to special groups, and by attempted simplification of governmental operations; and to the effort to balance the Federal Budget, and to recognize the obligation of contracts on government as well as on individuals.

CONDEMNATION OF ATTEMPTED REDELEGATION TO THE EXECUTIVE OF POWERS ENTRUSTED TO CONGRESS

We condemn the attempted redelegation by Congress to the Executive of the legislative powers entrusted to it by the Constitution; and pledge ourselves to use every proper effort to preserve the separation of legislative, executive, and judicial powers as provided in the Constitution.

CONDEMNATION OF BLANKET APPROPRIATIONS—TO BE ALLOCATED AND EXPENDED UNDER EXECUTIVE AUTHORITY

In particular we unreservedly condemn the so-called appropriation by Congress of lump sums to be expended in the uncontrolled discretion of the Executive; and pledge our efforts to reenforce the constitutional provision that no money shall be drawn from the Public Treasury but in consequence of congressional appropriations made by law—such legal appropriations involving the allocation by Congress of definite sums to definite and specific purposes and objects authorized by the Constitution.

TOTALITARIANISM FUNDAMENTALLY CONTRADICTORY OF AMERICANISM

We declare that totalitarianism is fundamentally contradictory to, and destructive of, Americanism, and that the conflicting principles underlying the two political philosophies make it impossible to graft totalitarianism on, or blend it with, Americanism, without undermining and destroying the latter.

UN-AMERICAN ACTIVITIES CONDEMNED

In this belief, we condemn all un-American activities, directed to promoting and establishing these alien philosophies in the United States.

While we insist upon the preservation of free speech, free radio, and a free press, we condemn any attempted exercise of these individual rights in advocating the overthrow of our Government by force and violence. Such proceeding is not ordered liberty, but criminal license; and should be prevented by governmental force, if necessary.

SUBVERSIVE ALIENS TO BE DEPORTED

Where such subversive action is taken by aliens enjoying our hospitality, or where such aliens engage in subversive activities against our Government, we pledge ourselves to use every proper means to secure their proper deportation, and to prohibit the entry into our country of any aliens who hold, and publish here or publicly advocate, such views.

IMMIGRATION TO BE CURTAILED OR TEMPORARILY DISCONTINUED

In view of the world-wide conflict now waging between the totalitarian and the democratic nations, of the widespread use of propaganda as a weapon in this struggle, of the insidious attempts to drag the United States into the conflict, of the danger of permitting a further influx of peoples holding to these alien philosophies, and of the need for reestablishing the principles and governmental plans of Americanism in the hearts and minds of our people; we advocate that immigration from all countries be greatly curtailed, or else completely stopped, at least until the termination of the present conflict; and we advocate the strict enforcement of legal punishment on all native-born or naturalized citizens, who openly advocate any change in our form of government by force or violence, or who teach the justice of such doctrines in any of our schools supported in whole or part with public funds.

KEEPING THE UNITED STATES OUT OF WAR

We declare our opposition to the United States in any way becoming embroiled in the European war, or in any war save to repel invasions of our territory, to maintain our national honor, or to maintain and protect the rights of American citizens.

We reaffirm our historic slogan of "Millions for defense, but not a cent for tribute," paraphrasing it to meet the present situation to "Millions (in money or men) for defense of our territory, our national honor, and our rights, but not a cent or a man to settle wars to which we are not a party, and about which we have had no voice."

PREPAREDNESS

Recognizing that the unequaled wealth of our country, produced under the political theory of limitations on governmental purposes and powers, places us in a position where totalitarian dictators covet control of our resources, and desire to abolish this outstanding proof of the superiority of the democratic over the totalitarian ideal as a means for producing individual and national happiness and welfare, so as to bring the entire civilized world to an acceptance of their false political theories and to establish their universal rule; we declare our belief in the necessity for national preparedness against any assault upon our territory, rights, and liberties.

Specifically declaring the friendly feelings of the American people toward the peoples of other nations (whatever may be their differing sentiments toward any rulers who disregard justice, persecute minorities, and seek to subjugate and oppress weaker nations) and disclaiming any purpose to grasp additional territory at the expense of other nations, or any desire to enforce our ideals or rule on other people, we pledge our efforts to secure such enlargement and perfection of our Army, Navy, and air forces as may be adequate to protect the United States against aggression by any nation.

A PLATFORM OF PRINCIPLES, RATHER THAN OF SPECIFIC REFORMS

We hold that political platform pledges are solemnly binding upon the party making them; and should be substantially carried out, or attempted to be carried out, by those who secure the suffrages of their fellow citizens on the basis of such pledges.

In this belief, we submit to the American people a platform of principles, rather than a set of pledges of specific legislation.

We recognize that the fluctuating conditions confronting the world from day to day make unwise too definite a commitment to specific legislation which may prove inadvisable under a different state of facts.

We appreciate that the problem of arresting our present trend toward complete centralization of power in government, and hence toward ultimate totalitarianism, inevitable dictatorship, and loss of liberty, involves the defeat of entrenched power and privilege; that it will require the cooperation of all three of the great departments of government, legislative, executive, and judicial; and that it can succeed only if the American people themselves (thoroughly reconsecrated to the political theory and governmental plan to which the founders and framers of the Republic pledged "their lives, their fortunes, and their sacred honor") shall endorse and support this attempt to return to the faith of the fathers, and shall be willing to forego and surrender any temporary group or class privilege in the supreme effort to assure that human liberty does not perish from the earth.

OUR OBJECTIVES

Our objectives are:

To preserve Americanism as a citadel of human freedom.

To reestablish the just idea of "equal rights to all and special privileges to none."

To put into force again the theory and plan of a government of limited purposes, powers, and functions.

To preserve the democratic ideal as against the totalitarian ideal.

To maintain the rights of man—of each human being as such—against the aggressions of power and of rulers.

To perpetuate individual and political liberty.

To maintain, in an embattled world, where force strives to establish its universal rule, a great and powerful Nation, consecrated to a rule of justice and as a nucleus around which a new international structure of ordered liberty can be erected when the present struggle is terminated.

SUMMARY OF OUR PLATFORM

In order to attain these great objectives we pledge our best efforts:

A. To restore Americanism, involving—

(a) The reestablishment of American government as a government of limited purposes, powers, and functions.

To that end we pledge our best efforts:

1. To abolish special privilege.

2. To take the National Government out of business competition with its citizens.

3. To limit Federal activities to those authorized by the Constitution, with those activities exercised only in furtherance of our declared national purposes;

4. To reduce as rapidly as possible, and ultimately to abolish, Federal bureaucracy;

5. To reduce the cost of National Government by:

a. Discontinuing, as rapidly as possible, all activities of the National Government which are non-Federal in their nature, which are not authorized by the Constitution, or which are not directed to carrying out our declared national governmental purposes;

b. Discouraging, and eventually ending, the grant of business and special privileges (either in the form of grants of money, or of exemption from the operation of general laws, or otherwise) to any groups or classes;

c. Abolition of the practice (under the guise of public works or under other guise) of Federal financing and construction of local improvements not directly contributing to the general welfare;

d. Simplification of government;

e. Balancing the National Budget;

f. More equitably distributing the burden of national taxation, so as to carry out our national objective of equality of duty and burden on each citizen in maintaining an equality of rights and opportunity to all, and so as to enable business to function on a substantially fixed and constant basis.

6. To terminate the attempted redelegation by Congress to the Executive, or to boards, commissions, or bureaus established by it, of the legislative power entrusted by the Constitution to Congress alone.

7. To end the present practice of blanket so-called appropriations, to be allocated and expended in the uncontrolled discretion of the Executive or of someone else; and to require that no sums shall be drawn from the Public Treasury except by an act of Congress allocating a definite sum to a definite and specific purpose authorized by the Constitution.

8. To enforce the separation in Government of the legislative, executive, and judicial functions.

9. To preserve the independence and impartiality of the judiciary, free from domination or control, direct or indirect, of the executive or legislative departments; and to recognize and maintain the constitutional power of the courts to adjudicate questions of whether Government is exceeding its entrusted authority, whether an act of Congress is constitutional, and to review the decisions of boards, bureaus, and commissions created by Congress with the alleged power to establish rules and regulations having the force of statute law.

10. To protect the several States in the exercise of their reserved sovereignty, and to prevent invasions of that sovereignty by the National Government.

11. To deport all aliens who publicly advocate here changes in our Government by force and violence.

12. To reduce, and perhaps prohibit, further immigration until the termination of the present World War.

13. To bring to trial all citizens, native-born and naturalized, who publicly advocate changes in our Government by force and violence.

14. To impose on government, as well as on individuals, the duty of observing the obligation of contracts.

(b) Reeducation of the citizens of the United States as to the true political theory and governmental plan of Americanism, its logical political, economic, and social soundness, its adaptability and responsiveness to the needs of a liberty-loving and progressive people, and its demonstrated superiority over all other political theories and plans yet evolved for promoting the individual and national welfare of human beings, coupled with education of the American people as to the unsoundness and viciousness of the totalitarian theory and plan of government, as being destructive of human liberty, welfare, and happiness, and of national greatness, so as to revivify in citizens of our country a love for, and support of, Americanism and its underlying principles.

B. To keep the United States out of war, except wars of defense to resist invasions of our territory, to preserve our national honor, and to protect the rights of our citizens.

C. To maintain peaceful and friendly relations with the peoples of all nations, without attempting to impose on them an acceptance of our governmental theories and plans, without interference in their domestic affairs, and without designs against their territory or sovereignty.

D. To use all proper efforts, as friends of the peoples of all nations and as neutrals in the present conflict, to bring about a just peace, to restore ordered liberty throughout the world, to promote mutual respect and friendly trade and intercourse among all peoples, and to remove the menace of force and to substitute therefor the rule of justice in international relations.

APPEAL FOR SUPPORT

On this platform of principles, and so as to make possible the attainment of these objectives, we appeal for the support of citizens of the United States, choosing as our slogan the appeal to "Honor God and Save the Republic," urging them to reject totalitarianism, with its materialistic basis, and to preserve Americanism by strengthening its spiritual foundations.

Colonel Lindbergh's Speech

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

EDITORIAL COMMENT BY GRAND RAPIDS PRESS

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Grand Rapids Press entitled "A Voice of Reason," referring to Colonel Lindbergh.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VOICE OF REASON

Col. Charles A. Lindbergh may not have increased his popularity by the frank statement of his ideas concerning America's defense needs, but his voice was one of moderation that should be heeded. He has raised a valid protest against hysterical and directionless rearmament.

For one thing Colonel Lindbergh effectively dealt with the emotional appeal for a vast air fleet of 50,000 planes. Even more effectively he met the "scare" propaganda that America is in imminent danger of invasion. Whatever may be the value of his word as an authority on foreign affairs, he certainly may be recognized as one of the foremost spokesmen of the Nation when it comes to questions of national defense, especially in the aviation sphere.

He effectively answered the scaremongers with his assurances that a foreign power could conquer the United States only if bombers were accompanied by an invading army and "great armies must still cross oceans by ships." In other words the Atlantic and the Pacific are still barriers over which invasion will be a difficult if not impossible role if our own defenses are reasonable.

One trouble in America is that so many seem to lose their sense of proportion as they watch events abroad. They forget that distances in Europe are as nothing compared with the distance between that continent and this. They see invasion of the United States carried out with the same facility as the invasion of the Netherlands. They seem to assume that crossing the Skagerrak is no lesser feat than sending an army across the Atlantic. There is simply no comparison, as Colonel Lindbergh so ably points out.

Lindbergh's analysis of actual defense needs seems to be wholly logical. He visualizes close cooperation among all the nations of the Western Hemisphere, which would not leave the entire burden of defense on the United States. And he minimizes the likelihood of attack if this country will stop meddling in foreign affairs. His advice that we adopt definite defense policies before, not after, we spend our billions is as sound a piece of advice as any that has been offered.

It is well that the Nation has at this time a few who will dare to speak a bit out of tune with the chorus in Washington. It is fortunate that there are some whose sense of proportion has not been destroyed, who can watch the unfolding drama abroad without being thrown into hysterical fits of apprehension. Colonel Lindbergh is serving his country today in a capacity more valuable than that which he filled when he was the object of acclaim by the multitudes.

National Aviation Forum of 1940

EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ARTICLE BY THOMAS H. BECK

Mr. CLARK of Idaho. Mr. President, commencing next Monday the National Aviation Forum will commence a series of meetings in Washington. This probably will be the greatest gathering of aviation experts which has ever been held in the United States. Every branch of this great industry will be represented—both civil, military, and naval aviation. This gathering will be especially significant because of the stress which is now being laid, and rightfully so, upon our national defense in the air.

Consequently, I ask unanimous consent to have printed in the RECORD a short article by Mr. Thomas H. Beck, general chairman of the National Aviation Forum of 1940, outlining the purposes of the Forum and the program of the meeting next week.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NATIONAL AVIATION FORUM OF 1940

(By Thomas H. Beck, general chairman)

During the week of May 26, thousands of residents and visitors in Washington, D. C., will witness a spectacular demonstration of this Nation's aeronautical strength and potentialities, civilian and military.

The occasion is the National Aviation Forum of 1940 and its complementary aeronautical exhibition at nearby Bolling Field.

With civilian air travel constantly reaching new peaks, and with questions regarding the true air strength of the Nation inevitably in mind at this time, this year's forum, under the auspices of the National Aeronautical Association, is bound to be of interest to every American. Nor is it confined to those of us of the North Americas, for President Roosevelt has instructed the State Department to invite representatives of 21 nations of the Western Hemisphere.

"I know of no way better to promote the best technical development of aviation than through meetings such as that which is to take place in May," President Roosevelt wrote. "I need hardly say that in the interest of all the Americas such development is essential."

While the forum in the Department of Commerce auditorium will consist of talks by leading aviation figures, emphasis this year is being placed upon getting home to the entire public of the Americas the story of where this Nation stands and where it is going in the ever-widening field of aeronautics.

The aeronautical exhibition at Bolling Field, therefore, will be the public's own show. Two tremendous hangars will contain exhibits by the Army, Navy, Coast Guard, Coast and Geodetic Survey, Weather Bureau, Post Office Department, Work Projects Administration, Office of Education, Air Transport Association, National Advisory Committee on Aeronautics, and Civil Aeronautics Authority.

The manufacturers of airplanes and accessories will be represented in full force and the public will see everything, from the huge stratosphere planes to the most delicate of precision instruments.

More than 300 private fliers from coast to coast will converge on Washington during the week. Then there will be formation flying by Navy and commercial blimps and flights to and from Washington by the latest aircraft developed for commercial flying.

In the Department of Labor auditorium, free motion pictures will show the progress of flying from the days of the fabled Icarus to present-day flying fortresses.

American aviation has a story of profound significance to tell at this National Aviation Forum of 1940.

The United States and the European War

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM WASHINGTON TIMES-HERALD

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial appearing in today's issue of the Washington Times-Herald entitled "Hot Heads, Bone Heads, and Cool Heads on the War."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Times-Herald of May 24, 1940]

HOTHEADS, BONEHEADS, AND COOL HEADS ON THE WAR

There are many hotheads, and quite a proportion of boneheads, in the United States who are urging the country to get into the European war.

These folk probably think they are moved by some sort of high idealism.

As a matter of fact, they are merely the weak and vacillating victims of propaganda and hysteria.

A few months ago they, like all other intelligent Americans, were cool-headedly calculating the unavailing cost of the last war, the utter failure of America's high objectives of permanent democracy, of open covenants openly arrived at, of self-determination of all peoples.

The facts of history have not changed.

It is the thistledown thoughts, the tumbleweed minds, blown hither and thither by every changing puff of propaganda or breath of hysteria, that have changed.

Some of our leaders are probably influenced, as Wilson was influenced, by a desire to occupy an important place in history and to take a big part in world events—violating the injunction of the fathers of the Republic to keep free from foreign entanglements.

But most of us small fry are animated by no more intelligent motive than the moth which sacrifices itself in the flame, impelled by hysteria and dazed by the blinding glare of publicity and propaganda.

Fortunately there are experienced men in responsible positions in the United States to warn us foolish and flighty moths to keep our impressionable heads and preserve our inflammable wings.

Rear Admiral Harry E. Yarnell, United States Navy, retired, spoke last Saturday before the graduating class of the Naval War College.

Said the admiral:

"The people of this country are still painfully aware of the result of the last World War, when we sent 2,000,000 men abroad, and spent thirty or more billions of dollars to make the world safe for democracy; then at the end witnessed a relapse of the high ideals and a resumption of the old nationalistic policies that planted the seeds of future wars.

"Why should we spend our blood and treasure until there is assurance that they will be spent to a far better end than in 1918?

"The Atlantic Ocean," continued the admiral, "still remains a large body of water, and the probability of plane attack from overseas on this country will remain remote for some time to come."

The admiral concluded with this sound statement:

"Command of the seas is and will remain the primary factor in our plan of national defense, and as long as we have it we are safe from successful enemy invasion."

Fortunately for our blessed and beloved country, our sea defenses are in better condition than our ridiculously insufficient land defenses.

According to Secretary Edison, our Navy will be adequate as soon as our battleships now building are redesigned to resist the powerful weapons of modern airplanes, and as soon as we shall have a fleet of airplanes sufficiently large and powerful to cooperate with our ships of war, and to defend them from the attacks of the enemy airplanes which might otherwise annihilate them.

This cooperative fleet of modern airplanes, however, we do not seem to be in a very good way to secure soon.

In the debate in the United States Senate Saturday on unpreparedness, Senator CLARK, of Missouri, a World War veteran and former commander of the American Legion, said the United States at the present time, according to General Arnold in his testimony before one of the House committees, has only 58 planes which are not obsolete.

Said Senator CLARK of Missouri:

"I am not a member of the Military Affairs Committee, the Naval Affairs Committee, or the Appropriations Committee, but I am advised by members of those committees that General Arnold testified before the Appropriations Committee, not once, but a number of times; that the maximum production of the American airplane factories by July 1, 1941—somewhat more than a year from now—would be slightly in excess of 6,000 planes, 2,800 of which were to go to the American Army, and the remainder to the Allied armies, or various other foreign countries."

So even if all the plane production of 2,800 planes allotted to America should be delivered to the Navy, it would be 2 years before the Navy would have the 5,000 up-to-date modern planes necessary for successful cooperation in American defense.

The contention of Senator CLARK of Missouri, Democrat, was sustained by Senator LODGE, of Massachusetts, Republican who is a member of the military subcommittee of the Appropriations Committee, and in addition an Army Reserve officer.

Senator LODGE said:

"The facts, as the Army officials have stated them to us, and they have not been controverted, are that by July 1, 1941, there will have been produced in this country about 6,000 military planes, about half of which will go to our own defense establishment, and the other half will go abroad."

So it will be clearly seen that we are far from adequately prepared even in our best-prepared and most-important arm of defense—the Navy.

And the best thing for an unprepared nation to do is to stay out of war if it honorably can.

Senator CAPPER, of Kansas, typically sound and sincere American, speaking under the auspices of the Coalition of Patriotic Societies, said last Saturday:

"The President has a right to make the United States invulnerable, but I will continue to oppose any move to send troops abroad. I will protest against pork-barrel methods and stand against repeal of the Johnson Act.

"In the first place, I will say without any reservation, that this European war is not ours, and don't let anyone tell you otherwise. In the second place, no head of any nation is justified in plunging a nation into a war that is not theirs. * * *

"No matter how high our ideals and no matter what we sacrifice in money and men, we cannot bring peace to Europe.

"The situation today is sympathy for the Allies. This sympathy does not justify taking on their war. * * *

"Here is what that would mean to us. First, we would abolish democracy and get a dictatorship. Second, there would be an increase in the national debt. Third, there would be a loss of life running into millions and a loss of property running into billions. Fourth, there would be a depression worse than this and a continuation of dictatorship, and then more European wars.

"Keep these things in mind and stay out of war. I pray in this crisis we will keep faith in ourselves and faith in our form of government."

Senator CAPPER's words of warning are apt and immediately applicable when he says:

"Every time we send supplies, advance credit, and do all the things 'short of war,' then we have the final step—war."

Our position on the side of the Allies is getting to be like the position of Italy on the side of Germany, except that we are not as neutral as Italy.

Italy does not supply Germany with arms and ammunition, to the detriment of its own forces and the injury of its own safety and security; nor does it tolerate any hostile interference with its own political rights and national independence.

Those who wish our America to abandon its neutrality and plunge into a terrific war do not realize what that would mean in our utter unpreparedness.

We would soon find ourselves fighting not only Germany, but Italy, Russia, and Japan.

We would be harried on our east coast as well as on our west coast.

Men we would have in plenty for defense, but no munitions, no modern guns, no modern planes, no sufficient mechanized forces.

We would be unable to send aid to our allies.

We would be unprepared even adequately to defend ourselves. In 2 years we might be properly prepared; but in 2 years our country might be destroyed.

Says Colonel Lindbergh, truthfully:

"If we desire peace, we need only stop asking for war. No one wishes to attack us and no one is in a position to do so."

As a matter of plain fact, these European nations have their own private quarrels. They have always had them and will always have them.

It is a species of tribal warfare, based on alien interests and foreign policies and jealousies, which are none of our affair.

Our ancestors founded this great free Nation to be independent of these race antagonisms and tribal conflicts.

Let us keep free of them.

Let us maintain our independence.

Let us defend our own land and our own liberties, and neither sacrifice our own interests to fight on foreign ground, nor invite alien conflicts to invade our shores.

If the Allies Lose

OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ARTICLE BY DOROTHY THOMPSON

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "If the Allies Lose" by Miss Dorothy Thompson. The article appeared in the Washington Post on the 23d of this month.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 23, 1940]

IF THE ALLIES LOSE

(By Dorothy Thompson)

NIGHTMARE INTO REALITY

If the Allies lose this war, it will prove to be the worst catastrophe for the United States in our whole history.

Four empires—the British, the French, the Belgian, and the Dutch—with their vast raw material resources and markets in Africa, Asia, and throughout the world, will have fallen into the lap of the Nazis, with sops thrown to Mussolini for his willingness to act as foreign Gauleiter No. 1.

This world empire, of a size undreamed of by Caesar or Napoleon, will feed raw materials into a huge European workshop drained of capital, and will produce goods by enslaved skilled and unskilled labor working under taskmasters at maximum hours and subsistence wages; it will dump these goods at prices with which no free country can possibly compete.

The idea that North America can hold South America economically under these conditions is illusory. The very products of which South America has a surplus are the products of which we, too, have a surplus. The markets of South America have always been chiefly in Europe, and Hitler's Europe will buy South American products in exchange for armaments, machinery, and consumers' goods offered at prices with which we cannot compete unless we cut our own standards of life to the bone.

The economic drive which we have already seen on a large scale will be carried forward on a stupendous world scale and will be accompanied by a political and propaganda campaign through "fifth columns," augmented by every commercial agent.

The fall in the standard of living, and the loss of markets and possibly even sources of raw material such as rubber and tin will produce new unemployment in America, and social unrest, which these "fifth columns" will systematically inflame.

In the crises they will set class against class, race against race, and party against party. Old racial and national allegiances will be appealed to, and America will escape this war only to risk the worst kind of war—revolution, civil war—fomented from without and carried on through agents within.

What America risks is to be turned into another Spain.

It is hard to write what one sees, what one has seen coming, irresistibly and ruthlessly and encountering only the resistance of words, for 7 long years of nightmare. There is another "fifth column," and perhaps it is the most dangerous of all. It is found in those who pooh-pooh the danger and strangle the words in the throats of the warners by wisecracks. They tap their foreheads and smile in a superior way, whispering sympathetically, "hysterical," "poor fellow, a little cracked; he sees bogies." "Why does he speak so loudly?" Or they look severe and say, "If he keeps on talking about this, he will conjure it up. He is inciting to action, and action is dangerous." They are close to the very entourage of the President, some of them, and they have stripped his own words of much of their strength. He has not dared to tell the whole truth.

One must not tell the people more than they can bear.

Who knows how much truth the people can bear? Do they not in the end see it—in the eyes of the gangster at the door and the bayonet at the breast?

We should send aid to the Allies, now, today. Every airplane that can be shipped, every gun that can be crated, in every ship that can be floated and convoyed, while there is a toehold in Europe where they can be landed and while there are still men alive offering their bodies to be broken. We should send aid regardless of all mistakes which all the Allied governments have made; for their mistakes are our own mistakes—the errors of incredulity and complacency. They, and we, have been giving away our world, inch by inch and position by position, retreating to the last stand, in the last trench.

The last trench is a trap.

This war is not lost for a world where men can still live, free and unafraid. It is not going to be lost. But 1,000 airplanes today will be worth 20,000 tomorrow.

Armaments are useless unless one uses them on the right side. Czech armaments equipped 40 Nazi divisions and revealed the secrets of the Maginot line. They are being used all right—to kill a Czech legion in France and to keep down the Czechs at home.

The fleet that fights in our interests today will, if captured, be used against us tomorrow.

Hitler's secret weapon is not a thermite bomb or a surface detonator. It is bacteria, all right, but new bacteria—the germs of defeatism. It is his knowledge of the deathly slowness, the childlike credulity, the easy-going complacency of democracies and their apparent incapacity, in the twentieth century, to make an audacious decision in time.

Hitler won his first war against the German Republic, and observed then that the characteristics of democracies is that they wake up too late.

The British and French thought they would get really going in 1941.

This is no time for panic—for the organization of American mothers to receive parachutists. The Nazis won't come to America in parachutes—not for a long time, anyway, and probably never. But they have already been among us for some time agitating American mothers not to permit us to be drawn into war by sending aid to the Allies.

What we need are not minute ladies with rifles but a council of national defense with full powers to plan the organization and speeding up of our industries for the most rapid delivery of weapons to England and France—and the delivery of what we have now.

Failures in Democracy

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

LETTER FROM THE WASHINGTON EVENING STAR, BY J. H. BILBREY

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Washington Evening Star of Wednesday, May 22, 1940:

POINTS TO FAILURES OF OUR DEMOCRACY—ACTIVITY OF PRESSURE GROUPS HELD MENACE TO ANY REPUBLIC

To the EDITOR OF THE STAR:

During nearly a decade the public ear has been assailed with the phrase "make democracy work." Under the guise of these inoffensive words many things have been done. An encyclopedia of new statutes has been enacted. Our revamped judiciary has given new construction to our old laws. A whole alphabet of boards, commissions, and bureaus has been created. Treasure almost beyond imagination, upward of $60,000,000,000, has been spent for relief, subsidies, salaries, pensions, and hand-outs. All of these things, so it was said, were done to make democracy work.

At this critical time is it not fitting that we seriously and honestly search our souls and inquire whether any of these things, or all of them together, have made any substantial contribution toward making democracy work? If they have, the price, although high, is not prohibitive.

Unless history and reason lie, the primary purpose of government is to provide, as a minimum, security in person and property. Security of worship, of thought, and of expression are but refinements and extensions of the primary security. Always important, these latter rights, recently spoken of as "civil liberties," have received a plethora of attention and publicity. It might be truly said that the public is "civil liberty" conscious. This is not an unhappy circumstance, unless our attention has been distracted from the foundation of all of our rights, security of person and property; for what shall it profit us to attain a full measure of civil liberty at the expense of national unity and national security?

The Frenchman could give us some excellent advice on this subject. It was he who invented the sit-down strike, and, of all places, in the aviation industry. It was the Frenchman who invented the week with two Sundays and the vacation with pay. The Norwegian could also give us some advice on national unity and security. Liberality and collective effort were their shibboleths. In fact, their liberality was so genuine that its legislative body until 1935 was a member of the Third International. Its liberality filled its country with spies and saboteurs, destroyed the unity of its people and invited national calamity and disgrace from which it will never recover.

But what of our national unity and security? Is democracy working in this respect? Although threatened on both the Atlantic and the Pacific, little of the $60,000,000,000 has been spent to strengthen our Navy, our first line of defense. Our Army, with one mechanized division, is literally contemptible when compared with the world of today. We have not enough antiaircraft guns adequately to defend the city of Washington. Although charged with the defense of the Panama Canal, our air force in planes and personnel is not sufficient for this one mission, not to mention our unprotected Atlantic and Pacific coasts and other strategic points. Plants for production of fighting planes are gradually being built up, thanks to foreign purchases and not our own foresight. The Government has taxed and taxed, and spent and spent to make democracy work, but we have no army or air force and but an inadequate navy.

Among the numerous new enactments to make democracy work, one was designed to provide social security. Under this enactment vast sums have been collected, but only a small moiety remains in the Treasury for the purpose for which it was collected. If our economy is adversely affected by our national weakness, our social security cannot be very secure.

While under the sway of foreign agents—the Frenchman invented the sit-down strike, the week with two Sundays, and vacation with pay—to make democracy work, we provided pay for work not done and a bounty to farmers for not producing, all for the purpose of creating prosperity through scarcity. Notwithstanding the use of public funds to organize and protect the workingman, an army of racketeers, padrones, and others of such ilk gained lucre and high place. With all of our statutes, all of our good will, and all of our liberalism, the crackpot, the inept, the visionary, the left winger, and the agents of foreign governments clog and distract the functioning of the Government service and of the many laws passed to make democracy work.

In spite of all of our liberal laws and liberal interpretations by a truculent judiciary, and the never-ending stream of treasure poured out by a liberal hand, there came into being a class of organized mendicants, and class unrest with constant warfare between capital and labor, resulting often in the destruction of private property. To make democracy work, only those able to pay were taxed. Unhappily, these taxes were regarded by those paying them as confiscatory, rendering insecure all manner of property from the widow's mite to the millionaire's yacht, and driving capital from industry. To make democracy work, sharp distinctions were drawn between human rights and property rights; between corporate property and individual property. All too many persons refused to acquiesce in these subtle distinctions and have bitterly maintained that human rights and property rights are inseparable and that the widow's mite is oft invested in corporate enterprise; that laws come with property and leave with it.

Besides the "fifth column" of foreign and domestic origin whose entry into strategic positions has been so rapid, we have with us an organized host whose primary idea is to get something for nothing; to live on the fruits of the labor and thrift of others; and the iron in whose blood has been distilled away, leaving a softer but much less useful substance.

Considering our potentiality as a going concern, the new laws and the staggering sums laid out in that behalf, it cannot be said that democracy has not had a chance to work. The plain evidence is that if it has worked, it has worked poorly or in reverse.

That democracy will not work is a fact as old and as large as civilization itself. It should be the common knowledge of every grade pupil that an attempt to make democracy work is an attempt to change our republican form of government and revert to a form of government which is bound to destroy itself.

Much of our confusion of thought and lack of national unity arises from the belief, all too general, that our Constitution set up a democracy providing for direct action through organized pressure groups, impulse, and emotion. Actually our form of government was carefully designed to prevent this sort of thing.

J. H. BILBREY.

May 15.

Allies Need Arsenal

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ARTICLE BY ERNEST LINDLEY

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. Ernest Lindley, published in the Washington Post on the 24th of this month, entitled "Allies Need Arsenal; the American Role."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 24, 1940]

ALLIES NEED ARSENAL

(By Ernest Lindley)

THE AMERICAN ROLE

The dreadful euphemism "melee" which has appeared almost daily in the French Army communiques applies to the entire world situation. Any attempt at a short analysis must be oversimplified. Insofar as the Allies are concerned, however, the major possibilities of the next few weeks include these:

(1) The miracle which saves the Allied Armies on the Continent from destruction.

(2) Surrender by France.

(3) Surrender by Great Britain.

(4) Surrender by both Great Britain and France.

(5) The refusal of either France or Great Britain to surrender, even though both may be overrun or bombed into shambles. In other words, their insistence on carrying on the war as world empires even if their home bases become untenable.

Many complications can be introduced—the roles of Italy, the Soviet Union, Sweden, Turkey, and the Balkans, and Japan.

Whatever ensues, the United States must become a great arsenal as rapidly as possible. Whatever ensues, Germany, for a long time to come, will be the world's most formidable air power and probably its most formidable land power. If it succeeds in forcing the surrender of the British and French Fleets and captures the naval ships now being built or repaired in British and French docks, it will also become the world's greatest sea power.

Whatever the result, Great Britain, and perhaps France also, seem destined to be during the next few weeks the victims of terrible destruction from the air. The tragic fact is that they were unprepared for this war. In war, to be relatively unprepared may be as disastrous as to be totally unprepared.

The cold reality is that we must pay heavily for the diplomatic and military blunders of France and Great Britain—and of the Netherlands and Norway, and of every other small European neutral which did not arm itself and join with its neighbors in maintaining an iron ring around the Germans. We may have to pay also for Italy and Russia. For if the Allies are quickly crushed, neither Italy nor Russia, nor probably the two in combination, can muster the strength to stop the Nazi power on the ground and in the air.

At present the only nation combining the raw materials, the industrial capacity, the organizing ability, the energy, and the relative security from attack to serve as a base for the effort to limit the expansion of Germany seems to be the United States. We have also a formidable instrument in our Navy. Despite their dark outlook, the Allies may yet be able to do the job, by relying on us only as an arsenal. But this prospect has been getting dimmer hour by hour. The time may be near when we will have to decide whether we are going to assume major responsibilities for directing the resistance to German expansion.

It is conceivable that within weeks the British Isles will become untenable as a base for British sea power. If the British or combined Allied fleets, or what is left of them, in the Atlantic fall back on Canada we will be all the way into the world struggle, whether or not we declare that we are at war.

At the moment our formal entry into the war, even if we were disposed to make it, could accomplish nothing beyond bolstering the morale of the Allies, and possibly deterring other nations from jumping on the German band wagon—a band wagon which may prove to be a Moloch. We are not prepared, in the air or on land, to give effective assistance immediately. And if sea power without air power can save Great Britain and France, as distinguished from their empires, they already have it.

There are practical ways, however, in which we can give more help, and in which, if worse comes to worst, we can collaborate in

saving as much as possible of the non-European world from the domination of Germany and her potential satellite allies. We have available very little material that would be useful to the Allies. We do have, however, 2,000 or more old light artillery pieces from the World War, which could be shipped abroad. Their mountings have not yet been modernized, but it takes a long time to bore the barrels of 2,000 field pieces. This semiobsolete equipment might be valuable to France.

We might also ship immediately from 700 to 1,200 of our Army and Navy planes. Those are planes which are obsolescent or obsolete, and which will quickly be replaced by better models already ordered from American factories. Although out of date, these planes, if sent immediately, could be of substantial help to the Allies.

Looking ahead a bit further, we could much more rapidly rearm the Allies and ourselves if we had the help of several thousand highly skilled workmen. Even now among the Belgian refugees in France there may be skilled gun makers. If French arsenals are bombed, both French and Belgian artisans with high skills may have no place to work. And if the destruction extends to Great Britain, as it almost certainly will, there may be available shortly thousands of British machinists, gun makers, and ship loftsmen, fitters, coppersmiths, and other men in the naval shipbuilding crafts.

If these highly skilled artisans cannot be kept at work in France and Great Britain, they can be put to work in the United States. We can use all of them we can get to expedite our rearmament program.

In the present struggle several thousand of these men, with highly specialized skills which take years to acquire, are far more valuable than all the gold, diamonds, and other precious articles which are being moved westward from the continent of Europe. It may be well to begin to think now about the organization of a selective migration, which, with our already available assets, will permit the acceleration of our defense program. This program must include the strengthening of the Allies, simply because we are not yet ready to assume the consequences of their total defeat.

America's Real National Defense

EXTENSION OF REMARKS

OF

HON. OSCAR YOUNGDAHL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

ARTICLE FROM THE MINNEAPOLIS STAR-JOURNAL

Mr. YOUNGDAHL. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Minneapolis (Minn.) Star-Journal, of May 21, 1940:

AMERICA'S REAL NATIONAL EMERGENCY

Extremely disturbing to thoughtful Americans is the rumor from Washington that President Roosevelt will invite two or more Republicans into his Cabinet and form a coalition government to meet "the present national emergency."

What national emergency?

The United States is not about to be invaded.

The people of the United States are not about to declare war on anybody.

It is true that our national defenses are far from adequate, in spite of the Roosevelt administration's expenditure of more than $6,000,000,000 for defense in 7 years, and that in view of the turn the war has taken we must get ready—promptly, but without hysteria—for whatever situation may confront us if the worst happens in Europe.

To make ourselves strong is a national objective. It is in no sense a partisan one. Whoever the President appoints to direct America's rearming as head of a national-defense council must be a man who can unite industry, labor, Government, and all the people in the common effort for preparedness which all are ready to make.

But this does not require a coalition Cabinet.

AND CONCENTRATION OF POLITICAL AUTHORITY WOULD BE THE BEGINNING OF THE END OF REPRESENTATIVE GOVERNMENT

Suppose Governor Landon and Colonel Knox—who, as 1936 Republican nominees, are nominal heads of the party—or any other prominent Republicans were to accept the portfolios of war and navy, or any other Cabinet posts.

President Roosevelt would then be able to say that in view of "the present national emergency" politics had been adjourned.

The proposal already has been made, with the apparent connivance of New Deal strategists, that the Republican nominating convention be postponed from June because of "the present national emergency." It would be only another short step to the proposal that it not be held at all, inasmuch as a government of "national unity" was administering the Nation's affairs.

If some Republicans nevertheless held a convention and nominated a candidate for President, he would be weakened and disarmed by the argument that his supporters were keeping partisanship alive, against America's interests, in a time of national crisis.

The election in November might then become one at which voters could only ratify the continuance of President Roosevelt in office, at the head of a coalition government, for another 4 years or for as long as he might deem the "national emergency" to exist.

Mr. Roosevelt may genuinely believe that if the Allies are defeated and if the British Navy is captured or driven from European waters, it would create a national emergency for this country. He may genuinely believe that a coalition government with himself at its head, could serve the national interest most wisely during the indefinite future. For no man lives—including Mr. Roosevelt—who can dissociate his own convictions from his personal aspirations.

There may be prominent Republicans who could be persuaded that they would be serving the Nation by joining a coalition government.

There may be voters who, without thinking the thing through, would endorse the suggestion that politics be adjourned and that both parties be united under one leader for as long as the shadow in Europe falls across the outposts of America.

But the Star-Journal does not believe Governor Landon or Colonel Knox or any other responsible leader will take any part in such a potentially dangerous first step toward the abrogation of democratic processes.

The Star-Journal does not believe the Republican Party will be persuaded that it should, in the national interest, postpone its 1940 convention or waive the nomination of a candidate for President.

The Star-Journal does not believe the voters of the United States would surrender to a "national emergency" their right to choose their leaders by genuinely constitutional methods.

Democracy which depends on one man or one party is no longer democracy.

THE REAL NATIONAL EMERGENCY WE CONFRONT IS THE SURVIVAL OF DEMOCRACY

We cannot serve or defend democracy by letting it go by default in the United States.

The day is long past when a physician bled the patient instead of diagnosing his illness and acting intelligently to cure it.

America cannot be made strong by letting democracy's blood.

America Seen Facing Nazi Peril if Allies Are Defeated in War

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ARTICLE FROM WASHINGTON SUNDAY STAR

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the Washington Sunday Star of May 19, entitled "America Seen Facing Nazi Peril if Allies Are Defeated in War."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star of May 19, 1940]

AMERICA SEEN FACING NAZI PERIL IF ALLIES ARE DEFEATED IN WAR—"ROMAN PEACE" WOULD BE DICTATED BY AXIS LEADERS AND RICH POSSESSIONS WOULD BE DIRECTED FROM BERLIN

(By Constantine Brown)

President Roosevelt has asked Congress for new and substantial appropriations for the Army, Navy, and air force. The tragedy of the western democratic states in Europe has made the White House, the State Department, and the majority of the Members of Congress realize that wars are no longer waged with swords and pistols, and that manpower is only cannon fodder unless backed by the most up-to-date war paraphernalia.

The truth is that Washington leaders believe we are facing Hitler and his partner. While the prospect that the totalitarians may actually attack the United States is still remote, there is a strong

feeling that the defeat of the Allies would mean, in the end, a defeat for the United States, and we must be prepared for any eventuality.

Those who are worrying about the unfortunate developments in Europe—for the Allies—are not sentimentalists. Few among them talk about making the world safe for democracy. If we are drawn into the present holocaust, it won't be for sentimental reasons. Nor will it be for the sake of billions the Allies may owe the United States in the future.

Here, in brief, is the thesis put forth by the molders of our national policies: If the French and the British are defeated, a "Roman peace" will be dictated by the totalitarians. Whichever side is defeated will be downed for many years to come. As things are now, it is not unthinkable that the British and the French may have the short end of the stick. Under such circumstances, Europe, parts of Asia, and a major part of Africa would be in the hands of the totalitarians, with the master brain in Berlin.

COMPETITION IS KEEN

The economic system of Germany, Russia, Italy, and Japan is based on state socialism. The individual is a wheel in the machinery—the state is supreme. All the rich possessions of the British, French, Dutch, and Belgian colonies would be transferred to the powers of the axis. These Governments, then owning vast resources and all kinds of raw materials, could produce far more cheaply than we can in this country. Hence, unless we change our form of government and follow the totalitarians economically—and by inference politically—American manufacturers and farmers will be out of luck. As it is, we have been having a hard time competing with the Germans and Italians in South America and in southeastern Europe and have had to erect powerful economic barriers—sometimes unsuccessfully—to compete with the Japanese in our own country. But since they had to buy from the United States the oil, cotton, copper, and other raw materials needed for their industries, the competition of the totalitarians outside our own borders was tolerable.

If the British and the French are defeated, our cotton and oil will choke us. We shall not be able to sell them abroad. The totalitarian governments, having all these materials free, will be able to produce and sell at prices with which the United States cannot compete. Hence an increase in unemployment and a rapid drop in our standard of living.

The South American markets will be taken away from us within a short time after a Roman peace has been dictated. For the time being the governments of the South American republics are playing along with us, but there may come a time when the pro-axis elements in those countries will have the upper hand and will prefer to deal with Berlin and Rome rather than with their comparatively new friend—Washington. Nations more frequently than individuals fraternize with countries offering more profitable economic dealings; they are seldom bound by such ideologies as democracy and economic individualism.

MOST SERIOUS LACK IS PLANES

These, in short, are the considerations which worry the leaders in Washington when they read the disconcerting news from the Western European front. The paramount thought in their minds at the moment is to facilitate supplying the Allies with all the material they lack. The democracies do not lack man power. But they are sadly deficient in airplanes and, up to a point, in antiair artillery and in mechanized forces.

Their most serious lack, however, is airplanes. The Germans have managed to build an air force of incredible strength. Even if the figures of the German Government—60,000 machines—are exaggerated, it is believed here that they have between 18,000 and 30,000 pursuit and bombing planes. Some 30 percent of these must be used for training purposes—some are slower than others. But there is no doubt that the Germans, in the last 6 years, have been able to build an aerial fleet incomparably superior to that of the Allies.

Reports emanating from Paris state that Germany is now building 1,900 planes a month. The British factories deliver 1,200 planes—the French only 700. Even if these figures are correct, the Allies have a long way to go before they can achieve parity with the enemy. The airplane is a much more important weapon for the Reich than the mysterious nerve gas or whatever new electric and chemical inventions the Germans may have up their sleeve. And for the present, in order to achieve a quick and decisive victory, the Reich is reckless in the use of its air fleet.

ALLIED PURCHASES VITAL

The United States, says Washington, must not be niggardly in providing the Allies as rapidly as possible with enough airplanes to offset the German superiority. This will be no easy task for our factories are not equipped for mass production and the output is still slow. After January 1, 1941, it is probable that American factories will be able to produce as many as 40,000 airplanes a year. But January is still a long way off.

Moreover, Washington is deeply concerned lest the Germans may put into effect their threat to bomb England and France out of existence. This would not mean that they intend really to wipe out the two countries. That would not be necessary for the war purpose of the Reich. If French and British industrial centers are mercilessly bombed, the production of war material will fall behind, and it is conceivable that the entire industry might become paralyzed.

The Germans would gladly sacrifice 9,000 or 10,000 planes to achieve this objective. Should such an undertaking be successful, the millions of men at the front would be completely useless. The Maginot Line—regardless of its strength—would immediately become like the branch of a dead tree, falling to the ground as soon as a strong wind should blow from the other side of the Rhine.

ITALY A BIG FACTOR

All these considerations are examined without taking into account the possibility of Italy entering the war. In that eventuality the situation would become grimmer. The Italians have a strong air force. To fight it the allies would have to detail flights from the German front, further weakening their position. The French and the British can afford to spare few airplanes these days. The flying forces at present in Tunisia, in Egypt, and in Syria with the army of General Weygand are insignificant compared to the 8,000 or 10,000 planes the Italians now possess.

Lack of gasoline is one element on which the Allies have been reckoning to defeat the axis. Yet the restricted amount of gas owned by Germany and Italy is sufficient to wage a relentless war for about 5 months.

A gloomy picture—but it is the picture as seen from Washington. It is based on irrefutable facts and reliable information. To try to minimize Germany's ability to cause the Allies irreparable harm, and to glorify the preparedness of the Allies would be following an ostrich policy—a policy which is the cause of the present plight of the Allies.

The principal hope of Washington officials is that the Allies may be able to hold off the Germans until the somewhat clumsy American war industry can be put on a more efficient basis and can export sufficient matériel—especially airplanes. Should the German blitzkrieg be so effective as to make French-British resistance impossible for more than 3 or 4 months, the general belief here is that we shall be face to face with Hitler.

What policy this country will be compelled to adopt in the event that the Allies weaken to the point of crumbling, is a question which will be decided in Washington in accordance with future developments. The one paramount thought of the administration today seems to be: Great Britain, France, and their Allies must remain the buffer between us and the totalitarians.

Republican Leadership United in Defense of American Peace

EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

ARTICLE FROM THE WASHINGTON DAILY NEWS

Mr. JOHNS. Mr. Speaker, we are hearing too much these days from the alarmist and hysterical pronouncements of radio commentators, jitter-minded columnists, and a few editorial writers in the panic-stricken press of a few eastern cities. These salesmen of sensational war emotion and atrocity stories speak in glib and glittering terms about war but they seem entirely unmindful of the bloodshed, the heartaches, the broken homes, the bankruptcy, and the black-out of human liberty and Christian brotherhood which war involves. It is highly gratifying therefore that the more substantial elements of America are settling back to exercise their serious second judgment and concentrating on the job of improving our national defense rather than being stampeded into an armament panic.

The following statement by Ludwell Denny is taken from the Washington Daily News for May 22 and represents a summary of opinion by serious-minded Americans and Republican leaders who recognize the obligation which this country has to solve its own serious problems, to perfect its own defenses, and to give genuine service to our Christian idealism by keeping America out of foreign wars.

Ludwell Denny's statement in the Washington Daily News of May 22, 1940:

The President has failed to "blitzkrieg" Republican candidates in acceptance of his anti-isolationist foreign policy.

Hitler's bloody sweep through the low countries and northern France and the President's shrill cries that the United States is

in danger have only increased the demands of Republican candidates that we keep out of European war and concentrate on defense of this hemisphere.

What will happen if and when Paris falls and actual fighting is carried to England is a matter of guess. Some of the President's supporters, who insist that this is "our war," predict that large-scale German bombing of England will inflame American sentiment and force the G. O. P. campaigners to change.

Meanwhile the leading opposition candidates, Dewey, Taft, and Vandenberg, continue their attack on the ground that the President's policy tends to the warlike and that his defense methods are belated and blundering.

Of the three Republican leaders, Democrats have expected Taft to come around first. Vandenberg has long been an isolationist leader. Dewey began last January by underwriting Roosevelt's foreign policy, but switched to the isolationist position during the Wisconsin primaries and won. Since then he has gone the limit of opposing American participation in European negotiations and of opposing modification of the neutrality and Johnson laws to permit allied loans.

But Taft was one of the eight Republican Senators who voted last fall for Roosevelt repeal of the arms embargo. Although in April he started the campaign criticism of the President's foreign policy, he has not been as vigorous as Dewey or some others.

Hence the importance of Taft's speech this week in St. Louis. In reply to the sensational statements of the President to the Pan American meeting and to Congress, Taft went further over to the isolationist side than ever before.

In view of his following St. Louis declarations, it is difficult for those who know him to believe that TAFT will retreat on this issue:

"Let's stop playing with the idea that we may enter the war, and devote ourselves to a genuine program of defense. * * *

"The President has made no definite move toward war, but he has made a number of disturbing statements which indicate that he might favor that position if the people would permit it. * * *

"If Germany should win, we would have to consider defense in the light of defending the entire continent of North America, the Caribbean Sea, and, at the very least, the northern part of South America. * * * Yet even that alternative seems to be preferable to present participation in the European war. * * *

"If we are justified in spending billions for the Allies and supporting their navies, then it would be cowardice not to support them also with men.

"Our going to war would be more likely to destroy American democracy than to destroy German dictatorship."

And here is Candidate VANDENBERG's reply to the President:

"No matter what our sympathies, we must keep America out of these wars and out of foreign policies which would drag us in. Overnight, our entry would precipitate a virtual war dictatorship in our own America, which would cancel out our liberties almost as completely as they have disappeared among the victims of conquest. * * *

"We must never surrender to the state of mind which resigns itself to the ultimate inevitability of our involvement—a state of mind which entirely too often possesses Washington. And we must never forget that we have our hands full in saving democracy at home."

Wendell Willkie says: "This present administration has proved itself incompetent to defend us from ourselves. We dare not, therefore, trust it to defend us from strangers."

BRUCE BARTON says: "I cannot see circumstances under which I would vote to put this country into foreign war. To do so would be to abandon our own democracy in an effort to defend and preserve democracy abroad."

Back Again

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

EDITORIAL FROM FORT MYERS (FLA.) NEWS-PRESS

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the May 16 issue of the Fort Myers News-Press, of Fort Myers, Fla., entitled "Back Again."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BACK AGAIN

The armistice is over.

The Germans are back in Sedan. That is where the World War left them. Sedan is just inside the French border. They had been chased that far by American troops who broke through the Hindenburg line in the Argonne Forest. The armistice saved them from being chased any farther. From that point they were allowed to march home and disband.

Now they are back where they left off. All that work the American boys did 22 years ago has gone for nought. In fact, for worse than nought. For there is no exhausted, vanquished army licking its wounds in Sedan today. It is an army fresh and strong, flushed with victory and keyed to revenge. After being allowed to recover and prepare, it has regained every military advantage it lost in 1918 and has literally turned in its tracks to resume the war in which it had been decisively defeated.

Now at Sedan, where democracy once triumphed, it again stands menaced. It is no longer safe in the world. It was on November 11, 1918, when the Germans waited at Sedan for orders to march home and give up their Kaiser's dream of conquering the world. There was no force anywhere that could change the way of life for which Americans fought. Back home our people were free to speak and walk the streets. They had no need to tax themselves huge sums for battleships and a standing army. They could spend that money for social security and peaceful construction. To remain forever safe they had only to maintain their part of the army of occupation on the Rhine, and that at Germany's expense, to see that the enemy did not rearm and renew his depredations.

But the American people did not do that. They called their troops home. They bought worthless German marks with valuable American money. They sent loans to Germany and Red Cross funds to feed children now grown to sturdy parachute troops. They scolded France for being too hard on the vanquished and finally influenced England into also withdrawing from the watch on the Rhine.

Modern history knows the rest. Crying poor mouth and whimpering for sympathy, the Germans—not Hitler alone but all of them in what is now clearly a national conspiracy—armed with our money and trained secretly to get even, not only with France and England but also, you can bet, with the Yanks who came to deprive them of their booty 22 years ago.

Does that have to be done all over again? Must we again drive them out of Sedan so that our people need not worry about the kind of lives they wish to live? If so, dead eyes in Flanders field are going to turn accusingly on the influences in America that destroyed the work our soldier boys so gallantly performed in 1918.

Landon Asks the President a Fair Question—It Demands a Fair Answer

EXTENSION OF REMARKS

OF

HON. THOMAS D. WINTER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. WINTER. Mr. Speaker, national defense is not a partisan matter in America—it has never been considered such at any time in the past and it must never become so at any time in our future. Americans may differ regarding the relative merits of various types of defense, and administrations may differ in the degree of efficiency with which they spend national-defense appropriations; but the basic American policy of millions for defense, but not one cent for tribute, which has always governed this country, is as true today as it has always been, although the figures have become larger.

However, Mr. Speaker, there is today stalking across America the widespread and apparently well-founded suspicion that the present occupant of the White House seems bent upon using the European war situation and his own failure to bring our national defense system up to date, as a smoke screen behind which to hide his own determined maneuvers to secure a third term for himself and his associates. It is unfortunate for America's future that the President should inject his own personal ambitions into the picture at a time when national unity is highly important, and Alf Landon, of Kansas, was precisely right in calling upon President Roosevelt, here and now, to manifest a sincere desire for an "adjournment of politics" by publicly announcing that he will neither seek nor accept a third-term nomination. This country has many serious issues to face in the coming campaign—should the President insist on running for a third term, all other issues will be overshadowed by this threat of

one-man government in America. Such an attempt to scuttle traditional democratic traditions at this time would be a great disservice to the United States, and it is difficult to believe that President Roosevelt would place self-interest above country in times like these.

ROOSEVELT EXPECTED TO TELL AMERICA IN SUNDAY NIGHT'S FIRESIDE CHAT THAT HE IS RENOUNCING THIRD-TERM ASPIRATION

It is rumored among newsmen today, that President Roosevelt will avail himself of the opportunity made possible for him in his fireside speech next Sunday night to declare himself definitely out of the running for a third term. Many Democrats have insisted right along that the President has no desire to establish a family dynasty in this country or to circumvent the continuance of free democratic elections by using his huge patronage machine to seek to perpetuate himself in office. If that be true, Sunday night affords him a great opportunity to give new hope and fresh confidence to America by openly, definitely, and publicly disclaiming any third-term ambitions and pledging himself not to run again. That would be a great patriotic service to his country, and would go far toward settling the uneasiness which America now feels as it contemplates the possibility that the President and his lieutenants are trying to capitalize on current European developments to create political advantage for themselves.

Mr. Landon put the proposition squarely to the President. Thus far he has evaded a direct reply to Alf Landon on the basis he was too busy to make a statement. He is now taking time to prepare a talk to the Nation which he will deliver Sunday night. He has created his own opportunity to speak frankly and fully to his fellow citizens. America is expecting a candid reply to the fair question propounded by Mr. Landon. This is no time for further evasion; it is time for frank talking and complete candor. Upon the President's answer Sunday night to the question concerning his own political plans, depends to a large degree the reaction of the country to his future declarations on foreign policy and the European situation. America has a right to be assured that now as always there is no politics seeping into our national attitude on foreign affairs or military preparedness. This is no time for toying with the destiny of 130,000,000 freedom-loving people.

MR. LANDON ASKS THE QUESTION, "MR. PRESIDENT, ARE YOU RUNNING FOR A THIRD TERM?"

[From article by G. Gould Lincoln, in Washington Evening Star, May 24, 1940]

THIRD-TERM ATTACK BY LANDON FOLLOWS WHITE HOUSE CALL—G. O. P. LEADER MYSTIFIED BY INVITATION LEADING UP BLIND ALLEY

Former Governor Alf M. Landon of Kansas, titular head of the Republican Party, today is wondering just why he was asked to come all the way from Topeka to have luncheon with President Roosevelt.

Mr. Landon had the luncheon yesterday and an hour-and-50-minute conversation with the President. He had expected to be consulted about the national-defense program.

As far as could be learned, however, the President put no concrete proposals to the Kansan. He did not invite Mr. Landon to become a member of his Cabinet, nor did he suggest any other way in which the Kansan might be of assistance in promoting the new national-defense program.

The Kansan, after leaving the White House, issued a statement in which he expressed a hope that President Roosevelt would eliminate himself as a third-term candidate.

THE LANDON STATEMENT

Mr. Landon, at a press conference after he had left the White House, said that he was issuing a statement—not in any way based on his conversation with the President—because of the widely spread reports that the New Deal administration was seeking some kind of a coalition government, with Republicans in Cabinet or other key positions, to meet the national-defense emergency situation. He said in his statement:

"National defense organized and carried on with reason and calmness is necessary for the same reason that fire extinguishers are necessary even in a fireproof building.

"It cannot be denied that the present European situation has serious implications even for this country.

"As a further means of defense, a national council—a small group of leaders and experts in their own fields, the members of which are not merely administration satellites—is desirable to head the defense program.

"But unfortunately for the country, the leadership is in the hands of a man who has not eliminated himself as a candidate for an indefinite term as President, who at the moment has pledged to him more than enough delegates to take the Democratic nomination if he wants it.

"Political implications, consequently, are inescapable.

"Unfortunately, any Republican leader who takes a position in the present set-up from the standpoint of unselfish national service is making himself a party to this third- or indefinite-term move.

SHOULD ELIMINATE HIMSELF

"If President Roosevelt is equally interested in unselfish service, he should publicly and forthwith eliminate himself as a third-term candidate.

"Instead of weakening his position, this action would strengthen it. The President would become the leader of the Nation instead of the head of a party.

"If he does eliminate himself as a candidate, Republicans can and will participate. It is to be noted that even in the midst of actual war the Labor and Liberal Parties in England refused to enter the Cabinet until there had been a substantial agreement on policies.

"To suggest that President Roosevelt is the only man in the Nation to carry on, or that the national elections should be canceled or allowed to go by default, is to use the same argument the Nazis use in behalf of Hitler.

BASIC PRINCIPLES NECESSARY

"If democracy is important, and is in peril, there is a particular necessity to preserve all its basic principles, including that of two Presidential terms.

"Fortunately, under our tradition and usages, stepping out of the White House does not mean that the Nation is deprived of a President's experience and ability."

It has been repeatedly published that President Roosevelt recently offered Col. Frank Knox, publisher of the Chicago Daily News, the office of Secretary of the Navy, without any denial issuing from the White House. And it was rumored that the President had in mind the offer of a Cabinet place or some other important job which he would make to Mr. Landon.

Mr. Landon, however, issued a statement in Topeka last Sunday night opposing anything that resembled coalition government. Friends of Mr. Landon say that his statement was responsible, first, for a cancelation of the invitation to luncheon at the White House, which reached Mr. Landon in Chicago on his way to Washington, and finally to the indefinite conversation which took place at the White House, after Mr. Landon had been reinvited by the President himself.

NO POSITION OFFERED

Prior to giving out the statement, Mr. Landon said the President had offered him no position in the Government, Cabinet or otherwise.

"Why were you asked to come to Washington then," Mr. Landon was asked.

"You will have to ask the President about that," was the reply.

Will Roosevelt Answer Landon Sunday Night or Again Dodge the Issue

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

ARTICLE FROM WASHINGTON DAILY NEWS

Mr. THILL. Mr. Speaker, next Sunday night the President is scheduled to address the country in another so-called fireside chat. This would be an opportune time for Roosevelt to answer Alf Landon and publicly announce that he would not accept a nomination for a third term. We have heard so much talk about coalition and national unity that the public is beginning to wonder whether there are not some political implications in Roosevelt's desire to confer with leading Republicans at the White House. A public disavowal by Roosevelt of any intention of using the European war situation for political self-advancement would be encouraging to many Americans who feel the President is making political capital out of the misery and suffering of warring nations overseas.

The following news article written by Mr. Flynn discusses the 50,000-plane program suggested by the President. The

last paragraph of this article indicates there might be such a thing as politics in the defense program:

F. D.'S AIR FLEET WOULD COST ABOUT SEVEN BILLIONS

NEW YORK, May 23.—When the President talked to Congress about providing for 50,000 planes and asked an appropriation of over a billion dollars, like many Americans I began to ask myself some questions.

Not being a military or naval expert, I did not know the answers. So I went to some experts. I did what most readers would do if they had the leisure and the facilities.

I wanted to know: Is the billion dollars to build airplanes?

Can you build 50,000 airplanes for a billion dollars?

How are we fixed to build 50,000 airplanes? And after we build them, how much will it cost?

The first information I got was that it would cost not less than $3,000,000,000 to build them, not including equipment. Then I learned from authoritative sources that at the price England and France were paying for planes, $3,000,000,000 wouldn't buy half 50,000 planes.

However, with the best information I could get I wrote a piece saying that we must not think we were being let in for a billion-dollar program but for at least a $3,000,000,000 one. I wondered if I had made a mistake. I felt that the President ought to have said something about the cost of all this.

However, asking further, I was informed by aviation production experts that the smallest amount 50,000 planes could be built for was not a billion or even three billion but $6,000,000,000. And now the head of the country's air forces puts the price at seven billions. So the President told Congress he wanted to plan immediately a program for 50,000 airplanes, which he must have known would cost seven billion, yet said nothing about that.

On further questioning of experts, I am informed that we must figure on an army of pilots, mechanics, helpers, laborers, attendants, and other ground workers of 30 men per plane. That would make 1,500,000 men—an army almost as large as the one we sent to France in 1917—and that for planes only. With the 750,000 men the Government is talking about in a Regular Army Establishment, we are actually talking about an army of 2,000,000 men.

There is no way to get an Army of 2,000,000 men in America save by conscription—universal military service. And the cost would be staggering—billions every year for men, supplies, and equipment.

I find these figures, fantastic as they seem, confirmed by official statements, for a naval aviation expert says that a force of 10,000 planes will require 320,000 pilots and men—which is 32 to each plane.

At this point I ask myself a question which there is no expert to answer. Either the President is actually talking about precipitating this country into this 50,000-plane program and an Army of 2,000,000 men, or he is kidding us, or he is ignorant. With his access to Army facts, I cannot believe him to be ignorant.

And then I remember that there is such a thing as politics. Is all this terrifying of the American people, all this talk about 50,000 planes and a standing Army of airmen and mechanics that means conscription in times of peace, part of a political game? Either the President really means to do this or try it, or he is feeding this to the American people for some concealed purpose. What is the purpose?

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

ADDRESS BY HON. FRANK E. HOOK OF MICHIGAN

Mr. HOOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I delivered on the Townsend plan.

SHERMAN J. BAINBRIDGE. Dr. Francis E. Townsend takes pleasure in presenting Representative FRANK S. HOOK, of Michigan. Congressman Hook.

Congressman HOOK. Thank you and greetings, friends. Two-thirds of the people of the United States have become so adjusted to poverty that even a scale of living in accord with health and decency seems almost impossible of achievement. Through all the centuries man has never been free from the fear of want—we have always thought, lived, and been governed on the principles of scarcity. There was never—until just recently—enough to go around. It is little wonder, then, that we have such difficulty in adjusting our lives to our new world of potential abundance. Subconsciously we feel that it is impossible to improve the condition of the impoverished without taking something from the prosperous. This is no longer true. We need only to create and distribute more goods—to multiply instead of subtract. At present scarcity governs our every action. Goods are put up in smaller and smaller packages—dime stores multiply. We buy our automobiles, homes, furnishings, and our clothing on the installment plan. We read learned articles by dietitians on how little food we can eat and still manage to exist. It is not surprising, therefore, that when Dr. Francis E. Townsend first proposed generous pensions for the aged as a recovery measure that he was hailed both as crack-pot and national deliverer according to the individual viewpoint. The new Townsend bill is now up for consideration and the senior citizens who have long suffered privation and want are asking, "How much income may we expect when the new measure becomes the law of the land?"

First, let me state that the Townsend plan was not designed just for the benefit of the aged. Dr. Townsend's original idea was to first bring about a recovery and then an expansion in our economy. And so it is essential that the pension payments made under the Townsend plan shall be generous in order that the major objective of releasing stagnant savings and starting a fresh flow of money through the channels of trade shall be realized.

The bill provides for a 2-percent gross income tax but exempts all earnings and income under $250 per month, or $3,000 annually. It reverses the social-security procedure where the man of small earnings does most of the paying and says to the great corporations and the wealthy, "Come; you, too, must carry your share."

Much misinformation is being broadcast as to the returns to be expected from the proposed new tax. I shall now give you the results of a recent painstaking analysis of the Townsend bill. Our national gross income is estimated by conservative authorities at approximately $365,000,000,000. Our net income has varied in recent years from thirty-eight to eighty-three billion dollars. Some estimate our gross income as being nearly $150,000,000,000 higher than the figure I am using. When we exempt from the payment of the 2-percent gross income tax all wages, salaries, and incomes below $250 per month, as well as other exemptions, we exempt a total of $65,000,000,000 from the taxable total. That leaves us with an amount to levy upon of three hundred billion—and the proposed 2-percent tax will therefore yield $6,000,000,000 annually, which is to be divided equally among approximately 10,000,000 senior citizens—or about $50 per month to be paid to both men and women who have reached the age of 60, not 65 as under social security, but age 60. The 5 years from age 60 to 65 cover the most heartbreaking period in the lives of most people. Sixty-five as the age of retirement is fantastically high when we confront actualities.

The pension money to be paid under the Townsend bill must be spent within 35 days after it is received—no hoarding is permitted. Remember that $50 per month is only the start. Dr. Townsend is certain that, as the Nation returns to full employment and widespread prosperity, the initial amount should soon be increased and in a short time reach an amount which will actually make possible the prosperity we so greatly need. An important point in the bill, and one which I have not heard others stress is a provision that the 2 percent gross-income tax shall not be applied to fraternal societies, churches, hospitals, scientific, educational, business, or labor organizations operating for the promotion of social welfare and not for profit.

The right to receive retirement compensation is not transferable under the Townsend Act and none of the moneys or rights are subject to attachment. It is, however, considered to be the duty of the annuitant to pay his just obligations and to allot at least 10 percent of any monthly installment for obligations incurred before any pension money was received.

The Townsend bill has teeth, and fines not to exceed $10,000 or imprisonment not to exceed 10 years, or both, may be imposed for attempts to evade the payment of the 2-percent tax or for the making of false returns or statements. Those receiving the pension are not permitted to engage in any occupation for wages or profit, but past thrift or business acumen does not go unrewarded and pensioners are permitted to collect interest, rents, or other revenues from their prior investments. They may not, however, support an able-bodied person in idleness except it be wife or husband, nor will the annuitant be paid while confined in any penal institution.

Under Social Security the allowance to wives is only 50 percent of the amount paid to the husband, and a widow receives only 75 percent of the husband's allotment. It is indeed strange reasoning that considers a woman's needs for food and raiment less than those of the man. Under the provisions of the Townsend plan, the wife will receive her full share and in her own right.

Certain opponents of the plan have expressed a fear of additional taxation, but it must be remembered that the proposed rise in per capita income for those past 60 is actually offset by lower per capita living costs for the balance of society. For instance, there is immediately eliminated the 6 percent tax on pay rolls for social security—a saving of about one and a half billion dollars. Charity age pensions of five hundred million with Federal and State contributions are eliminated, together with other expenses. So that the net additional tax load, for which provision must be made,

should not exceed $3,000,000,000, and this sum is but 5 percent of the national income.

The total increase in the cost of living will not, therefore, exceed 5 percent—but the low wage and income groups will enjoy a 2 percent tax exemption on their income and so the total cost of the Townsend tax to the little man will be a net increase in the cost of living of about 3 percent—and this is precisely the amount of the pay-roll tax which will be imposed as the workers' share under social security.

But social security gives no return to 15 percent of those who pay for it—and another 35 percent will receive about $15 per month. Whereas, those who have enjoyed large incomes are the only ones to receive allotments sufficient to furnish a decent scale of living. A 3 to 5 percent increase in price, when absorbed in a 50 to 100 percent rise in general income means nothing.

The Townsend plan, through reemployment pay increases for the workers, greater business profits, and the lifting of the support of parents from their children opens a new world to America. The abolition of charity, poorhouses, and doles brings us nearer to the heart's wish of humanity—and a dignified living for our veterans of industry.

Cotton Marches On

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JAMES A. FARLEY AT TEXAS COTTON GINNERS' CONVENTION

Mr. CONNALLY. Mr. President, on April 4, 1940, Hon. James A. Farley, Postmaster General and Chairman of the Democratic National Committee, made a notable speech in my State at the convention of the Texas Cotton Ginners' Association, on the subject Cotton Marches On.

I ask unanimous consent that the speech be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

You have given me two pleasures this morning.

The first is the privilege of addressing your meeting: The second is the opportunity to be in Texas, now that April's here and spring is sweeping through the Texas valleys, across the plains, into the forests, and up into the mountains of your majestic State.

But best of all, I like to come here to meet your fine people, and the oftener I come, the deeper insight I get into the spirit which inspired the Alamo, rebuilt Galveston and brought the ocean to Beaumont. It is this heroic spirit which has lifted the industry, commerce, agriculture, and the oil production, as well as the education and culture of Texas into a front rank in the United States.

While this spirit is alive here, and in the Cotton States, the future market for your great empire of cotton will be enlarged by the application of your natural talent and ability for organization and salesmanship. Knowing of your enterprising spirit, I am sure the people here who are interested in the success of cotton will be first to take advantage of every opportunity which can be uncovered and developed by modern business methods of scientific research and marketing.

Because you are businessmen and practical men, I would like to talk to you in business terms. It is needless for me to dwell here upon the importance of the cotton industry in the United States. Cotton is one of the major industries, upon which millions of our citizens depend for a livelihood. Cotton is so vital to the economic welfare of the Nation that when cotton suffers, the whole Nation feels it. Not long ago, as many of you well know, a group of economists declared cotton to be the number one economic problem of our country. This revelation within itself should awaken the American people to the necessity of finding a proper solution for the cotton problem.

I understand you have in Texas an organization composed of representatives of every phase of the cotton industry and allied industries, called the State-wide Cotton Committee of Texas. The program of this committee, as I understand its work, deals with several important phases of the cotton problem, including research. I commend the emphasis on research. Modern business can deal only in facts; and the two greatest difficulties we now have are, first, to learn what the facts are, and then how to make use of them after we get them.

It was an important step when we learned, through research, that over 2,000,000 farm families in the United States produce cotton; of whom more than 400,000 families average 2 bales or less per year; over 700,000 produce from 2 to 5 bales; over 200,000 produce 5 to 6 bales; and the balance, or over 900,000 families produce more than 6 bales per year. In these figures we find the accurate income picture for every family to whom cotton spells livelihood and purchasing power. We can now measure cotton in terms of humanity as well as economics.

More progress was made when we discovered, again through research, that if the national purchasing power of all American families could be increased by a comparatively reasonable margin, that is, from 10 to 15 percent a year, textiles would share materially in the increased consumption. It has been often said, that if the people of the South alone would use cotton goods, in such volume as to meet their ordinary needs, the surplus cotton problem could be largely solved. In many cases the fault lies in a lack of funds for families to purchase the proper quantities of bed sheets, mattresses, clothes, towels, and other things made from cotton. But in the majority of cases it is a matter of salesmanship, a matter of educating the people, not only as to the necessity of purchasing, but as to the real value of cotton items.

As businessmen, you and I think in terms of more buyers for better goods, goods in which we take personal pride because materials and workmanship are of the best, the price is right, and our name and word are behind them as a guarantee. Cotton and cotton products have always enjoyed a market and a reputation based on this method of doing business.

Before I left Washington I saw a report of the research begun in August 1938 by the Department of Agriculture on the best ways to use cotton for hosiery. As I read it, I was proud of this practical achievement in the field of business research under this administration. This new research is one of the first in disclosing new possibilities for increased consumption of cotton. If this first research under the new program could open up a revolutionary new method of using cotton for hosiery, with potentially millions of customers for it, what limit would there be to the possibilities resulting from extensive research, salesmanship, and cooperation in a dozen other directions?

The Department of Agriculture began, as you will recall, with an appropriation of $13,000,000 to promote domestic consumption—voted by Congress because Congress was vitally interested in the cotton-surplus problem. The unfortunately small portion of this appropriation devoted to research on the subject of new cotton threads and weaves for hosiery has already paid rich dividends on the investment.

The Department of Agriculture began by studying hosiery and fabric designs, current fashions, style trends, and the problems of manufacturers and distributors. More than a dozen attractive new weaves were evolved. Then the Department interested yarn manufacturers in spinning extra-quality threads. The next step was to interest hosiery manufacturers in knitting the thread—and the Department obtained their cooperation even to the extent of knitting this extra-quality thread on silk-stocking machines, so that full-fashioned, sheer, attractive hosiery would result.

People in the hosiery trade already welcome this new form of cotton. Some hosiery firms want cotton hose for international reasons. Others want this new hosiery for patriotic reasons—they favor American cotton growers. Others are dealers in hosiery in cold climates—they want warmer, yet lightweight and fashionable hosiery. Still others are dealers in the lower-priced fields—they want smart but less expensive lines.

Next, there are new users yet to be attracted—nurses, laboratory workers, cosmeticians, clerical, and others—more than a million women of this category alone, the majority of whom wear white stockings on duty. The new cotton thread, knit on silk-stocking machines, is attractive as well as economical and practical, does not turn yellowish, and can be sterilized without deterioration.

I cite these details as a matter of practical business interest. According to the report I read, beyond even the foregoing markets there is yet another unexplored field—the market among American women who use special hosiery for housework, gardening, athletics, special stockings for different types of shoes, and the like. Having two daughters of my own, this subject is of acute personal interest to me as chairman, in my own family, of the committee on ways and means.

In my opinion, research and salesmanship are just beginning their greatest work. I am positive that they can give cotton a new security and luster for its throne and crown.

I am happy to note the beginning of the cotton-stamp plan. I hope the experiment is so thoroughly successful that it will spread as rapidly as the food stamps have spread, into more than 40 areas and approximately 100 cities of the United States. I say this most emphatically, because cotton and its products supply a livelihood for approximately one out of every ten people in this country. Even if the cotton-stamp plan does not increase consumption as rapidly and as much as we would like, it would still be a success if it increased cotton processing, and therefore increased employment and income. One of the most urgent needs today in this country is for increased buying power. So long as 50 cents of every cotton-consumption dollar is spent for processing, and another 30 cents for transportation and distribution, in other words, so long as 80 cents of every dollar spent for cotton products goes to keep people at work and helping them to keep buying the things they want and need, what we should do is to see to it that the American public have

sufficient employment and attractive forms of cotton products to buy.

Cotton is a world commodity. America, for many years, supplied the rest of the world with a considerable portion of its cotton needs. This export of American cotton has been an important factor in the proper balance of our foreign trade. The cotton policy of the United States necessarily must take into consideration our export markets, if there is to be a permanently successful solution of our domestic problems in cotton production and distribution. I share your hope in the success of any program that will keep the market open for American cotton abroad.

I pay you my earnest compliments on the constructive work you and the other cotton States are doing, and particularly on the work your organization is doing, to improve the staple quality of cotton. As ginners, I pay my special respects to the manner in which you are meeting your responsibilities as a vital link between the grower of cotton and the market for the ginned product. So long as Texas and the cotton States strive for better and better quality of staple, the competition of foreign cotton in the world market will serve to direct attention to the superior quality and value of American cotton.

Valuable and important work also has been done in developing cottonseed oil as a basic food and commercial product of public acceptance. Here again, research and marketing have demonstrated their importance to increased volume at present levels and proper development of future markets.

I was encouraged when I heard the details of the Cotton Research Congress, planned for Waco in the early summer. I wish that meeting all success, just as I congratulate you on this meeting. It is programs such as these that inevitably will find complete solution of the cotton problem. Godspeed to you in your great work.

National Aviation Forum of 1940

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ARTICLE BY THOMAS H. BECK AND PROGRAM OF THE NATIONAL AVIATION FORUM

Mr. McCARRAN. Mr. President, commencing on Monday next, the National Aviation Forum will assemble in the city of Washington. Thousands of private planes, and some from the military and naval branches of the Government, will give a demonstration at Bolling Field. On Monday evening, at the auditorium of the Department of Commerce, the Forum itself will assemble. On behalf of the Forum I desire to extend to the Senate an invitation to attend the show which will take place at Bolling Field, in which our private and military fliers will participate.

I ask unanimous consent to have printed in the RECORD an article on the subject by Thomas H. Beck, general chairman of the National Aviation Forum.

I also ask unanimous consent to have printed in the Appendix of the RECORD the program of the National Aviation Forum.

There being no objection, the article and program were ordered to be printed in the RECORD, as follows:

THE NATIONAL AVIATION FORUM OF 1940

(By Thomas H. Beck, general chairman)

During the week of May 26 thousands of residents and visitors in Washington, D. C., will witness a spectacular demonstration of this Nation's aeronautical strength and potentialities, civilian and military.

The occasion is the National Aviation Forum of 1940 and its complementary Aeronautical Exhibition at nearby Bolling Field.

With civilian air travel constantly reaching new peaks, and with questions regarding the true air strength of the Nation inevitably in mind at this time, this year's forum, under the auspices of the National Aeronautical Association, is bound to be of interest to every American. Nor is it confined to those of us of the North Americas, for President Roosevelt has instructed the State Department to invite representatives of 21 nations of the Western Hemisphere.

"I know of no way better to promote the best technical development of aviation than through meetings such as that which is to take place in May," President Roosevelt wrote. "I need hardly say that in the interest of all the Americas such development is essential."

While the forum in the Department of Commerce auditorium will consist of talks by leading aviation figures, emphasis this year is being placed upon getting home to the entire public of the Americas the story of where this Nation stands and where it is going in the ever widening field of aeronautics.

The aeronautical exhibition at Bolling Field, therefore, will be the public's own show. Two tremendous hangars will contain exhibits by the Army, Navy, Coast Guard, Coast and Geodetic Survey, Weather Bureau, Post Office Department, Work Projects Administration, Office of Education, Air Transport Association, National Advisory Committee on Aeronautics, and Civil Aeronautics Authority.

The manufacturers of airplanes and accessories will be represented in full force, and the public will see everything from the huge stratosphere planes to the most delicate of precision instruments.

More than 300 private flyers from coast to coast will converge on Washington during the week. Then there will be formation flying by Navy and commercial blimps and flights to and from Washington by the latest aircraft developed for commercial flying.

In the Department of Labor auditorium free motion pictures will show the progress of flying from the days of the fabled Icarus to present-day flying fortresses.

American aviation has a story of profound significance to tell at this National Aviation Forum of 1940.

PROGRAM OF THE NATIONAL AVIATION FORUM

WASHINGTON, D. C., May 22.—With representatives of more than 100 airplane, aircraft-engine, accessory, and machine-tool manufacturers gathered in Washington in response to the Government's call for a program of 50,000 planes a year, attention turned today to the National Aviation Forum and its aeronautical exhibition at Bolling Field, at which these very manufacturers are exhibiting their latest productions and are indicating this Nation's true potentialities in the realm of aviation.

Subject to the necessary military requirements, this year's Forum and exhibition which open this coming Sunday, May 26, present to the American public a graphic picture and story of our air strength, civil and military. The Forum, which is sponsored by the National Aeronautic Association, will last through May 29, being climaxed by a banquet at which Cabinet officers and others will address some 1,000 of the leading figures in the world of aviation.

"The question of national defense, especially in the air, has been raised in Washington this week as never before," Thomas H. Beck, general chairman, pointed out today. "This National Aviation Forum of 1940 and its aeronautical exhibition at Bolling Field will provide a good part of the answer."

More than 125 manufacturers will exhibit at Bolling Field from 3 p. m. to 6 p. m. on Sunday and from 3 p. m. to 11 p. m. on the three following days.

From Monday through Wednesday the most prominent of this Nation's aviation leaders will speak at Forum sessions in the Department of Commerce auditorium. Two of the outstanding addresses will be made by Mayor F. H. LaGuardia, of New York, who has promised to let go full blast on the subject Let's Tell the Truth, and Al Williams, who will speak at the banquet on the subject Real Air Power for the United States.

The 4-day program has been outlined as follows:

Sunday, May 26, model exhibition day.
Monday, May 27, private flyers' day.
Tuesday, May 28, air-line day.
Wednesday, May 29, national-defense day.

The program for the forum at the Department of Commerce is:

Monday, May 27, 1940

MORNING SESSION

1. Representative JENNINGS RANDOLPH, District of Columbia Commission, American Aviation Moves Forward. (Greetings to the forum.)
2. Ruth Nichols, Rye, N. Y., Woman's Place in Aviation.
3. J. B. Hartranft, Jr., executive secretary, Aircraft Owners and Pilots Association, Flying Clubs and Group Flights.
4. Oliver Parks, president of Parks Air College, East St. Louis, Ill., How You Can Get Into Aviation.
5. Helena Mroczkowska, of Hofstra College, What the Civilian Pilot Training Program Has Meant to Me.
6. Mrs. Louise Thaden, veteran woman pilot, The Ninety-nines and the Future of Women in Aviation.
7. Dr. Edward C. Elliott, president, Purdue University, Civilian Flight Training in National Service.
8. Gordon M. Curtis, president, Aviation Funding Corporation, How to Buy Airplanes.
9. Haven B. Page, Washington representative of the Private Fliers Association, A New Status for Private Pilots.
10. Grove Webster, Chief, Private Flying Development Division, C. A. A., As We See It.
11. William B. Stout, president of Stout Laboratories, Inc., Flivvers of the Future.

AFTERNOON SESSION

1. W. W. Brinckerhoff, secretary, Private Fliers Association, The Insurance Status.

2. Rudolph Loening, president, Seaplane Flying Association, What the Seaplane Offers.
3. Fred E. Weick, chief engineer, Engineering and Research Corporation, Simpler Flying.
4. C. G. Taylor, president, Taylorcraft Aircraft Corporation, The Light Plane.
5. Arlene Davis, Cleveland, Private Flying As I See It.
6. Alfred L. Wolf, secretary, Association of Aircraft Owners and Pilots, What Are You Waiting For?
7. A. I. Martin, Watkins Glen, N. Y., Ox Team to Airplane.
8. Alfred Brokaw Bennett, Hightstown, N. J., Merchandising Light Planes for Defense.
9. Hon. Robert M. Hinckley, Chairman of the Civil Aeronautics Authority, Nonscheduled Civil Aviation and Government.

Tuesday, May 28, 1940

MORNING SESSION

1. Capt. Robert Dawson, United Air Lines, What Are We Going To Do About the Weather?
2. Al Near, Bowman Field, Louisville, Ky., The Importance of Aviation in the Small Town.
3. Roger M. Combs, Jr., New York, Why It Pays To Fly.
4. Norman Bel Geddes, New York, Tomorrow's Airways.
5. Mrs. Ogden Reid, New York, Air Transport From the Passenger's Viewpoint.
6. Charles A. Rheinstrom, American Airlines, When the War Is Over, Then What?
7. F. W. Reichelderfer, Weather Bureau, Department of Agriculture, International Character of Airways Weather Service.
8. Col. Edgar S. Gorrell, Air Transport Association, The Civil Aeronautics Act of 1938 and Reorganization of 1940.
9. Grover Leening, New York, Cargo by Air in War or Peace.

AFTERNOON SESSION

1. Maj. R. W. Schroeder, United Airlines, Behind the Scenes of Safe Air Transportation.
2. Devon Francis, Associated Press, News Is Where You Find It.
3. Richard du Pont, All American Aviation, Inc., Feeder Lines.
4. Dr. Alfred N. Goldsmith, New York, Radio and Aviation.
5. Kinsey N. Merritt, Railway Express Agency, Progress in Air Express.
6. Roscoe Turner, Indianapolis.
7. H. M. Bixby, Pan American Airways.
8. T. B. Wilson, T. W. A., Public Relations in Air Transport.

SPECIAL FEATURE

Lowell Thomas, broadcasting on the subject of the forum at 5:45 p. m.

Wednesday, May 29, 1940

MORNING SESSION

1. Gill Robb Wilson, National Aeronautic Association, Forecast of the Flying Forties.
2. Ralph McClarren, Franklin Institute, An Action Story of Aviation.
3. Charles H. Babb, Los Angeles, Air Freight.
4. Ernest R. Breech, General Motors Corporation, Outlook for Civil Aviation.
5. Rear Admiral R. R. Waesche, United States Coast Guard, Aviation in the Coast Guard.
6. Zack Mosely, New York, Aviation in the Comics.
7. Dr. Vannevar Buch, National Advisory Council for Aeronautics, Aeronautical Research, A Vital Link in Our National Defense.
8. Col. John H. Jouett, Aeronautical Chamber of Commerce, Industry's Position in Accelerated National Defense.

AFTERNOON SESSION

1. C. S. (Casey) Jones, Newark, N. J., South American Sidelights on National Defense.
2. Capt. A. L. Patterson, New York, Flying in China and Its Lesson to Us.
3. Rear Admiral J. H. Towers, United States Navy.
4. Harold Montee, Aero Insurance Underwriters, Insurance and Its Part in the Development of Aviation.
5. Commander C. E. Rosendahl, United States Navy, The Case for the Airship Today.
6. Jacqueline Cochran, New York, Women in Air Defense.
7. Maj. Gen. H. H. Arnold, United States Army, the Army Air Corps.
8. Hon. F. H. LaGuardia, New York, Let's Tell the Truth.

In addition to the two main features of the forum and its exhibition, thousands of visitors and residents of Washington will have an opportunity to see many of the following features in the realm of aviation:

One hundred and eight Army planes taking part in maneuvers over the city.

Approximately 500 private planes flying in cavalcade.

Films depicting the development and drama of aviation, free to the public, in the Department of Labor auditorium, noon to 5 p. m. and 6 p. m. to 9 p. m.

Lowell Thomas broadcast, Tuesday, 5:45 p. m.

American Forum of the Air, Sunday night, May 26, Mutual, coast-to-coast.

Winthrop Rockefeller and T. H. Beck will speak on Air Youth of America, Monday, 6 p. m., N. B. C.

Postmaster General Farley is among others on the banquet program, Wednesday, 10 p. m.

Model flying on Sunday at Bolling Field from 3 to 6 p. m.

A Pan American clipper ship in the Potomac River.

Pan American also will have a DC–3 Douglas of the latest type on exhibition.

The air mail stamp collection of the President of the United States on display in the Department of Commerce.

Exhibits by the Patent Office and Library of Congress, in addition to those of 12 Government agencies already announced.

An aviation fashion show with beautiful models at the Raleigh Hotel, Saturday at 1 p. m.

Visits especially arranged for Forum guests to the Federal Bureau of Investigation.

Formation flying by Navy blimps from Lakehurst, N. J.

The *Stratoliner*, recently acquired by Transcontinental & Western Air, Inc., is flying in for the show.

Maj. Roscoe Turner will exhibit his Thompson record-breaking racer, arriving at Bolling Field about 11 a. m., Monday, May 27.

Jacqueline Cochran, famous woman flyer, has promised to show her Seversky (Republic) pursuit plane in which she set recent international records.

Forty members of the Aviation Writers Association are coming to Washington and will make the Forum the occasion of their annual convention.

Johnny, Get Your Gun

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

ARTICLE BY JOHN T. FLYNN

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial by John T. Flynn published in the New Republic of May 27, 1940, entitled "Johnny, Get Your Gun."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New Republic of May 27, 1940]

JOHNNY, GET YOUR GUN

(By John T. Flynn)

It is here. And a little more swiftly than I supposed it would come. I mean the war mania.

Before September and Herr Hitler's dash across Poland everybody in America believed that the declaration of war would mean the immediate clash of Germany and France, the possible entry of Italy, the swarming of German planes over England and France, with the slaughter of their citizens and the destruction of their cities, and, sooner or later, the rape of Belgium. Notwithstanding all that, Americans, as yet quite calm and in possession of their senses, were resolved to remain neutral. Mr. Roosevelt called himself a neutral—the one true neutral. Now, terrible as are the events in Europe, they are merely what Americans, still acting upon reason, supposed they would be. But now the war fever flames up—or is said to flame up—everywhere.

In the early days of this war I warned that Americans were all set to protect their minds from propaganda from England, but that in this they were mistaken—that the propaganda that would inflame them and slowly coax them from their neutrality would come, not from England but from Washington. I think this prediction has turned out to be true.

We are now definitely presented with an issue of war or peace. And the danger of it lies in the fact that those who are for war are still proclaiming that they are for peace. They are clamoring for billions for arms. These, they say, are for defense. But—and they never fail with the "but"—they keep on repeating that if Germany wins our democracy is ended, that "we cannot sit by and see civilization reduced to ashes," that "the defeat of England and France means that we shall be left single-handed to save freedom in the world," that "the defeat of the British Navy will leave us exposed to the German terror," that "within 6 months after Hitler has crushed England he will be knocking at the door of this continent." Now, if we are raising an army because all these things are true, then the only object in raising the army is to help England defeat Germany. There is no doubt that there is a party in Washington which, 1 inch at a time, one little step after another, as fast as it thinks the American people can be drawn along, is leading us into this war. That is the war party. And the President of the United States is the leader of this party. Can anyone have the slightest doubt about this for a moment?

We now face a national political campaign. In both parties there is a struggle going on for the nomination for the Presidency. In good time these two parties will select candidates and write platforms. But the platforms will be meaningless and no one need concern himself about what they will say. There are just two issues before the American people. One is the issue of recovery—how to get the economic machine moving again. The other is war.

I have talked with all or nearly all the candidates for President in both parties on the first issue—recovery. I cannot for the life of me find any great difference among them. On the Republican side all of them sing the tune—"get the Federal Government off the neck of business," "free enterprise so that it can function," "change the personnel of the S. E. C. and N. L. R. B., and other regulatory bodies so that they will cease to be hostile to business." They range all the way from moderate modification to a grand strip tease of New Deal garments—bringing back what Lawton Mackall calls the "bright Coolidge years." But in fact we can expect that whoever is elected will take down the barriers as far as possible.

On the Democratic side, it really isn't very different. There would be somewhat more feeling for the liberal viewpoint if WHEELER were named than if McNutt were nominated. Roosevelt, if renamed, would perhaps make a wee bit more effort for some of his pet measures and labels, but Congress is going to be for turning business loose, no matter who is President, and, for that matter, the next President will be for this too, no matter who he is. The only difference will be in the language he uses. One candidate will say business ought to be freed and will free it. Another will say business must be curbed and will free it. The difference is merely in the patter that goes with the act.

On what basis, then, is the choice of candidates to be made? There is only one issue on which any genuine difference will be found among the candidates for the nominations—that is on the question of war. Remember, all candidates are telling us that we must stay out of war. All candidates are telling us that we must be neutral. But all do not mean it. Some of them are deliberately fooling the American people—and it is a terrible responsibility they take before the bar of history. On the recovery issue, all talk differently, but will act alike. On the war issue, all talk the same, but will act differently.

To me the most important issue now is to keep this country out of war. If war comes, all the other issues will be meaningless. If we enter this conflict no man can predict what our condition will be when the final disaster comes and the whole world is in ruins. I am no politician and take no part in political parties or movements. I shall put my vote on the side of that candidate who I believe will most energetically and honestly try to keep us out of this war. Who he will be, Heaven only knows. But it strikes me that the first duty of Americans now is to look behind the words of the leaders, behind all the fair protestations of peace, and decide who is telling the truth and who is kidding us. For we are being kidded—kidded into war.

There has suddenly flared up a great panic about our defenseless state—as if somebody was on the point of invading us or attacking this continent. Does not every American know that those who are now making the air blue about our lack of strength are those who are friendly to the idea of using that strength in Europe and not America? If we are planning to go to war in Europe, then we are most certainly in no position to do so. If we do so it will be in a state of unpreparedness. And if we are going, we had better prepare. But if we are not going to war in Europe, then what is all the shooting for? Who's coming over here? And in what? And when? There is not one of those military gentlemen in Washington who has the slightest doubt on this point. They know no one is coming here. They are thinking about "over there."

Foreign Policy of the United States

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Friday, May 24 (legislative day of Wednesday, April 24), 1940

LETTERS AND STATEMENTS TO SENATOR PEPPER

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain statements which, in my opinion, are very eloquent and moving, as to what the foreign policy of the country should be at this time.

There being no objection, the statements and letters were ordered to be printed in the RECORD, as follows:

As one democracy after another crumbles under the mechanized columns of the dictators, it becomes evident that the future of western civilization is being decided upon the battlefield of Europe. Here is a life-and-death struggle for every principle we cherish in America, for freedom of speech, of religion, of the ballot, and of every freedom that upholds the dignity of the human spirit. Here all the rights that the common man has fought for during a thousand years are menaced. Terrible as it may seem, the people of our country cannot avoid the consequences of Hitler's victory, and of those who are or may be allied with him. A totalitarian victory would wipe out hope for a just and lasting peace.

The time has come when the United States should throw its economic and moral weight on the side of the nations of western Europe, great and small, that are struggling in battle for a civilized way of life; that constitute our first line of defense. It would be folly to hold this Nation chained to a neutrality policy determined in the light of last year's facts. The new situation requires a new attitude.

From this day on America must spend every ounce of energy to keep the war away from the Western Hemisphere by preparing to defend herself and by aiding with our supplies and wealth the nations now fighting to stem the tide of aggression. This is no time for leaders to consider party or factional advantage. All men and all creeds and clans may well call upon our President to confer with leaders of all parties looking to a foreign policy providing for an increase in armaments to defend ourselves and for every economic effort to help the Allies. In foreign affairs we must present an unbroken, nonpartisan front to the world. It is for us to show the people of England, of France, of Holland, of Belgium, and of Scandinavia that the richest country on earth is not too blind or too timid to help those who are fighting tyranny abroad. If they fail, we shall not have time to prepare to face their conquerors alone.

Will you join with me and several hundred others in the formation of a committee which would carry these points of view to the American people?

WILLIAM ALLEN WHITE.

COMMITTEE TO DEFEND AMERICA BY AIDING THE ALLIES,
New York City, May 22, 1940.

"There is only one course open to us at this tragic moment: We must go to the Allies' aid with all the power that we can command," Robert E. Sherwood, author of There Shall Be No Night, declared in a letter to William Allen White, accepting membership on the Committee to Defend America by Aiding the Allies. "We cannot send an Army now," said Mr. Sherwood, "and every present circumstance in Europe indicates that the war will have ended before we could possibly raise, train, and equip an army of sufficient strength. We cannot send our Navy, which is doing vital guard duty in the Pacific. We can contribute money and materials, planes, and guns and food, and we can pray to God that the British and French won't weaken in their will to fight for freedom."

Additional new members of the committee released by its chairman, William Allen White, at 8 West Fortieth Street, include: Robert E. Lucey, Catholic bishop of Amarillo, Tex.; Governor William H. Vanderbilt, of Rhode Island; Governor Barrows, of Maine; James B. Conant, of Harvard; President Charles Seymour, of Yale; Msgr. John A. Ryan, Catholic University, Washington, D. C.; Robert Millikan, Nobel Prize winner; Samuel Seabury, Gerard Swope, of New York City; and Bishop James de Wolf Perry, of Tennessee.

Mr. Sherwood's letter follows:

"DEAR MR. WHITE: Of course, I shall be glad to join in the formation of your committee.

"The American people now are beginning to realize the extent to which they have been betrayed on the false prophets of isolationism; they are beginning to realize that President Roosevelt and Secretary Hull and patriotic citizens like yourself who have been branded as "alarmists" and "war mongers" have been telling nothing more than the truth. "Keep us out of war," the isolationists have cried, fomenting a kind of peace hysteria. They believed, complacently, that this hollow slogan was all the protection we needed against the swelling forces of evil. Now we confront, and face to face, the terrible, immediate problem of how to keep war out of us.

"Hitler may win this war this year. Following his victory and the ruthless reduction of Britain and France to the present status of Poland, the Nazis or Fascisti or Japanese or Russians or all of them together can easily establish bases in this hemisphere. And not only bases. They can occupy whole territories to the north or south of us just as quickly and easily as they occupied Scandinavia, and our attempts to stop them or dislodge them would be just as futile as the pathetic efforts of the Allies to defend Norway.

"To say that the totalitarian powers will be too exhausted to commit further aggression is to indulge in childish, wishful thinking. To say that they will instantly start warring with each other and leave us alone is equally nonsensical. The one purpose they all have in common—their first, avowed objective—is the destruc-

tion of the last vestiges of democracy on earth. After they have accomplished that they will probably start the semifinals for the supreme championship, but we shall not be here to enjoy the spectacle.

"This is a subject about which we cannot quibble or kid ourselves, as England did. Only a Nazi, a Communist, or an idiot can deny that the Allied armies and navies are now our own outpost line, our first line of defense. If they are overwhelmed, then we will be virtually as helpless as little Holland; the enemies won't wait the years which we will need to build up adequate hemisphere defense.

"There is only one course open to us at this tragic moment. We must go to the Allies' aid with all the power that we can command. We cannot send an army now, and every present circumstance in Europe indicates that the war will have ended before we could possibly raise, train, and equip an army of sufficient strength. We cannot send our Navy, which is doing vital guard duty in the Pacific. We can contribute money and materials, planes and guns and food, and we can pray to God that the British and French won't weaken in their will to fight for freedom.

"Ever since this war started, we have been quivering behind the cardboard mask of neutrality. It has fooled nobody but ourselves. It has been proved a useless protection against reality. We are now casting it off. But, there is one important point for us to bear in mind when we take the action that is essential to our own self-interest: We must establish the understanding, among the Allies and between ourselves, that we shall have a controlling voice in the ultimate peace, and that then we shall not rat on our obligations for helping to keep the peace as we ratted so disastrously 20 years ago.

"Sincerely,

"ROBERT E. SHERWOOD."

Others who have accepted membership on the Committee to Defend America by Aiding the Allies include: Dean Acheson; Dean Paul Shipman Andrews, Syracuse; Dr. Frank Aydelotte, of Swarthmore; Paul Blanshard; Robert Woods Bliss, of Washington, D. C.; Dr. Frank G. Boudreau, president of League of Nations Association; Bishop Wyatt Brown, of Harrisburg; Zechariah Chaffee; Henry Sloane Coffin; Paul Cruikshank, headmaster of Taft School; George B. Cutten, president, Colgate University; Col. Henry Brickenridge; Walter Damrosch; Victor Elting; Silas Evans, Ripon, Wis.; Dorothy Canfield Fisher; President Harry Gideonse, of Brooklyn College; Dean Virginia C. Gildersleeve; John Henry Hammond; Walter M. Howlett, secretary, Greater New York Federation of Churches; Rupert Hughes; Fannie Hurst; Louis Kirstein, of Boston; Mrs. James Lees Laidlaw; President Daniel Marsh, of Boston University; Robert Lncoln O'Brien, of Washiugton, D. C.; Chester Rowell; George Rublee; Mayor Scully, of Pittsburgh; Ellery Sedgwick; Bishop Henry K. Sherrill; Marshall Stimson, Los Angeles; Mrs. Raymond Gram Swing; Herbert Bayard Swope; Huston Thompson, of Washington, D. C.; John Perry Wood, of Los Angeles.

SOME OF THE FIRST SIGNERS

Among those who have already accepted the invitation to join the committee are: Herbert H. Lehmann, Governor, Albany, N. Y.; Henry L. Stimson, New York; Frank Knox, publisher, Chicago Daily News, Chicago, Ill.; Nicholas Murray Butler, president, Columbia University, New York, N. Y.; Anita McCormick Blaine, Chicago, Ill.; William L. Clayton, Houston, Tex.; Frank L. Polk, New York; Gene Tunney, New York; Miriam Hopkins, Hollywood, Calif.; Ernest Minor Hopkins, president, Dartmouth College, Hanover, N. H.; Robert Watt, international representative, American Federation of Labor, Washington, D. C.; John Temple Graves II, Birmingham, Ala.; Grover C. Hall, Montgomery Advertiser, Ala.; Henry W. Hobson, bishop, Cincinnati, Ohio; Alexander Mann, Episcopal bishop, Pittsburgh, Pa.; Theodore Marburg, Baltimore, Md.; Freda Kirchwey, editor, The Nation, New York; James Truslow Adams, Southport, Conn.; Harry Best, University of Kentucky, Lexington, Ky.; Esther Caukin Brunauer, Washington, D. C.; Philip Marshall Brown, Washington, D. C.; Harry Woodburn Chase, chancelor, New York University, New York; Evans Clark, Twentieth Century Fund, New York; Martin J. Collins, St. Louis, Mo.; Frederic Coudert, New York; Samuel A. Elliott, Arlington Street Church, Boston, Mass.; William Yandell Elliott, Harvard University, Cambridge, Mass.; John W. Frazer, Methodist Church, Mobile, Ala.; James W. Gerard, New York; Samuel R. Guard, editor, Breeder's Gazette, Spencer, Ind.

Sidney B. Hall, superintendent of public instruction, Richmond, Va.; Roswell G. Ham, president, Mount Holyoke College, South Hadley, Mass.; Oscar Leser, judge, Baltimore, Md.; Stephen Keller, Episcopal bishop, Minneapolis, Minn.; William P. Ladd, dean, Berkeley Divinity School, New Haven, Conn.; William T. Manning, Episcopal bishop, New York; James M. Maxon, bishop of Tennessee, Protestant Episcopal Church, Memphis, Tenn.; Reinhold Neibuhr, Union Theological Seminary, New York; Elinor Purves, Princeton, N. J.; William Jay Schieffelin, New York; Samuel Seabury, New York; Robert Emmet Sherwood, New York; James T. Shotwell, New York; Ernest Stires, Episcopal bishop, Garden City, N. Y.; Clifton M. Utley, Chicago Council of Foreign Relations, Chicago, Ill.; George E. Vincent, Greenwich, Conn.; Charles A. Webb, Citizens Times, Asheville, N. C.; Stephen S. Wise, New York; Mary E. Woolley, Westport-on-Lake Champlain, N. Y.; Quincy Wright, University of Chicago, Chicago, Ill.; Allen D. Albert, past president, Rotary International, Paris, Ill. Lindsey Rogers, Columbia Unversity, New York; William Allan Neilson, New York.

MAY 22, 1940.

SIR: I want you to know that I fully approve of your plan to send all possible help to the Allies.

Let us take our stand by the side of those who are fighting a world enemy. The moral effect of a declaration of war would be tremendously beneficial.

I served at the front throughout the World War, and I'm eager to go again.

May our leaders lead wisely.

A. W. POWELL, *Swift Run, Va.*

THURSDAY, MAY 23, 1940.

I am glad there was one man on that committee who approved of selling planes to the Allies. We should help them in every possible way, even to giving the planes if necessary, for they are in a desperate situation, and if those Huns wins (as they will, you watch and see), then we are going to be. We would want other nations to help us if we had our backs to the wall. We are lost without England's Navy. Japan will then attack our Pacific coast, and we have a Navy for only one. Germans will own Canada, Bermuda, Greenland, and with their spies within our borders (as there now are), what then? Our billions have been wasted that should have gone for defense.

Don't let F. D. R. handle any of that appropriation. Only Congress should do it. They made that mistake once, and we all know how the money was used.

You are from the State I love.

Sincerely,

G. B. PEIRCE.

WASHINGTON, D. C., *May 24, 1940.*

Senator CLAUDE PEPPER,
United States Senate, Washington, D. C.

SIR: As a thinking American citizen I protest the inaction of our Congress in the world emergency.

I urge upon you to immediately initiate action to repeal our neutrality laws, in order that we may proclaim to the world that we favor justice—wherever such a proclamation may lead us.

We will be obliged to face the facts sooner or later, and it may be better to do so while our own house is in order rather than later when chaos reaches us.

I, with thousands of others, believe that the people of the United States would gladly extend every possible aid (excepting manpower) to the Allies, and that such action should be taken before it is too late.

Respectfully,

A. M. PARKINS.

ST. AUGUSTINE, FLA., *May 23, 1940.*

Senator CLAUDE PEPPER,
Washington, D. C.

DEAR CLAUDE: Yours of the 21st at hand. Burrell (nicknamed Pete) is one of my closest friends, a straight shooter, and law partner of Jacob S. White, my cousin and former law partner. I appreciate the compliments you and he both have expressed.

When you made your motion to let the Allies have airplanes and help, I decided to interview a group of representative men, representing a fair cross-section of this community, to ascertain whether your move had local public opinion behind you.

Out of 27 men hastily interviewed, 25 favored the plan without equivocation or quibbling. The only 2 who had some doubts were lawyers, and they were not explicitly opposed but they were raising some questions about possible involvements, etc. I have agreed with your plan for months.

The butchers, bakers, and candlestick makers were enthusiastic and favored selling or giving them anything we have.

Yours, as ever,

H. A. HENDERSON.

P. S.—None of those interviewed dreamed that I was taking a poll, and none knew I would report to you.

WASHINGTON, D. C., *May 23, 1940.*

Hon. CLAUDE PEPPER,
United States Senate.

MY DEAR SENATOR PEPPER: I am writing to express my warm approval of the proposal you made to authorize the sale to the Allies of planes and equipment now belonging to the Army and Navy, and my very keen regret that the Committee on Foreign Relations rejected this proposal. It seems perfectly clear that our own best protection is the victory of the Allies—apparently Americans now understand that almost unanimously; and there can be little doubt that the Allies are in a most critical position and in need of substantial and immediate help, especially in planes. As you very aptly suggest, "the very existence of international law (and I would add, our own safety and the preservation of some semblance of civilization) depends on the Allies getting planes from us in time"; and under these circumstances it is hardly in point to consider this kind of help a violation of international law.

I know I need not urge upon you the importance of any other kind of aid as well, for you clearly understand the situation. I very much hope you will continue to press your resolution.

Perhaps I should add, for your information, that I am a professor of political science at the University of Illinois, now in Washington on leave of absence. I had the privilege of being in the same round table of the American Political Science Association with you a couple of years ago, and have seen and heard you in the Senate on several occasions. I happen to know Senator ELBERT THOMAS particularly well, and if you care to quote to him my feeling about your resolution, you are quite welcome to do so.

Very sincerely yours,

CLARENCE A. BERDAHL.

LOUISVILLE, KY.,
May 22, 1940.

The Honorable Senator PEPPER,
United States Congress, Washington, D. C.

DEAR SIR: The American people are awaking to the dangers facing it from the dictator nations. Sentiment in favor of helping the Allies is growing stronger daily as they watch the inhuman tactics of the Germans.

Please do not give up your fight to provide the Allies with American planes. Also help the fight for democracy in any other way possible.

Very respectfully yours,

R. J. FRANKLIN.

BOX 876, PORT ST. JOE, FLA.,
May 23, 1940.

Senator CLAUDE PEPPER,
United States Senate, Washington, D. C.

DEAR SENATOR: After reading your stand in paper regarding arming this great Nation and helping others who are our brother nations and need help so bad, I sure feel proud more than ever of you as though I did risk my job to vote for you.

Being an ex-service man, I think I know the real need of having an Army and Navy double any other nation.

I just wanted you to know I was with you.

May God bless you in your work.

Respectfully,

M. L. FULLER.

CANTON, OHIO, *May 23, 1940.*

Senator PEPPER,
Washington, D. C.

MY DEAR SENATOR: In view of your sympathies for the cause of righteousness, I take the liberty to advise you that it is high time that the United States Government breaks off relations with the Hitler regime and thus part with bad company and a great deal of malefactors in the United States.

Every German Consul in the United States and elsewhere, for that matter, is a Nazi spy and organizer for the "fifth column," and the sooner they are sent back to Germany with diplomatic passports, the sooner the country will be free of bad propaganda, hatred, spying, sabotaging, misinformation, lying, and trouble shooting.

The recent scandals in Pittsburgh and Cleveland amply proves my contention, and I sincerely trust that you persuade our President to take immediate action in that direction before the damage done here may become irreparable.

Sincerely yours,

ALFRED ZIFF.

THE WOMAN'S CLUB,
Jacksonville, Fla., May 23, 1940.

Senator PEPPER,
Washington, D. C.

DEAR SIR: I am directed to send you herewith a copy of the resolution passed by our club at the meeting yesterday.

Very truly,

MOLLIE LENOIR,
(Mrs. C. O. LeNoir.)
Executive Secretary.

RESOLUTION PASSED MAY 22, 1940, BY THE WOMAN'S CLUB OF JACKSONVILLE, FLA.

The Woman's Club of Jacksonville, in session May 22, 1940, unanimously adopts the following resolution:

"Whereas, the world is facing the greatest crisis in history because of betrayal and ruthless aggression,

"And, since this aggression has succeeded largely through the unpreparedness and negative optimism of the peaceful countries, and through the ability of false prophets and traitors to enter their inner citadels and rob them of their strength and unity, thus rendering them easy prey for the enemy at their gates,

"We, therefore, earnestly request our Government to profit by the experience of these other countries.

"We demand that all saboteurs and repudiators of our flag be routed out, labeled, and imprisoned.

"We demand that our people be awakened fully to the great responsibility resting upon them and upon our chosen leaders to protect our country on land, sea, and in the air, while lending such aid to other countries struggling to uphold civilization as seems expedient and right in the sight of men and God.

"We pledge, as a body of clear thinking women, to refuse to be influenced by selfish aims or narrow political propaganda; to stand clear-eyed and unafraid.

"We pledge, as members of a United States of America, to maintain an active neutrality worthy of our mental, physical, and spiritual integrity."

On the Job in Washington—National Defense

EXTENSION OF REMARKS
OF
HON. RALPH O. BREWSTER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 24, 1940

Mr. BREWSTER. Mr. Speaker, flying up from Washington to Bangor, Maine, in approximately 5 hours reveals the annihilation of distance by the airplane. Europe is learning this lesson in a very tragic way.

MAINE A EUROPEAN LANDING FIELD

Maine as the nearest point to Europe, with a series of land areas that are convenient stepping stones, must realize that we cannot expect indefinitely to remain aloof.

Our isolation is being modified, whether we like it or not. This does not mean that we need tomorrow to fear clouds of bombers in the skies.

But it does mean, in the words of George Washington, that we should put ourselves in a "posture of defense."

AMERICA GOES IN THE AIR

To one who has for 6 long years in Washington contended day in and day out for aeronautical development, it is profoundly gratifying to see the Congress and the country awaken to the need of planes.

Even as late as 2 years ago I pointed out to the Congress in a formal report, as a member of the House Committee on Naval Affairs, that the proposed bill sponsored by the administration—

> Limits naval aircraft when the importance of aircraft for defense is increasing with revolutionary rapidity and other nations are spending 10 times what we are for experimentation in aircraft development for defense.

It seems incredible that on February 6, 1938, when I filed that report, I was one of a small minority, while today everywhere there is recognized the vital importance to defense of supremacy in the air as well as on sea and land.

LINDBERGH

I repeated the plea of Lindbergh for money for research and for the development of construction facilities for planes.

Whatever may be thought as to Lindbergh's views on foreign policy, there can be no question as to the authority with which he speaks on airplanes. No one in the world has seen more from the inside of the aeronautical preparations in Europe for this current holocaust. Certainly events have vindicated Lindbergh's estimate of the superiority of the German Air Corps. It is a matter of regret that this tremendous range of experience and trained capacity for observation is not now actively identified with our expanding air program. He is one of the first who should be called as a Reserve officer of the United States Army Air Corps. Research and production facilities are the two things he has constantly emphasized.

AIR DEFENSES

The lesson has at last been learned. America seems likely now to turn its tremendous energies and resources to a proper preparation for aeronautical defense.

Let us realize, however, that we have still much to learn. The factories to fabricate these planes, and particularly the mechanics to construct and maintain the planes, cannot be created overnight.

TRAINING MECHANICS

Maine has reason to be gratified that it has been selected as a pioneer in the mechanical training of our youth in the

schools that have been established by the National Youth Administration at Quoddy, at Dexter, and at Houlton. Ground training to service airplanes and mechanical training to serve in their construction is already being given to Maine boys and to boys from all over New England and New York here in eastern Maine. Maine Yankees take naturally to machines. Henry Ford characterized New England as the greatest reservoir of mechanical genius the world has ever known.

Substantial expansion of these schools may be expected under the great program that is now planned. The trail here has been blazed and the courses of instruction developed which are imperatively required in connection with the training and equipment of the boys who are to be the backbone of our defense.

Washington is still intoxicated to some extent with talk of billions, with all too little realization of the things that are required to produce the planes, the tanks, the guns, the gas masks, the airplane detectors, and all other paraphernalia of modern war.

EXPANDING PLANT FACILITIES

In the past year under the stimulus of orders from the Allies we have expanded our production capacity from 6,000 to 12,000 planes a year, or 1,000 planes a month, which is about one-third of what it is believed Germany can now turn out.

The President suggests a production capacity of 50,000 planes a year and also a goal of 50,000 planes for our defense.

This means quadrupling our present plants and the personnel with which they must be manned.

Fifty thousand planes mean a million men upon the ground and in the air with all the varied training that is required to service these complex giants.

AIR BASES FOR MAINE

The Army has repeatedly shown great interest in the development of a modern air base somewhere here in central Maine. A glance at the globe will make the reason for this interest easily apparent. The great circle from Europe passes close by our shores. Already the Army Air Corps has urged the development of 12 advance air bases in Maine. This crisis seems likely to supply the funds.

Let us not delude ourselves, however, with the idea that our problem is solved by a billion-dollar appropriation. Enormous executive and engineering talent is required to make this program a reality.

DEFENSE DEFICIENCIES

More than $6,000,000,000 has been expended for defense in the past 6 years. Aside from a first-class navy, our defenses are lamentably deficient. Our Army, our Air Corps, and our coast defenses are a travesty so far as adequate supplies of modern mechanized equipment are concerned.

One of the first problems that must be faced is the question of curtailing shipments to the Allied Powers. The President has strongly urged that the Allies shall be permitted to receive the planes now under order or that may be ordered during the coming year. This inevitably means that our requirements will be met somewhat more slowly during the next 18 months, while production capacity is being expanded.

PLANT CAPACITY

Some suggest that with an inadequate air force it is unwise for us to export planes. Let us realize, however, that the primary problem with planes is capacity to produce. Planes are not like ships, or even guns, but far more nearly resemble shells.

Germany has superiority in the air not only because of the great number of high-speed planes in the air but more especially because of the capacity to turn out 3,000 planes a month to replace the thousand planes a week that are the toll of total war.

Let us realize that lifting the embargo—for which I voted along with Senators HALE and TAFT and AUSTIN and Congressman WADSWORTH—has meant a greatly expanded productive capacity for planes here in America, and that is a tremendous asset, as we now discover.

RESEARCH IS KEY

Research and constant progress in plane types and performance is the key to success coupled with the factory facilities to produce. Henry Ford and General Motors might well be called in to advise on the organization of American industry to turn out planes. Research in America has been woefully neglected as Lindbergh has repeatedly pointed out.

AMERICAN MERCHANT MARINE

Meanwhile in the same neutrality legislation it was provided that American ships should stay out of the war zones. This has meant that not a single American ship has been lost while 652 ships were being sunk. Nearly half of those belonged to neutrals.

Sinking of American ships and the loss of American lives was one of the chief causes of our entering the last war. That cause has been practically eliminated by the legislation of last fall.

Opponents of this policy objected that we were sacrificing the American merchant marine. The American merchant marine, however, today is experiencing a prosperity it has not known for 20 years. Ships are commanding tremendous prices for sale or charter. Congress has just been compelled to release 112 ships over 20 years old to supply the insatiable demand for shipping.

That fear for our shipping has been shown to be groundless.

It is gratifying to find America becoming air-minded. The lessons of Europe do not seem likely to be lost.

If it were not for the thousand planes that America has furnished to the Allies during this past year since the lifting of the embargo the Allies today would be even more hopelessly outclassed. It is probably no exaggeration to say that without the aid America has been able to furnish in equipment the German prospects of victory today would be far better than the 50-50 estimate that is now accorded to them in Washington.

The German "blitzkrieg" has also probably been precipitated by the growing menace of American production which threatened in another year to tip the balance perhaps decisively in favor of the Allies. Hitler evidently decided the war must be settled now, if ever.

Without a decisive victory this summer, Hitler is probably condemned to slow starvation in a military sense by lack of the essential materials that are required for the conduct of modern war and are measurably being eliminated by the British blockade.

RUBBER, TIN, AND MANGANESE

We realize suddenly here in America that our civilization seems to be dependent upon rubber and tin and manganese. We look to our supplies and find them coming across 6,000 miles of ocean with less than 6 months' stock on hand.

This indicates it is time for taking very serious thought. It is high time that we made a careful survey to determine to what extent the resources of the Western Hemisphere may be sufficient to supply our needs.

Curiously enough, a Maine boy, Lieutenant Commander Talbot, of Portland, has written one of the most authoritative articles upon the subject of the resources of the Western Hemisphere published in the proceedings of the Naval Institute.

Maine has manganese deposits that are even now being explored to determine their extent and quality.

Maine may be able to make a substantial contribution to our immediate task of liberating America from dependence upon overseas supplies of this essential material in the making of modern steel. The difference in cost of production on account of the difference in quality of the manganese ore is, of course, a factor of no importance in the event of a major crisis.

These deposits have long been known in Aroostook and Hancock Counties and elsewhere in Maine, but their major

significance has only been brought home to us by the events of recent days in Europe.

BERYLLIUM

Maine also possesses what are the largest deposits of beryllium in America if not in the world. Reports have been current for some time that beryllium alloys may be the key to some of the amazing German progress in the air. These alloys are by far the lightest and toughest ever produced and may be used both for bearings and also possibly for casing pilot's cabins to stop bullets.

A reducing plant for beryllium has been started in the United States recently, and experiments are now in process with test orders by the War Department. Curiously enough it now develops that in handling beryllium we are dependent upon American patents owned in Germany.

These resources emphasize the strategic significance of Maine in consideration of American defense. Perhaps America will not abandon us to the European vultures.

Tin, however, must come from Bolivia and rubber from Brazil, its native home.

It is interesting to note that James G. Blaine, of Maine, as Secretary of State 50 years ago was one of the first in high position to urge the wisdom of cultivating far more intimate relations with our neighbors to the south.

Today it is imperative. Not a day must now be lost. Any menace to America will come either across the Atlantic from the northeast or will approach us from south. First may come peaceful penetration of South American countries by alien systems from Europe or Asia. This will present increasingly difficult problems to combat. European cultural and commercial approaches may be in very attractive form, particularly to the Latin temperament, with which we here have taken far too little pains to become familiar.

South America may very properly be considered our Achilles' heel.

With the continued cultivation of more intimate relations with our South American friends must go far more adequate preparation for defense of the Americas, particularly in the air and in the mechanized marvels or monsters that are abroad in the world today.

Great Britain, France, and their allies have approximately $9,000,000,000 in credits available in the United States to supply the sinews of modern war. This is sufficient to supply the British needs for approximately 2 years. This means it is not necessary now to consider modification of the Johnson Act.

NO WAR FEVER

The mothers of Maine will be interested and reassured to know that in Washington there is less evidence of war fever than anywhere else in the United States.

Within the past week I have heard several leading Members of the Senate on both sides express themselves in the strongest terms publicly and privately against United States involvement in the European war.

On the other hand, there is everywhere evident the firmest determination that America shall be far more adequately prepared, and that without delay.

In the past 6 years more than $6,000,000,000 has been appropriated for defense by the Congress—practically every dollar that the administration has requested. In addition, more than $15,000,000,000 has been poured out in projects outside normal governmental activities simply to create work.

Now evidence indicates that our defenses are woefully inadequate, particularly in the instruments of modern war on land and in the air. The Navy is first rank in quality and quantity except—and this is a big exception—except that it is deplorably weak in aircraft.

Recent months have indicated this deficiency might well be fatal in the days ahead.

MAINE AIR BASE

Maine has a vital stake with 2,000 miles of tidal coast line holding out welcoming arms to Europe with convenient aerial stepping stones all along the way—in Iceland, Greenland, and Newfoundland.

We must think not in terms of today when we may still be reasonably secure but of the tomorrow that rushes on us as relentlessly as the hosts that have poured over Poland, Norway, and the Netherlands in very recent months.

Maine must have an adequate air base, and that without delay. Here pilots may be trained to scout the stormy North Atlantic in weather very different from what our Navy enjoys at Pensacola or San Diego.

Here pilots may learn to operate in all the kinds of weather that Maine may offer at all seasons of the year. Familiarity with the fog banks off our coast and with the tricks of wind and storm may some day be a vital factor in our aerial defense. Now is the time to train the boys against the need that may some time arise, in justice to the boys and to the country they seek to serve.

To fail now to train our youth in the instrumentalities of a modern mechanized defense is flying in the face of the plain lessons of events across the seas. It is like giving them bows and arrows to defend the land they love.

NATIONAL GUARD EQUIPMENT

Preparation prompt and adequate is now the order of the day. Planes must be provided and pilots must be trained. The existing naval program must be vigorously carried out. In my report on the Navy only 2 years ago it was necessary to point out that our fleet then lacked 40 destroyers and 17 submarines that were then authorized by existing law. Kittery and Bath must be kept constantly busy in essential replacements for the next 10 years.

Meanwhile the Regular Army and the National Guard must be adequately equipped. The picture at Plattsburg last summer at the National Guard maneuvers was pitiful. I wondered what was passing through the mind of the German military attaché as he watched our guard in training with a 75-percent deficiency in the equipment required to meet the demands of the modern military machine.

Those intricate mechanisms cannot be created in a moment nor can even the mechanical genius of a New England Yankee be expected to learn overnight how to operate or repair a sound detector for air attacks.

But let us always remember that putting our domestic house in order is the first step in an adequate defense. The sinews of modern war are found first in a sound economy.

A $45,000,000,000 DEBT

Pitiful as is the condition of certain phases of our military preparation let us realize that a $45,000,000,000 debt and a budget continuously out of balance by more than $3,000,000,000 is our most serious handicap in preparing to defend the United States. Twenty-five years ago America had practically no national debt.

Let the people of America resolve to place high on their list of defense needs a budget honestly and annually balanced. We shall have then taken the first great step in preparing an adequate defense against foes from without or from "fifth columns" and "Trojan horses" within. This will mean that this generation of Americans is ready to pay the price of life in the modern world.

GUIDANCE OF GOD

Let us also remember that man shall not live by bread alone. In this time of world travail let us keep ever in mind that while our grandfathers were wresting this wilderness from the savage and converting the forests into farms creating a free America that has been the envy of the world they also found time to build churches. Let us see that they are occupied. At this memorial season let us make very sure that America is still mindful of the spiritual impulses that gave us birth and have guided us for three centuries.

With that inspiration America cannot fail. The faith of our fathers will not falter before the fear of foreign foes.

America is still prepared to defend its faith in the free government of a free people in the American hemisphere.

America will be united in a great crusade to save the American way of life under the guidance of an Almighty God.

National Defense

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. BECKWORTH. Mr. Speaker, I wish to state I am happy to support the National Defense bill which is before the Congress today. It has been my firm belief for sometime that our country should further prepare itself for any type of eventuality. With the war demons and warmongers of Europe—those who care nothing for the rights of people—surprising us every day and shocking the world with each news despatch, it would, indeed, be unthinkable to fail to appropriately and effectively prepare to protect our Nation. We have a country and a form of government—a great democracy, yes, a workable democracy—which are worth perpetuating and protecting to the fullest extent.

For this Congress or any Congress to be unmindful and oblivious to its duty in this connection would be unpardonable. I am happy to say I have supported every national-defense measure which has been before the Congress since becoming a Member of this body. Certainly, I favor authorizing and appropriating sums of money now and in the future which will adequately protect this country, its citizens, and institutions from attack by any country or combination of countries.

Would-Be Dictators Out in the Open

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. HOFFMAN. Mr. Speaker, Dorothy Thompson, Harold Ickes, and other new dealers have so far forgotten the Nation which has given them their opportunities, they unwittingly or otherwise preach a doctrine which would destroy it. They not only "bite the hand that feeds them" but they "befoul their own nest" by advocating a policy which would bring to us the tyranny, the brutality, and the destruction which is now sweeping Europe.

A logical statement of such activities is given in an editorial from the Chicago Tribune of May 23:

DISLOYALTY TO AMERICAN PRINCIPLES

The efforts of the third termers and Mr. Roosevelt to silence the Republican opposition by trying to form what is called a coalition government to meet what is called national emergency reveal how far away they are from the ideas, traditions, and practices of the American Republic. The purpose of the New Deal proposals, supported by people who no longer pretend to keep the United States first in their thoughts, was to blanket the Republican convention and, indeed, to suggest that it would be unpatriotic for the party to make nominations and conduct a political campaign at this time.

No politicians or self-seekers who had not already in their own plans junked the entire American system of representative government, with an executive dependent for office upon the consent of the people, could come before the public at this or any other time with any sort of an intimation that political action be suspended. Only persons who wish to get rid of government by consent would put forth such ideas.

We have known occasions when it was necessary for loyal Americans to support a government regardless of their party affiliations. That meant that when the national welfare required it, the party of opposition did not seek partisan advantages by maneuvering against the administration. Some of the political tactics which were regarded as permissible in normal times were thought discreditable when a united national effort was needed. There has never been any difference of opinion about this. But no one really loyal to American principles can propose that a political party shall not hold its convention, nominate its candidates, and conduct a campaign for their election.

In 1864 Lincoln went into a campaign for renomination and the Republican Party felt that the outcome was uncertain. The party made a concession to Democrats who wished to support it by putting Lincoln on what was called a Union ticket. But it did not think its Democratic opposition should not nominate a candidate or that the people of the country should not have the right to reject the policies of the administration if that was their desire. There was no question about the national emergency in 1864. It wasn't as great as the anxious Unionists thought it was in its military aspects, but it was in its political phase because a great many people did want to stop the war.

No persons in authority have ever proposed heretofore that American citizens be denied their franchise rights or that a party be required to suspend its activities, whether the country was at war or not. The country is not at war now. It is yet to be determined that the majority of American people now would want to face any emergency under an administration that has proved it couldn't run the country in peacetime, an administration which has already put the United States at a disadvantage financially for any great additional undertaking. The very excitement which that administration is now raising about emergency and defense is an admission of its incompetence in times of peace to give the Nation the safeguards it says are necessary.

This is just such a time as requires the adherence, without hindrance, to the full use of American franchise rights and political privileges. Whoever tries to promote the idea that the Republicans should not nominate the strongest ticket the party can present and make the strongest campaign it can against the policies prevailing in Washington is, in truth, disloyal to what makes America a land of free people. He is promoting the cause of dictatorship and he is doing so either because he is emotionally unbalanced or because he is craftily seeking to undermine a form of government he does not like.

The Requirement of a Poll Tax as a Prerequisite to Voting Is a Dilution of Democracy and a Violation of Basic Human Rights

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

STATEMENT BY PROF. EDUARD C. LINDEMAN

Mr. GEYER of California. Mr. Speaker, I have just received a statement in support of my anti-poll-tax bill—H. R. 7534—written by Prof. Eduard C. Lindeman, professor of social philosophy at the New York School of Social Work. He believes that we are moving toward a moral crisis and that we and our generation will have to show our faith in democracy by eliminating with courage all vestiges of anti-democratic regulations, such as the poll-tax requirement. Under the permission granted me to extend my remarks, I include Professor Lindeman's statement:

Having once been a resident of a Southern State I have a deep realization of the disastrous effects which the Civil War brought to this region. One of the chief of these consequences may be designated as economic, political, and cultural lag; the South did not and could not keep pace with progress attained in the North and the West. Happily, however, these various lags are slowly being overcome. The bitterness of feeling between the North and the South was all but eliminated during the last World War, and economic and cultural relations between the two sections have constantly improved. The South is once more taking its rightful place in a unified nation.

There remain, nevertheless, certain aspects of lag which seem to me to endanger, not merely the future of the South, but also that of the Nation as a whole. One of these remnants of a former fear is the existence of a poll tax in eight of the Southern States. Such

a tax no longer exists in any other modern democratic nation and it should be eliminated as quickly as possible. I am glad to see that the progressively minded citizens of these States are devoting themselves to this task. I realize that this goal can be achieved more quickly by means of Federal action and I have, therefore, alined myself with those who are striving to bring about the enactment of the Geyer bill, H. R. 7534.

There remains in my mind not the slightest doubt concerning the desirability, the legality, nor the practicality of this proposed legislation. So long as the poll tax exists, the people of the Southern States will not exercise a genuinely representative role in American life. Their Representatives in Congress are at present the delegates of minute minorities, and if democracy is to survive we must rest our judgments upon the will of true majorities. Indeed, I can discover no argument in logic nor in recent experience which justifies the continuation of this undemocratic practice in a nation which is by declaration and tradition a democracy.

Like many other reforms of a similar nature, the chief impediment is habit. I have a strong feeling that on the day which sees the abolishment of the poll tax there will come to the minds of southern men and women a sense of profound relief, a clarifying feeling that at least this section has brought its political practices into alinement with those of the remainder of the country. Our Nation seems now to be moving steadily and implacably toward a great moral crisis; we and our generation will be required once more to validate our belief in the democratic way of life. The best way of bringing our faith into conformity with our practices is to eliminate with courage all vestiges of antidemocratic regulations. In a democracy the right to vote is a basic human right which rests upon the person and not upon his property. The payment of a fee for the privilege of voting belongs to the age of feudalism. It constitutes for our time a perversion of the meaning of freedom.

Hence, I repeat, I aline myself gladly with those liberal citizens of the Southern States who have dedicated themselves to the achievement of this reform. Those who have not given the matter in hand their earnest thought seem to believe that it is a question which concerns only the eight States where poll-tax systems still prevail. This is a grievous error. To admit that democratic methods are desirable in one section of a supposedly democratic country and to deny their validity and practicability in another section is to assume that democracy is a privilege for a selected fraction of our citizenship. This amounts to a denial of the essence of the democratic principle. There are at present hundreds of thousands of American citizens with full constitutional rights for the exercise of their suffrage who now do not vote, and the poll tax is one of the principal deterrents. Representatives from some of these States come to Congress on the support of less than 2 percent of the population of their districts. To call this a democratic system of representation is to reduce democracy to the level of absurdity and shame. Heaven knows, the antidemocratic leaders of other nations can find enough flaws in our democracy, but we should not leave ourselves vulnerable at this obvious point.

A Department of National Defense

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

RADIO ADDRESS BY HON. JAMES E. VAN ZANDT, OF PENNSYLVANIA

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by me over the red network of the National Broadcasting Co. on May 23, 1940, on the subject A Department of National Defense.

Ladies and gentlemen, 23 years ago tonight America was an armed camp, having been at a state of war with Germany a short period of over 30 days.

Congress was in session, President Wilson was given emergency powers, industry and manpower was mobilized in a supreme effort to defend our national honor, and, as we were told, to make the world safe for democracy.

On November 11, 1918, an armistice was signed, hostilities ceased, battle lines disappeared, and the air was rent with joyous sounds as bedlam broke forth in relentless fury heralding the end of the conflict. America was at peace—the war was over.

With grateful hearts and a prayer on their lips the people of America turned their attention to the many tasks yet to be accomplished. From the tomb of the past came the sound of the voice of the Great Emancipator—Abraham Lincoln—who in surveying the ruins of the Civil War uttered this advice to a heart-weary people:

"With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

With these words ringing in their ears the American people began to realize and experience the aftermath of war.

While they lovingly buried their dead, and with compassion for the sick and wounded caused veteran hospitals to be erected almost overnight, the world's greatest depression invaded the business and industrial life of this prosperous Nation. Millions found themselves unemployed, the economic stability of our Nation was destroyed, and America was face to face with the grim reality that war is not ended on the battlefield.

From the day America entered the World War it was realized that we as a nation were woefully unprepared, and the conviction grew that never again must the security and peace of the American people be jeopardized.

While America proceeded in an orderly way to rebuild its military defenses a series of armament-reduction programs were accepted by the major nations of the world which had as their objective world peace.

As a nation we religiously adhered to all treaties as a result of the World War, as well as armament-reduction programs, thus assuming a stationary position, and did nothing to promote our national-defense program. While enjoying this period of world peace, the utter disregard of certain nations became apparent as they proceeded to cast caution to the winds in their feverish anxiety to provide for what they termed their economic needs. Under this guise there developed dictatorships, who, in pursuance of their objectives, launched a period of ruthless and relentless persecution of peaceful nations that gave birth to World War No. 2.

As the world gazed in stricken horror at the invasion of the Lowlands and saw Holland and Belgium in turn devoured by the world's mightiest military machine, once more the attention of the American people was called to the necessity of an adequate national defense.

President Roosevelt, in a surprise and dramatic appearance before a joint session of Congress, revealed in no uncertain terms that the clear fact is the American people must recast their thinking about national protection.

In other words, from the lips of our Chief Executive—the Commander in Chief of the armed forces of the United States—came the frank admission that streamlining our national defense is the paramount question of the hour.

With the President's message came a literal command, Awake, America! echoing those prophetic words uttered by the late Gen. William Mitchell, World War hero, who, in 1929, said:

"The coming of air power has made a greater difference in war than anything in history. Armies are mere holders of land. During the war armies only moved back and forth for 60 miles and killed hundreds of thousands. That isn't war—war is getting at the vital centers of the enemy—where they live, their food, their communications. Air power can go straight to them now, 3,000 miles away, and destroy.

"What we need in this country is a single department of national defense, with a separate department for air force, Navy, and Army. Until we have that we cannot protect ourselves. No rules or regulations or treaties can do away with the necessity of protecting ourselves. If we don't protect ourselves, no one else will."

This timely warning from an unsung hero fell on deaf ears, but there is no man to deny the truthful accuracy of what was then considered a bold assertion.

Billy Mitchell, as he was affectionately called by those who admired him as a friend, evidently knew whereof he spoke.

One has only to consider the development of the German military machine of today compared with 1914. For the past 7 years Hitler has directed the energies of the second greatest industrial country in the world toward a single national objective. Spending close to $40,000,000,000 in 7 years, there has emerged the greatest and most powerful military machine the world has ever known. Functioning at top speed, there is unfolded before the eyes of the world the threatened destruction of our former Allies—France and Great Britain.

As this mighty military machine rolls on in ruthless fashion, the Congress of the United States is eager to approve the Chief Executive's request for additional millions of dollars for national defense. Partisan politics give way to love of country and a desire to protect our most cherished possessions—peace and freedom.

In keeping with the spirit and purpose of the President's solemn warning that we in effect streamline our national defense, there is a crying need that the words of the late Billy Mitchell be translated into positive action.

The American people are entitled to a survey of our national-defense policies which will determine the following pertinent facts:

I. The area we as a nation are expected to defend.

II. The cost of adequately protecting such area.

III. The adequacy of our present national-defense system.

IV. The advisability of a separate department of national defense to insure cooperation, efficiency, and economy among our defense forces.

The findings of such a survey will give the American people a comprehensive picture of the needs of their national defense, and

once they know the area to be defended, money and manpower will unite in true American fashion in defense of their liberties.

No one will deny in the light of present world conditions that America must expand its national defenses immediately. With Congress ready to appropriate billions of dollars the time is ripe for an immediate and thorough survey to develop a maximum of security at a minimum cost.

The necessity of such a survey was conveyed to Congress when on January 10, 1940, it was my privilege to introduce House Joint Resolution 417 which provides for a Commission to survey the national-defense requirements and resources of the United States. This Commission will be truly representative of the American people since it will be composed of Members of the House of Representatives, Senate of the United States, Cabinet officers or their representatives, representatives of agriculture, labor, business, industry, and finance, retired Army and Navy officers, two aviators with at least 10 years of experience, and two women recognized for their mercies in wartime.

Under the terms of this resolution this group will function for the purpose of placing in the hands of Congress information necessary for legislation as a result of their comprehensive survey and study of the national defense, including the following:

1. The advisability of completely revising the National Defense Act in the light of events in Europe and Asia and the need for legislation to establish a peacetime defensive system, based upon the national objectives of the United States, which can be rapidly expanded into a wartime defensive system, which will carry out the national objectives of the United States.

2. The advisability of establishing a Department of National Defense, under which the armed forces of the United States would be combined and coordinated to provide for a more adequate national defense in any emergency.

3. The practicability under a Department of National Defense of promoting and accomplishing among all branches of the armed forces (a) coordination of effort and efficiency, (b) savings in purchases of military and naval material, (c) unified responsibility, and (d) elimination of duplication of effort and conflict of authority.

4. The advisability of establishing a National Defense Planning Board to formulate a long-range national-defense policy that has sufficient flexibility to meet any changes required by developments and maintain an orderly, progressive program.

5. The advisability of expanding and speeding the naval program and to examine the necessity for what is known as a two-ocean Navy.

6. The advisability of further expansion of the air forces of the Army and Navy, the number and type of planes required, and a coordinated program and policy for training personnel and cooperation between Army and naval air operations.

7. The advisability of granting Government subsidies to commercial air lines, requiring their transport planes to be convertible bombers and specifying that their pilots be commissioned in the Reserve Corps of the Army and Navy.

8. The advisability of perfecting a comprehensive program for rapidly mobilizing industry and commercial shipping into a defensive force.

9. The advisability of supplementing educational orders by providing an adequate liquid fund to be expended under the direction of the Secretary of National Defense for the encouragement of inventions, research, experiment, and development of arms, munitions, and implements of war.

10. The advisability of determining the interests and responsibilities of the United States under the Monroe Doctrine, the declaration of Panama, and the pledges made in the name of the United States by the Chief Executive to defend Canada in the event of an armed attack by any other power.

11. The advisability of determining the interests and responsibilities of the United States in the Philippines if and when that Commonwealth becomes independent in 1946.

12. The advisability of formulating a definite military and naval program in keeping with the announced policy of the United States in the Orient and the possessions of the United States from the Aleutian Islands to the Samoan Islands.

13. The advisability of acquiring territory in the Atlantic Ocean and the Caribbean Sea which might serve as enemy bases.

In other words, what I proposed in this resolution to Congress last January was that we should do a thorough job of surveying our resources of national defense before taking any action.

If the National Defense Act should be dusted off with a view of making necessary amendments—if the Navy should be overhauled fore and aft; if the Army should be given a rigid inspection; if we must secure islands in the Atlantic and Pacific to serve as air bases; if we need a separate Department of National Defense; if we need 50,000 airplanes—then in the name of God and in memory of those who gave their all that this country might enjoy peace and freedom, let us do the job without delay.

Common sense tells us that instead of doing a piecemeal patchwork job that might find us almost as unprepared as we were in 1917, the national defense must be examined and explored from every angle—to the end that an up-to-the-minute policy can be established and place us in readiness to meet any emergency.

The cry of Keep America Out of War! is ringing in the ears of every American. The bitter memories of the World War are still fresh in the minds of all of us. Who can forget the horrors of the last World War that took from home, office, and factory the flower of American manhood, whose blood later irrigated the meadows of Europe? Who can forget the human aftermath of the World War, with its toll of wrecked bodies, economic depressions, and huge national debts?

The American people hate war, but in these trying days they recognize that the only way to avoid war is to maintain military defenses that will keep America safe, thereby adhering to the philosophy of the great American, Theodore Roosevelt—"Speak softly, but carry a big stick."

That is the type of national defense the American people want, should have, and are entitled to; and, with such national protection, every American mother will have the assurance that her son will not follow the pathway of the youth of 1917—to join in death those brave young Americans who now sleep in Flanders fields.

National Defense

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mrs. BOLTON. Mr. Speaker, for national defense the Army School of Nursing should be reestablished for these reasons:

To insure adequate nursing care to the increased numbers in the Army and affiliated services.

To insure adequate nursing care to the civilian population which would be definitely impaired by the recruiting of nurses into the Red Cross for Army use.

To protect the sick, both now and in the immediate and later future, against the lowering of the standards governing the training and accrediting for service of that group of the general services caring for the sick known as registered nurses.

To protect the civilian sick, as well as the Army, from the inefficient unskilled care of inadequately trained groups.

Shut down in 1932 after a very fine record, the framework is still in existence and it should be reopened.

Entrance requirements should be:

1. College:

(a) To give maturity to the service.

(b) To give constructive occupation to a group who have found it exceedingly difficult going and who are especially well fitted for nursing training.

(c) To set up a method that will not draw from civilian nursing schools and so deplete the ranks of nursing in the United States.

(d) Retain high standards of nursing that our sick may be assured proper nursing care in the future.

2. Two units could be opened at once, one at Walter Reed, Washington, D. C., and one at Fort Letterman, Calif.

RED CROSS NURSES

These are recruited from the all too inadequate number of civilian nurses.

To deplete these ranks will very quickly demoralize the civilian population, as was demonstrated conclusively during the first World War.

Therefore, there should be immediate reopening of the Walter Reed and Fort Letterman units of the Army School of Nursing.

If this seems reasonable, there can readily be prepared cost figures as well as estimates of numbers, and so forth.

The Life, Character, and Unselfish Accomplishments of Mrs. Nettie Coryell

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

Mr. JOHNSON of Oklahoma. Mr. Speaker, under the leave granted me, I am delighted to include a brief statement con-

cerning the outstanding work of a very personal friend of mine, Mrs. Nettie Coryell, of Chickasha, Okla., whom I have known for nearly a quarter of a century. She is the efficient, tireless, and much-beloved home-demonstration agent for Grady County, Okla., which position she has held for many years. The life and character of Mrs. Coryell is one that the present generation, as well as generations yet unborn, might well emulate. Mrs. Coryell is active in church and civic work and never too busy to lend a helping hand to those in need. The splendid unselfish service rendered by this good lady to the women of Grady County cannot be measured in dollars and cents. Her very useful life will long remain a beacon light for others.

Although she is now in her seventy-seventh year, Mrs. Coryell is one of the most energetic, hard-working, and best-beloved women in the State of Oklahoma. I am indebted to my good friend, George Crouse, a young newspaperman, of Chickasha, Okla., for the information set forth herewith. I agree heartily with him that the world needs more Mrs. Nettie Coryells.

In reply to a letter from me requesting some data and other information about this unusual lady, Mr. Crouse writes:

DEAR JED: I do not know exactly what information you desired about Mrs. Coryell, but to what I have written I might add a warning to you, or any other man, to never attempt to accompany her on one of her daily jaunts, even if she is a mere youngster of 77, or nearly so.

I was foolish enough once to decide I would enjoy making the rounds with her, and came home worn out, dusty, and perplexed. How on earth does a woman her age manage to drive, get out of her car, open gates, walk over plowed ground to look over gardens, can a whole beef at a community demonstration, attend a couple of club meetings, talk her head off, go on to give a chicken-culling demonstration at another place in the afternoon, and then drive thirty or forty miles on home? It is too much for me, but perhaps you can answer it.

Understand, too, that Mrs. Coryell isn't just a home-demonstration agent. She is mother adviser, supreme lecturer, and a saint in the eyes of these women and girls. I have heard her talk religion, economics, sociology, farm engineering, and practically everything but politics. She's a born optimist, and the cheer and good faith she spreads has been worth several millions. The world needs more Mrs. Nettie Coryells. That's all.

Respectfully yours,

GEORGE H. CROUSE.

The statement follows:

A quarter of a century ago Mrs. Nettie Coryell, dean of Oklahoma home-demonstration agents, started out with a candy bucket to spread her teaching in home building, culinary art, needlecraft, and carry her philosophy and optimism to farms of Grady County.

That candy bucket served as an improvised fireless cooker and was the first utensil used by Mrs. Coryell in a work that today reaches 1,056 women in 47 home-demonstration clubs, and 750 girls in 37 4-H Clubs in communities throughout the county.

Just how strongly that work has affected the lives in farm homes may be understood when one realizes that not a single home-demonstration club woman has been listed as a relief client during the 25 years Mrs. Coryell has served them and her county.

She will round out her quarter of a century of service next August, and November 4, she will reach her seventy-seventh birthday, and it is doubtful that any younger woman serving as a home-demonstration agent is any more active. Mrs. Coryell travels many miles daily in her visits with women's and girls' clubs, giving demonstrations in canning, culling farm flocks, and attending to many other lines that she regards her duties.

She was born November 4, 1863, on a farm in Winnebago County, Ill., and moved with her parents to Crawford County, Kans., in 1868. She was married in 1894 and her husband was the late Dr. Martin Coryell Mrs. Coryell is the mother of three children, two of them living.

Something of the background where Mrs. Coryell was prepared for the many offices she fills as county home-demonstration agent may be gained from a study of her early life. She attended rural schools and a county normal, received a teacher's certificate in 1879, attended high school in Girard, Kans., then taught in the rural schools in that county. She continued teaching until 1884, when she was appointed a deputy county clerk of Crawford County, Kans., holding that position 4 years. She continued her studies while teaching in the Girard city schools.

In 1894 she married Martin Coryell, a country doctor, and lived on a 20-acre farm, where they kept cows and poultry that paid the expenses of their household. She organized a neighborhood reading club, worked in the rural church and Sunday school, and nursed the sick in nearby homes. In 1905 the Coryells moved to Chickasha, Indian territory, and Mrs. Coryell served as field secretary of the United Charities here, a position she held when asked to enter the Extension Service.

In the first year Mrs. Coryell served as home-demonstration agent. Five women's clubs were organized in the county.

She estimates that during her 25 years of Extension Service in the county she has worked with around 7,000 individuals, and she believes work with food preservation alone has contributed $1,228,427.70 to farm incomes alone in Grady County. Approximately 135,831 garments and other articles have been made in home-improvement and clothing projects by women and girls.

During the 25 years of Extension Service Mrs. Coryell has traveled approximately 325,360 miles, 307,558 of which has been by auto. During the first few years she made her way about the county by rail and with a team. She has used 11 automobiles and drives from 50 to 100 miles daily now in making her daily rounds.

Legal Philosophy in the United States

EXTENSION OF REMARKS

OF

HON. C. ARTHUR ANDERSON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, May 24, 1940

ARTICLE BY REV. LINUS A. LILLY, S. J.

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very learned article on legal philosophy written by Rev. Linus A. Lilly, S. J., regent of the St. Louis University School of Law and an outstanding authority on constitutional law. It will be recalled that Father Lilly was called as an expert witness by the Senate Judiciary Committee during its deliberations on the bill that was proposed several years ago to enlarge the membership of the Supreme Court. I commend this splendid article to every Member of the House.

LEGAL PHILOSOPHY IN THE UNITED STATES

(By Linus A. Lilly, regent of the School of Law, St. Louis University)

In our United States of America there has been comparatively little said and less written about legal philosophy. Yet our people have done more than any other nation of modern times to make law and government philosophical in a true sense. Our reticence in matters of philosophical discussion and our failure to produce a legal literature, available for teachers and students, became emphatically plain some 30 years ago, when the Association of American Law Schools undertook the task of promoting the study of legal philosophy. A committee, appointed to inaugurate the work of encouraging philosophical study of the law, learned not only that American scholarship had nothing adequate to offer but that practically no treatises or suitable sources for study were to be found in the English language. They therefore deemed it necessary to begin the labor of translating works produced by continental scholars. After about 15 years of very commendable work the Modern Legal Philosophical Series, in 12 volumes, was offered to the law schools and law students of the United States. (Modern Legal Philosophy Series (New York, the Macmillan Co.).) Apparently, there are no encouraging results to indicate that the laudable purposes of the association and the committee have been attained.

Law school professors, members of committees, and translators were all, no doubt, inspired by one aim and hope, that of encouraging and supporting a more thorough and general study of legal philosophy. They are neither to be charged nor credited with sponsoring the type of teaching contained in the Modern Legal Philosophical Series. To a very great extent the teaching of the series is such that imputed authorship or support might be considered as constituting a very grave charge. This fact, rather than a marked decline in the philosophical movement from the enthusiasm which characterized its inception, may account for the failure of the philosophical series to exercise an appreciable influence on the study of law in the United States. Since the authors repeatedly inculcate theories that are directly hostile to elementary principles of popular government, we may count the absence of effect upon our legal thought as a fortunate escape rather than a serious loss. Inasmuch as law follows philosophy even as action follows thought, it is not difficult to trace in the works of Von Ihering, Berolzheimer, Stammler, and Kohler germinal principles of the state apotheosis and irresponsible arrogance which have darkened Europe with chaos and carnage. There is reason indeed to be profoundly grateful that our scholars have not produced so copiously the letter which may be lethal, and that leaders who organized and maintained our Government have been more effectively actuated by the spirit which leads to a more prosperous and contented life. However, the theories propounded in the series may serve as convenient and helpful bases for comparing and contrasting unproductive speculation with effective action.

PHILOSOPHICAL FOUNDATIONS OF OUR GOVERNMENT

Governmental organization began in the United States with an affirmation of faith in God. It began indeed where the Book of Genesis begins, with the assertion of man's creation, and the rights

guaranteed by the Creator. The men who established our Government were convinced that necessity compelled them to dissolve the bonds of political union which had connected them with another people. They announced, in severing ancient ties of political alliance and establishing a new and independent Government, that they were but assuming a separate and equal station—to which they were entitled by the laws of Nature and of Nature's God. In thus taking a place among the powers of the earth, they yielded to what they considered a decent respect for the opinions of mankind, both in declaring the compelling causes of separation and in giving a clear, succinct statement of their governmental philosophy. They put more sound philosophy of law and government into the Declaration of Independence than can be found in the 12 volumes of the Modern Legal Philosophy Series. As a matter of fact, the 12 volumes fail not only by deficiency, but advocate, or cite with approval, numerous statements and tenets which contradict implicitly or specifically, and positively and emphatically, cardinal concepts of democratic government.

Imbued with an abiding trust in Divine Providence, the Founding Fathers made manifest their belief in God as the foundation and inspiration of their political philosophy and faith. They not only grounded the colonial title to a separate national existence on the laws of Nature and of Nature's God but on analogous grounds they claimed for individuals as well, rights which were theirs because of their human nature and because of their creation. To them God was the Author of Being, the Source of Right, and the reason for their relation of equality, one with another. "We hold these truths to be self-evident, that all men are created equal, that all are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

Some who support and praise our form of government, speaking with more enthusiasm than accuracy, refer to our Constitution as if it were a source of right, or assert that certain immunities or privileges belong to them because they are given by the Constitution. Our Constitution is not, primarily, a source of right, nor is it, indeed, a philosophical document. It is rather an instrument, of practical nature, intended to translate into action the principles of the Declaration of Independence, making operative the philosophy the declaration teaches and correcting the abuses it enumerates. It is the proper function of government to protect rights, not to grant them. This was well understood by the founders of our Republic, and they did not desire to establish a Government that would or could be a source of right, for well they knew that a Nation, claiming the prerogative of granting rights, might insist on taking them away at will, without notice, and without reason, save that of Shylock, "It is my humor." They based their claims to life, liberty, and the pursuit of happiness on natural and divine law, believing it to be the major end and aim of human laws to protect, defend, and preserve the rights given to men by their Creator.

AN ANTIDEMOCRATIC THEORY

The authors of the Modern Legal Philosophy Series did not regard God as the Author of Being, the Source of right, the Reason for equality among men. When they evidence any comprehension of a supreme being, they propose some vague concept of the evolutionist or the pantheist, who usually begin with ruling God out of His universe and come finally to doubting or denying His existence. Witness, for instance, the words of an eminent jurist quoted in Stammler's Theory of Justice, "It is enough for us that the universe has produced us and has within it, as less than it, all that we believe and love." (Rudolph Stammler, The Theory of Justice, translation, Isaac Husik, New York, the Macmillan Co., 1935.) It seems to be a part of their consistent state deification, not only to assert that fundamental human rights are derived from state grant, but even to maintain, strangly enough, that men owe their being to the state. This is the doctrine of Rudolph Stammler—and it is not gleaned from his work by mere inference or interpretation. It is made manifest in clear and emphatic language scarcely susceptible of misunderstanding or misconstruction. "As an individual," says Stammler, "is and has nothing which he does not owe to the community to which he belongs, so every exclusive power of disposition that he has, comes to him from it" (ibid., p. 246). Lest this be taken as an isolated passage, another is offered with the assurance that these are representative of many more which could be cited but for limitations of space. "But the individual would not exist without the community. From the community he has received what he is and what he can do. He owes to the community his being, his true being" (ibid., p. 329).

Obviously if man owes to the state his being, all he is, all he has, and all he can do, he must look to the state for his rights to life, liberty, and the pursuit of happiness. The author follows his deceptive premises to their logical, but pernicious, conclusion, and though it be only the consistency of delusion, Mr. Stammler is consistent. "The rights," he tells us, "which a man calls his own, he has because he has received them from the law" (ibid., p. 146). Again, as if to make this strange doctrine still more plain and emphatic, we are told by the same author: "The individual in himself, taken merely as such, is for social consideration nothing at all. He has not merely taken everything he has from the community, but is still continuing to take from it" (ibid., p. 347).

Mr. Stammler is not a solitary protagonist, nor does he bear a sole responsibility, in sponsoring theories that are distinctly antidemocratic. If called to bar for the doctrine herewith challenged, he might page his fellow countryman, another author of a volume in the Modern Legal Philosophical Series, a former president of the International Society of Legal and Economic Philosophy at Berlin. Fritz Berolzheimer, by way of supporting his colleague in denying the existence of inalienable rights derived from man's creation, would say, "There are no primitive or inalienable rights. Man acquires rights only as a member of a community" (Berolzheimer, the World's Legal Philosophies, translation, Rachel S. Jastrow (New York, the Macmillan Co., 1924), p. 197). Neither is Mr. Berolzheimer less bold than his brother philosopher in accepting the manifest corollaries of state creation and asserting the dependence of individuals as owing all they have to the state. "To the state," says Mr. Berolzheimer, "belong the people, the land, and the sovereignty. The sovereignty of the people is a meaningless term" (ibid., p. 257). He also joins Mr. Stammler in minimizing the importance of the individual. "The welfare of the individual," he tells us, "is never a purpose in itself, but ever a means of securing social welfare" (ibid., p. 247).

To show the sharp antithesis between the theories of these legal philosophers and the thought that has been dominant in the United States, the words of Mr. Justice James Wilson, in *Chisholm v. Georgia*, may be of value. On one side of this controversy was a sovereign state, and on the other, a lone individual. Mr. Wilson, writing an opinion in favor of the individual, insisted that he was interested in the cause, and not the parties, whether numerous and powerful on the one side or weak and alone on the other. "Causes," he said, "and not parties to causes, are weighed by Justice in her equal scales; on the former solely her attention is fixed; to the latter she is, as she is painted, blind" (Wilson, *Chisholm v. Georgia* (2 Dallas, 1893)).

EQUALITY OF INDIVIDUALS

That society can have no rights more sacred than those of the individual is a proposition that is basic in our philosophy of government. It is as an individual that man derives from his Creator rights so essential to human existence and human welfare, that they cannot be alienated. President Lincoln, at Gettysburg, bore witness that this truth, explicitly stated in the Declaration of Independence, remained as the warp in the woof of our political fabric. "Fourscore and seven years ago our fathers brought forth on this continent a new nation, conceived in liberty and dedicated to the proposition that all men are created equal." Whether or not they are impelled by force of logical sequence from other hostile tenets, eminent authors in the Legal Philosophy Series reject our structural principle of equality before the law. "Is the concept of justice," asks Von Ihering, "based upon the principle of equality in the law? What is there so great in equality that we measure the highest concept of right—for that is what justice is—by it? Why should law strive after equality, when all Nature denies it?" (Von Ihering, Law As a Means to an End, translation, Isaac Husik (New York, the Macmillan Co., 1924), p. 276). Lest Van Ihering appear unsustained by his fellow philosophers, we may call to his aid a comrade in fallacy, though not a countryman by birth, Leon Duguit. "Men are not born equal," observes Duguit, "they are born different. * * * The natural fact, as they called it in the eighteenth century, is not that men are equal but that they are unequal, and the general tendency of evolution is toward an even greater inequality" (Fouillee, Charmont, Duguit, and Demogue, Modern French Legal Philosophy, translation, Scott and Chamberlain (New York, the Macmillan Co., 1921), p. 274). It may be very true that men differ widely in advantages and opportunities, in reputation and honor, in qualities and powers of mind and body; yet it is equally true that so far as regards the right to live, to enjoy liberty, to pursue happiness and trust in the law's protection, the greatest of mortal great and his lowest lackey stand together on terms of complete equality, just two free men in a free country.

SOURCE OF RIGHTS

Men are equal and endowed with the same natural rights, because they owe both their being and their rights to the Author of their common nature. If man is, by gift of God, vested with inalienable rights, he must be privileged to adopt such measures as seem to him best calculated to provide for their maintenance and enjoyment. This brings us directly to the obvious necessity and primal purpose of human authority, indicating that free and equal men may of right establish, preserve, and control governments, to promote their safety and happiness. Hence the statesmen who drafted our Declaration of Independence, after enumerating the principal inalienable rights of man, continued "To secure these rights governments are instituted among men deriving their just powers from the consent of the governed." Essential as these truths clearly appear, consistent reason would seem to postulate their denial by the totalitarian philosophers—and these are not found wanting in the requirements of consistency. If men owe their being and all they have and can do to the State, if they belong to the State even as the soil of the earth, it must follow that they cannot establish, maintain, and control governments, and that there can be no derivation of power from the consent of the governed.

Readers therefore will suffer no shock of surprise when they find in the long-drawn chapters of Berolzheimer, "The sovereignty of the people is a meaningless term." Neither will they think it strange when they discover that the author makes his position even more emphatic by saying, "In its origin the state is remote from the will of the people" (Berolzheimer, op. cit., p. 257). Surprise, however, may be conceded as incident to intelligence, when readers meet Von Ihering's confirmation of his countryman's philosophy, "But the experience of all times has shown that the force of the state may have the entire population against it, and yet be in a position to maintain its power" (Von Ihering, op. cit., p. 236). This bewildering statement, a possible deduction from teachings of Stammler and Berolzheimer, is confirmed by Josef Kohler in propositions too long to be quoted here. (Kohler,

Philosophy of Law, translations, Adalbert Albrecht (New York, the Macmillan Co., 1921), p. 294.) To make evident how far these eminent authors depart from our fundamental concepts of legal philosophy, Chief Justice Marshall may be cited as a competent witness. "That the people have an original right to establish, for their future government, such principles as, in their opinion, shall most conduce to their own happiness, is the basis on which the whole American fabric has been erected (Marshall, *Marbury* v. *Madison*, 1 Cranch, 137, 1803).

THE CONSTITUTION

Chief Justice Marshall, in the words cited from *Marbury* v. *Madison*, only paraphrased the sentiment expressed by those who formulated the fundamentals of our legal philosophy and who were planning even in 1776 to establish a new government, "laying its foundations on such principles and organizing its powers in such form," as would seem to them "most likely to effect their safety and happiness." When Lexington and Yorktown had become memories of tragedy and triumph, and when the last argument of kings had ratified a resolution declaring the united colonies free and independent States, 55 men met in convention at Philadelphia to frame a constitution for the United States of America. Being ordained and established by solemn sanction of a free people, this document made effectively enduring the assertions of liberty proclaimed amid the opening cannonades of revolution. Powers of government were distributed among three departments, each being limited to its proper sphere of action and prevented from encroaching upon or absorbing specific functions of the other two. Rights considered too valuable to be jeopardized by current changes in national policy, were made expressly exempt from possible invasion or violation by either legislative or executive authority. Powers of government could be exercised only by consent of the governed, because the people retained within their own firm grasp effective means of ultimate control.

Constitutional government in our country has proved to be a most successful agency in translating few, but exceedingly comprehensive, philosophical principles into vital and lasting realization. Experience under a written constitution, through a century and a half of vigorous, national growth, has shown with conclusive emphasis that the people of the United States of America, who have said and written so little about legal philosophy, have indeed done very much to make the law of the land follow and interpret philosophical truth.

National Defense

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ADDRESS BY PRESIDENT ROOSEVELT

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered last evening by the President of the United States over a Nation-wide radio hook-up on the subject of national defense.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

At this moment of sadness throughout most of the world, I want to talk with you about a number of subjects that directly affect the future of the United States. We are shocked by the almost incredible stories that come to us of what is happening at this moment to the civilian populations of Norway and Holland and Belgium and Luxembourg and France.

I think it is right on this Sabbath evening that I should say a word in behalf of women and children and old men who need help—immediate help in their present distress—help from us across the seas, from us who are still free to give it.

Tonight over the once peaceful roads of Belgium and France millions are now moving, running from their homes to escape bombs and shells and fire, without shelter, and almost wholly without food. They stumble on, knowing not where the end of the road will be. I remind you of these people because each one of you that is listening to me tonight has a way of helping them. The American Red Cross, which represents each of us, is rushing food, clothing, and medical supplies to these destitute millions. Please—I beg you—give according to your means to your nearest Red Cross chapter; give as generously as you can. I ask this in the name of our common humanity.

Let us sit down again together, you and I, to consider our own pressing problems that confront us.

There are many among us who in the past closed their eyes to events abroad, because they believed in utter good faith what some of their fellow Americans told them—that what was taking place in Europe was none of our business; that no matter what happened over there, the United States could always pursue its peaceful and unique course in the world.

There are many among us who closed their eyes, from lack of interest or lack of knowledge; honestly and sincerely thinking that the many miles of salt water made the American hemisphere so remote that the people of North, Central, and South America could go on living in the midst of their vast resources without reference to, or danger from, other continents of the world.

There are some among us who were persuaded by minority groups that we could maintain our physical safety by retiring within our continental boundaries—the Atlantic on the east, the Pacific on the west, Canada on the north, and Mexico on the south. I illustrated the futility—the impossibility—of that idea in my message to the Congress last week. Obviously, a defense policy based on that is merely to invite future attack.

And, finally, there are a few among us who have deliberately and consciously closed their eyes, because they were determined to be opposed to their Government's foreign policy, to be partisan, and to believe that anything that the Government did was wholly wrong.

To those who have closed their eyes for any of these many reasons, to those who would not admit the possibility of the approaching storm—to all of them the past 2 weeks have meant the shattering of many illusions.

They have lost the illusion that we are remote and isolated and, therefore, secure against the dangers from which no other land is free.

In some quarters, with this rude awakening has come fear bordering on panic. It is said that we are defenseless. It is whispered by some that only by abandoning our freedom, our ideals, our way of life, can we build our defenses adequately, can we match the strength of the aggressors.

I did not share those illusions. I do not share these fears.

We are now more realistic. But let us not be calamity howlers and discount our strength. Let us have done with both fears and illusions. On this Sabbath evening, in our homes in the midst of our American families, let us calmly consider what we have done and what we must do.

In the past 2 or 3 weeks all kinds of stories have been handed out to the American public about our lack of preparedness. It has even been charged that the money we have spent on our military and naval forces during the last few years has gone down the rathole. I think that it is a matter of fairness to the Nation that you hear the facts.

We have spent large sums of money on the national defense. This money has been used to make our Army and Navy today the largest, the best-equipped, and the best-trained peacetime military establishment in the history of this country.

Let me tell you just a few of the many things accomplished during the past few years.

I do not propose to go into every detail. It is a known fact, however, that in 1933, when this administration came into office, the United States Navy had fallen in standing among the navies of the world, in power of ships and in efficiency, to a relatively low ebb. The relative fighting power of the Navy had been greatly diminished by failure to replace ships and equipment which had become out-of-date.

Between 1933 and 1940—7 fiscal years—your Government will have spent $1,487,000,000 more than it spent on the Navy during the 7 years before 1933.

What did we get for this money?

The fighting personnel of the Navy rose from 79,000 to 145,000.

During this period 215 ships for the fighting fleet have been laid down or commissioned, practically seven times the number in the preceding similar period.

Of these we have commissioned 12 cruisers, 63 destroyers, 26 submarines, 3 aircraft carriers, 2 gunboats, 7 auxiliaries, and many smaller craft. Among the many ships now being built and paid for are 8 new battleships.

Ship construction costs millions of dollars—more in the United States than anywhere else in the world; but it is a fact that we cannot have adequate naval defense for all American waters without ships—ships that sail the surface of the ocean, ships that move under the surface, and ships that move through the air. And, speaking of airplanes that work with the Navy, in 1933 we had 1,127 useful aircraft and today we have 2,892 on hand and on order. Nearly all of the 1933 planes have been replaced by new planes because they became obsolete or worn out.

The Navy is far stronger today than at any peacetime period in the whole long history of the Nation. In hitting power and in efficiency, I would even make the assertion that it is stronger today than it was during the World War.

The Army of the United States in 1933 consisted of 122,000 enlisted men. In 1940 that has been practically doubled. The Army of 1933 had been given few new implements of war since 1919, and had been compelled to draw on old reserve stocks left over from the World War.

The net result of all this was that our Army by 1933 had very greatly declined in its ratio of strength with the armies of Europe and the Far East.

That was the situation I found.

Since then great changes have taken place.

Between 1933 and 1940—7 fiscal years—your Government will have spent $1,292,000,000 more than it spent on the Army the previous 7 years.

What did we get for this money?

The personnel of the Army has been almost doubled. And by the end of this year every existing unit of the present Regular Army will be equipped with its complete requirements of modern

weapons. Existing units of the National Guard will also be largely equipped with similar items.

Here are some striking examples taken from a large number:

Since 1933 we have actually purchased 5,640 airplanes, including the most modern type of long-range bombers and fast pursuit planes, though, of course, many of these which were delivered 4, 5, 6, or 7 years ago have worn out through use and been scrapped.

These planes cost money—a lot of it. For example, one modern four-engine, long-range bombing plane costs $350,000; one modern interceptor pursuit plane costs $133,000; one medium bomber costs $160,000.

In 1933 we had only 355 antiaircraft guns. We now have more than 1,700 modern antiaircraft guns of all types on hand or on order. And you ought to know that a 3-inch antiaircraft gun costs $40,000 without any of the fire-control equipment that goes with it.

In 1933 there were only 24 modern infantry mortars in the entire Army. We now have on hand and on order more than 1,600.

In 1933 we had only 48 modern tanks and armored cars; today we have on hand and on order 1,700. Each one of our heavier tanks costs $46,000.

There are many other items in which our progress since 1933 has been rapid. And the great proportion of this advance has been during the last 2 years.

In 1933 we had 1,263 Army pilots. Today the Army alone has more than 3,200 of the best fighting flyers in the world, who last year flew more than 1,000,000 hours in combat training. This does not include the hundreds of splendid pilots in the National Guard and Organized Reserves.

Within the past year the productive capacity of the aviation industry to produce military planes has been tremendously increased. This capacity today, however, is still inadequate. But the Government, working with industry, is determined to increase this capacity to meet our needs. We intend to harness the efficient machinery of these manufacturers to the Government's program of being able to get 50,000 planes a year.

One additional word about aircraft: Recent wars, including the current war in Europe, have demonstrated beyond doubt that fighting efficiency depends on unity of control.

In sea operations the airplane is just as much an integral part of unity of operations as are the submarine, the destroyer, and the battleship; and in land warfare the airplane is just as much a part of military operations as are the tank corps, the engineers, the artillery, or the infantry itself. Therefore, the air forces should be part of the Army and Navy.

At my request the Congress is voting the largest appropriation ever asked by the Army or the Navy in peacetime, and the equipment and training provided by them will be in addition to the figures I have given you.

The world situation may so change that it will be necessary to reappraise our program at any time. In such case I am confident that the Congress and the Chief Executive will work in harmony as a team—as they are doing today.

I will not hesitate at any moment to ask for additional funds when they are required.

In this era of swift, mechanized warfare, we all have to remember that what is modern today and up to date, what is efficient and practical, becomes obsolete and outworn tomorrow.

Even while the production line turns out airplanes, new ones are being designed on the drafting table.

Even as a cruiser slides down the ways, plans for improvement, plans for increased efficiency in the next model, are taking shape in the blueprints of designers.

Every day's fighting in Europe, on land, on sea, and in the air, discloses constant changes in methods of warfare. We are constantly improving and redesigning, testing new weapons, and seeking to produce in accordance with the latest that the brains of science conceive.

We are calling upon the resources, the efficiency, and the ingenuity of American manufacturers of war matériel of all kinds—airplanes, tanks, guns, ships, and all the hundreds of products that go into this matériel. The Government of the United States itself manufactures few of the implements of war. Private industry wil continue to be the source of most of this matériel; and private industry will have to be speeded up to produce it at the rate and efficiency called for by the needs of the times.

I know that private business cannot be expected to make all the capital investment required for expansions of plants and factories and personnel which this program calls for at once. It would be unfair to expect industrial corporations to do this, when there is a chance that a change in international affairs may stop future orders.

Therefore, the Government of the United States stands ready to advance the necessary money to help provide for the enlargement of factories, the establishment of new plants, the employment of thousands of necessary workers, the development of new sources of supply for the hundreds of raw materials required, the development of quick mass transportation of supplies. The details of this are now being worked out in Washington, day and night.

We are calling on men now engaged in private industry to help us in carrying out this program and you will hear more of this in the next few days.

This does not mean that the men we call upon will be engaged in the actual production of this matériel. That will still have to be carried on in the plants and factories throughout the land. Private industry will have the responsibility of providing the best, speediest, and most efficient mass production of which it is capable. The functions of the businessmen whose assistance we are calling upon will be to coordinate this program—to see to it that all of the plants continue to operate at maximum speed and efficiency.

Patriotic Americans of proven merit and of unquestioned ability in their special fields are coming to Washington to help the Government with their training, experience, and capability.

It is our purpose not only to speed up production but to increase the total facilities of the Nation in such a way that they can be further enlarged to meet emergencies of the future.

But as this program proceeds there are several things we must continue to watch and safeguard, things which are just as important to the sound defense of a nation as physical armament itself. While our Navy and our airplanes and our guns may be our first lines of defense, it is still clear that way down at the bottom, underlying them all, giving them their strength, sustenance, and power, are the spirit and morale of a free people.

For that reason, we must make sure in all that we do, that there be no break-down or cancelation of any of the great social gains which we have made in these past years. We have carried on an offensive on a broad front against social and economic inequalities and abuses which had made our society weak. That offensive should not now be broken down by the pincers movement of those who would use the present needs of physical military defense to destroy it.

There is nothing in our present emergency to justify making the workers of our Nation toil for longer hours than now limited by statute. As more orders come in and as more work has to be done, tens of thousands of people, who are now unemployed, will receive employment.

There is nothing in our present emergency to justify a lowering of the standards of employment. Minimum wages should not be reduced. It is my hope, indeed, that the new speed-up of production will cause many businesses which now pay below the minimum standards to bring their wages up.

There is nothing in our present emergency to justify a breaking down of old-age pensions or unemployment insurance. I would rather see the systems extended to other groups who do not now enjoy them.

There is nothing in our present emergency to justify a retreat from any of our social objectives—conservation of resources, assistance to agriculture, housing, and help to the underprivileged.

Conversely, however, I am sure that responsible leaders will not permit some specialized group which represents a minority of the total employees of a plant or industry to break up the continuity of employment of the majority of the employees. The policy and the laws providing for collective bargaining are still in force. And labor will be adequately represented in Washington in this defense program.

Also our present emergency and a common sense of decency make it imperative that no new group of war millionaires come into being in this Nation as a result of the struggles abroad. The American people will not relish the idea of any American citizen growing rich and fat in an emergency of blood and slaughter and human suffering.

And, finally, this emergency demands that the consumers of America be protected so that our general cost of living can be maintained at a reasonable level. We ought to avoid the spiral processes of the World War. The soundest policy is for every employer in the country to help give useful employment to the millions who are unemployed. By giving to those millions an increased purchasing power, the prosperity of the whole country will rise to a much higher level.

Today's threat to our national security is not a matter of military weapons alone. We know of new methods of attack.

The Trojan horse. The "fifth column," that betrays a nation unprepared for treachery.

Spies, saboteurs, and traitors are the actors in this new strategy. With all of these we must deal vigorously.

But there is an added technique for weakening a nation at its very roots, for disrupting the entire pattern of life of a people. It is important that we understand it.

The method is simple. First, discord. A group—not too large—a group that may be sectional or racial or political—is encouraged to exploit their prejudices through false slogans and emotional appeals. The aim of those who deliberately egg on these groups is to create confusion of counsel, public indecision, political paralysis, and, eventually, a state of panic.

Sound national policies come to be viewed with a new and unreasoning skepticism, not through the wholesome political debates of honest and free men but through the clever schemes of foreign agents.

As a result of these new techniques, armament programs may be dangerously delayed. Singleness of national purpose may be undermined. Men can lose confidence in each other, and therefore in the efficacy of their own united action. Faith and courage yield to doubt and fear. The unity of the state is so sapped that its strength is destroyed.

All this is no idle dream. It has happened time after time, in nation after nation, during the last 2 years. Fortunately, American men and women are not easy dupes. Campaigns of group hatred or class struggle have never made much headway among us, and are not making headway now. But new forces are being unleashed, deliberately planned propagandas, to divide and weaken us in the face of danger as other nations have been weakened before.

These dividing forces are undiluted poison. They must not be allowed to spread in the New World as they have in the Old. Our moral and mental defenses must be raised as never before against those who would cast a smoke screen across our vision.

The development of our defense program makes it essential that each and every one of us feel that we have some contribution to make toward the security of our country.

At this time, when the world—and the world includes our own American hemisphere—is threatened by forces of destruction, it is my resolve and yours to build up our armed defenses.

We shall build them to whatever heights the future may require.

We shall rebuild them swiftly, as the methods of warfare swiftly change.

For more than three centuries we have been building on this continent a free society, a society in which the promise of the human spirit may find fulfillment. Commingled here are the blood and genius of all the peoples of the world who have sought this promise.

We have built well. We are continuing our efforts to bring the blessings of a free society, of a free and productive economic system, to every family in the land. This is the promise of America.

It is this that we must continue to build—this that we must continue to defend.

It is the task of our generation. But we build and defend not for our generation alone. We defend the foundations laid by our fathers. We build a life for generations yet unborn. We defend and we build a way of life, not for America alone but for all mankind. Ours is a high duty, a noble task.

Day and night I pray for the restoration of peace in this mad world of ours. It is not necessary that I, the President, ask the American people to pray in behalf of such a cause—I know you are praying with me.

I am certain that out of the hearts of every man, woman, and child in this land, in every waking minute, a supplication goes up to Almighty God; that all of us beg that suffering and starving, that death and destruction may end, and that peace may return to the world. In common affection for all mankind, your prayers join with mine, that God will heal the wounds and the hearts of humanity.

Organization for the Protection of American Enterprise

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. JOSEPH C. O'MAHONEY, OF WYOMING, BEFORE NATIONAL INDUSTRIAL CONFERENCE BOARD, AND AN EDITORIAL FROM THE WASHINGTON POST

Mr. MURRAY. Mr. President, the able Senator from Wyoming [Mr. O'MAHONEY] for several years—in fact, ever since he introduced his first bill dealing with the subject of our system of free enterprise—has been pressing for consideration of this vital problem. A few days ago he addressed the National Industrial Conference Board, at New York City, on the subject. His address was considered of such significance as to form the subject of an editorial in the Washington Post this morning. I ask unanimous consent to have the address and the editorial printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

It was with great pleasure that I received and accepted the invitation of Dr. Jordan to participate in this significant discussion of the "possibilities of the reconstruction and improvement of American enterprise." It is, by all odds, the most important question of our time, a question which loses none of its importance even by reason of the shocking events of the last few days. We are in fact dealing with one of the great crises of human history, a crisis which is intimately bound up with the subject matter of your conferences.

There is no disagreement anywhere in America today that this country must be made absolutely impregnable against every possible attack. There will be complete cooperation among all our people with the program now gaining speed and cohesion in Washington to complete our defense. None will cooperate, I am sure, more freely and effectively than those who are assembled here. Minor divisions and differences of opinion will be forgotten in the knowledge that a new political system which would destroy all the ideals of democracy, threatens to engulf the world.

In this crisis I find it a profoundly encouraging and hopeful sign that so many busy business executives have found the time to attend your sessions and to give attention to the many varied problems listed on your program. More important, however, than this catalog of problems is the fact that in your program they all have been tied together by the two words, "American enterprise."

I have come here tonight to talk to you because I believe in American enterprise and because I believe that the preservation of American enterprise, as our Nation has conceived it, is the greatest service that the people of America can perform for a bewildered and tortured world. Let no one imagine that war developments abroad, nor rising emotion in America, have in any way diminished the need of such conferences as this. On the contrary, what is happening in Europe only demonstrates the necessity of a united and determined defense of the principle of free, American enterprise by all the people of this country.

Before we can make this defense, however, we must understand just exactly what American enterprise is, and we must comprehend the dangers which beset it.

FREE OPPORTUNITY IS BASIC

I conceive American enterprise to be the right of every man to work and to possess the fruits of his toil. This enterprise as we know it is worthy of defense because it represents that free opportunity, guaranteed to every citizen of this Republic by the Declaration of Independence and the Constitution of the United States, to use the faculties with which he has been endowed by an all-wise Creator. If there is anything distinctive in the American way of life, if there is any mark which differentiates American ideals of political and economic organization from those of other peoples and other countries, it is that here we hold it to be a self-evident truth that to every individual God has given rights which no other individual, or no organization of individuals, whether political or economic, can take away.

Unless enterprise is free, it is not enterprise. For if it is not free, it is controlled, and when it is controlled it does not represent the spontaneous reaction which proceeds from the unfettered flow of individual energy and intelligence. America has grown great because we have managed somehow in this country to keep individual enterprise free. European civilization is tottering upon the brink of complete destruction because Europe has not succeeded in finding the way to protect the individual from organizations, both economic and political, which claim the right to restrain his freedom and direct his activity.

The failure of Europe and its present catastrophe are the result of complete misunderstanding of the fundamental concept upon which our institutions have been founded, namely, that governments are instituted among men to preserve the inalienable rights which individuals derive from their Creator. This fundamental American philosophy is spurned by those leaders who preach the doctrine that man has no rights which certain races or States may not disregard or destroy. If we are Americans and if we believe in American principles we know that this is not true. We know that the individual comes first, that he derives his being and his independence from a power which man cannot control, and that kings and constitutions are only the creatures of man, not his masters.

This is the principle which we must understand and defend if we are to understand and defend American enterprise. But we must go a step further and we must understand also that the problem of our time is to preserve the rights of men in an era which compels a higher degree of organization, both political and economic, than was ever before necessary in the whole history of the world. Those who selected the subject matter for these discussions understood this principle, for the prospectus of this Institute of Enterprise sets it forth as a "series of private conferences devoted to systematic discussion of the position and prospects of the American enterprise organization and possibilities, programs, and procedures for its reconstruction and improvement."

EFFECT OF ORGANIZATION ON PEOPLE

This title is a lecture in itself and could be subjected to most stimulating analysis, but I shall be content to point to the emphasis which is placed upon organization. No group of American citizens, indeed, no group of individuals anywhere in the world, could understand better than do the members of this conference the importance of organization. Modern business would be utterly impossible without it, for most of the activities upon which it depends are group activities. Consider the nature and significance of some of the subjects you have had under discussion since last September—capital, production, power, transportation, and taxation. All of these are problems of group or collective activity. One of the reasons why the investment of savings has become so important a subject of general discussion is that so many of the avenues of modern investment are to be found only in enterprises which are carried on by groups of individuals. Power is made available only through the cooperation of large numbers of persons, because no single person is capable, under modern conditions, of making steam or electricity available for practical use. All of the elements of transportation and communication which only a few decades ago were wholly within the control of individuals are today, so far as modern enterprise is concerned, wholly within the control of groups of individuals, and these individuals have found it necessary to impose organization upon themselves in order to make their purposes effective. Old-fashioned methods of transportation are, to be sure, still available, but they are no longer convenient; they no longer serve our purposes. Our greatgrandfathers, everyone of them, could provide themselves with all the transportation they needed because every practical man of a century ago could, under the press of

necessity, build himself a wagon and acquire a horse, but none of us can equip ourselves with the means of transportation which the modern world demands. We have to depend upon the collective organizations which manufacture locomotives and railroad cars, automobiles and airplanes, and which make steam, electricity, and gasoline available for instant use by every man.

Thus, organization is the mark of the modern world. The troubles of this generation arise from the simple fact that we have not yet learned how to shape this necessary organization in such a manner as to preserve that individual freedom for the protection and preservation of which the United States of America was established. If we understand the meaning of organization and the necessity of making it serve the individual needs of all our people we shall understand that the economic organization, like the political organization, must not be permitted to become more powerful than the people. Then we shall be in a position to offer to mankind the prescription for peace and prosperity, for lack of which the nations of Europe are today destroying one another and tearing away the roots of civilization.

Europe has organized for war, and, though much against our will, by that very fact we are compelled to organize for war; our real duty is to organize for peace. Europe has organized for destruction because of fear, fear that races and individuals cannot live without pillage and rapine upon one another. We can organize for constructive purposes once we realize that the world provides more than enough for all and that by intelligent distribution of the abundance which surrounds us we can actually, through organization, make robbery and pillage as unnecessary among nations as it is among men. Not upon fear of one another, but upon faith in the capacity of our people to cooperate, can we give the world that organization of free enterprise which it so much needs.

PEOPLE ALWAYS COME FIRST

If we are to achieve this end, we must begin by recognizing that people come first; that they precede all forms of human organization; and that all organizations justify themselves only in the degree in which they serve people. A railroad system is built across a continent only because it makes cheap transportation available to people. A telephone system is brought into existence only because people want to communicate conveniently at long distances. A great electric company is possible only because people want electricity in their homes for light and for power. Automobiles, airplanes, electric refrigerators, and every imaginable device which has been invented to supply the luxurious tastes of the modern world are possible only because living people demand them; and so, all industry, all business, and all commerce are organized to produce and distribute the unlimited variety of products which human ingenuity discovers and invents. Though we know that none of these things would be possible without people to buy and to use them, we seem to have overlooked the fact that the complex industrial organization necessary to produce and distribute these products will finally defeat itself if it is not so constructed as to guarantee to people the opportunity to acquire what business offers.

This is the organization which American enterprise must perfect and defend if it is to preserve itself and offer the world an alternative to the horror that now makes us all tremble. The totalitarian governments of Europe sprang into existence and seized all power because the economic organization had failed to preserve opportunity for the people.

Germany, Italy, and Russia, because they were unable to create a democratic peace organization that would preserve prosperity for people, chose the horrible alternative of creating an arbitrary war organization in the attempt to preserve their own lives and property by destroying the lives and property of their neighbors. Great Britain and France, blind as we have been blind to this organization of death, allowed the years to pass as it grew in power, and having failed within their own countries to protect the rights of people in the modern economic world, now find themselves in a disastrous extremity, an extremity which we ourselves now share because the arbitrary organization of whole peoples for war has repudiated the old concepts of neutrality and international comity as well as the principles of democracy.

PREPARE FOR PEACE AS WELL AS WAR

Though as a result we find ourselves compelled, in defense of our ideals of life, to organize for war so that we may not find ourselves utterly unprepared as other peace-loving nations were, we shall make a tragic mistake if we allow ourselves to think for a single moment that such organization will be a substitute for the necessary organization for peace of which I speak. War and even preparation for war may, for a time, seem to solve the unemployment problem. Armies which are assembled for purposes of destruction will, to be sure, use the hands which we have not had the intelligence, by organization and cooperation, to put to work in the productive enterprises of peace. But war solves nothing, for when it is over the same stark problems of people and their relation to the economic structure remain unanswered.

He who imagines that in this great crisis America can dodge this phase of the problem of organization, by preparing for war, misses the fundamental fact that there is neither peace nor prosperity save in production. American business can find no permanent prosperity in the sale of commodities to a modern world at war. Modern war, the aggressors have told us, is a total war. That means not only the destruction of soldiers and of civilians and of women and of children; it means also the destruction of the ability of whole peoples to produce. No European country can pay for anything it gets unless it can produce, for commerce among nations, as among people, is merely the exchange of goods and services, and when the ability of one man, one group, or one nation to produce is destroyed the whole basis of commerce is destroyed. Even when we ourselves prepare, as we must prepare for our own defense, upon the modern scale we necessarily incur an expense of staggering proportions that can only be met by increasing cooperation and production.

Let no one delude himself, therefore, into the belief that our problem of organizing people so that they may all reap the benefits offered by modern science can be postponed by either war or preparation for war. We must ask ourselves, and never let the question for one single moment vanish from our minds, what is to happen in this world after the war is over? Who is to bind up the wounds of war? Who is to assuage the suffering of stricken population? Who is to preserve the American ideal of free enterprise if we are not to do it? And how can we do it if for one moment we consent to set aside the problem of economic recovery for the benefit of all?

I have no blue print to offer, but I can recognize the elementary principles which have made America great, just as we all recognize them. We know that the progress of America has been the fruit of liberty, the liberty of every man to work out his own destiny. That liberty has been protected heretofore because here in America men, until recently at least, have always been economically free. Political liberty is the product of economic freedom. When economic freedom is lost, political liberty is endangered. That is the lesson Europe teaches us today. The genius and energy of Americans have been free to bequeath all manner of discoveries and inventions to mankind, but as these discoveries and inventions produce a more complex economy, depending in greater and greater degree upon complex economic and commercial organization, the individual has been finding it more and more difficult to preserve his economic freedom. The steady increase of tenant farmers and of industrial workers whose only property is an uncertain job has marked the growing instability of our economic system. When people are without property and when, for any reason, they cannot command the opportunity to work, then the danger to established order arises.

We hear a great deal nowadays of the demand for security. That is the phrase, to be sure, but it is not what is actually meant. People want opportunity much more than they want security. People have always been ready to risk everything, even life itself, in the pursuit of an objective. But when organizations become so complex that the individual is overshadowed and has no sure and certain part in the organization, then it is that dissatisfaction and unrest begin to appear. America has heretofore always sought to preserve the open door of opportunity to people. We have boasted, and rightfully so, that in this country every man who is able and willing to work could work and by energy and intelligence could rise to the highest positions in business and in industry. It is impossible to read the names of modern American business executives without knowing that this is so. The greatest personal satisfaction I have had as chairman of the Temporary National Economic Committee has been the realization, as a result of my contacts that America is still devoted to the old traditions of freedom and that American businessmen, no less than American workers, are willing to protect and defend the elementary principles of human rights, upon which our country was founded.

ECONOMIC ORGANIZATION NEEDED

Once before the people of this land faced a great crisis of organization. It was after the Revolutionary War when 13 sovereign States were struggling to cooperate for the mutual benefit of their people in an imperfect union. They saw the need of political organization then and they called together a convention chosen from among the rank and file of the people to draw a constitution which would give them the more perfect union that was needed to protect the general welfare.

The political organization which proceeded from that convention was the work of all and it gave to the world a government of the people, that is to say, a government of all the people; a government which derived its authority, not from the desires or needs of any single group, however powerful, but from the desires and needs of a whole people who were determined to provide opportunity and freedom for all.

Our greatest need now is a conception of an economic organization upon the same broad national scale, one which shall not be designed to serve the interests of any group or class, but which, like our political organization, shall be founded upon the abiding conviction that our economic system must be made to work so as to serve all.

We must therefore comprehend clearly the nature of the organization and the source of the authority which the individual must obey.

Organizations of minorities, whatever they may be, represent only part of the people, each group acting according to its own function. This is obviously true in the economic sphere, for even those huge and efficient organizations which have produced the triumphant industrial successes of America, represent only parts of our population. The railroad expert cannot speak for the automobile manufacturer. The manufacturer cannot speak for the

financier. The leaders of the petroleum industry cannot possibly know the problems of the steel maker, and so it goes through the whole variety of commerce and industry with those mighty and far-flung complicated organizations which produce, fabricate, and distribute all the commodities of trade and commerce.

GOVERNMENT ACTS WHEN ECONOMIC ORGANIZATION FAILS

We have seen from what has happened in Europe that if the modern economic organization, for all its internal efficiency, fails to preserve economic opportunity for people, the state inevitably steps in to attempt the task which business is not performing. When people cannot find employment in the avenues of private industry they turn to government. When, as in Germany, the dominant figures of the economic world, in order to protect their own interests, seek to obtain control of government, they only lay the ground for the inevitable result, that government will in the end dominate and control business. When that happens, free enterprise is gone and the state has become not only more powerful than the economic organization, but more powerful than the people.

It seems to me, therefore, to be perfectly clear that the organization of American enterprise which will protect the birthright of mankind is an organization which, by preserving free opportunity to all, will make unnecessary the appeal to Government to perform the economic function. This is the task this generation faces. Like our predecessors who drafted our political Constitution, we must draft an economic constitution. Just as they undertook to preserve political freedom for men by fixing the powers and responsibilities of political organizations, so we must preserve economic freedom by defining the powers and responsibilities of economic organizations.

This is the opportunity and the duty of America. Here in the New Yorld the challenge must be met, for Europe has failed before our very eyes.

I have no hesitation in predicting that the totalitarian states of Europe cannot endure, for every dictatorship contains within itself the seeds of its own destruction. Such an organization is founded on the negation of a principle that all history and all religion, fortified by human instinct, tells us is true that every individual soul is free and independent, created so by the Author of all life and capable of being subjugated only by the Author of its being. Whatever may be the temporary advantage of the mechanized legions of the totalitarian organization, they will in the end perish, because they will be defeated by the free spirits of free men, who, all history teaches, can never be held in permanent bondage.

We stand at the crossroads of history. By what we do will it be determined whether democracy and freedom shall prevail. I place my faith in the wisdom and ability of the people of America to preserve for all mankind and American heritage of free enterprise and economic liberty for all.

[From the Washington Post of May 27, 1940]

CHALLENGE TO AMERICA

In an address before the National Industrial Conference Board last week Senator O'MAHONEY clearly formulated the nature of the task ahead of the United States if it wishes to preserve a system of free enterprise based upon freedom of individual action.

Mr. O'MAHONEY reminded his audience that war and preparation for war, however imperative under present conditions, will not solve the problems confronting this Nation. Permanent prosperity is not to be achieved by selling commodities to a world at war. We have to keep in mind the question of organization for peace, even in the midst of the present turmoil. Our institutions are threatened not by war alone but also by the forces that led to prewar political upheavals.

The Senator from Wyoming, in statesmanlike fashion, tries to explain the triumph of totalitarian political systems over democratic methods. The problem of our time, he well says, "is to preserve the rights of men in an era which compels a higher degree of organization, both political and economic, than was ever before necessary in the history of the world."

In a society in which extensive organization based upon collective activity has become essential, it is extremely difficult to achieve maximum efficiency without ignoring the claims or invading the rights of individuals. Yet, if either economic or political organizations become too powerful, individual liberties are extinguished.

To avoid the fate that has overtaken Germany and other European nations, Mr. O'MAHONEY concludes, the United States must preserve economic opportunity for the people. This means, in simpler terms, that a way must be found to provide employment for the individual without making him a ward or employee of the Government itself.

Senator O'MAHONEY has repeatedly emphasized the danger to our established order of a propertyless people, denied the opportunity to work. The existence of such unfortunate classes abroad undoubtedly has played into the hands of political demagogues who have used the economically disinherited and the spiritually dissatisfied as tools for the work of destruction.

Senator O'MAHONEY sees the danger ahead and he has presented the problem clearly. It is a challenge to which we have not yet found the answer. But we are less likely to blunder if we understand its universality and its critical significance.

Iceland—First American Republic

EXTENSION OF REMARKS

OF

HON. ERNEST LUNDEEN

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ADDRESS BY HON. ERNEST LUNDEEN, OF MINNESOTA

Mr. LUNDEEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on Iceland.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On whether Iceland is a part of the New or Old World, whether it belongs more closely to America or to Europe, most geographers will agree with a characterization in a State Department publication of 1868 which was signed by Benjamin Mills Peirce. It has on its first page the statement that—

"* * * (Iceland) belongs to the Western Hemisphere, and is an insular dependency of the North American Continent."

The rightness of this 1868 characterization is even more apparent today; for we have learned in the meantime that Greenland, always considered a part of the North American complex, extends some 2° of latitude farther east than Iceland—a line drawn straight south from the most easterly tip of Greenland passes about 50 miles east of the most easterly tip of Iceland.

The main arguments for Iceland being American which were available in 1868 remain in full force. You can see Greenland from the mountains of northwestern Iceland. A ship rightly placed in the 185-mile gap between the two countries will see Iceland to the southeast and Greenland to the northwest; by contrast, the nearest considerable European land, Scotland, is 520 miles from Iceland. Even the Faroes, problematically situated so that you can argue reasonably whether they are European or American, are far beyond the range of ordinary vision from the mountain tops of southeastern Iceland. Norway, the nearest part of the European Continent, is separated from Iceland by 630 miles of sea.

Historically Iceland is a part of the New World in that the Old World had to discover it. Some believe that the discoverer was the Greek navigator, Pytheas, around 325 B. C.; what we know definitely is that the knowledge of Iceland was a commonplace to the Irish in 795 A. D.

The Norsemen seem to have learned about Iceland from the Irish during the spread of their conquest over northern Ireland in the early part of the ninth century. In 850 the first known Scandinavians went to Iceland; in 870 they began moving there in considerable numbers. Scandinavian reports agree with the Irish—the Irish say they were there first and the Scandinavians say they found Irish people in Iceland. Many of these Irish, or at least their leaders, were clergy. This was before the institution of celibacy was taken up by the Irish priesthood, so that there would have been wives and families.

However, it was more from later emigration of the Irish to Iceland that students derive that share of Irish blood which is estimated by different authorities at from 10 to 50 percent. If we add the highest and lowest estimates and divide by two, we get 30 percent, which appears reasonable. It is agreed that there were no people in Iceland when the Irish moved there. Accordingly we feel that most of the rest of the blood is Norwegian, about 60 percent, with the remaining 10 percent from Scotland, England, Denmark, and Sweden, perhaps in that order. The total of Icelandic blood of other sources than Scandinavian and Irish will be less than 1 percent.

The chief motive for the Norse colonization of Iceland was similar to that of the colonization of the territory which became our Thirteen States—the colonists were oppressed minorities. Their leaders were earls and petty nobility who had been defeated by King Harald the Fairhaired, first to become master of all of Norway. It was dislike for his overkingship that produced the migration, with a necessarily resulting antipathy for that type of government. Accordingly there was only the rudest kind of sectional organization until the country grew to a population of around 50,000. Then there was established, in 930, a republic for the whole of Iceland, functioning through a parliament that is still in session—in its one thousand and eleventh year.

It is commonly said that in 1261 Iceland voluntarily ceased to be an independent republic and became a province of Norway through requesting admission. This is true in practice; in theory, there is a difference between the Dano-Norwegian and the Icelandic view. The Scandinavians claim that what was true in fact was also true

in theory and principle—that Iceland was a province. The Icelanders, somewhat after the manner of the Scots, claim that what they asked for and expected to get in 1261 was a partnership. This theoretical position they held through the centuries, actually gaining little home rule, however, until about 100 years ago.

By 1874 Iceland had worked up to approximately dominion status, similar to the relation between Canada and Great Britain just before the 1914 war.

In 1918 Iceland became an independent state. By a treaty it was arranged that the same man who was King of Denmark should be King of Iceland—one man with two jobs. The Danish kingship was inherited and for life; the Icelandic kingship was by arrangement and for a limited period. There was to be a plebiscite in 1943 as to whether the same man should be reemployed as King of Iceland.

Several months prior to the German invasion of Denmark three of the four political parties of Iceland announced that they would at the coming plebiscite oppose the continuation of the arrangement with the King of Iceland. The only party which had not taken this position prior to the fall of Denmark was the Communist, represented by four members in a Parliament of 49. Therefore the declaration which Iceland made April 10 was an action taken in 1940 that would have been taken in 1943. The following is a translation from an article on the events of April 10, 1940, published by the Reykjavik daily newspaper Morgunbladid of the same date:

"The two Houses of Parliament assembled in joint session at 2:25 a. m. [April 10] and decided unanimously upon two crucial matters. The first concerns 'leadership in affairs of the state' and the second 'the administration of foreign affairs and of the coast guard service.'

"The first decision reads: 'In view of recent developments which have made it impossible for the King of Iceland to exercise those powers which were entrusted to him by the constitution, Parliament announces that it has transferred to the Cabinet of Iceland, for the time being, the exercise of the said powers.'

"The second decision reads: 'In view of recent developments it is not possible for Denmark to carry out those transactions of the foreign affairs of Iceland which were entrusted to it by paragraph 7 of the Danish-Icelandic joint declaration of law [of 1918] nor can the Danish Government carry forward the coast guard service provided for in paragraph 8 of the same law. Therefore, Parliament announces that Iceland for the time being will handle its own affairs under both the above heads.'"

Mississippi, the Heart of the South

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, May 27 (legislative day of Wednesday, April 24), 1940

ARTICLE BY THOMAS GARNER JAMES

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Thomas Garner James entitled "Mississippi, the Heart of the South," published in The Industrial Expansion of the South, the special edition of the Journal of Commerce and Commercial of May 20, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Journal of Commerce and Commercial of May 20, 1940]

MISSISSIPPI, THE HEART OF THE SOUTH—MOST SOUTHERN OF STATES HAS PAPER, LUMBER, OIL, AND COTTON, OLD AND NEW AGRICULTURE, AND A POWER LINE GRID LINKING EVERY TOWN

(By Thomas Garner James, Mississippi Advertising Commission)

The oft-quoted phrase, "Mississippi, heart of the South," comes close to stating a truth with universal applications. Mississippi is the heart of the South, not only by virtue of its central location; it is also a composite and the epitome of the Southern States, the most characteristically southern of them all.

What is possible to any part of the South is to some extent possible in Mississippi. The South's challenge, the South's hope is represented in Mississippi. Industrial news from the South begins in Mississippi.

White paper from southern pine?

The first mill to manufacture bleached Kraft paper from southern pine is at Moss Point, Miss., a mill founded by the South's first successful papermaker. Pulpwood from Jackson County, Miss., was the first southern pine ever to be made into paper.

Low cost hydroelectric power?

Tupelo, Miss., was the first city to use T. V. A. power. Since January 1, 1925, Mississippi has built up a gridwork of high-transmission lines linking every town in the State and supplying power at rates comparable to those of any State.

New industrial-crop resources?

Mississippi leads all other States combined in acreage planted to tung trees. Mississippi has the Nation's first ligno-cellulose plastic plant in operation. Mississippi has the Nation's only commercial sweetpotato-starch factory, which in addition to its starch product is now producing a cattle feed from sweetpotato hulls which may revolutionize stock feeding practices in the South. In the past 7 years Mississippi has tripled its cash income from sales of livestock and livestock products. As a result of soil-building practices the State's yield of lint cotton has increased from an average of 185 pounds per acre for the 5 years 1928–32 to an average of 328 pounds per acre for the past 4 years; an achievement in increased crop production without a parallel in the history of American agriculture.

New fuel sources?

The Nation's newest major oil field has opened in Yazoo County, Miss., following a strike made at the end of 1939. As of March 1, 1940, there were two dozen producing wells in the Yazoo field, as many more drilling, and more than 6,000,000 acres in the State under lease in the revived hunt for oil.

LOCATING MISSISSIPPI

It is not surprising that industrial news from the South is largely industrial news from Mississippi. For, lying alongside the great river which divides the South in two, Mississippi extends across and athwart the concentric arcs of southern development from geology to politics.

Physiographically, Mississippi lies nearly entirely within the Coastal Plain province characteristic of the southeastern United States—extreme northeast Mississippi being the exception—and extends completely across the Coastal Plain from north to south at a point halfway between the Atlantic coast and the Rio Grande.

Climatically, Mississippi lies entirely within the humid's subtropical region characteristic of the southeastern United States, extending almost across this climatic belt at its midpoint from east to west.

Mississippi lies entirely within the belt of red and yellow soils, characteristic group of the southeastern United States, the latitudinal extent of the State almost equaling that of the soil belt, and the State's position being only slightly west of the geographic center of this major soil group.

Mississippi is centrally located relative to the southeastern forest region of the United States and stretches completely across that region from north to south.

Thus does Mississippi occupy the approximate center of each of the four major natural regions descriptive of the South's physiography, climate, soils, and natural vegetation. And thus does Mississippi's geographic composite nearly epitomize the natural resources of the South. Mississippi's latitudinal extent traverses the whole series of geologic deposits of the Coastal Plain in its 800-foot range of elevation. The frost-free season grades from 275 days along the coast to 200 days in the northern part of the State. Average annual precipitation varies from as much as 65 inches along the coast to less than 48 inches in the extreme northwest. Mississippi soils, developed from alluvial, loessial, and sedimentary parent materials, represent great graphic position and drainage. Mississippi includes portions of four major forest regions of the United States. Nine distinct vegetation types comprise its varied pattern of plant associations.

THE STATE'S RESOURCES

So then a summary of Mississippi's resources samples the South's resources. The South is Mississippi spread out and diffused. One is the index to the other.

The tabulation should begin with climate, the resource which cannot itself be remade, nor transported, nor manipulated, nor exhausted. The framework within which the State's agro-industrial development must be projected, Mississippi's climate is one of frequent changes within moderate limits, being relatively predictable rather than monotonous. The repeating annual cycles of Mississippi's weather changes are remarkably uniform, a feature in the physical resources of the State which hardly can be overemphasized, Mississippi being rivaled by few other areas in this respect.

For agro-industrial expansion, Mississippi's climate is excellent. It is amiable yet stimulating in the autumn, winter, and spring months. With the development of refrigeration and air-conditioning, the high summer average temperature occurring in the interior of the State no longer presents an industrial problem. The frost-free period allows an unusually long growing season and a wide variety of pastures and crops. The seasonal variations in precipitation between northwest and southeast Mississippi likewise allow for a maximum variety in crops and timber within the limits fixed by the annual aggregate precipitation averages. The combination of high average precipitation and mild temperature is highly favorable to forest growth and is an important consideration in low costs of crop production.

Then next are the minerals in evaluating which availability and accessibility are as important as possession. Located midway between the coal and iron fields of the Southeastern States and the oil and gas fields of the Southwestern States and being readily

available to the mineralized areas of the southeastern and midcontinent regions Mississippi is in an ideal situation for the coordinated use of a great variety of mineral products from all parts of the South.

Of special importance is the proximity to both types of mineral fuels, the coal of the Southeast and the oil and gas of the Southwest. As a result of this favorable position, and because of voluminous production of natural gas and oil within the State, some parts of Mississippi enjoy lower industrial rates on natural gas than any other section of the United States. Mississippi is unsurpassed in the variety and quality of her undeveloped clay resources, detailed tests of which are now being conducted by the State along with State surveys of surface and ground-water resources.

It was from a preliminary survey of the mineral resources of Yazoo County that the present oil play there developed. Surveys of other counties in the State, now being carried out on a multiple-county scale, promise equal rewards.

TRANSPORTATION

A factor in evaluating all other resources is transportation. Railways, inland waterways, motor routes, and airways which foreshadow the supertransportation routes of the near future show Mississippi to be the transportation crossroads of the South. Raw materials to factories, finished goods to markets are carried easily to, from, and through Mississippi.

More than 4,000 miles of trackage operated by a half dozen major companies serve Mississippi by rail. In the Illinois Central system the State's western half is served by one of the Mississippi Valley's greatest trunk-line carriers. The recent merger of the Mobile & Ohio and the Gulf, Mobile & Northern into the Gulf, Mobile & Ohio Railroad gives the State another giant railway system to its eastern half.

The Nation's largest inland waterway, the Mississippi River, carries Federal and private barge traffic from half a continent along the western border of Mississippi.

Mississippi's deep-water harbor at Gulfport is advantageously accessible to the mid-South area. The harbor's nearness to the open Gulf effects time savings as high as 24 hours over its chief competitive ports, and new wharfs provide economies in handling.

Mississippi's new $90,000,000 arterial highway system is the peer of any other State, and with the second largest system of secondary roads in the Nation, Mississippi is well known for its all-weather farm-to-market roadways. Serving an evenly distributed population, Mississippi's motor freight lines are extending their operations rapidly.

Labor to convert raw materials into finished products is another factor in the evaluation of resources. Here the damaging of previous migration from farm to city is backing up a reservoir of farm youths of the most productive age for release in the channels of new industries. Harvard University found Mississippi farm youths to possess greater endurance and capacity for work than eastern college students. Factory superintendents are finding them quick to learn new trades.

This Land of Liberty

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

EDITORIAL FROM THE ST. LOUIS POST-DISPATCH

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of May 26:

[From the St. Louis Post-Dispatch of May 26, 1940]

THIS LAND OF LIBERTY

America's course is clear.

We must stay out of this European war.

If destiny has decreed that our democracy is to be threatened, we must prepare to protect it, not in Europe but here at home.

The great American statesman, Daniel Webster, said that "God grants liberty only to those who love it, and are always ready to guard and defend it." If Daniel Webster were alive today, he would be preaching impassioned sermons from this text, but it is doubtful whether they would be one-tenth as impressive as the lessons being drawn by the American people from the smashing victories of Adolf Hitler over the liberty-loving peoples of Europe.

One of these lessons is that we Americans can no longer take liberty for granted. It is not free as the air we breathe. It is something that was won for us by the blood, the tears, the sinews, the genius, and the fortunes of our forefathers, and it is something that may have to be defended by the blood, the tears, the sinews, the genius, and the fortunes of ourselves. We in this country have for so long luxuriated in the atmosphere of freedom that it is sometimes hard to remember that liberty has a price.

If we look back upon the pages of history, we recall that in the long chronicles of mankind the kind of freedom Americans enjoy today is of comparatively recent origin. The ancients never tasted it. They lived under strict tribal rules or under tyrannies which, even though often benevolent, were still tyrannies. The boasted civilization of ancient Athens, glorious though it was in many ways, was founded upon the labor and complete subservience of the helots, or slaves, who far outnumbered the freemen.

Liberty in the modern sense dates in England, not from the Magna Carta of 1215, by which the King surrendered certain rights to the feudal lords, but from 1688, when William and Mary recognized the supremacy of Parliament over the crown. In France, liberty in the modern sense dates from the fall of the Bastille in 1789, though it had to be rewon from the two Napoleons. In America, it dates from 1776, 164 years ago, a short span in history's long perspective.

A cynical Englishman once wrote that "liberty can neither be got, nor kept, but by so much care that mankind are generally unwilling to give the price for it." Yet in all ages, even in the most benighted, men have suffered and died in aspiring for liberty. In all ages to come, men will suffer and die to preserve liberty because it is a perfect expression of the human spirit.

One of the most illustrious of all libertarians, the great Garibaldi of Italy, in rallying his ragged soldiers to his banner, addressed them in these words: "Those of you who will resist the stranger at the gate will come with me. I offer you hunger, cold, forced marches, battles, death." Not bright uniforms, dazzling swords, victory, and spoils, but hunger, cold, forced marches, battles, death.

The world has now arrived at a juncture when liberty and American democracy must be reexamined in the light of world events. Liberty is fast disappearing everywhere. It has been taken from the vast population of Russia, inert under Stalin's iron dictatorship. It long ago disappeared in Italy when the country of Garibaldi became the Italy of Mussolini. It was never known in Japan. It is gone from Spain, from Czechoslovakia, from Poland, and from Denmark, Norway, the Netherlands—and now, as the mechanized forces of the ruthless, reckless, revengeful genius, Hitler, crunch the armies of France and Britain, perhaps liberty will soon be gone from those countries, too.

Who knows but that in a few short weeks the last great power on earth where men can still call their souls their own will be the United States of America? If that be true, this country must now prepare, in Daniel Webster's words, to "guard and defend" its liberty. This does not mean that we must succumb to hysteria, that we must be stampeded into panic, that we must overexaggerate our dangers. Far from it. There is no strength in hysteria, there is no efficiency in panic, there is no sense in overexaggeration.

When Adolf Hitler began to prepare for war in 1933, he did so quietly, calmly, and skillfully. He put his technicians to work. He built the best airplanes. He trained the pilots. He constructed air bases. He built military roads. He built tanks and antiaircraft guns and all the other devilishly powerful weapons of modern war. All this was done coldly, systematically, methodically. More, he devised the ways in which these weapons were to be used, drafting the best brains of the German nation to scheme and plan and devise everything from the grand strategy down to the smallest detail.

If we are to prepare ourselves against a possible foe like Adolf Hitler, we shall not do it by listening to inflammatory and ridiculous speeches, but by buckling down to work. If Hitler has mechanized war, we have the genius to beat him at his own game. If Hitler can build a magnificent fighting airplane, we can build a better one. If Hitler can turn out tanks like battleships, we, with our great mechanical skill, can make even more formidable ones. We have the brains, the driving energy, the plants, the money, the raw materials.

We only need the will. We only need to exercise this will. We only need to show that we think liberty is worth saving, is worth making sacrifices for, is worth a certain national discipline, is worth higher taxes, is worth some of the material comforts which we now so heedlessly enjoy.

Garibaldi's soldiers gladly accepted hunger, cold, forced marches, battles, death. But they were a ragged little band forced to the last extremity. We are a Nation of 130,000,000, with great, shining cities, vast and fruitful fields. We are strong, rich, vigorous, daring, ingenious. We are invincible, unconquerable, if only we use that proportion of our energy, that proportion of our brains and skill, that proportion of our wealth, which is needed to preserve all of the magnificent things that are symbolized by the noble Goddess who stands triumphantly above the waters of New York Harbor.

If destiny has decreed that our American democracy is to be threatened, let us prepare to protect that democracy, to crush for all time its attackers, and to crush them here at home on our own beloved American soil.

National Cotton Week

EXTENSION OF REMARKS

OF

HON. PAUL H. MALONEY

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

ADDRESS BY HON. PAUL H. MALONEY, OF LOUISIANA

Mr. MALONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech I delivered to the citizens of New Orleans last week during the observance of the National Cotton Week.

REMARKS OF HON. PAUL H. MALONEY ON COTTON WEEK, MAY 24, 1940

National Cotton Week is drawing to a close. The observance has brought home to us once more the vital importance of this staple for the well-being of our people.

Cotton is and will long remain the great natural American fiber. Cotton for some time will continue to furnish the chief source of livelihood for about 10,000,000 farm people. The processing of cotton yarn into clothing and industrial products plays an indispensable role in the life of many manufacturing centers in this country and provides the source of livelihood for about 3,000,000 additional people.

The Cotton Belt, in its broad sweep from the Carolinas to western Oklahoma and Texas, comprises still the largest single, homogeneous market in the world for the output of American factories.

The overseas movement of cotton from our ports is a factor of undiminishing importance in our national economy as well as in the larger picture of international commerce.

These facts stand in the foreground of the present cotton situation, whether we view it individually as a shipper in New Orleans, a sharecropper in Louisiana, a textile worker in New Orleans, or an automobile-tire dealer in Louisiana. What we have is an intricate network of interests, world-wide in extent, the welfare of each element affecting the welfare of all the rest.

Let us keep these fundamental facts in mind as we confront today the actualities of the cotton industry in its manifold ramifications. Calm, dispassionate thinking is the plain duty of everyone of us. We do not need to be told that the going is getting rough. Incalculable events on the battlefields of Europe and Asia make all our predictions worthless. Predictions of disaster are just as groundless as forecasts of sunny skies day after tomorrow. Pessimists and optimists alike are disarmed by the onrush of military, political, and economic forces loosed among us.

In the midst of the alarms, however, we can be realists if we will. We can stick to the facts. We can strengthen our resolve to deal with the complex problems of cotton in the light of our experience and not in the darkness of our fears.

Let us look at some of the cotton facts. The most outstanding one of recent months is the export program made possible by the action of the Federal Government on the initiative of the Department of Agriculture. Not since the upsurge in 1933 has the foreign trade in cotton been so active as during the 9 months ending April 30 of this year. More than 5.7 million bales were shipped abroad in that period, whereas for the corresponding period a year ago the total was under 3,000,000. This has meant new life and hope for an important section of our export trade, particularly that section centered in New Orleans. It has helped to remove the specter of a still more burdensome surplus. Money has gone into the hands of the producers. Our uncertain hold on the foreign market has been strengthened to the extent of these recent recoveries. It was no easy accomplishment to ship this cotton at a competitive price on the world market and at the same time assure the American farmer a return commensurate with his needs.

Predictions as to the immediate future of cotton exports are as futile as prophecies in any other field where the hazards are comparable. It is justifiable, however, to take pride in the cotton export record of the 9 months preceding the furious turn of events in western Europe. The American cotton industry and the Government at Washington have demonstrated afresh that their common efforts can be directed to desirable ends.

Not only is it necessary to the well-being of the cotton industry that a substantial portion of the crop be profitably moved into the channels of world trade, but also that domestic consumption hold up to a high level. Here, again, the facts of recent months are reassuring. Indications are that our home consumption of cotton will amount to more than 7,000,000 bales for the season ending July 31. This is well above the total of 6,858,426 for 1938.

Many factors have contributed to this increase. The generally favorable outlook prevailing in business stimulated demand. Concerted promotional activities have helped. Aggressive invasion of new commercial fields by the industry has done its share.

I mention these two outstanding facts—the revival of exports and the increase of domestic consumption—to illustrate the basic vitality and resourcefulness of the people actively engaged in the cotton industry. These are the prerequisites of any Government program to help and of any private agencies hopeful of lifting business by its own bootstraps.

It is upon these qualities that the future fortunes of cotton depend. No one should minimize the difficulties ahead. The war in Europe, regardless of its outcome, will force upon us far-reaching readjustments.

Our foreign-trade prospects for the months immediately ahead challenge us to new approaches to this aspect of our problem. There is the long-standing story of trade barriers between the nations. As a great creditor country our position in the export field is gravely complicated. In the world market American cotton is facing keen and growing competition from crops grown in other lands. The increasing use of synthetic fibers as a substitute for cotton, both in textiles and in many industrial outlets, endangers the position of the southern staple. Against these difficulties we must pit the good sense, the energy, the imagination, and the combined will of our people.

The attack is going forward on many fronts. Our State Department, in cooperation with the Department of Agriculture, is steadily advancing the cause of reciprocal-trade agreements. The A. A. A. program is being used by farmers with unrelenting vigor to maintain a fair balance between cotton production and the prospective demands, foreign and domestic. The distressing depletion of our soil, long attending the cultivation of cotton, is being retarded. Soil-building and soil-conserving practices are being carried out on millions of acres of cropland in the South. New acreages are being planted to food and feedstuff for consumption on the farm. The cash income of cotton growers from their staple crop has advanced from $464,300,000 in 1932 to $815,000,000 in 1939, including A. A. A. payments.

Dirt farmers themselves operate the A. A. A. program through their own county and community committeemen.

On other sectors of the front new outlets are being sought and developed for cotton consumption. The growing movement to ship in cotton coverings is a good example of this tendency. Research experts are disclosing the possibilities of cotton as excellent bagging material. Other use requirements are being studied in governmental laboratories such as the great research center established in our own city of New Orleans, and tested in practical experience. I select at random the most promising at the moment; open-mesh bags for packaging fruits, vegetables, and other farm products, cotton bagging for cotton bales, and mats for curing concrete. Each year from 400,000 to 500,000 bales go into the manufacturing of bagging alone. With judicious promotion it is felt that this could be easily raised to a million and a half bales. Men's summer suiting, wall coverings, insulation material, and building equipment are also absorbing the attention of the cotton trade.

All these trends are indicative of a vigorous people attacking their problems with courage and confidence. It should be the role of the Government at Washington to do all within its power to help the people in their own efforts toward maintaining a decent standard of living during these difficult and critical but not disheartening days.

I do hope our citizens will appreciate what the cotton industry in its many ramifications contributes to the general welfare of our Nation and respond to the fullest in its use. I may also say that I do believe Congress should approve my bill, which would give authority to use a postal cancelation stamp, Ship It in Cotton, the purpose of which is to keep our citizens continuously cotton-minded.

To the Unknown Soldier

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 27, 1940

ARTICLE BY REV. W. C. PORTER, WATERLOO, IOWA

Mr. GWYNNE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following poem by Rev. William C. Porter, minister of the First United Presbyterian Church, of Waterloo, Iowa:

Months ago I stood in Arlington before the Tomb of the Unknown Soldier. The perpetual pace of the guard of honor, the still glory of the pure marble, the volunteering pulsebeat of that melted

dust within, all burdened my thought as I turned away. So my heart returned to speak America's grace—

Once living. Dead. Unknown.
Beneath vast marble thine mere guarded rest!
Thou, mature, aware, gave all for liberty and right.
After thee our countrymen vow,
And, in war or peace, will pay to oblivion.

Dead? Unknown? August and eternal thy renown!
Thy high love America's unutterable song!
To God, our Glory, thy gleaming tomb
Hymns a silent, never-ceasing psalm.

God restore the noble grandeur of such manhood. Divine overruling maintain American patriotism on holy principles.—W. C. Porter, minister, First United Presbyterian Church, Waterloo, Iowa.

New Deal Obligation

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 27, 1940

EDITORIAL FROM THE MARSHFIELD (WIS.) NEWS-HERALD OF MAY 16, 1940

Mr. MURRAY. Mr. Speaker, there are a few fundamental issues about which the people of this country are entitled to know. They are entitled to know how every Representative stands on communism without any shadow-boxing or sidestepping.

The following editorial from the Marshfield News-Herald, Marshfield, Wis., May 16, 1940, expresses the responsibility of the New Deal:

THE NEW DEAL'S OBLIGATION

The New Deal has been accused of harboring many Communists, some of whom have been placed in important positions in Government. Spokesmen for the New Deal have denied this, but from time to time evidence has been uncovered to prove it is true.

With the air and the press filled with Trojan-horse tactics in Europe, the average American citizen has been set to wondering if we have a "fifth column" here in this country. It seems fairly certain that the Government will be asked to move the extreme "left wingers" from their posts. That seems assured as a result of the disaster which befell small European countries where "fifth columns" gained control of strategic points.

There should be no "red" hunt; there should be no Nazi hunt; what should never have been permitted must now be stopped. The Government—Federal, State, and local—must rid itself of those who have expressed dissatisfaction with our representative form of government and who would replace it with some foreign and un-American "ism."

The New Deal is responsible for placing thousands of these "left wingers" in Government jobs. Investigation by the Dies and the Smith committees prove their presence as well as their influence in these posts.

Not because of what has and is occurring in Europe but because it is unsafe, men and women who disbelieve in our form of government should have no right to hold any Government position. Those who would replace representative rule for authoritarian rule, even unto dictatorship, are not to be trusted as servants of the people. They never should have been given Government posts.

This is not to say that they should be denied the right of expression. This Nation must always maintain the constitutional guaranty of freedom of speech and press and the right of petition. Those who disagree with our form of government have the right to advocate change by peaceful constitutional methods. Since they have that right, they can have no squawk because they are frustrated in their Trojan-horse efforts.

In this connection it is well to point out that in times of crises it is difficult to retain the right of freedom of speech by minorities. When public opinion becomes inflamed against minorities, as it is today with foreign "isms" of all kinds, it becomes dangerous for spokesmen of these "isms" to publicly advocate change, even though it be peaceful change. We have reached no crisis in this country, but it is not difficult to perceive the increasing tension in the land as a result of what is happening in Europe. It is a time when the individual must exercise a large degree of self-restraint and tolerance of viewpoints that may be contrary to his own, so long as those viewpoints are openly expressed and do not contemplate overthrow of our Government by force.

The New Deal would do well to clean up its myriad of alphabetical creations by replacing radical left-wingers with persons known for their honest intentions toward representative government. The time is past when radicalism of the type encouraged by the New Deal is a political asset. Communists have aided the New Deal in many ways only because the New Deal was traveling in their direction. The New Deal owes the subversive groups exactly nothing for their support. On the other hand, the New Deal is heavily obligated to the American people for the safety of our representative form of government.

South Seeks New Uses for Cotton

EXTENSION OF REMARKS
OF
HON. THEODORE G. BILBO
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, May 27 (legislative day of Wednesday, April 24), 1940

ARTICLE BY OSCAR JOHNSTON

Mr. BILBO. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Oscar Johnston entitled South Seeks New Uses for Cotton. This article was published in The Industrial Expansion of the South, the special edition of the Journal of Commerce and Commercial of May 20, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From The Journal of Commerce and Commercial of May 20, 1940]

SOUTH SEEKS NEW USES FOR COTTON—LARGER AND MORE DIVERSIFIED DOMESTIC CONSUMPTION REGARDED AS PERMANENT SOLUTION OF PROBLEMS OF COTTON GROWERS

(By Oscar Johnston, National Cotton Council of America)

In the opinion of many of the Nation's most able thinkers only a few years ago, cotton was doomed as a major factor in the American economic scheme. It was rapidly coming to be the belief of thousands of those connected with the cotton industry. And there were many factors which indicated that this opinion was well-founded.

Export figures driven to all-time lows, the world price of American cotton dipping to ruinous levels, steadily decreasing domestic consumption and multiple other factors had caused the greatest of America's agricultural industries to sink into a slough of despond.

That the Federal Government stepped in desperately attempting to stem the tide with such legislative dams as benefit payments, soil-conservation payments, cotton-adjustment payments, crop loans, production control, etc., did not alter the fact that the situation remained desperate, with the economic fate of 25,000,000 people hanging in the balance.

The very fact that such a situation did exist, and to a large extent still does exist, makes interesting a brief résumé of what the cotton industry, awakened to the true facts of the case, has done, is doing, and proposes to do, to lift itself by its own bootstraps to the level of prosperity which it formerly enjoyed.

First step toward the organization of a permanent coordinated agency to fight the battles of cotton was taken by representatives of each of the five branches of the raw-cotton industry at Cleveland, Miss., in June 1938. Funds for preliminary organization of a National Cotton Council of America were provided by a $9,000 appropriation by the Mississippi Legislature.

Such a council, composed of elected representatives of all raw-cotton interests in the 19 cotton-producing States, is today working actively toward its one goal of increasing throughout the world the consumption of American cotton, cottonseed, and the products thereof.

A DEFINITE PROGRAM

The National Cotton Council has advocated a definite agricultural program. It was largely through the activities of the council that the Federal Government adopted a program which applied the so-called export subsidy to the 1939 crop, and not the ten-thousand-odd bales of cotton that had been accumulated by the Government as a result of the 1934, 1937, and 1938 loan programs. The effect of this was that a crop of 11,500,000 bales has moved with relative freedom. Some 7,000,000 or 7,500,000 bales of it will move directly from the producer through normal channels to the mills and ultimate consumers. Aided in part by the high price of Indian and Egyptian cotton resulting from war conditions, in part by the export subsidy, the exports of American cotton will this year approximate a minimum of 6,500,000 bales.

It is now apparent that our domestic consumption, plus our exports, will approximate 14,000,000 bales. The crop produced in

1939 was approximately 11,500,000 bales. This development means that price levels have been, or will be, such as to enable producers, who took advantage of the 1938 loan program, to withdraw between 2,000,000 and 2,500,000 bales of the 1938 loan cotton, and to realize a fairly substantial profit from this transaction.

During 1939 the council was responsible for advertising and publicity to cotton such as has never been known in the history of the industry. Approximately 15,695,862 agate lines of publicity have been given to cotton at the instance of the council through newspapers, trade journals, and general magazines in the United States. The cause of cotton has been preached in civic groups, dinner groups, trade organizations, fashion shows, throughout the length and breadth of the land. It is not possible to measure in dollars and cents the results which have flowed from this publication.

The fact stands that the domestic consumption of cotton for the season, August 1, 1939, to July 31, 1940, will be above 7,500,000 bales as compared with a domestic consumption of 6,858,426 bales for the year ended July 31, 1939, and 7,747,978 bales for the year ended with July 31, 1938. This increase has not been an accident. There may be much argument as to what factors have contributed to this result, but the fact stands that the domestic consumption of cotton began increasing with the development of the activities of the National Cotton Council, and has increased proportionately as the council has increased its activities.

NEW OUTLETS

Seeking new outlets for cotton, the council conducted the first exhaustive survey of the possibility of successfully using cotton fabric as a membrane in the construction of bituminous roads. Dr. Gibb Gilchrist, dean of engineering at Texas Agricultural and Mechanical College, conducted this survey. Though Dr. Gilchrist's studies revealed that cotton fabric at present manufactured is not sufficiently durable to make its use of material value in the construction of highways, they did prove the value of cotton fabric in curing concrete roads, in the construction of irrigation ditches and canals, and other sundry purposes.

Through the instrumentality of the Cotton Research Foundation, the research agency of the National Cotton Council, the council maintains at the Mellon Institute of Industrial Research, Pittsburgh, Pa., a multiple research fellowship in which a number of chemists and scientists are employed. The fellowship is engaged in scientific research in an effort to develop new uses for cotton, cottonseed, and the products thereof, and to so improve these materials as to develop increased consumption thereof in known uses.

In the future the research division will cooperate closely with the activities of research laboratories established under the jurisdiction of the United States Department of Agriculture. Every effort will be made to harmonize the activities of these two agencies, and to avoid duplication and needless expenditures. The regional laboratories will deal with many agricultural commodities; the Research Foundation will deal exclusively with cotton, cottonseed, and their products.

Recognizing the value and the necessity to the industry of foreign markets and in an effort to meet world competition, the council has gone on record as recommending so-called "tariff adjustment," or "cotton price adjustment," or "parity" payments to American producers in such amounts as would bring the normal returns from an average crop to a price level comparable with returns realized by those engaged in other lines of endeavor. An export subsidy can be made most beneficial in our efforts to export in competition with other cotton-producing countries, provided, however, the plan contemplating such a subsidy be so developed as to permit the free marketing of cotton by producers through normal and established trade channels, and not by diverting the cotton into a governmental agency to be marketed by a Federal bureau.

TRADE AGREEMENTS

Definitely going on record in favor of continuance of the reciprocal trade agreements program which expires June 12, 1940, the council is lending tremendous Cotton Belt support to the act extending authority for the negotiation of such agreements.

Through a period of 75 years we have demonstrated definitely and conclusively that international trade policies and tariffs cannot be economically and scientifically developed by direct congressional action. For this action there was substituted the plan of reciprocal-trade agreements, confessedly an emergency measure. It has been successful and would have succeeded infinitely more but for the development of the European war.

State and Federal trade barriers against cottonseed food products, particularly oleomargarine, have been vigorously attacked by the council during the past year. Early oleomargarine, made largely from imported oils and fats, fell easy prey to the dairy-products industry which feared the new product would encroach on its butter market. As a result of their activity, the manufacturers of creamery butter have been able to cause State and Federal Governments to so restrict margarine sales through taxes and license fees as to make its use in many instances virtually impossible.

With the rapidly increasing use of cottonseed oil in margarine during recent years, it has fallen to the cotton industry and its agency, the council, to seek the removal of discriminations against the cottonseed-oil product. So successful has been the council's campaign that in 1939 a total of 29 legislative attempts to place new restrictions on margarine were defeated and early in 1940 the Mississippi State Legislature so amended its statutes as to exempt dealers in margarine made from domestic oils and fats from license fees. Efforts are being made to have other State and Federal restrictions removed.

PROGRAM FOR 1940

So much for what has been done, and for what is in process of being done. Let us turn now to the cotton industry's program for 1940.

The council will continue its efforts to obtain extension of the life of the authority of the President to negotiate reciprocal-trade agreements. So long as the authority to negotiate these agreements is in existence, the council will continue its efforts to bring about the negotiations of specific agreements designed to promote the export of cotton, cottonseed, and their products.

The council will continue to wage a campaign against high tariffs where those tariffs interfere with international commerce in such a manner as to affect adversely the cotton industry. The council will continue its efforts to bring about tariff reductions where such reductions will not seriously adversely affect our domestic economy.

In the specific instances of the abrogation of the Japanese trade treaty, efforts will be made by the cotton industry to have negotiations handled through customary diplomatic channels rather than through legislation. The Japanese market is one of the largest open to the cotton-export industry. Despite the fact that to a major extent Japan is largely dependent upon the United States for oil, scrap iron, and other materials vitally essential to her economic life and as a market for her raw silk, this country depends upon Japan to absorb approximately 1,000,000 bales of cotton a year.

Although the termination of the treaty does not necessarily mean that either the American Government or that of Japan must necessarily alter trade conditions which have existed under the treaty between the two nations, the situation leaves each country in a position to modify, or to terminate, trade relations between the two countries. The council takes the attitude that the Japanese Government and our Government should, at an early date, reach a mutually satisfactory agreement which will permit the negotiation of a trade agreement and treaty between the two countries, thereby enabling business interests of the two countries to resume the mutually profitable trade relations which have existed between them in the past.

AN UNSOUND PRACTICE

In search of a reason for America's declining foreign trade, the members of the raw-cotton industry early determined that the gradual development of a high-tariff policy, culminating in the Hawley-Smoot Tariff Act, had resulted to the detriment of agriculture as a whole and of cotton in particular.

We are now engaged in a policy or practice which, in my judgment, is utterly economically unsound, and which will, unless timely action is taken, result in an enormous financial loss to the United States. The policy referred to is that of buying gold.

This country is now annually exchanging millions of dollars of goods, wares, and merchandise for the commodity gold, which has not appreciable real intrinsic value. Without regard to its cost of production, we have fixed arbitrarily a price of $35 per ounce, and announced to the world our willingness to purchase, regardless of the quantity offered, the gold of the world at that artificial and exorbitant price level.

For wheat, cotton, and other commodities, raw and manufactured, produced in America, we are taking vast quantities of gold, which is being buried at Fort Knox. Already there has been accumulated some $18,000,000,000 of gold, valued at the artificial value of $35 per ounce. Expressed more accurately, we have acquired by volume or weight 63 percent of the monetary gold in the world. It may be asked, What is the relation between our gold policy and the objectives of the National Cotton Council? The answer is obvious. The people of the Cotton Belt are interested in future foreign markets for cotton, cottonseed, and the products thereof. The economic situation which is developing throughout the world by reason of America's silly and short-sighted gold policy threatens the future of the cotton industry in that it threatens to destroy export markets.

It probably would be unwise at the moment to discontinue arbitrarily the gold-buying policy, unwise though it was in conception and inception. There are, however, steps which can be taken. Congress should terminate the discretionary power given the President to further devalue the dollar by reduction of its gold content. Congress can remonetize gold by making available, on demand, to every holder of an American paper dollar gold on the basis of an ounce of gold for $35. Holders of American dollars should be allowed to redeem against these dollars at their election in the form of gold coin, or gold bars, or bullion.

An ideal opportunity now exists for the United States to make the dollar the world standard of value to the end that when peace is restored international commerce may be on a dollar basis. This can only be accomplished if the dollar is stabilized, and is supported by the basic monetary metal, gold; and that metal made available to the holders of dollars throughout the world. The only value of gold is its value as a base for national currencies and a basis for international trade. If we own all the chips, the international poker game will have to come to an end, or the players agree to use a new variety of chips.

DOMESTIC CONSUMPTION
